The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 458. New Series. SATURDAY, OCTOBER 13, 1906. (Registered as a Newspaper.) Price 6d.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Nine Months' Foreign Trade.

It is hardly worth while delaying to analyse the figures for the month of September, as they are blurred by the fact that the month had five Sundays against only four in 1905. The aggregates, however, may be given, as they show a decrease of £664,000 or 1.4 per cent. in the value of the imports, which was £45,068,557; but, in spite of the additional Sunday, the exports of British and Irish produce show an increase of £1,147,693, or 4 per cent., at a total of £30,425,153, and the reshipments of foreign and colonial merchandise are at £5,520,763, almost identical with those of the previous September, showing as they do a decrease of only £474. It thus appears that the trade of the country retains the same aspect of expansiveness which has characterised it for the whole of this year, indeed, for the last three years, and the result is that for the nine months imports show an increase of £32,620,135, or 7.9 per cent., and exports of British and Irish produce an increase of £35,658,677, or 14 per cent. It will be seen from our summary tables that thanks to the unprecedented development in our export trade the margin between the values of exports and imports has diminished by no less than £10,495,649 on the nine months. Our figures include the movements of bullion out and in, as well as the reshipments of foreign and colonial merchandise, and it may be interesting in connection with gold to note that our exports for the nine months, in spite of the remarkable strain put upon the Bank of England's stock in recent weeks, exceeds our imports by little more than £2,400,000.

Coming to the expired nine months of the year, we still find that although prices are to some extent adverse, that is to say rising, the bulk of the increase on both sides of the account arises from the greater demand at home and abroad for the infinite variety of commodities in which the country trades. We are paying less for our wheat and oats, but somewhat more for other food grains, and the price of imported beet, butter, and cheese has also gone up. Raw cotton is likewise dearer, although the figures for the past month are to some extent misleading owing to the flurry which American speculators have produced in the cotton "futures" market. On the whole, however, the trade seems elastic and unforced in any direction so far as we can judge. The only doubt is, as hinted last month, whether it is as profitable now as it used to be, and this doubt is excited by the narrowing margin shown between the value of imports and exports in our table. When we remember that the entered value of imports includes besides cost, freight and insurance it is perhaps a remarkable fact that the excess value of imports over exports should be as great as it is, because the value of the exports is set down as merely free on board, the internal charges alone being included, the charges incidental to getting the goods to the ship. It follows that our exports have to pay freight and insurance in addition, and that these charges have to be added to the cost of the goods when ultimately sold in the countries to which they are sent. The fact that we are able to get sufficiently high prices for these goods on the average to pay these charges, to buy also the quantities we do of foreign merchants, and to import them into this country, adding charges to cost, and still to have a margin to the

good of upwards of £106,000,000, leads surely to the inference that although the average profit may be less now than it was in recent years, it is still ample and substantial.

Excess value of imports over exports	130,044,656	116,566,392	106,070,743	— 10,495,649

The values of the imports represent the cost, insurance, and freight, or, when goods are consigned for sale, the latest sale value of such goods.
The values of the exports represent the cost and charges of delivering the goods on board the ship, and are known as the "free on board" values.

In the circumstances it is always most interesting to dwell upon the state of our export trade because, as Mr. Chamberlain quite justly observed in one of his early speeches advocating the clogging of this trade by import duties designed to buttress rampant Imperialism, the ultimate test of prosperity lies in the condition of our export trade. If that is being curtailed it inevitably follows that imports must fall off. If we do not sell, in other words, we cannot buy. We are, however, selling in a remarkably energetic way at the present time, and, to take large branches of commerce only, we have this year up to the end of last month sold upwards of £4,000,000 worth more coal than we did to the end of September in 1905. Our total export of raw materials and articles mainly unmanufactured has gone up by upwards of £5,000,000 in the same time. Our exports of pig-iron have increased by about £680,000, and it is interesting to note that out of the total exports valued at £3,977,000 for the nine months, countries outside the British dependencies have absorbed more than £3,600,000 worth. We have sent abroad rather less railroad iron this year than last, but more bar, rod, and other shapes of the metal, less rails but more wrought iron and manufactures thereof, and more iron wire as well as ship, bridge, boiler, and other plates, while the increase in the export of galvanised sheets has amounted to about £750,000 on a total of £4,261,000, out of which nearly £3,000,000 worth went to foreign countries, including in that term countries unspecified. Out of the miscellaneous manufactures of steel or steel and iron, the aggregate of which was £1,063,000, only about £350,000 went to specified British dependencies. In like manner our exports of pig and manufactured lead, which aggregated £617,000 for the nine months, was in great part sent to foreign countries, British possessions absorbing only £167,000 worth. Out of a total of £518,000 worth of cutlery exported about £260,000 worth went to British possessions, and the absorption of hardware by our dependencies, including East India, came to rather less than £800,000, out of a total value of £1,743,000.

When we come to machinery the remarkable strength of our hold upon purely foreign markets becomes even more striking. For example, in the last nine months we exported £2,086,000 of locomotives, and of that total only £661,000 worth went to British possessions, including £597,000 to British East India. In other words, the demand from Australia, New Zealand, and British South Africa was altogether unimportant. In like manner agricultural steam engines were exported to a total of £882,000 in the nine months, and less than £66,000 worth went to named British possessions, while of £1,996,000 worth of miscellaneous steam engines sent abroad, only about £580,000 went to any specified part of the British Empire, and that total includes £313,000 worth sent to India. Of other machinery than steam engines it is unnecessary to give a detailed enumeration, since the demand of British possessions for other descriptions than mining is insignificant compared to that from foreign countries, and even in mining machinery, including £187,000 worth sent in the nine months to South Africa, our possessions account for only £308,000 out of a total export of £556,000. More remarkable still is the exhibit of our exports of textile machinery, which aggregated in the nine months £4,811,000, and of this only £1,204,000 went to countries inside the British Empire, that total including £1,177,000 worth sent to British India. Our total exports of machinery of all kinds reached in the nine months a value of upwards of £19,497,000, and of that total less than £5,000,000 is accounted for by all the enumerated portions of the British Empire taken together. The increase shown, it may be added, upon the export for the previous year of this the most profitable of all branches of our manufacturing business was £2,613,000 on the total for the first nine months of 1905.

It is unnecessary to again go over in detail the various divisions of our textile trade, but some of the changes may be worth mentioning as indicating the marvellous elasticity of that leading branch of our manufacturing industry. The total exports of cotton yarns and textile fabrics for the nine months reached a value of £74,579,000, which was fully £6,600,000 more than the total for the same period of last year. We hear much from time to time about the distress and backward condition of our woollen and worsted trades, and yet the increase in the value of these for

the past nine months was not to be despised. In woollen tissues the total export reached a value of £7,735,000, or nearly £600,000 more than in the same part of the previous year. Worsted tissues showed an increase of barely £250,000, but the total was £5,259,000. We also sent abroad larger quantities and values of carpets, hosiery, small wares, and in the result our total exports of woollen yarns and textiles reached a value of £24,521,000 for the nine months, or an increase of £2,433,000 on the total for the same part of last year. We also did a larger business in jute goods, both yarn and piece, and the linen trade continues to flourish in a remarkable manner, showing at £5,083,000 an increase of nearly £500,000 in the value for the corresponding period. Altogether the exports of yarns and textiles of all descriptions, including silk, reached a value of £109,957,480 for the nine months, which was upwards of £10,000,000 more than in the first nine months of last year. As was the case with these great branches of business so with the smaller, and given peace we really do not see how this progress is to be permanently or in any serious manner interfered with. It should be mentioned perhaps that last month showed a decrease of £851,000 in the value of new ships sent out of the country, but for the nine months there is an increase of no less than £2,960,000, the total for the current year to date being £7,382,000.

Buenos Ayres Great Southern Railway.

Although the annual report of the premier railway of Argentina is a record of marvellous progress and prosperity, the outlook for this and, indeed, for all other Argentine railway undertakings, cannot be viewed entirely without anxiety. Before the country was favoured with the wonderful spell of prosperity which commenced about half a dozen years ago, trade and commerce had been subject to such violent fluctuations that the railway companies did not see their way clear to indulge in lavish capital outlays in anticipation of possible flourishing conditions which might never have come about. So it was that when business began to expand with vigour the great majority of the railway systems found themselves quite incapable of handling and transporting the traffic offered to their lines. The result was that in the last six years there has been a feverish haste to make good previous shortcomings, and capital has been raised and spent in a manner that would create grave concern if by any chance the present spell of prosperity should receive a sudden and unexpected check. This is brought rather prominently into view at the present moment by the fact that reports have lately been coming from various parts of Argentina of severe droughts, especially in the southern districts, and a revisitation of the terrible locust pest. Neither seems to have had the injurious effect of previous incidents of a similar kind, because the area of land under cultivation is now so vast that probably under the worst conditions only a small proportion of the total acreage would be involved. None the less do we find the total of last year's wheat crop described as disappointing by Mr. White, the chairman of the company's local committee, while the general manager, Mr. F. W. Barrow, refers to the partial loss of the maize crop. These matters, however, detract but slightly from the general flourishing conditions, and if we could be sure that each year would show progress of the kind experienced in the last twelve months, it might not be necessary to lay exceptional stress on the immense obligations now being undertaken in order that the company may bring its system to the high level of efficiency which the business and trade of the country demand.

It is rather difficult to say whether capital or revenue deserves prior treatment in analysing the latest annual statement, but we may as well conform to our usual custom and deal first with the achievements of the past year. In the twelve months which ended on June 30 last, the company gathered a gross revenue from all sources of £3,896,888, being an advance on the previous year of £546,786 or 16.32 per cent. It is, however, startling to find that the increase of £568,762 or 34.04 per cent. in working expenses was actually greater than in revenue, the total being £2,239,387. So the nett income is £21,976 lower at £1,657,501. The percentage of working expenses to gross receipts comes out at 57.47 against 49.87, being an increase of 7.60 per cent., and it seems doubtful if any material future reduction in this ratio can be expected. The item of wages we may be sure will not show any diminution, because the cost of living in the country has now reached such a pitch that a crisis of some kind is not considered at all unlikely. This seems rather a remarkable condition of affairs in a country which raises such immense quantities of produce, but it is to some extent the natural result of the great impetus given to trade during the last few years. The increase in value of landed property, and particularly of dwelling houses in and around the large centres of population, has had its inevitable result in a continuous rise in the cost of living. House rent being dear, labour has become expensive, and the cost of obtaining the ordinary necessaries of life has become greater, so that everything in the way of food, housing, and clothing has been steadily increasing in price during the present year. Therefore, if an adequate supply of labour is to be commanded, the wages bill must be continually on the increase, and as the company's customers will naturally continue to demand better and increased facilities for handling traffic, the prospects are that expenses will have a tendency to go on growing rather than to diminish. To the balance of nett revenue just mentioned must be added the credit brought forward of £113,704, interest on reserve funds £21,398, and profit on remittances, transfer fees, &c., £10,819, making a total of £1,803,422. Against this the directors have already dispersed £1,109,592 in the shape of debenture interest, rents, income-tax, and interim dividend of 3 per cent. on the ordinary stock, so that the sum still left is £693,830. It is therefore proposed to pay a final dividend of 4 per cent. on the ordinary stock, making 7 per cent. for the year, adding £10,000 to the pension fund, and £5,000 to the staff benevolent fund. Last year the directors also placed £150,000 to the permanent way and rolling stock renewal funds, but this time they prefer to increase the balance carried forward from £113,704 to £198,830. This is an increase of rather more than £85,000, so that after making allowance for the extra sum required to maintain the ordinary dividend, it appears that the directors had about £65,000 less to divide.

The larger gross revenue was earned on a track only 25 miles longer, and we find that the increase in the number of passengers carried reached the fine figure of 1,969,288 at a total of 9,999,203. These travellers produced a gross income of £1,084,004, being £225,463 in excess of the previous year, while the income from luggage and parcels was £30,225 larger. The quantity of goods dealt with during the year, including the company's own service, Western Railway material, and freights on Government account, all of which are charged at more or less cost price, amounted to 3,944,143 tons compared with 3,238,763 tons in 1904-5. The transport of this great quantity of merchandise brought in a revenue of £2,053,801 or a gain of £236,570, and the company received an additional £23,995 for carrying 121,671 more animals. The only item in the goods traffic to show an important loss was maize, which fell off 47,568 tons and £40,093 in revenue. Wool and skins also showed small decreases, but on the other hand there were substantial gains in all classes of general goods, linseed, wheat, barley, oats, hay, potatoes, stone, and fencing posts. The materials carried on capital account were up by 91,021 tons, and the contemplated developments on the company's system will cause this item to be a very heavy one for some time to come. The shortage of rolling stock which has been so noticeable during the past three or four years, and which has given rise to

so many bitter complaints, was apparently still being felt during the past season, and notwithstanding the heavy additions recently made the continued increase in business has already rendered the placing of further orders necessary. Contracts have therefore been entered into for ten heavy tank shunting engines, 35 passenger saloons, 400 eight-wheeled covered wagons, 20 passenger brake-vans, and 50 goods brake-vans. The delivery of the new stock has been so arranged as to ensure its being available for the 1907-8 produce season.

Important additions and improvements have been carried out during the past year at Bahia Blanca. The loading capacity at this port has been very greatly increased, and the growth of its trade is strikingly illustrated by the fact that 102,193 tons of imports and 887,536 tons of exports were dealt with at the company's moles there as compared with 60,084 tons and 756,460 tons respectively in the previous year. In other directions the company has evidently done its best to increase the facilities offered for the rapid handling of traffic, and we find references to the doubling of several of the congested sections of the system, the laying down of extensive siding accommodation, the introduction of additional crossing and other stations, and the general enlargement of the platforms and the station yards, all of which has entailed a considerable expenditure on both capital and revenue account.

These, however, are comparatively small matters compared with what the directors have in contemplation. At the general meeting held a year ago the chairman said that the board had under its consideration the most efficient manner of opening up the districts lying between existing main lines, and negotiations in connection with the matter have been carried on for some time past with the provincial Government. Moreover, in response to repeated requests, the directors have decided to include in their extension programme the prolongation of the Newquen branch to the Chilian frontier, and have authorised their local representative to petition direct to the national Congress for this and other extensions for which the company had previously been in negotiation with the provincial Government. Altogether the new lines proposed to be constructed amount to 852 miles, and the line of 251 miles from Newquen to the Chilian frontier will join up with the line at present under construction by the Chilian Government, thus affording a direct and important transcontinental route for the southern portion of the Argentine Republic. As we know, a northern transcontinental line will in due course come into operation by linking up the Argentine Transandine line, now building, with the Argentine Great Western and Buenos Ayres and Pacific systems. It is proposed to construct these 852 miles at the rate of not less than 186 miles per annum, and to finish the whole in five years from the date of obtaining the concession. Naturally enough an immense amount of capital will be required to carry out the work, and to provide some of this as also moneys for the completion of the works at present authorised, the further enlargement of the moles at Bahia Blanca, and additional rolling stock, an increase in the capital of £5,000,000 is proposed. Should the shareholders give the necessary authority, as, of course, they will, three millions of it will be immediately allotted to holders of ordinary stock and shares *pro rata* at par in the form of 4 per cent. extension shares 1910, ranking *pari passu* with the existing 1910 shares when fully paid up. It is suggested that the balance of £2,000,000 to make up the total of £5,000,000 should be issued in preference shares as and when wanted. The directors point out that as this capital will be expended on works and extensions which should at once either result in economy in working or increase the earnings, they have confidence in recommending its creation. We suppose the directors have no alternative. They must increase the facilities offered to the public at any point where the outlay gives a prospect of lasting benefit, but it would be folly to disguise the fact that many distant years of prosperity are being discounted in the present expansionist policy. It seems almost impossible to believe that last twelve months the capital outlay reached £2,638,938, yet such was the case. We see good in the fact that revenue outlay was so largely increased last year, and despite drought and other misfortunes which must periodically be expected, can only hope that the enormous growth of business and creation of additional wealth during the past half-dozen years are sufficient to prevent a repetition of the periods of depression from which the country has suffered so acutely in the past.

Bottomley on Mandeville.

We bought a copy of *John Bull* this week curious to see what the great Horatio was saying about the greater A. Moreton Mandeville and his "London and Paris Exchange." The investment was not particularly fruitful, but some interesting statements are made, and, as might be supposed when one "bookmaker," to use Bottomley's phrase, or bucket-shop keeper takes to criticising another, there is a chance that the public may learn something. Some unfortunate customer of the London and Paris Exchange has been writing to Mr. Bottomley setting forth his grievances to that knowing and lachrymose man. They are great enough, and we should feel sorry for his misfortunes were it possible to get up any sympathy for those who allow themselves to be persuaded to deal with bucket-shops. We never can do so. Such people have had lessons enough, warnings enough, but they still go on, perhaps because, as Bottomley says, all men are gamblers. This individual's story is that he had £1,057 to invest, and went to the London and Paris Exchange with the money. From it he bought a few "good things," or fairly good, and in addition 3,000 shares, each in Myall Peak Hills and East Fingalls, two very speculative "mines." To make a long story short, in the result the "investor," at the time of his writing, said he had lost over half his capital, or, according to Bottomley's calculation, had really lost it all, and was behindhand some £400. The method of operation is simple enough, and is well described by Bottomley:—A line of a certain stock is secured either by purchase or option, and then "boomed" by Mandeville in his circular and *Daily Report*. It is usually a stock for which there is no very free market, but for which a nominal quotation exists. Then upon either the "cover" or the "marginal" system, parcels of the "security" are advertised for sale, as a rule, between one or two well-known and popular securities, and are bought by the uninstructed public. This is exactly what happened with the trustful West Kensington gentleman who went to Mandeville with his thousand odd pounds.

This result must always happen, and if people would only pause and think they might save their money. The bucket-shop keeper is only a kind of social "tapeworm," gnawing at the vitals of civilisation. How otherwise could he afford to spend lavishly upon advertisements of all descriptions, to scatter millions of circulars by post all over the world, to maintain costly offices and a large staff? The ordinary broker, member of the Stock Exchange, is not permitted to do these things, and that they are done indicates immense profits drawn by one device or another out of the pockets of the unwary. There are quite a variety of ways in which the money of the beguiled public is secured besides vanishing "margins," submerged "cover," and sticking the victim with shares that prove to be valueless, and money is made by all of them at the trustful one's expense. The game goes on always, and unless some drastic police measures can be taken to put a stop to it the public will continue to lose its money. It deserves to do so most times, because the bait thrown out by gentlemen like Mr. Bottomley and Mr. Mandeville is always "profit," immediate, swift gain to be secured by a "stock operation" of some sort under

the guidance of these superlatively wise croupiers of the tables. If the public were not greedy for this gain and eager to "make a bit," as on the turf, the lures spread before its eyes by bucket-shop keepers would not induce it to part with its money. It, however, will part again and again, no matter how it has suffered. As we know from experience people who have often lost before will have another throw, hoping that the last chance will recoup them for all their previous loss, that the fellow who has had their money will this time use them well as bait for the trap. The victims never seem to realise that the sole purpose kept in view by the bucket-shop keeper is to make money for himself, not to make profits for them. It is because the public is so inveterate and so vicious in its habits with regard to institutions of the kind Bottomley is dealing with that we seldom or ever take the trouble to give specific warnings to our readers. Circulars are often sent to us by readers—we had one to-day from Paris, a Copthall Avenue thing asking deposits for a "bull" deal in Home Rails—doubtless by people who resent the intrusion on their privacy, but we always feel that to take particular notice of them is only to give them a much-needed gratis advertisement. For one who will take our advice and put the literature of this type rained in upon him into the waste-paper basket, two or three will be tempted to "have a fling." The only thing we can do is not to advertise the bucket-shop keeper in any way, and The Investors' Review at least has a clean record in this respect.

Can any stop be put, then, to this victimising system of irresponsible gambling? Not by the action of the law, we fear, but there is a natural term always looming ahead for these bucket-shops. They all come to grief. Either the biter is bit and, over-reaching himself, loses all his money, or he becomes ambitious and launches into private expenditure—mansions, yachts, motors, pictures, wives, and so on—or he continues his "run of luck" too long, and the market suddenly turns round and corners him. This last event has happened more than once, unless we are much mistaken, in the history of the London and Paris Exchange, and we see no reason why it should not happen again. A short life and a merry one is the law of being for all bucket-shop tape-worms, and the comparatively hoary have a knack of perishing suddenly in a market east wind, so that the aggregate number alive to prey upon the vitals of society at any one time is kept down. Until a better spirit comes over the people, until men learn something of contentment, and, instead of struggling continually to make money, by speculative ways if honest effort avail not, shape their expenditure modestly according to their means, there is no other way except the savage one of mutual destruction, by which this parasite blight on our civilisation can be kept in check, still less any by which it can be eradicated. While the highest in the land patronise the turf and sanction gambling there by their presence, why should the bucket-shop keeper be treated like a pariah and hounded out of existence? He is not worse than the kurbstone bookmaker, whose special patron the devout Horatio Bottomley is; nor is he really worse than a great many highly respectable individuals and firms that make no scruple at all to utilise the bucket-shop when they have a large line of unsaleable stuff to trade off upon an easily deluded public. They are not much worse, indeed, than the brokers and jobbers on the Stock Exchange who fill the Official List from week-end to week-end with unreal prices of the securities in which they deal. There was rather an interesting article, by the way, in this week's "Commercial Supplement" of the *Times* on this very subject. It is one that always comes up in dull times, and exposes a grievance for which likewise there is no remedy. Honesty is a thing of degrees, and as long as the bucket-shop plays more or less in the open it is for the public to take care of itself. An honest broker can be found always when honest business is in view.

Economic and Financial Notes and Correspondence.

"The Times" and the Publishers.

A temperate letter has been issued to the Press by the publishers after their meeting on Wednesday, and from statements made in Thursday's *Morning Leader*, obviously upon inside information, we gather that the decision has been come to to withdraw advertisements from the *Times* wherever the publisher is not bound by contract to continue them. It adds that one of the oldest and most respected publishers in the room announced that he will occupy his space in the *Times* in future merely with a statement that his new books can be found in other daily papers, and that applicants at his office will receive a pamphlet stating the reasons which had rendered this step necessary. Apparently the publishers were unable to stop the sale of discount books to the *Times* Book Club, but it should now be impossible for the diligent pioneers who control that curious exhibition of Yankee childish astuteness to procure any books unless they abandon their malignant-looking attempt to ruin author, publisher, and bookseller all together. The *Times* Book Club itself issues another manifesto, printed at the end of the publishers' letter in Thursday's issue, which is in some ways a marvel of disingenuousness, but not in these ways will the real source of the trouble be obscured. This book club was ostensibly started to increase the circulation of the *Times* by offering subscribers the privilege of reading new books gratis and carriage paid. There was never any solid business foundation for an offer of this kind. It could not possibly pay, no matter what the circulation of the *Times* might be driven up to. On the contrary, the larger the circulation the greater the loss, therefore in order to try and make profits the American gentlemen who hit upon this brilliant idea were driven into an effort to ruin the trade by forcing down the prices of books by coercing publishers to sell them large quantities below the market price. Had they succeeded in this the book trade in this country must have fallen into their hands, and every one concerned therein would have been reduced to a position of helpless subjection.

They are not going to succeed. Goaded on by the booksellers, who saw themselves in danger of ruin, the publishers have been obliged to take action in defence of the trade, of themselves, and of the authors whom they serve and employ. In the end therefore, should this agreement be adhered to—and self-interest will compel the publishers to abide by it—the *Times* Book Club will be compelled to shut up, and it will be fortunate for the *Times* itself if it escapes from a disastrous setback. No other end was possible to the enterprise started by these American gentlemen. They came here full of Yankee bounce and impudence, perfectly ignorant of the conditions of business, and caring as little as they knew. They started their career by, as the publishers say in their letter, selling to the British public "a hopelessly antiquated edition of the 'Encyclopædia Britannica,'" making thereby, if all tales are true, quite a large sum of money. This success led them to think that they could do as they pleased with the British public and with the book trade. Plunging ahead in their wild ignorance they have now landed themselves in an impass, and will have to abandon their attempt to reorganise the trade in their own interests, to the ruin of everybody else concerned therein. In vain do they draw all sorts of red herrings across the scent, publish fantastic calculations like that contrasting a cheap reprint of Lockhart's "Life of Scott" with Winston Churchill's Life of his father, giving demonstrations of how much the publisher, author and bookseller make by selling 2,000 copies of a book published at 26s. nett, and in other ways trying their utmost to obscure the issue, and to throw mud at an honourable business. They will fail, and they deserve to fail, for we still like plain dealing in this country, and have not yet come to believe that our salvation lies in the creation of pernicious monopolies.

Crisp and Company.

It is no use coming down on this much buffeted drapery business because it failed to earn a profit during the year ended on August 31 last. Since the reconstruction was carried through in August, 1905, the new directors have had a most unenviable task. So much time elapsed between the breakdown of the old company and reconstruction in its present form that a good deal of the trade previously possessed disappeared, and the directors have really been faced with the necessity of building up a new trade. Those familiar with the conduct and record of the original concern can imagine what a difficult task this must have proved, and shareholders need not despair of an ultimate smile from fortune just because it was not given at the start. Since the business was taken over from the liquidator all the departments have been thoroughly overhauled and reorganised with a view to preventing the ever-recurring losses hitherto made, and placing the business on an established and profit-earning basis. In order to get back some of the old connection a good deal of expenditure has been incurred in advertising, and the condition of the buildings, fixtures, plant, and rolling stock was such that immediate repairs and additions were absolutely necessary, entailing further expense and outlay. Just now trade is of a more profitable nature than it was during the period under review, and the directors are hopeful that at the end of another year the business will have recovered some of its previous prosperity. Authorised capital is now £65,000 in 130,000 shares of 10s. each, and of this £60,906 has been issued, the calls in arrear being wonderfully small at £307. The new debenture debt is £50,000, of which £45,327 was issued at August 31, making with interest accrued £45,705. Creditors of £5,080 make up the balance-sheet total of £111,384. Additions to leasehold property, fixtures, &c., during the year were £3,064, increasing the item to £70,977, while £262 was added to the furniture and £762 to the horses, carts, vans, and harness. Unfortunately it has not been possible to provide any depreciation on the leases, fixtures, furniture, and rolling stock. A sum of £211, however, has been written off horses, £75 off the electric plant, £315 off the advertising account, leaving it at £1,261, and £126 off the discount on issue of new debenture stock, reducing this item to £3,472. Stock-in-trade, certified by the managing director, is in at £23,749, and we are inclined to consider this a conservative figure, especially when compared with the huge amounts the company used to hold, much of it not worth a twentieth part of its balance-sheet value. Book debts, less the reserve for anything doubtful, appear at £3,553, and cash at bankers and in hand is £981. Gross profit for the twelve months is returned at £17,789, discounts and allowances produced £2,168, and transfer fees, &c., £45, making a total of £20,002. Unfortunately it cost £19,519 to earn this sum, another £727 went in depreciation, &c., and £2,635 was required for debenture interest, directors' fees, and the remuneration of auditors and debenture holders' trustees. The actual outcome of the year's operations was therefore a loss of £2,879, and although the year was no doubt an exceptionally trying one, the business is clearly a long way off earning the 5 per cent. dividend predicted when the reconstruction scheme finally adopted was put forward. When we also remember that if profits are earned the directors must first make good the arrears of depreciation, and take steps to improve the finances by the creation of a reserve fund, it is not possible to be very sanguine of an early resumption of dividends.

The Reading Company.

It must never be forgotten that under this general name is included the property of the Philadelphia and Reading Railway Company, the Central Railroad of New Jersey, and the Philadelphia and Reading Coal and Iron Company, which were all absorbed by the covering or holding Reading Company at the last reorganisation some nine years ago. Taking the two branches of the business separately we find that the Reading Railway Company's gross receipts last year amounted to $40,564,000, and the working expenses to $25,676,000, the increase in receipts being $3,068,000 and in expenses $5,185,000. The receipts were the largest in the history of the company, but the increase in working expenses was even greater, yet the company, after meeting its fixed charges and taxes, which took $9,503,000, had a surplus of $5,384,000, after providing $3,539,000 for improvements. That is to say, revenue was drawn upon to that extent in order to add to the value of the property in a variety of ways, and these fine results were reached in spite of the backward condition of the anthracite coal trade as shown by the figures of the Philadelphia and Reading Coal and Iron Company. It made no profit at all last year, but, on the contrary, showed a deficit of $131,000, after paying only 2 per cent. upon its debt to the covering Reading Company. This result is ascribed to the troubles in the anthracite coal trade, but the Coal and Iron company never has been prosperous, or, at any rate, whatever prosperity it attained has been utilised to swell the earnings of the railway company, so that it might make a good show, come of the Coal Mining company what may. The truth is that the coal properties owned by the Coal and Iron company as a creature and subsidiary of the Railway company were bought too dear, and have been burdened throughout by their excessive capitalisation.

It is interesting to note that the railway company only distributed $56,190 last year in pensions, having actually only 179 pensioners out of all its immense staff upon its books. Of these 23 had served for 50 years and 120 30 years and upwards. Of that number all were 70 years of age or more, and there were only 23 incapacitated employees altogether on the pension list. Is it any wonder that with an exhibit like this discontent should be permanent amongst the workers employed by the company? The entire nett revenue, taking the whole of the companies together and dealing with the consolidated account as exhibited by the Reading Company, which probably includes Central of New Jersey earnings, was $21,895,000, and there was a surplus of $1,741,000 after paying all charges, setting aside large amounts for improvements, giving full dividends on the Reading preference stocks and 4 per cent. on the common stock as against 3½ per cent. for 1904-5, and only about £11,000 of this went to the worn-out employees. This is the sort of equity between employer and employed which tends to breed revolutions. There is, however, no gainsaying the fact that the Reading Railway has made remarkable progress, and Mr. George F. Baer is quite entitled to set forth the story with unction. Since the company was reorganised in 1897 its gross receipts have nearly doubled, and it has been improved in a variety of ways without adding any appreciable amount to the debt of the company or to its capitalisation in any form. The only additional burden imposed upon the company in this time has been $4,536,000 of general mortgage bonds and $4,242,000 of car trust certificates, besides a small amount of $283,000 in real estate and ground rent bonds, making the total not much more than $9,000,000, while the value of the equipment alone has increased during the eight years by $21,483,000. The railroad company at least would appear to be now in an impregnable position, and one of the most remarkable developments illustrates the broadening out of its traffic. It now carries nearly as much bituminous coal as anthracite, in spite of the fact that in former days it struggled to get a monopoly of the anthacite trade. Its carriage of general merchandise has also expanded in a remarkable way, and altogether the railroad company must now be considered one of the most prosperous in the United States. All the more interesting is the reported effort on the part of the Standard Oil people to get control of the property, with a view to the establishment of a through route all under one management between the Atlantic and the Pacific Oceans. Last year alone the merchandise traffic increased by 3,659,000 tons, or

nearly 20 per cent., and the earnings went up nearly 17 per cent. Passengers also showed an increase of 4 per cent. in number and in earnings of nearly 9 per cent. What this implies we do not quite know, but the Reading Railway has always been a large passenger carrier, and perhaps it is now taking people longer distances.

Ind, Coope and Company.

The following memorandum reached us some days ago, and was headed "Suggestions for the Press." It came through an advertising agency, and may therefore be supposed to represent the views that Mr. C. Howard Tripp obligingly desires the newspapers to express with regard to the changes made in the internal management of this company and his superlative abilities. It seems to us better to give the extract as it stands on the responsibility of the originator than for us to father it. In printing it we may perhaps be allowed to express the fear that Ind, Coope's shareholders may not be so completely satisfied with the changes made and the prospects held out as Mr. Tripp and his colleagues obviously desire them to be. It is, indeed, far from satisfactory for any journalist to be bombarded with matter of this description, and expected to give it his editorial imprimatur. There is, however, at least one suggestive revelation in the appended paragraphs; we gather from them that the two businesses hidden under the common name of Ind, Coope and Co., Limited, one in Burton and the other in Romford, have been worked more or less as rivals and in competition hitherto. No wonder the business went to the bad and profits:—

As has been pretty generally known for some considerable time past, indeed it was referred to at the last annual meeting of the shareholders of the company, the idea of the closer, more harmonious and more economical working of the two breweries (Romford and Burton-on-Trent) has been under the serious consideration of the board of directors.

The matter has been one of considerable magnitude to arrange, but we understand officially, as and from quite a recent date, the fusion of all interests in connection with the two businesses has now become an accomplished fact. The board of directors have decided to place the management of the whole business under the direct control of one managing director, Mr. C. Howard Tripp, who, for the greater part of the last 13 years, has been with Mr. Chas. W. Matthews, joint managing director.

Mr. C. W. Matthews, whilst enjoying more or less comparative rest after many years of great service to the company, will, we understand, be director in charge of the London Romford office, and will continue to give his valuable advice in the matters in which he has had so much experience.

The board and Mr. C. Howard Tripp will be ably supported in the future management by Messrs. A. W. Griffith, Algernon Ind, and C. E. Sheffield, the two former gentlemen being located more especially at Burton-on-Trent, and the latter representing the managing director at Romford during his absence.

This complete reorganisation and amalgamation of interests in this old-established concern should, we feel sure, be conducive to a period of greater prosperity, and the interests of all parties and of all the employees will now be, as we have long felt they ought hitherto to have been, identical. The agents and representatives of the combined businesses will be able to sell the products of each brewery (either Romford or Burton), whichever may be preferred, with the full knowledge that it will be equally to the advantage of the company and themselves individually.

The well-known boundless energy and long experience of all trade matters possessed by Mr. C. Howard Tripp, which has been hitherto exercised comparatively in the interests of the Burton house alone, will now be concentrated throughout the whole business, and we have every reason to hope with most satisfactory results, and we trust that we shall ere long, with improved trade, see this old-established business once again enjoying its former prosperity.

New York Finance and the Gold Hunger.

One of the most interesting articles that have recently been published on the gold demand from North America appeared in last Saturday's *Financial Times*, from the pen of its New York correspondent. It deals with the position of American banks and New York speculative markets. The writer begins by quoting Mr. E. H. Holden, the well-known managing director of the London City and Midland Bank, as having declared to an interviewer in New York that in recent years a spurious finance bill has been called into existence, and is being used by members of the New York Stock Exchange. The bills apparently are created on securities deposited with the financial trusts of New York City, and sent to London and discounted there at the finest rates ruling in our remitted bill market. Has the Guaranty and Trust Company a large share in this output? Well may Mr. Holden say that no banker here would grant a credit to a member of the London Stock Exchange for the purpose of drawing and discounting bills, nor could any stockbroker here raise money by such a device, except perhaps at highly usurious rates. But seemingly it is not the New York banker that does the thing, but the financial Trusts, those excrescences of American finance whose end we have always felt must be sinister.

The immediate point, however, to which we wish to draw attention is the extent of the indebtedness of American speculators to Europe, to us, thus created. The correspondent puts it at from £100,000,000 to £120,000,000. It may be considerably larger, he adds, and the higher figure, at any rate, does not include the short term railway notes placed abroad. "An extremely well-posted international banker" expressed the opinion to him that this outstanding indebtedness already exceeds the amount of merchandise credits, through crop exports and other channels, which can be expected to arise this season. It is the more likely to be in excess of the accommodation bills afloat, because the imports of the American Union are considerably larger in proportion to the exports than they were a year ago. Therefore the question must soon confront us here—how is this finance debt to be dealt with? Will the bills be renewed, and if our banks refuse to renew, what will happen on Wall Street? Nay, what will happen here? The two markets are interlinked by means of financial operations of this description to an extent that must be deemed in a high degree dangerous. They will stand or fall together.

Some interesting figures as to the position of banks in the United States are also supplied by this correspondent, compiled from the reports of the 6,100 National Banks making returns to the Government. The figures indicate that these banks are now holding much less cash than they did a year ago at the same time that their deposit liabilities have gone up, as they must do when credit is being created for the use of the market in an ever-expanding magnitude of daring. The statement for September last, embracing the figures of these banks, shows that their loans had gone up $300,000,000 compared with the same month of 1905, and that deposits were higher by $379,000,000, while at the same time the cash reserves have actually declined by $39,500,000. This gives us a faint idea of the kind of inflation practised, and of the gap that has had to be filled by imports of gold from Europe. Were the untrammelled depositors of these banks in the United States to begin to demand coin for the notes in their possession the whole banking system of the Republic would come to instant collapse, though every ounce of gold in the Bank of England were drawn away in order to prop it up. But there is no danger of that kind in sight yet, though what might happen did a Standard Oil bank or two succumb to financial dropsy we may not imagine.

Australian Commonwealth Finance.

The figures for the year ended June 30 last are satisfactory. The revenue at £11,879,343 was larger by £491,738 than the estimate, while the expenditure at £4,494,841 was £111,432 smaller. The Commonwealth authorities were thus able to hand £603,170 more than had been estimated to the various State Governments, the total payments for the year to them having amounted to £7,385,731, which was slightly larger than the total for 1903-4 and about £244,000 more than the transfer for 1904-5. And this excellent result was attained in spite of the fact that the Customs yielded less by £360,000 last fiscal year than in the previous one owing to the smaller imports of foreign sugar. Sugar alone, in fact, gave £371,022 less, so that the general Customs revenue may be considered

fairly elastic, and the loss thereon was more than made good by an increase of £382,087 in the Excise duties, of which £263,955 was attributable to the Excise on domestic sugar, that industry being apparently conducted on a vicious system of duties and bounties. In the last three years, in fact, the Commonwealth has paid away £360,000 in sugar bounties, of which £148,106 fell upon the past fiscal year. In the current year a rather smaller gross revenue is looked for, but the trade of the various States appears to be on the whole so prosperous at present that the forecast may very well be exceeded, and the decline looked for is only £434,370, giving a total of £6,951,361. In the past three years the Commonwealth has spent £2,152,000 on "defence," as it is called, the figure for the past year alone rising to nearly £778,000. In the current year it is expected to amount to £865,000. The cost of the Commonwealth administration in the three years of its existence has altogether been about £1,070,000, and the average £354,000 per annum. Last year it was nearly £361,000, so it has not been so very expensive as might have been feared; at the same time, this amount is a serious additional burden upon communities already groaning under the excessive cost of their elaborate individual systems of administration, and it will be well for the future of the whole country if as the cost of Federal Government grows that of the local governments can be cut down. One large item of income and outgo is the postal and telegraph service, which as a rule yields next to no profit. It figured at £2,842,182 in last year's receipts, but £2,629,702 of this went away in working expenses, and in the current year the expenses are estimated to exceed the revenue of £2,813,000 by £172,382, so that these services are at present really a direct burden upon the people, and we should like to know how much capital has been sunk in their establishment.

Australian Trade in 1905.

A remarkable and encouraging change has come over the business of Australia in the past three years. Taking the first of the three, 1903, we find that the colonies had that year to draw upon their stock of bullion to the extent of £10,974,000 in order to pay their way abroad owing to the drought and the bad harvests, which compelled the people to import unusual quantities of food. The imports of merchandise that year exceeded the exports by nearly £7,000,000, but the exports of bullion were nearly £18,000,000 larger than the imports. In 1904 the position was better in one respect, but in another worse, no doubt because the severe strain of the drought years upon the resources of the communities was still telling heavily against them. On the merchandise business there was an excess of exports amounting to £3,902,000, but none the less were the colonies compelled to export £16,563,221 more in bullion than they imported, so that the total adverse balance of trade, as it might be called, was £20,465,000 for that year. All that wealth had to be parted with by Australia in order to pay its way, but great improvement is shown in 1905, when the excess of merchandise exports over imports rose to £8,429,000. This released the Commonwealth from the necessity of exporting such enormous quantities of gold, and the nett outgo of that metal for the year was therefore brought down to £10,245,219. Even so the entire excess value of exports over imports exceeded £18,500,000. For all that the exports of gold fell short of the production by about £6,000,000, and the position of the banks has therefore been materially strengthened so far as specie reserves is concerned.

It is worth noting that Great Britain still accounts for fully 55 per cent. of Australia's imports of merchandise. Adding in 10.10 per cent. contributed by other British possessions, the proportion remaining for foreign countries was only 34.84 per cent. of the whole last year. These figures are probably not exact, because a good deal of foreign merchandise reaches Australia through British ports; but, as the *Australasian Insurance and Banking Record* remarks, the classification of goods in the port of shipment gives no signs of any recent decadence in the volume of imports from the United Kingdom. If Australia continues to prosper, to have good harvests, a fine mineral output and a general growth of production through the increase of population, there is no reason at all why the United Kingdom should not continue to enjoy its present advantageous business position. If, however, the colonies forming the Commonwealth again fall upon a cycle of drought years, of if their administrations clamour for higher protective tariffs and mock us by sham preferential rates, it is just possible that their whole trade may again fall into confusion. At the best, too, a draft of from £18,000,000 to £20,000,000 per annum upon the industrial output of these communities is an enormous handicap.

Canada Life Insurance.

An obliging correspondent has sent us a file of the *Toronto World* containing reports of the investigation supposed to be carried on by the Dominion Government into the methods of these commission gathering institutions, for some of them are not much else. Along with the reports are editorial articles of a pungent and refreshing description, which we have read with much interest and some amusement. The subject is not itself amusing, but on the contrary calculated to excite most painful reflections, but it is impossible to shut one's eyes to the grotesque exhibition made by men like Senator Cox, the great insurance, banking, and land mortgage company pluralist, and by others of lesser magnitude in the Canadian business world. Mr. Senator Cox is a most virtuous man—"unco guid," if we mistake not—and rather boasts of his skill in having captured the Canada Life Office and made it a family business, "his life work," the good man. But there is another gentleman, a Mr. or Colonel Macdonald, actuary of the Victorian Life Office, who is perhaps more valuable to people who are beguiled into taking out life policies in the go-ahead and grab-all Canadian offices, because of the facts he admits, telling us, for instance, the amount of loading which is necessary in order to provide commission and working expenses for respectable offices like his. On whole-life policies since the 4 per cent. basis for accumulating reserves was introduced the clippings for expenses exceed 22 per cent., plus $2, and the same on ten-year policies, plus $1. Plus on what? This seems to us rather modest if the "plus" applies only to the first premiums, and is but one or two dollars per cent. We fear, indeed we know, the total is much exceeded by offices like the Canada Life and Sun.

But Mr. Shepley, the examining counsel—not by any means a man so well up in the business or so free-handed as Mr. Hughes, that New York lawyer who opened up some of the hidden secrets of the gigantic American life offices—produced a table illustrative of the results to those who insure compared with the estimates, and the figures seem of general application. In every instance the actual results were much less, often more than 50 per cent. less than the "estimate." Thus on a ten-year life plan the estimate of profit for a policy-holder who entered at the age of 45 was $276, and the actual result $115. To a man entering at the age of 55, $431 profit was miraged, and he got or would get $170. It was no better but if anything worse in the case of fifteen-year life policies, and worst of all for the poor dupe who invested in a fifteen-year endowment policy. There a man who entered at 55 was promised an addition of $439, and he received $133. Mr. Shepley seems to us to have had a great opportunity in these tables, and he missed it.

But, after all, Senator Cox is the great man of the day in Canadian life insurance business. He acknowledged that although he liked to see the large number of policy-holders who attended the last meeting of his Canadian Life Company, he "did not like the row they kicked up." He also said that he formed the Imperial Life Office in 1898 to get his son into business, and admitted that either the Canada Life or he himself had invested heavily in Dominion Coal, Dominion Steel,

Canadian General Electric, Electrical Developments and San Paulo and Twin City speculations, which the Senator called investments. As the *Toronto World* remarks, Senator Cox, having two of his sons in the Canada Life, and being exceedingly sensitive to policy-holders' opinion, did not care to bring a third bearer of his name into the company. But he wanted his son Fred to fill a big position, and hence the Imperial Life. The ex-Prime Minister of Canada, Sir Mackenzie Bowell, was pressed into the services of the Imperial Life "all for Fred." Mr. J. W. Flavelle became vice-president, and so on, "all for Fred." It is very interesting and amusing, would be nothing but amusing if one could forget the cruel losses inflicted upon the people who have entrusted their money to this enterprising gentleman and his associates on the faith of their pious whines and specious promises. There are also interesting hints in the story before us as to the unscrupulousness with which the power of the purse is used to coerce public opinion or to poison it as expressed through the newspapers, so that the brilliant organisers may live immune, and a lot of valuable information may be picked up about the way the money of the Canada Company has been handled. The plea advanced for increasing its capital is one thing worth noting. "But for the capital reserve," said Senator Cox, "if the company had not had the $1,000,000 to fall back upon it would always be on the verge of bankruptcy." We venture to doubt that statement. As long as the policy-holders can be jockeyed out of the profits they are led to look for, bankruptcy should be kept at arm's length, and no need of the "long spoon" either. Will anything come of all this investigation? Not much, we fear. The Dominion Government is not free to act with vigour, and the official to whom the duty of probing the boil was assigned appears either to be imperfectly acquainted with his subject or to have his hands tied. Senator Cox, in fact, is a great man in Canadian politics by reason of his wealth, of the number of joint-stock companies he controls, of the money he can furnish for election campaigning, and for other reasons. So unless policy-holders themselves learn wisdom and determine henceforth to avoid all extravagant or one-man life insurance offices, they will continue to suffer and curse for anything the Canadian Government can do to help them.

Belgian Trade in 1905.

Much of the prosperity of Belgium may be ascribed to locality, since its geographical position has made it a great maritime nation, while possessed of only an insignificant mercantile marine. In Antwerp it has one of the great water gates of Europe, through which flow in and out vast quantities of merchandise, brought from and destined for all quarters of the earth, and carried by ships of all nations, though mainly by those of the United Kingdom, which number 50 per cent. of the whole, and Germany. With this enormous transit trade, the wealth of its resources and the industry of the people, Belgium's high position among the commercial nations of the world is easily explained, a position which at first sight seems scarcely compatible with the small space it fills on the map of Europe. Last year its imports amounted to 19,668,000 tons, valued at £122,732,000, an increase of 1,486,400 tons in volume and £11,444,000 in value on those of 1904, and far in excess of any year yet recorded, while the exports, though 73,100 tons less in volume, were £6,016,000 higher in value, the respective totals being 15,638,800 tons and £93,348,000. Like the majority of manufacturing countries, Belgium has to look abroad for much of its raw material, and its foodstuffs, and these two classes naturally form the most important items among the imports. Grain, of which 3,056,651 tons, without including flour, rice, bran, &c., were brought into the country during 1905, alone accounted for 15.6 per cent. of the total imports, while further large proportions were contributed by iron ore and various resinous and bituminous substances. Then coal was also imported in increased quantities from France, Germany, and this country to fill the deficiency caused by the smaller output of the home mines during the strike in the early part of the year. These were the main articles responsible for most of the addition to the bulk of the total imports, but pig-iron, beetroot, grain from the United States, dyes and colours, chemical products, &c., were also higher, while imports of potatoes from France rose from 22,973 tons to 37,715. But the increase in the volume of these commodities was not sufficient to swell the value by over 11 millions sterling, and Sir Cecil Hertslet, our Consul-General, says the explanation is to be found in the increased number of uncut diamonds sent from this country, the additional value of which was £521,320, while their weight for practical purposes was nil. Imports of textiles, copper, vegetable substances, unprepared hides from the United States, and sundry other articles diminished, though the above are those in which the most marked decline occurred, but in no case was the decrease remarkable.

Exports, as previously mentioned, showed a marked falling off in volume, the first for many years, with a rise in value, the value, indeed, showing a very fair proportional increase compared with previous years. An examination of the figures, however, discloses the fact that a considerable part of this increase was furnished by diamonds, the estimated value of these rising £580,000 to £3,980,000, and at the best this can only be an ephemeral prosperity. To the Belgian workmen it must be far more satisfying to note that the exports of manufactured iron and steel, in the shape of rails, bars, girders, and so forth, lime and cement, and other products of the country's big industries, showed on the whole but little change, and even where they did the cause was not a lessening demand abroad, but social and industrial troubles at home. The coal strike, the cause of increased importations of coal, also reduced the exports by some 500,000 tons, which in a large measure accounted for the decrease of the total weight, while other considerable factors were a drop of 71,182 tons in the potatoes sent here, owing to the weakness of the Belgian crop, one of 76,864 in pottery, and another of 34,780 tons in sugar exported to the Netherlands. Apart from these articles, trade was distinctly good, though in the iron and steel industries and glass making the high price and inferior quality of coal marketed during a great part of the year did considerable harm, and tended to reduce profits. British trade with Belgium, so far as imports are concerned, was decidedly healthy, the total increasing in volume by 74,735 tons to 1,398,939 tons, and in value by £1,660,000 to £15,076,000. With regard to exports, matters were not so satisfactory, and the volume showed a decrease of 118,629 tons, and the value one of £1,040,000, the totals respectively being 1,284,115 tons and £14,652,000. In connection with British trade and the possibilities of fresh openings for it in Belgium, it is worth noting that the trading tax of 2 per cent. on the nett profits at one time collected solely from Belgian firms has now been extended to all limited liability companies that carry on business within the country. This is only right, since prior to the new law foreign firms were given an undue advantage over Belgian rivals.

The Grand Trunk Meeting.

Much though there was to cheer and buoy up in the speech of Sir Charles Rivers Wilson at the Grand Trunk shareholders' meeting on Thursday the "bear" points were not wanting. For one thing, £1,000,000 of new debenture stock is to be issued to pay for the rolling stock of the Grand Trunk Pacific line. Surely it is a vicious policy to create perpetual debt for such a purpose. The United States method—short term equipment bonds—is better, but doubtless the Pacific line must be equipped. Then the higher Canadian tariff is adding a formidable deadweight to the cost of everything, especially to the cost of the new construction. The result of the additions made last year to the duties on imported iron and steel at the bidding of a clique of capitalists in the Dominion—hard-mouthed imperial patriots all—is to put another £40,000 per annum upon the already heavy dead-

weight charges borne by the company's revenue. And the cost of building the Grand Trunk Pacific line alone will be augmented by £800,000 by the same short-sighted and tyrannical plan for creating native iron and steel industries. Incidentally Sir Charles illustrated the meaning of "preference to British products" as understood in Canada. On rails imported from foreign lands the Customs levy is about £1 12s. 6d. per ton, on rails from the United Kingdom about £1 1s. 6d. per ton. The lower of these duties is excessive, and altogether outside the limits of fair give and take. No wonder the Grand Trunk board feels that the company is entitled to some relief from this excessive load. It is the home investor who suffers in common with the Canadian farmer and consumer, and without our money such a tariff would kill railway extension in the Dominion, check land settlement, cripple instead of helping the native iron industry, and hurt and hinder many things besides. And local taxation also grows oppressive. As late as 1904 the company paid $13,000 in all on its lines in Ontario. In that year the levy was raised from $5 a mile to $30 on the single track and $10 on the second track, and the company had then to pay $83,000 per annum. Nor is this the end. Last year the rate was raised to $60 per mile for the single and $20 for the second track, and by this increase another $95,000 has been added to the company's provincial burdens. This means an increase in three years of $165,000, and the company is "absolutely defenceless." In yet another direction Sir Charles gave sanguine "bulls" a hint to exercise caution. We must, he said, impress upon proprietors the impossibility of ever attaining anything like finality in expenditure. "A progressive railway must be re-equipped every 15 to 20 years." Yes, but should this re-equipment be paid for out of capital? Ought not up-keep and improvement out of revenue to be so continuous and systematic as to preclude the necessity for periodical overhauls involving heavy and it might be enormous drafts upon capital? "Fructifying and remunerative" expenditure must have its limits, even on the Grand Trunk, and the prospect thus opened up is anything but cheering for holders of the company's lower-grade securities. No wonder the market for them has become flabby!

American Business Notes.

Last week's return of the Associated Banks is not a very encouraging exhibit, showing as it does a decrease of $1,243,000 in the special and of $2,554,000 in the legal tender notes. This is equivalent to a decline of about £760,000 altogether, in spite of heavy borrowings of bullion abroad. There is still a surplus of £1,900,000 over the 25 per cent. nett of deposit liabilities which the banks are compelled by law to hold, or more than twice the total of a year back, but the fact remains that the banks in New York are still being drawn upon for currency and at the same time they are compelled to increase their advances to the market. The expansion was only $1,158,000, or about £240,000, last week, but that any increase at all should take place in present circumstances and while such a tremendous proportion of the stock gambled with on Wall Street is carried on foreign markets is a fact of sinister import.

The first act in the Cuban comedy is over and the curtain is down until the time comes to ring it up for the next scene. The smoothness with which everything has worked indicates how well everyone concerned in the business—President Roosevelt, President Palma, the junta in New York that got up the *opera bouffe* revolution, the Press chorus and the supers, to say nothing of the financial prompters at the bottom of it all—had got up their part. The deprecatory make-believe of the anti-Imperialist papers was perhaps the most amusing part of the business. Crocodile regrets at having to interfere and the pretended satisfaction that the Cuban flag was left flying over the public buildings deceived nobody, for everyone perfectly well understood what was going on and what the result would be. Cuba is now as much part of the United States as Porto Rico, and the Cuban people have been betrayed by false leaders. Hypocrisy, however, the virus of which comes from the old Puritan days, will probably impel the United States Government to go through a process of feigned unwillingness to assume the burden of governing Cuba, while carefully preparing the island for ultimate annexation. The only danger is that the greed of those who will swarm into the island in the wake of the army of occupation to grab lands, seize on offices, and repeat the doings that landed so many of Mr. McKinley's appointees in the penitentiary, may provoke the native Cubans, and turn Cuba into an American Ireland. The difficulties about applying the American tariff to the island have probably been well considered, and the how and when provided for. It is not at all likely that President Roosevelt took the action he has without knowing something of the mind of the heads of the sugar, tobacco, fruit, and other trusts that would be affected by the occupation now and annexation later of Cuba. To use a new England Yankeeism, Mr. Roosevelt has done a "slick" piece of business, and if anyone outside of the United States is surprised by it, it will be because of their ponderosity and slowness of thought.

The sulphur industry of the State of Louisiana is reported to be steadily increasing its shipments. A statement from New Orleans showed that in one week of September over 12,000 tons were sent to New York, Boston, Philadelphia, Baltimore, and other cities. Paper manufacturers find it well adapted to their needs, and are consuming large quantities.

The salmon canning industry of British Columbia continues to lead in the fish products of that province. In 1905 the output was 1,167,460 cases, valued at $5,750,000. More than 11,000,000 salmon were required to fill the 50,000,000 cans.

The Nipissing, Canada, silver deposits continue to attract the attention of every class interested in the ores of that metal, from miners to financial agents, who are flocking into the district in large numbers to take advantage of the new finds, and get to work on them before the severe winter in that region sets in. The Ontario Government railway, the first of its kind, shows a phenomenal increase in its traffic of all kinds, especially of machinery and building materials. One company reports that from now on its shipments of ore will average 30 car loads of first and second grade monthly. Shaft sinking to test the depth and richness of the new veins will be carried on during the winter.

The *New York American* brings a charge against the Interborough Rapid Transit Company of having in its report for the year ending June 30 made it appear that its operations showed a surplus of $281,391, whereas it has really a rapidly increasing deficit. The current liabilities are said to be understated by $3,380,565, and the net deficiency by $1,335,184; and instead of a surplus of $281,391, there should be shown a deficit of $1,931,109. It is believed, according to the *American*, that the matter will engage the attention of the New York Stock Exchange.

Apropos of the haste in which the Panama Canal was to be built, and the crowd of well-salaried "experts" who were to superintend the work, the New York *Sun* of September 27 has this to say:—

> Easy days these for the dirt and the dirt flingers on the Isthmus of Panama, days of siesta, to say nothing of nights filled full of merriment and music. The engineer commissioners are taking their pleasure at various summer resorts in this part of the world. The secretary-historian commissioner, Mr. Bishop, is maintaining that "normal public sentiment" of which we have heard so much, by the ingenuous expedient of leaving the country to think what it pleases. Governor Magoon has completed his task, and has left for another post. The mosquitoes are all dead, and yellow fever, therefore, is eradicated. One can still make the acquaintance of "denque" or "Chagres fever" by the exercise of a little ingenuity, but those are pretty names and do not frighten anybody. So these be easy days, from Panama to Colon. The soil is taking a much-

needed rest, and the only noise we hear is that of colliding engines on the railway, or perhaps the snore of alligators unafraid.

Meanwhile the visit of President Roosevelt to Panama, where the tranquility described prevails, and the spirit of the Spanish "mañana" pervades the pest-laden atmosphere, has been deferred, owing to the Cuban troubles; and there are sufficient millions of dollars allotted for the job still remaining in the United States Treasury to keep the responsible officials from anxiety on the score of their salaries, until the next display of hustling activity necessary to get Congress to make fresh appropriations is called for.

Some interesting correspondence regarding the proceedings of the Pan-American Congress that recently sat at Rio Janeiro is being published in the American papers. That referring to the question of compulsory collection of public debts by Governments is exceptionally important, inasmuch as it appears that the definite declaration of the Drago doctrine as expounded by the Argentine Minister for Foreign Affairs was opposed by Mr. Buchanan, the chairman of the United States delegation, and also of the committee which had to consider it, on the ground that he "did not believe that the defining of the question of the collection of debts by force, involving many delicate points and principles of international law, came within the scope of the Pan-American Conference, composed to a great extent of debtor nations." The United States point of view, as presented by Mr. Buchanan, after consultation wth Mr. Root, the United States Secretary of State, was that it would be unseemly and uncalled for if the Conference of debt-owing nations should attempt to lay down a policy regarding the collection of debts for adoption by the Hague, the preponderating power of which is that of European creditor-nations. The result of the consideration of the subject by the committee, and of many disputes, was a colourless resolution sent to the Conference—

> To recommend to the Governments represented therein that they consider the point of inviting the Second Peace Conference at the Hague to consider the question of the compulsory collection of public debts; and, in general, means tending to diminish between nations conflicts having an exclusively pecuniary origin.

It was the old story all over again of the cooks and the fowls who were invited to decide with what sauce they wished to be eaten. It is not surprising that the consequence of the very curious attitude taken up by the United States Government in that and other matters has been that several of the South American States, which had renounced a considerable part of their naval programmes, have since given orders for battleships and heavily armed cruisers, and are adopting other measures for defence.

There appears to be a general movement going on in the United States among shareholders and stockholders in the great corporations for increases in dividends, instead of having large reserves and surpluses piled up over which they have no control, and which are very frequently used for purposes not in harmony with their interests, or to serve the private interests of presidents, directors, or leading officials. That this has been the case in many instances of late is mainly due to the apathy and neglect of shareholders themselves, but also to the principle largely held and practised by the heads of many of the great corporations that they are irresponsible despots, whose will is law. The laws relating to corporation all over the United States lend themselves to this.

The Board of Estimate of the New York Corporation took an extraordinary step the other day. It was the authority given to the comptroller of the corporation to issue $30,000,000 of corporate stock to cover bad debts that have been accumulating since 1889 under the head of uncollected personal taxes. The object is said to be merely to keep the books of the city straight, but the bonds will be sold from time to time in parcels of a few millions each until the deficit of uncollected taxes, amounting to $35,724,764, is wiped out. This novel system of financing does not appear to excite any comment in the New York Press, which accepts the explanation of the comptroller that "it amounted to nothing more than taking money from one pocket to put in the other." The Board of Estimate, it is said, adopted the resolution calling for the sale of the stock without comment, but whether their silence was due to ignorance of the significance of what they were doing, or whether it was owing to a keen perception of certain advantages, is not mentioned.

The Atlanta, Georgia, race riots were not without their effect on industrial and financial conditions throughout the Southern States, especially in the cotton belt, which depends almost exclusively on negro labour. The cessation of arbitrary arrests of inoffensive negroes at the caprice of anyone in a military uniform and the truce that has been temporarily established between the whites and blacks in Atlanta will, it is hoped, prevent a prolonged disturbance in the situation generally, but unless the attempts of a number of Southern State Governments to deprive the negroes of the South of the political liberty conferred on them after the Civil War by the 14th and 15th amendments to the Constitution of the United States are dropped, further and greater troubles are certain. Those European Governments possessing territory in which cotton can be grown with facility will, therefore, be wise in giving greater attention to the subject, for a general exodus of negroes from the United States would mean the crippling of the cotton-growing industry in the Southern States and of the factories dependent on it for long years to come.

Among the railways showing heavy gains in revenue for the year ended June 30 is the New York, New Haven, and Hartford R.R. Company. The lowering of the fares on this line to two cents a mile has stimulated business to such an extent that an increase of income is assured. The gross income was $53,984,332 and the operating expenses 64 4-10 per cent. This left $17,761,735, which, with $2,175,757 coming in from other sources, made a nett income of $19,937,493. A new feature in the management of this road is the establishment of an accident and casualty fund, out of which will be paid all settlements for accidents of every nature to passengers and *employés* in the company's service.

Reports were current in Wall Street that the Erie R.R. Company was negotiating for the purchase of the Toledo, St. Louis and Western R.R., commonly known as the Clover Leaf. The object of the acquisition of this line by the Erie would be to give it an entry into St. Louis over its own lines, but the purchase would only be made if it could be had on reasonable terms. The Clover Leaf was incorporated on July 5, 1900, and runs from Toledo, Ohio, to East St. Louis, a distance of 450.72 miles. Its capital stock is $10,000,000 common and $10,000,000 4 per cent. non-cumulative preferred, with a bonded debt of $9,750,000 3½ per cent. gold bonds, due July 1, 1925, and $6,500,000 first gold fours, due April 1, 1950.

The United States stockholders of the Mexican Central R.R. Company at their annual meeting held in Boston on September 26 voted to authorise an issue of $35,000,000 4 per cent. four-year gold notes, and the contract for the sale of $33,000,000 of the notes dated July 2, 1906, made by the directors several weeks ago was ratified. Arrangements were made last February for the sale of the $33,000,000 collateral trust notes, which will be used in part to refund the $29,000,000 collateral trust issues maturing in 1907 and 1908. The new notes will be secured by the same collateral as the old notes, including $41,000,000 consolidated 4 per cent. bonds. The loan will, in addition, finance the Mexican Central's requirements until 1911, when the Consols mature.

Mr. F. E. Steele, of Parr's Bank, London, will lecture on "Bankers and Borrowers" on the 15th inst. at the inaugural meeting of the winter session of the Liverpool and District Bankers' Institute.

Passing Events.

Mr. Alfred James, the well-known mine expert, has just returned from a tour to the Australasian and Indian gold fields, and has been interviewed upon his experiences by a representative of the *Financial Times*. His opinions of the prospects of the famous Indian mines are most interesting at the present juncture, and we note they confirm the views we expressed last week. Though the Mysore mine has reached a depth of 3,274 ft., he says it is looking remarkably well here; in fact, he believes that the developments in the lower levels are big with possibilities for the rest of the mines on this field. "These Indian mines," he remarked, "are managed on sound conservative lines, with remarkably little waste on equipment cost. They have managed, for instance, to have cyanide plants of large capacity at a fraction of the cost of similar plants in Africa. They have every up-to-date installations, electric power plant—which was regarded as quite an experiment when installed, but which has proved a very great success—and large stamp mills, which will compare with anything in Africa." These opinions may help to reassure the minds of those shareholders who have been disturbed by the depreciation in prices.

It is just as well to hear what an authority like Lord Welby thinks of South Africa mining companies, and of the attitude of the public towards them. As he presided at the meeting of the Standard Bank of South Africa he had little inducement to exaggerate facts, lamentable enough in themselves, and too obvious to be hidden from the eyes of intelligent observers. "Figures lately published," said he. "brought to view the excessive over-capitalisation of the gold mining companies, and accounted for the unwillingness of the public to invest in them." Quite so. This is, in the briefest possible phraseology, the lesson we have been endeavouring to teach for years past, and we are glad to see we expound it now to more attentive ears and less scoffing listeners. Experience has painfully brought home the truth to those who laughed at us, or cursed. They have seen their wealth gradually dissolve like the morning cloud, and every "record" output sees them poorer. It must be so, because human pockets, not banket or other ores, were the objects of solicitude to the men market and multitude alike have worshipped as gods. Ore that is fast depreciating in value can no longer pay big dividends on lavishly watered capital, and present-day shareholders have to pay for this water directly in shrinking dividends or crumbling prices, and indirectly in dear and bad Chinese labour. This the new public can see clearly; hence, in the words of Lord Welby, its unwillingness to invest. Are we not near the bottom? There is no bottom.

In order to increase the trade relations between Germany and Mexico, a *Tribune* correspondent announces that a new bank, entitled the Mexican Bank for Commerce and Industry, has been established by the Deutscher Bank at Berlin, together with the New York Banking House of Messrs. Speyer. This bank has, at present, a capital of £1,055,000, and has secured a concession lasting until March, 1937, and enjoys up to 1922 certain abatements of taxation. On the other hand, it is not given the right to issue notes, is restricted from entering into mortgage operations, and also from holding any direct interest in mining, industrial, or agricultural undertakings. A stipulation unknown in European banking practice is that from September, 1911, the amounts of the loans to mining, industrial, and agricultural undertakings must not fall under 20 per cent. of the paid-up capital. Probably such a bank has been established in order to stimulate trade between Germany and Mexico, as, despite the growth of Mexico, German exports in 1905 amounted only to £2,175,000, or 0.7 per cent. of the entire exports, while the Republic sends but £1,100,000 worth of goods to the Fatherland.

What does Lord Teynham mean? How is it that his opinions are diametrically opposed to those of others who have the control of the Rand mining industry? At the meeting of the Rand Victoria Mines on Tuesday, when he urged shareholders to approve of amalgamation with other companies of the Consolidated Gold Fields group, he actually declared that the labour question on the Rand does not now exist in acute form. From every other boss we hear daily that it is acute, so terrible that mines are being shut down. Only last week it was announced that operations had been stopped on the Cloverfield because the directors considered the outlook very black. On the other hand, Lord Teynham thinks the labour question will right itself, because it is "inconceivable that the Government will commit commercial suicide by putting undue restrictions upon labour, alien or otherwise." Indeed, he went further still, and expressed his opinion that the Rand has a prosperous future. Well, well! It is impossible to say where we are amidst all these contradictory and irreconcilable hypotheses. The labour question cannot be all right and all wrong, hopeless and hopeful, in the same moment. We know the amalgamation scheme must be carried, though, and plausible arguments must be adduced to held it through. And, as we say of the Cloverfield, directorial fees must be paid, let what will happen.

Lord Welby did not draw a particularly exhilarating picture of the general state of affairs in South Africa in his speech. Depreciation of fixed property in the larger towns continues, he said, as well as the depreciation of mine shares. In all this there is nothing new, nor yet we fear in the statement that the past half-year had witnessed an increase in the number of insolvencies and assignments. The strain involved in the transition from a period of inflation and extravagance to a normal condition of business and expenditure is very great. That being so, it is well to see the Standard Bank following the conservative course, and the picture drawn by Lord Welby was not all black. Certain industries are making some progress, good accounts having been received of the trade in ostrich feathers, and wool and mohair—the permanent industries by which South Africa must live and flourish, if it is to flourish after gold and diamonds have gone—are picking up a little, and for this reason we can hope. Surely it was ungenerous of Mr. J. R. Sykes to grumble at the small sum of £13,000 set aside for the officers' pension fund for the half-year. How are men to be kept loyal and faithful to their trust unless they are treated with some measure of consideration?

The official utterances about Russian finance continue to pervade the columns of newspapers, and the latest amongst them is the Finance Minister, Mr. Kokovtsoff's explanation of that private circular announcing a deficit of £15,500,000 which inconveniently saw the light last year. He does not deny the truth of that statement, but insists that increased revenue, economies, and various other compensating influences will bring things out all right at the end of the year. He even hopes to cover the anticipated deficit out of the increased revenue, and is thereby proving himself officially sanguine to an extent that must keep his master the Tsar at least in a comfortable frame of mind. We do not take much store by any of these efforts in financial gymnastics, and think that the British public should hold fast to its resolution to have nothing to do with any further Russian loans. It has not taken that slice of the last one which was offered here as the discount upon it abundantly proves, and we saw the other day in an interesting article in the *Revue de Paris* upon the aspect of Petersburg at the time of the meeting of the lately-dissolved Duma that the more enlightened minds in Russia have resented with the utmost bitterness the readiness with which the French public took up this last Russian loan.* After all, there is a moral standard applicable to loan-

* La plus grande partie du peuple russe, la partie la plus intelligente et la plus honnête, celle qui a particulièrement droit à notre sympathie, sinon à notre appui, la Russie de demain, considère le récent emprunt comme une trahison et comme un vol.

mongering as well as retailing tea and sugar, and for any individual to invest a portion of his money in a security which has been created for the purpose of enabling a dominant caste to keep its oppressive hand upon the very springs of life in a great nation is an act of reprehensible immorality and betrayal.

Lord Strathcona has been told by the Canadian Minister of the Interior that the wheat crop of Western Canada is this year estimated at 85,000,000 bushels, the product of 4,500,000 acres under cultivation. This is nearly 19 bushels to the acre, and undoubtedly a splendid yield. Moreover, 80 per cent. of this crop is said to be of high quality, there will consequently be a large export trade done, and we shall get our bread cheap. Equally prosperous is the record of mineral production in 1905. It aggregated no less than £13,715,000, or £1,700,000 more than the output of 1904. Of this £2,897,000 came from gold, the Yukon territory giving no less than £1,665,000. Of pig-iron the production in the first six months of the present year was 282,000 tons, or nearly 25,000 tons more than in the same half of last year. No wonder that the Customs revenue of the Dominion is expected to amount to £10,000,000 before the end of the year, or that the various provinces of the Dominion are knocking at the door of the Federal Government asking for an increase in their subsidies. They ought to get it, although we do not much care for this method of fostering extravagance.

We have received from a correspondent in Dublin a copy of the *Irish Investors' Guardian* for the current month, containing an article of great cogency upon the National Assurance Company of Ireland. It is not possible for us to deal adequately with this lamentable business in the present issue, but we shall return to it. Meanwhile, it seems advisable to counsel shareholders threatened with ruin to refuse payment of the call of £6 per share made upon them until an independent investigation has been made into the company's affairs. Its record has been scandalous for many years back, and the refusal of the directors to allow the books to be examined condemns them. There is no finality, moreover, in these calls, they may go on until nearly everyone concerned is exhausted. United effort ought therefore to be made to sift the matter to the bottom, no matter who suffers. The higher placed the culprits, indeed, the more condign should be their punishment.

This week's *Canadian Gazette* contains an interesting article upon the statements made by Mr. Mortimer Clark, Lieut.-Governor of Ontario, in a recent speech. He accused the British people of apathy in regard to Canada's resources and development, and this untrue statement the *Canadian Gazette* very effectively rebuts by analysing the references made to Canadian affairs in newspapers throughout the United Kingdom during ten days of last month. This analysis shows that within this period no less than 2,011 inches of space, or 200 inches a day, had been devoted to conveying information about Canada, her political developments, industrial doings, and future prospects. Well might an Australian official remark with reference to Lieut.-Governor Clark's accusation, "Would to heaven a little such apathy came our way."

Soap and water are no doubt very excellent for ablutionary purposes, but when they are combined in the company promotion business another story has to be told. It has been current gossip this past week, and there is no reason to disbelieve the statements made, that a huge soap trust is in course of formation. Of course, the public will not be affected, oh! dear no. In fact, it may be able to wash more often at the same cost, or a rise in prices, inevitable if the high prices for raw materials continue, may be prevented. The manufacturers only want to decrease management expenses, prevent over-lapping in advertising, and generally save money all round in order to ease things as much as possible for the long-suffering consumer. They will not dream of taking any extra profit for themselves. A capital of £12,000,000 is hinted at, possibly half soap and half water, and with previous monopoly experiences in mind the public will probably be wise to wash its hands of the whole affair. Is Lever Bros. with its tremendous capital burden feeling the pinch of competition and expensive raw materials? Those who remain outside the trust will probably do best.

Although at the time it seemed as if the efforts of the debenture holders' committee to force the Beira Railway directors to do them justice had ended in failure they have since borne good fruit. At the meeting in July the Chartered Company was able to defeat the proposal to use the surplus earnings in hand for the payment of outstanding interest coupons, and the directors sheltered themselves behind an assertion that such a distribution could not be legally made. Now, however, that obstacle has apparently been got over, and the welcome announcement was made a week ago that the half-year's interest due in July, 1905, would be paid on the 15th inst.

In accordance with the promise given at the last meeting, efforts have been made by the directors of the unfortunate Kensington business of Ponting Brothers to dispose of the unprofitable grocery branch. The endeavours, however, have proved unavailing, and it has been necessary to sell the stock and set about collecting the book debts. Steps will now be taken to dispose of the premises in Wright's Lane in one block. The capital of the company must be drastically written down, and the board recommends the formation of a new concern with a capital of £62,500, divided into 100,000 shares of 12s. 6d. each, credited with 5s. paid, thus leaving a liability of 7s. 6d. per share. Even this proposal is contingent on the debenture holders agreeing to renew their holdings for a period of ten years, and satisfactory arrangements being come to with regard to the bank overdraft, it remains to be seen if shareholders will risk a lot more money in the hope of recovering part of what has been already lost.

Steps have been taken to reorganise the capital of Furness, Withy and Co., with the principal object of cancelling the debenture debt. For this purpose the shareholders have sanctioned an issue of 50,000 new preference £10 shares, which will in future constitute a first charge on the assets. When the scheme has been finally settled the capital of the business will be £2,000,000, consisting of £800,000 in preference and £1,200,000 in ordinary shares.

Critical Index To New Investments.

Nitrate Securities Trust, Limited.

The promoters of this new trust do not place a high value on the intelligence of the average investor if they imagine that they can draw him into their scheme on the strength of the prospectus just issued. According to that document the current prices of nitrate shares are based on the last published balance-sheets of the various companies, and have not been influenced by the great advance in the value of the commodity which has since taken place. Unfortunately, however, for this theory most of the reports were issued some months ago, while the rise has been most pronounced within the past few weeks, so that if we are to believe that the one is a corollary of the other we must also believe that the Stock Exchange has for the first time in its history failed to show its usual shrewdness in making prompt response to any favourable influence. Still, such is the basis for the formation of this trust with a capital of £200,000 in £1 shares, of which half were offered for subscription. We do not say that prices of nitrate companies' securities have yet reached top, but they are quite high enough to make the future of the trust an uncertain one.

Barranca Mines (Mexico), Limited.

Sundry gold and silver mining properties covering 61 pertenencias, or over 150 English acres, in the Hermosillo district of Sonora, Mexico, were acquired from various parties for $70,000, and are handed over to

this company by the Benson Investment Company of Los Angeles, California, for £34,000 in cash and £80,000 in shares. Out of this sum the H. C. Syndicate, Limited, which acted as promoter on this side, received £9,000 in cash and £40,000 in shares for its trouble, and also took £6,000 in cash for underwriting 60,000 shares. The nominal capital of the company is £160,000 in £1 shares, but 20,000 of these are held in reserve and 60,000 were offered for subscription, of which £20,000 will be available for working capital. In the opinion of Mr. K. Dunbar-Anderson, who reported on the property, the mine is sufficiently opened up to justify the immediate erection of a reduction plant capable of treating 60 tons per day, but it is proposed for the present to ship the ore to a smelter already in operation about nine miles from the mine. Mr. Anderson gives the average value of the ore on his own assays as £9 12s., and calculates the cost of production at £1 5s. 8d. per ton, so that allowing for a loss of 10 per cent. in recovery a nett profit is shown of £7 7s. 2d. per ton, or, with 280 working days, £123,620 per annum. Labour is said to be plentiful and cheap, while abundant supplies of both timber and anthracite coal are readily obtainable, and the water supply is sufficient for all requirements, so that all the elements of success would seem to be gathered together, and the shares may be regarded as a fair speculation.

Burma Development Syndicate, Limited.

This syndicate commenced operations in 1903 with a nominal capital of £5,000 for the purpose of prospecting and acquiring mining and other properties in Burma and elsewhere, and has secured two leases, one for 30 years from July, 1906, of a tin mining area of about 1,955 acres at Maliwun, Lower Burma, and the other for 30 years from June of about 1,011 acres for rubber planting, with the option of a further 20 years at the expiration thereof. The time having arrived when actual mining and planting operations can be proceeded with on a much larger scale than hitherto, it has been decided to increase the capital to £65,000 by the creation of 59,750 new ordinary shares of £1 each, and 5,000 deferred shares of 1s. each. Of these the deferred shares are to be issued to existing members of the syndicate, and the new ordinary shares, which are entitled to a first dividend of 10 per cent. and half the surplus profits, were offered for subscription. It is estimated that a nett profit of £32,500 per annum should be earned from the lode tin only, taking metallic tin at £100 per ton or little more than half current prices, while the alluvial tin is estimated to produce a nett profit of £102,816, without taking into account any revenue from the sale of wolfram. In addition to this the directors expect to derive a revenue from rubber, rising from £6,383 in the seventh year to £63,366 in the twelfth year. The syndicate therefore has no less than three strings to its bow, and with such dazzling visions of wealth to come it is not surprising that the existing members have decided to secure 30,000 of the present issue. The only wonder is that they should have allowed the public to get any at all.

Southern Alberta Land Co., Limited.

The primary object of this company is to acquire a tract of land containing approximately 390,573 acres in Southern Alberta, Canada, and to erect thereon irrigation works, with a view to its resale at a profit. Of this land all but 10,000 acres will be acquired under an agreement between the Government and the Robins Irrigation Company, which fixes the price at $3 per acre, subject to a right, under certain conditions, to deduct the cost of the irrigation works to an amount not exceeding $2 per acre. As these conditions will be complied with, the nett price will be only about $1 per acre, the first instalment being payable on July 1, 1910, and the balance in five annual instalments, with interest at 5 per cent. from that date. The remaining 10,000 acres form part of the assets of the Grand Forks Cattle Company, the whole of whose assets and property is to be taken over. For the first contract the vendors pay £100,000 either in cash, or as to £10,000 in cash and the balance in shares, and for the second £135,000 in cash, or £45,000 in cash and £90,000 in shares, and they transfer the two to this company for £133,333 in shares and £166,667 in cash, out of which the preliminary expenses estimated at £10,000 are to be met. The capital of the company is £500,000 in £1 shares, but of these 100,000 are held in reserve and 133,333 are issued to the vendors, leaving 266,667 to be offered for subscription, of which the directors and their friends will take 50,000 and 90,000 are reserved for allotment to shareholders in the Western Canada Land Co., Limited. Mr. B. J. Saunders, formerly Chief Assistant Engineer of Irrigation for the Dominion Government, estimates that the company should obtain $20 to $25 per acre for the irrigated lands as soon as they are ready for sale as such, and that the non-irrigable lands in the tract on the north of the South Saskatchewan River should realise $10 to $15, while similar lands on the south side should bring $5 to $10. The assets of the Grand Forks Company are valued at $557,680, and the directors calculate that the company should obtain $5,185,467 or £1,066,000 from the sale of these and of the land. Under the regulations now in force the company will be entitled to make a maximum charge for water of $1.50 per acre, and a considerable income is looked for from this source, which should more than suffice to meet the cost of the upkeep of the canals. Altogether the project seems a fair one, and as the soil and climate are said to permit of the production of practically all cereals and of fodder crops the company should have little difficulty in realising its aims.

INDIAN GOLD MINES.

The returns from the mines in the Colar goldfield for the month of September shows a welcome improvement. True, there was a decrease of 179 ozs. compared with the preceding month, but August had one working day more, so on the average there was really an increase. Compared, however, with the corresponding month of last year there is the large deceease of 5,497 ozs., owing to the cause often enumerated—the fall in the quality of the ore. At the Mysore, however, a considerable improvement is shown and this company's prospects have changed greatly for the better.

Name of Company.	June.		July.		August.		Sept.	
	Tons.	Ozs.	Tons.	Ozs.	Tons.	Ozs.	Tons.	Ozs.

London and Westminster Bank.—Liabilities on October 1, consisted of current accounts and deposits £26,883,951, acceptances and endorsements £1,471,565, and other liabilities £680,060, against which there were cash in hand and at Bank of England £3,540,592, money at call and short notice £5,836,200, Imperial Government securities £3,885,000, bills discounted, loans, &c., £17,117,320, and other securities £1,384,899.

London Joint Stock Bank.—Current and deposit accounts on Sept. 28 amounted to £18,690,699 and acceptances to £1,415,125, against which there were Government stock and other investments £3,491,084, cash in hand and at Bank of England £2,478,305, money at call and short notice £5,018,993, and bills discounted, advances and other securities £10,203,102.

Mr. Joseph Wilson sends us an ingenious calculating disc, by means of which the discount at a fixed rate on sums of 1s. up to £1,000 can be ascertained in a moment. A separate set is, of course required for each percentage, but as the cost is only 6d. this can hardly be considered a drawback compared with the usefulness of the idea.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for week ended October 7, $3,900, decrease $609.

Argentine North Eastern.—Traffic receipts for week ended August 31, $23,907, increase $4,000; aggregate from January 1, $634,838, increase $67,589.

Assam Bengal.—Traffic receipts for week ended September 1, Rs. 85,186, increase Rs. 9,581; aggregate from July 1, Rs. 6,81,446, increase Rs. 1,14,214.

Canadian Northern Railway.—Traffic receipts for week ending September 30, $180,900, increase $42,700; total from July 1, $1,823,100, increase $691,600.

Lucknow Bareilly Railway.—Traffic receipts for week ended September 8, Rs. 18,118, decrease Rs. 5,767.

Quebec Central Railway.—Traffic receipts for the 1st week of October, $14,525, decrease $100; aggregate from January 1, $718,336, increase $97,748.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended September 8, Rs. 17,187, increase Rs. 5,542.

White Pass and Yukon Railway.—Traffic receipts for the week ended September 14 amounted to $65,533.

English.

Cleator and Workington Junction.—Receipts for week ending October 6, £1,274, increase £45; aggregate from July 1, £16,672, increase £65.

Cockermouth and Keswick Railway.—Receipts for week ending October 6, £804, increase £46; aggregate from July 1, £14,900 increase £762.

East London Railway.—Traffic receipts for July, £4,235, increase £17.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending October 6, £407, increase £1; aggregate from July 1, £4,663, increase £254.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Bath Electric.—Traffic receipts for week ending October 3, £912, increase £180; aggregate from January 1, £33,869, increase £6,174.

Blessington and Poulaphouca.—Traffic receipts for week ending October 3, £17, increase £1; aggregate from July 1, £466, increase £37.

Bristol Tramways and Carriage.—Traffic receipts for week ending October 5, £5,347, increase £544; aggregate from July 1, £77,305, increase £3,487.

British Electric Traction.—Receipts of all the Associated Companies for the week ending October 5, £30,097, increase £1,431; total increase from January 1, £118,838; 430½ miles, against 438½.

Burnley Corporation.—Traffic receipts for week ending October 6, £1,372, increase £154; aggregate from July 1, £17,689, increase £1,480.

Dublin and Blessington.—Traffic receipts for week ending October 3, £154, increase £36; aggregate from July 1, £2,484, increase £103.

Dublin and Lucan.—Traffic receipts for week ending October 5, £125, increase £10; aggregate from July 1, £2,005, decrease £39.

Dublin United.—Traffic receipts for week ending October 5, £5,188, increase £377; aggregate from July 1, £79,629, increase £4,467.

Edinburgh and District.—Traffic receipts for week ending October 6, £5,109, increase £173; aggregate from January 1, 1906, £200,172, increase £4,344.

Hastings and District.—Traffic receipts for week ending October 4, £957.

Isle of Thanet.—Traffic receipts for six days ending October 6, £440, increase £93; aggregate from October 1, £440, increase £93.

London County Council.—Traffic receipts for week ending September 29, £25,904, increase £11,346; aggregate from April 1, £687,704, increase £292,032. Miles 100⅜, against 51⅛.

London General Omnibus.—Traffic receipts for week ending October 6, £24,127, increase £1,086; aggregate from July 1, £329,604, decrease £7,319.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending October 6, £4,262, increase £2,675.

London Road Car.—Traffic receipts for week ending October 6, £8,132, increase £328; aggregate from July 1, £112,762, increase £1,709.

London United.—Traffic receipts for week ending October 5, £6,321, increase £1,056; aggregate from January 1, £253,487, increase £18,659.

Rossendale Valley.—Traffic receipts for week ending October 5, £224, increase £11.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending October 7, £845, increase £105; aggregate from January 1, £33,487.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending October 7, £16,718, increase £2,133; aggregate from January 1, £596,511, increase £66,599.

Barcelona.—Traffic receipts for week ending September 23, £2,114, decrease £85; aggregate from January 1, £83,687, increase £9,669.

Barcelona, Ensanche y Gracia.—Traffic receipts for week ending September 23, £293, increase £11; aggregate from January 1, £11,458, increase £1,441.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 393. Total receipts from August 1, 1905, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of August, 1906, £14,186, increase £1,415.

British Columbia Electric.—Nett earnings for August $44,790, increase $6,097. Nett earnings from July 1 to August 31, $102,385, increase $17,835.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending September 9, £3,841, decrease £89; aggregate from January 1, £128,934, increase £6,403.

Buenos Ayres Electric.—Traffic receipts for week ending September 1, £1,366, increase £91; aggregate from January 1, £47,400, increase £7,521.

Buenos Ayres Grand National.—Traffic receipts for month of September, $299,000.

Calcutta.—Traffic receipts for week ending October 6, Rs. 40,586, decrease Rs. 9,034; aggregate from July 1, Rs. 6,26,416, increase Rs. 17,828.

Cape Electric Tramway.—Total receipts for July: Cape Town, £12,590; Port Elizabeth, £3,478.

Carthagena and Herrerias.—Traffic receipts for the month of August, £3,708, decrease £222. Total from January 1, £35,223, increase £11,310.

Kalgoorlie Electric.—Traffic receipts for August, £5,005; aggregate from January 1, £34,892.

Lombardy Road.—Traffic receipts for the month of July, 1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Madras Electric.—Traffic receipts for fortnight ended September 30, Rs. 13,063, increase Rs. 1,817; aggregate from January 1, Rs. 2,56,023, increase Rs. 27,853.

Twin City Rapid.—Traffic receipts for the month of July, $522,949, increase $87,845; aggregate from January 1, $3,077,558, increase $470,984. Nett traffic receipts, $286,832, increase $38,781; aggregate from January 1, $1,627,058, increase $247,064.

ROYAL EXCHANGE ASSURANCE.
INCORPORATED A.D. 1720.

FIRE, LIFE, SEA, ANNUITIES. ACCIDENTS & EMPLOYERS' LIABILITY.
The Corporation is prepared to act as
EXECUTOR OF WILLS, TRUSTEE OF WILLS AND SETTLEMENTS.
Special Terms to Annuitants when Health is Impaired.
Apply for full Prospectus to the Secretary.
Head Office: Royal Exchange, London, E.C.

WHY PAY RENT?
The BRITISH HOMES SCHEME enables Policyholders to reap the benefit of their investment **during their own lifetime,** and in the event of premature death to leave their legal representatives in possession of a comfortable home free from any mortgage charge or encumbrance. Particulars post free.
Good Prospects for Active Agents.
BRITISH HOMES ASSURANCE CORPORATION, LIMITED,
6, Paul Street, Finsbury, E.C.
M. GREGORY, Managing Director.

The Investors' Review.

The Week's Money Market.

Bank Rate 5 per cent. (Advanced from 4 per cent. on October 11.)

Norfolk House, Friday Evening.

At last the market has got its 5 per cent. Bank rate, and does not yet quite know what to make of it. We have not had so high a Bank rate since the beginning of 1901, when the rate was put up to that figure and stayed there for eight weeks. That, however, was a very different thing from a 5 per cent. rate coming upon us in the second week of the final quarter of the year, and it is interesting to note that the reserve of the banking department has not been so low as it is this week in any October since 1893. We have had lower totals often in the interval, but earlier in the year for the most part. At the beginning of the present year the reserve was below £18,000,000, thanks to the end of the year dispersals of currency and banking credit, but we have not since the date named faced that quarter of the year which is usually the most fertile in demands from abroad upon our gold with a reserve of little more than £18,000,000.

The first question, therefore, we have to ask is—will a 5 per cent. rate be likely at this time of year to enable the Bank to replenish its gold reserve, not to say ward off demands for the metal from abroad? A dogmatic answer cannot be given to this question, but probabilities are at present against the view that 5 per cent. can bring about the desired and necessary change in the position of the Bank and market. Gold is wanted at the present time, not merely in London or in New York, but in Germany, and although France may be said to have enough for her own wants the recent returns of the Bank of France do not indicate that it can afford to let gold go in any large amounts in order to assist other markets. Compared with a year ago at this date the stock of gold in the Bank of France is down about £3,000,000 at the same time that the circulation of its notes has risen by nearly £6,000,000. Still worse superficially is the position of the German Reichsbank, which has actually lost nearly £8,400,000 in gold within the last three weeks, its note circulation having in the same time gone up by about £11,000,000. It seems fair to infer from such facts that our market will have to face its difficulties alone, and as yet there are no signs visible that it is in a position to do so effectively even with a 5 per cent. Bank rate.

For one thing it is comparatively helpless by reason of the abundance of short credits in its possession, an abundance likely to continue because the Bank of England has been creating credit at a great pace by discounting bills. Had it only made seven-day advances the market would soon have been in poverty. All the dividend money might have been required to pay these advances back, and then the open market rates would have been driven up to near Bank rate. As it is, however, a considerable portion of the dividend money released weighs down the open market, and some five or six weeks may elapse before the maturities of bills held by the Bank serve to deprive the credit jobbers of an excess amount of current banking credit. That being so we shall find the open discount market dragging behind the Bank, and in proportion as it does so the way will be open for foreign buyers of gold to come in and sweep away whatever they want or must have.

Some people are hoping that the Americans will send back the gold they have drawn away so liberally from us in recent weeks, but we can see no ground for that hope at present. The New York market appears to be moving in a sort of charmed circle, out of which were it to step it would court immediate disaster. Even were it possible to redeem the securities pledged here for the gold by sending the metal back owing to the establishment of a better credit position in the States through the sale of the current year's harvests, it would not be expedient for the Wall Street financiers to allow any such return movement to take place unless we also bought their high-priced shares. The banks they hold in hand for their own purposes might have their credit attacked and seriously undermined, if not partially destroyed, were the American people's fears to be excited by the return to London of the gold bought there at such cost. For these and other reasons we think our market should endeavour to shape its course with a view to a 6 per cent. Bank rate before the end of the year. That rate may not come, but the market will do well to act as if it were near at hand.

Unhappily the Bank of England's policy is calculated to produce and prolong ease, and we accordingly find call loans even on Stock Exchange pay day quoted at 3 per cent., or less in the afternoon, while banks get no more than 3½ per cent. on seven day money. These were to-day's rates, and the India Council was doing a considerable business in loans and renewals for a month at 4¼ per cent. Until the surplus credits are taken off the market this hurtful ease must continue. To-day's discount rates, however, were quoted by leading houses at 4⅝ per cent., as the minimum on three months' remitted bills, but business was done at 4½ per cent., and in sixty-day paper at 4¼ per cent. Six months' bank bills were also comparatively easy at 4⅜–½ per cent., and it is only dread of the future which keeps the market even at such rates.

Beyond what was said above, there is little to draw attention to in the Bank return, but its figures are interesting, as showing how the discount business done by the Bank within its week more than counterbalanced the loans falling due and paid off. As for deposit movements the market was enabled to meet a draft upon the reserve aggregating £2,112,000, mostly ascribable to exports of gold but also to an increase in the internal metallic circulation, because the Treasury disbursed £3,562,000, and the Bank of England in payment of its dividend £575,000.

The renewal bills of the London County Council were tendered for to-day, and applicants at £97 15s. 10d. received about 29 per cent. of the amount applied for, all above getting in full. This lowest successful price means, on a six months' bill, a discount of £4 8s. 4d., which is inconveniently dear borrowing. The average rate paid was £4 6s. 5.87d. Only £5,965,000 altogether was applied for.

Next week's calls on new issues aggregate £2,290,000, of which the heaviest single item falls on Tuesday, when £1,050,000 becomes payable on Irish Land stock. On Monday also there are one or two payments of some magnitude, the Buenos Ayres Extension debentures of the Cordoba Central Railway, for instance, will absorb £500,000 on that day, and another £150,000 is then payable on the Atlantic, Quebec, and Western first mortgage debentures. Other small payments on Monday include £90,000

upon the Pampa Alta Nitrate debentures, £15,000 on Rosario Electric second preference shares, and £75,000 on Royal Mail shares. The only other single payment of importance within the week is £325,000 due next Saturday on Argentine Great Western shares. A small sum of about £44,000 is payable on Tuesday upon De Mello Brazilian Rubber preference shares. On Thursday £11,275 is due on Harrismith Corporation bonds, and on Saturday £30,000 is payable on New York City Freehold Estates preference shares.

Silver.

A moderate inquiry came from the Indian bazaars this week, but the support from that quarter has not been sufficient to account for the advance in quotations. For some little time past speculators have been buying forward silver, and the demand was said to have originated in America, but no clue to what was at the bottom of it could be obtained until Thursday. On that day private advices, which were later confirmed by press agencies, stated that the United States Government had just bought 600,000 ozs., or nearly three times the amount taken in any one of the preceding weeks, and on the news prices jumped to 31⅞d. per oz. for spot and 31 13/16d. per oz. for future delivery. Another advance of ⅛d. per oz. was recorded to-day, and prices are now up to 32d. and 31 15/16d. per oz., or the highest point reached since 1893, the year in which the Indian mints were closed to the free coinage of silver, and the Sherman Act was repealed in the United States. Applications for the Rs. 1,00,00,000 Council drafts offered this week amounted to Rs. 4,89,00,000 in bills and Rs. 62,00,000 in telegraphic transfers, of which Rs. 89,52,000 were allotted in bills and Rs. 10,48,000 in transfers, tenders at 1s. 4 1-32d. and 1s. 4 1/16d. per rupee receiving about 18 per cent. The demand for remittances is less urgent than it was, and the Council has reduced the amount to be offered next Wednesday to Rs. 80,00,000.

Stock Market Notes and Comments.

It is too early yet to attempt to forecast the effects of a 5 per cent. Bank rate upon Stock markets, and we shall not inflict upon readers another variation of the old homily about overcharged markets and exhausted operators. The only thing we should like to point out is that a 5 per cent. Bank rate now must be a very different thing for all credit users from the same rate at the beginning of 1901. The market was then still in the enjoyment of accumulated wealth, the product of many years of profitable business. It had only begun to suffer from comparatively high rates for loans. It was not then impoverished either by the prolonged and ever-increasing depreciation in the price of securities. During the whole eight weeks when the 5 per cent. rate was in force at the beginning of 1901 the price of Consols stood at between 96 and 97, or nearly 10 per cent. higher than it is now. Other securities were in like manner quoted at much higher prices, and the interval has seen not only a gradual exhaustion of the credit user by the high rates for money he has been compelled to pay on the average, but a crippling of his freedom, if not a ruinous using up of his capital, in providing margins for the protection of the lender. It is therefore fair to infer that a 5 per cent. Bank rate now will be much more trying to the market than it was at the beginning of 1901. We shall be better able to judge some weeks hence, but looking at the facts from this and similar points of view, we confess that the immediate future inspires us with no small amount of fear. Firms that stood the strain of the previous 5 per cent. Bank rate may succumb now, and in failing uncover all sorts of hidden sources of affliction. There is a mass of concealed insolvency or credit paralysis and deadlock burdening the market; of that we are sure. So we shall look out for failures, and for lower prices.

The Week's Stock Markets.

The Stock Exchange naturally views with alarm the possibility of stringent monetary conditions, but members seemed to be relieved when the Bank rate was put up to 5 per cent. on Thursday. It is hoped that the rise now may prevent a 6 per cent. rate before the year is out, but from the figures of this week's Bank return we think the Stock Exchange and the money

market will be very fortunate if an advance beyond 5 per cent. can be prevented. The air, however, is cleared for the moment, although the outlook is too obscure to admit of the possibility of much improvement in business. Attention this week has been largely directed to the adjustment of the fortnightly settlement. The account open for the rise has been little, if at all, reduced, and there is still a stupendous amount of stock being carried in the American section. Bankers therefore experienced no difficulty in securing 5 per cent. for loans, and when additional money was required to carry Yankee shares the charge was often 5¾ and even 6 per cent. We may put the general rate outside at 5 to 5½ per cent., and, onerous though this is, it is probably the lowest rate that operators will see for the remainder of the year. Consols did not turn a hair, as one jobber put it, when the Bank rate movement was announced, and prices on the week show practically no change after the smallest possible fluctuation. Other British Funds were equally without interest, and nothing worth mention happened in the Corporation or Colonial sections. Colonial inscribed stocks were carried over at 4¾ to 5¼ per cent.

The Foreign Bond market opened with some show of strength, and modest support was extended to Brazilian issues after their recent severe fall, but most of the improvement was quickly lost again, and operators are still very suspicious of the Government plan for artificially maintaining the price of coffee. Very little interest was taken in the Argentine group of securities, but in the Central American section there was a good deal of fluctuation in Honduras bonds on further vague rumours of a pending settlement. The statement of Mr. Takahashi regarding the Japanese Government's plans for the issue of the remaining half of the 50 million 4½ per cent. loan seems to be regarded favourably, and prices of Japanese bonds were inclined to improve until some selling from America sent them down again. Industrial Bank of Japan shares, however, maintained a firm tendency to the end, and showed a sharp rise to 7⅛. The inevitable denial of the statement in the Paris *Temps* regarding the condition of Russian finance had a slightly favourable influence on the scrip of the new 5 per cent. loan, which hardened steadily to 8⅝ discount. From that point it reacted again to 9 discount, but closed about 8¾. Among other European issues Turkish unified were a strong market throughout the week, but Spanish eased off towards the end. Small selling of Chinese bonds was noticeable, and in one or two instances prices finished easier. All leading South American issues were carried over at 4 to 6 per cent., together with Japanese and Peruvian debentures, but the preference and ordinary of the last-named cost 6 to 8 per cent. to continue, and the general charge on Central American things was 5½ to 6½ per cent. Money was also dearer on Europeans, and 5 to 7 was again paid on the new Russian scrip, on the 4 per cent. 1889 the rate was 3 to 5 per cent., on Spanish 4 to 5 per cent., and on Turkish 4 to 6 per cent. Making-up prices were downward in the majority of instances, but this was often due to the deduction of dividends on October 1. There was an all-round fall of ½ to 3¼ in Argentines and Brazilian, and Chilian 1895 made up 3½ lower. Chinese Imperial Railway loan was down 2⅞, French Rentes 2, Japanese 6 per cent. sterling 3, and the second series 2¾. The Mexican 5 per cent. gold and internal silver loans were each 1¼ down, State of San Paulo 5 per cents. showed a decline of 3, and the 1904 issue a drop of 5. Cuban 5 per cent., however, were 1½ better, and a similar rise was shown by Honduras issues. Russian Nicholas Railway loan was up 3, and the new scrip made up 2½ better.

Dealings in the Home Railway market do not seem to have broadened out to any appreciable extent, but there has certainly been a small stream of investment buying recently, and the tone was distinctly more cheerful. For one thing, Mr. Haldane's speech last Friday was favourably received by those who had been conjuring up all sorts of dreadful events which were to happen with the present Government in power. For another the hopes that the Clyde strike would be settled almost immediately by arbitration led to a more reasonable view being taken regarding the labour disputes about which so much outcry have been made lately, and with the additional comfort derived from the excellent traffic returns the market was less inclined to be pessimistic in its view of the future. In its changed mood it looked for and found a new reason for the heaviness of prices which would have only a temporary effect, and now ascribes the steady decline to the realisation of several very large deceased accounts. So far, this veering round of opinions has done little more than check the downward movement, and the cases where any recovery is shown are few. Great Eastern, North-Eastern, Great Northern deferred and Hull and Barnsley, however, were substantially better on the week, North-Western put on 10s. or so, and Scotch stocks also shared to a moderate extent in the improvement. A heavy decline, on the other hand, took place in Tilbury and Great Central preferred, Great Western, South Western ordinary, Brighton ordinary, and District were all lower. Amongst privileged stocks Metropolitan 3½ per cent. debenture stock dropped 4, Chatham second preference lost 2, and several Great Central issues relapsed 1. The depression which prevailed throughout the past account is reflected in making-up prices by a long series of more or less severe declines, broken only by gains of ⅝ in Great Eastern, ½ each in Metropolitan and District, ¼ in Hull and Barnsley, and 1½ in City and South London. Brighton ordinary and deferred fell 2 and 2¼, Chatham preference 2½ and 5½, Great Northern deferred and "A" stocks 1½, and Great Western 1¼. South Western issues lost 1¼ to 2½, North-Eastern was 1 down, Great Central preferred and deferred dropped 1 and ⅝, and South-Eastern stocks ½ to 1. Scotch stocks were amongst the heaviest sufferers, Caledonian ordinary relapsing 3½, the preferred 2¼, and the deferred 1⅜, and North British preferred and deferred losing 2¼ and 2⅝. The account open in this section is now very small, and contangos consequently were comparatively light at 5½ to 6 per cent.

Yankee Railroad shares have presented the patchy appearance with which we have become so familiar when the various cliques endeavour to galvanise a stagnant market into a semblance of life. One stock, or group of stocks after another is forced up with a great noise, and the rise is accompanied by all kinds of favourable rumours, while the rest of the list lies neglected and inert. In this way advantage was taken of the definite announcement of the sale of the Great Northern Railway's ore lands to the Steel Trust to lift the price of the latter company's ordinary stock to 51. It did not hold long at that though, and attention was diverted to Union Pacific about which the usual plentiful crop of rumours was speedily forthcoming. First it was said that the buying was due to the company having secured control of the Milwaukee line, then to the favourable figures of the August statement, and lastly to a report that Mr Harriman intended to issue a statement with regard to his action over the recent dividend, in which he would show that the company had earned 21 per cent. last year. Erie were sought after on a story that the company had acquired the Clover Leaf line, Pennsylvania, on a forecast of a 7 per cent. dividend, and the "Granger" lines generally were supported on the Government crop report, but the market as a whole rather distrusted this ostentatious bidding up of selected securities, and business was never brisk. The demonstration of a week ago in National of Mexico preferred stocks has died down as suddenly as it sprang up, and they relapsed 1 and 1½, but apart from these and one or two trifling losses, movements on balance were favourable. There did not seem to be much change in the account compared with a fortnight ago, and arrangements were made without difficulty, but money was dear enough at 6 to 6½ per cent., and occasionally even 7

per cent. Changes in the making-up list, however, indicate clearly enough the special nature of the business done, and the narrow limits within which it has been confined. National Railroad of Mexico preference stocks enjoyed a brief spell of popularity, and rose 3¼ and 2, Norfolk issues put on 2½ and 1, Rock Island 2⅜, and Chicago Great Western, Pennsylvania and Reading were all ⅜ up, but against these Atchison were 5½ down, Milwaukee fell 2½, Louisville, New York Central, and Southern preferred 2 each, and Chesapeake and Ontario 1¼.

Grand Trunk stocks were unfavourably influenced by the small increase in the traffic returns, which was only about half what had been expected, but prices did not give way appreciably until after the meeting on Thursday. The chairman's speech at the meeting, as we show elsewhere, contained at least three very decided "bear" points, and although Sir Charles Rivers Wilson endeavoured to gild the pill by holding out hopes of an increased dividend on the third preference at the end of the year, prices of both that stock and of the ordinary ended flat and decidedly lower. Canadian Pacific shares, on the other hand, gradually hardened, with the result that they closed fractionally better. Amongst other Canadian issues Alberta stock recovered 2, but Canadian Northern debenture stock was weak, while in South African things Beira debentures improved sharply on the interest payment, and Mashonaland debentures fell 1. East Indian deferred annuities were 1 to 2 down. On the fortnight Canadian Pacific shares were 2 up, and Grand Trunk stocks put on ¼ to 1, the largest gain being in the firsts, but the ordinary fell ½. Alberta stock was also 2 higher, and Qu'Appelle, Long Lake bonds rose ⅜, but Quebec and Lake St. John income bonds and Temiscouata income bond certificates fell 1 each. Money on Canadian Railways cost 6½ to 6¾ per cent. as a rule, although in some cases the charge rose to as much as 7 per cent.

In the Foreign Railway market Buenos Ayres Great Southern issues improved on the announcement of a coming allotment of £3,000,000 to existing holders, but the market did not seem to relish the idea so much on second thoughts, and prices fell back sharply, the ordinary and preference closing as much as £2 down. Entre Rios ordinary and second preference came into prominence, and as the result of active dealings put on 3 each, while Argentine North-Eastern preference also met with a certain amount of support, and Rosario ordinary and deferred tended to harden. Uruguay stocks were all firmer, Paraguay Central debentures, too, were in some demand, but an attack was made on Guayaquil and Quito second bonds, driving them down 4½, and Leopoldina ordinary and debenture stocks declined 1 each on the reduction of £6,000 in the traffic return. Mexican Railway ordinary and second preference put on a fraction or two on talk of negotiations being in progress for an alteration in the pooling arrangement, and Interoceanic preference advanced ¾. Nitrate Railways were hard in sympathy with the improvement in the producing company's shares. United Railways of the Havana fell back early in the week, but recovered the loss and a little more after the dividend announcement on Thursday. Carrying over charges were much about the same as on Colonial things at 6½ to 6¾ per cent., and occasionally 7 per cent. Argentine North-Eastern preference and ordinary debentures rose 5½ and 3 during the fortnight, Entre Rios ordinary and first preference were 3 and 1 up, and East Argentine 1¼ higher, but Argentine Great Western ordinary and preference fell 3½ and 2½, Bahia Blanca and North-Western preference and Buenos Ayres Great Southern ordinary lost 3 each, and Buenos Ayres and Rosario ordinary and preference declined 3½ and 5. Antofagasta deferred and preference receded 1½ and 2, Guayaquil and Quito second bonds 7½, and United Railways of the Havana ordinary 2½. The only change in Mexican Railway stocks was a gain of 1 in the first preference, but Paraguay Central debentures put on 2, and San Paulo ordinary was 1 up.

The Miscellaneous groups of securities again attracted rather more attention, and the changes are becoming more numerous than anything we remember for some time back. Bank shares still enjoy some favour, especially foreign institutions, but apart from Bieckert's ordinary stock, which continues to make further records, the Brewery list is still in a very demoralised condition. More or less important declines, particularly in the prior charge stocks, take place almost daily, and the loss which investors have suffered from the depreciation within the last two or three years must be almost incalculable. Aerated Bread shares had a jump on the excellent final dividend of 4s. 6d. per share just announced, making the total return 37½ per cent. for the year. Lyons' shares were also good, and Slaters' met with a little support at one time. Russian oil shares, after going back, were inclined to pick up again, and the Textile group has again been firm. There seems to be no end to the rise in nitrate shares, and although the present selling values for the fertiliser no doubt ensure increased profits for the current year, we are not at all sure that the upward movement is not just a little too rapid. The ordinary and preference shares of Hope Bros. continue to recover, and in the cycle group Humbers have steadily gained ground on statements of the excellent profits which the company has gathered during the past year. Liptons were not affected by the interim dividend at the usual rate of 5 per cent. per annum. Meat shares were steady without important change, but the talk of a big soap trust caused a sharp upward movement in such issues as Edward Cook preference shares and the preference shares of the Vinolia Company. None of the securities of Pears' were affected one way or the other, and we have not seen it stated that this company is included in the combine. It would probably be better outside. Telegraph Construction shares were subjected to a little selling, but United Lankat Plantations were kept firm by the details of sales and profits just issued. Waring and Gillow securities were sold rather freely early in the week, but steadied somewhat before the close. Gramophones went back immediately after the issue of the report, but picked up again and closed almost 50s. The preference shares and debentures of the British Westinghouse Company continue weak, and it is pretty certain that the annual report due at the end of this year will again be very bad. Hudson's Bay shares very nearly reached the price of 100 so long predicted, but the "bears" sent them back again before the close, and the last price was only about 98. Pekin Syndicate and Shansi shares were flat, but other land issues kept tolerably steady. Insurance issues were still on the up grade, and Royal Exchange had another welcome rise of 5. Iron and Steel issues were much less freely dealt in, but the tendency was still adverse owing to fears of labour troubles. P. and O. deferred stock was better in the shipping section, and among telegraphs Anglo "A" recovered from a dull start. London Motor Omnibus shares were sold when the report came out, which is not surprising. Carry-over rates in this department were much the same as usual, but most of the leading speculative shares were lower on the fortnight. British Electric Traction ordinary and preference shares were ⅞ and ⅝ down respectively, and British Tea Table ordinary fell ⅛, the preference being 3s. 6d. down. Charing Cross Electric and Eastman's ordinary each lost ⅜, together with Pease and Partners ordinary, St. James' Electric, Westminster Electric, and Waring and Gillow preference. Allsopps issues were 2 to 4 lower, and Watney, Combe securities were down 2 to 3½. Pekin Syndicate ordinary made up 1 lower, the deferred shares showed a loss of 25, and Shansi shares of 1s. 3d. Anglo-American Telegraph ordinary and preferred were 1 down, and Standard Bank of South Africa fell 1½, but Anglo "A" was ⅝ better, and there were a few other favourable movements. Daimler Motor ordinary, for example, was up 7/16, Gordon Hotels ordinary and preference rose ¼, and the Nitrate group showed an all-round advance, prominent gains being 1 1/16 in Lautaro and 2 in Santa

Rita. Humber cycles were up 2s. 1cd., Bieckert's Brewery ordinary put on 15, and Hudson's Bay showed a rise of 5.

The account was settled to-day in the usual smooth, unruffled fashion, with nobody betraying difficulties and no scarcity of money. Partly for this reason prices steadied and were good nearly everywhere with a revival of life in Kaffir shares, and a very lively gamble indeed in the shares of the Vaal River Diamond Company. Premier Diamond shares, however, were still a most treacherous market. Business in Home securities was mostly limited to purely investment dealing.

It is announced that the Scottish Union and National Insurance Company has entered into a provsional agreement, by which it will acquire the entire business and assets of the Lancashire and Yorkshire Insurance Company, of Manchester. The former company, whose headquarters are in Edinburgh and London, was established in 1824, and has a capital authorised of £6,000,000, of which £300,000 is paid up, and its funds on December 31 last amounted to over £5,500,000. The Lancashire and Yorkshire Company is nearly 30 years old, and has conducted a profitable business in accident and fidelity guarantee insurance, the annual premium revenue last year being over £50,000, and the funds more than £100,000. Hitherto the Scottish Union and National Company has transacted only fire and life insurance business, but it is intended that the business now being acquired shall form the nucleus of an additional department to its operations in terms of the new Act of Parliament which it obtained this year.

London Motor Omnibus Company.

The Stock Exchange has been anxiously awaiting the first report of the first motor 'bus company, and wondering why it has been so long delayed. No explanation has been given, but the accounts cover a period of 18 months instead of 12 as expected, being made up to June 30 last. The prospectus was out early in January, 1905, and in November an interim dividend at 10 per cent. per annum on the ordinary shares was announced just to give a good send-off to an issue of preference shares which came a week or so later. In the opinion of the directors the accounts now submitted are highly satisfactory, but we are not so sure. A commencement was made on March 27, 1905, with five "Vanguards," and this number was gradually increased until on June 30 last the number on the streets was 98. The average daily service throughout the period was 38¼, and the passengers carried reached the highly respectable total of 18,351,098. They produced a revenue of £124,939, including advertising and other items, which may also be considered favourable, but we fear the good points end here. To begin with, the accounts do not contain nearly enough information. The horse omnibus companies supply a vast amount of detail concerning their expenditure, but this concern gives us only three concrete items. The first is traffic department expenditure, £49,536. Off-hand that does not appear excessive, but we have no warranty. Next, however, we have a much more important entry, and one on which the motor omnibus future may be said to really turn. It is the charge for maintenance and depreciation. Its amount, £49,090, is quite staggering. Just listen. The company's 'buses started running on March 27, 1905, so that to the end of June last they had actually been in operation 65 weeks. As before mentioned, the average number in service throughout the period was about 38, and 38 divided into £49,090 gives £1,292 for the maintenance and repair of each 'bus for a period of 1¼ years, say £20 per week. Add another £20 for traffic department expenditure and we find the actual working costs of the 'buses to be £40 per week. This seems exceedingly heavy, and if the upkeep reaches such a figure when the vehicles are brand new, what will it be when they begin to grow old? How long does it take them to reach decrepitude? General administration expenses absorbed a further sum of £7,838, and £2,792 was written off formation expenses, underwriting, &c., fixed plant and machinery, structural alterations, office furniture and fittings, leaving the nett balance at £15,682. The proportion of outgo to total income was about 87 per cent., rather over than under, and in view of this fact we should much like to know the composition of the gross revenue. How much came in as actual omnibus receipts, how much from interest, and how much from advertising or any other source?

This is asked in no spirit of carping criticism, but we have here an entirely new enterprise, and naturally desire to place on record all possible data for the future guidance of investors and others. The nett balance is used to pay the preference dividend and dividends at 10 per cent. per annum for the period covered by the accounts on the ordinary shares, with £4,000 to reserve and £953 carried forward. We must here note something rather disagreeable. Reference is made to the issue last November of £200,000 in 6 per cent. £5 preference shares, but the directors go on to say that owing to the non-delivery of chassis to time, according to contract, the greater part of the money has been lying on deposit at the company's bankers. What is the present position regarding the delivery of chassis? Unless a large number of additional omnibuses can be speedily put upon the road and earn profits a serious situation will arise. The amount charged in the last accounts for preference dividend was only £3,860, but for the current year the issue will require £12,000 for interest. We do not altogether like the prospect, and rejoice to think of the small public response to the multitude of 'motor bus promotions placed before them last spring. What these companies' reports will be like dare not be thought of. No wonder amalgamations are in the air. The position of some of these ventures must already be well-nigh desperate. This company still has £11,274 to clear off in the shape of preliminary and underwriting expenses, and it would have been more except that £2,499 came in as premium on 19,993 ordinary shares allotted to the British Motor 'Bus Trust. Motor Omnibus stock is valued at £115,030, say, £1,170 per 'bus for 98 'buses; premises are in at £11,023, plant and machinery at £8,404, and stores, materials, spare parts, &c., at £15,116. Payments in advance, including deposits with contractors, reach £20,934, and sundry debtors stand at £18,358 against creditors of £27,338. The company has no less than £85,966 in cash, the product of the preference share issue, and £10,000 has been invested in Consols. We wonder what the Handcross disaster will cost the company. The directors say they deeply regret it, but tell us nothing more.

Notes on Books.

Le Marché Financier, par Arthur Raffalovich. (Paris: Felix Alcan.) Prix, 12 francs.

Perhaps the most distinctive characteristic of this valuable annual is the care with which the relations between current politics and high finance are handled in the essays dealing with the various countries embraced in Mr. Arthur Raffalovich's series of surveys. This valuable peculiarity is well illustrated in the long and carefully put together essay on England, in the compilation of which Mr. J. F. Stone has collaborated. But it is visible throughout, and always makes the volume interesting reading. In a sense nothing is forgotten, the progress of a country's wealth, the effect of current legislation upon its trade, the condition of its leading industries, and necessarily the movements of prices on the Bourses are all, with many other items, passed under review. Taken as a series, these volumes contain fuller materials for the history of contemporary finance than any other publication known to us. As always, we turned with special interest to the chapter on Russian finance. This year its author, Mr. Paul Apostol, reviews very carefully and without any unnecessary rhetoric some of the effects which have been brought about by the disastrous war with Japan. In the matter of debt alone we find that up to the end of last year at least £110,000,000 had been added to the public burdens of the Empire in this respect, the total

being about £820,000,000, not such a heavy load as the United Kingdom had to carry after the close of the Napoleonic wars, but still one well calculated to increase the forces of revolution within the Empire. At the same time that the public interest-bearing debt went up in this fashion the currency became steadily more debased, the circulation of bank notes being augmented to some extent because the coin in circulation had dwindled. We do not gather from this essay what the real cost of the war has been to Russia, and for very good reason, no official accounts about the war have ever been made public. A general impression prevails on Western money markets that there must be at least £100,000,000 of unliquidated war obligations still outstanding, but we have no means of knowing, and it is not possible to put much faith in the elaborate and very neatly put together Budget statements from time to time emitted by the Finance Ministry, because there is no attempt ever made to audit the accounts of the Empire. Until these are subjected to public criticism and to some measure of independent supervision we must remain distrustful. Another essay of great value in this number relates to the finances of Japan. It is full, careful and up to date, hiding nothing, and at the same time setting down nothing in malice. Readers of this Review are already familiar enough with that story. Mr. Noyes, the well-known financial editor of the *New York Evening Post* furnishes the chapter upon the United States, and it is worthy of his ability, critical acumen, and independence. Most interesting also as usual is the chapter on the precious metals and monetary questions, packed as it is with statistics of production and distribution ranging over a series of years, and most useful for reference. Thus we must again extend a cordial welcome to this annual.

Map of the Dominion of Canada.

Although its primary object is to show the railway systems owned and controlled by the Canadian Northern Railway, by whom it is issued, this map is none the less an excellent piece of cartography. Railway systems other than that of the Canadian Northern are indicated in different colours, and it is also the first complete and modern map issued since the creation of the new provinces of Saskatchewan and Alberta. Altogether, it is a remarkable illustration of the enormous strides that have been made in recent years in the development of Canada, and looked at in this light a study of it can afford nothing but profit to those interested in any way in the Dominion. Copies may be obtained from the London office of the company in two sizes, 40 in. by 22 in. or 60 in. bv 31½ in., either in book form or mounted on rollers, for 3s. 6d.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Rise: Turkish Guar. 1, to 105-107. **Fall:** 2½ p.c. Annuities ¼, to 84⅞-85¼, Bank of England 1, to 271-275, Bank of Ireland 3, to 308-316.

CORPORATION STOCKS.—Rise: Birkenhead 1, to 83-85, Pocle ½, to 85-86. **Fall:** Croydon 3 p.c. 1940 1, to 86-88, Middlesex ½, to 88¼-89½.

COLONIAL AND FOREIGN.—Rise: Melbne. Fire Brigades 2, to 102-104. **Fall:** Rosario (1947 issues) 1, to 57-59, do. 1889 3, to 60-62.

COLONIAL GOVT. STOCKS.—Rise: Cape 3½ p.c. ¼, to 96½-97¼, Hong Kong ½, to 98-99, Natal 3½ p.c. ⅛, to 97-98, Queensland 4 p.c. 1924 ½, to 105½-106½. **Fall:** Gold Coast ½, to 86-87, New South Wales 3½ p.c. 1924 ½, to 99-100, Ontario ½, to 95-97, W. Australia 3 p.c. 1915-35 ½ to 85-87.

FOREIGN GOVT. SECURITIES.—Rise: Argentine, 1881, 1, to 101-103, Brazilian West of Minas Rly. 1½, to 95½-96½, do. Companhia ¼, to 80-80½, Chinese, 1894, ½, to 101½-102½, Cuba 1, to 104-106, Honduras Issues 2, to 12½-13, Japan 5 p.c., 1901-2, ¼, to 101-102, do. 4½ p.c. ¼, to 95½-96, Russian 3 p.c., 1882, 1, to 61-65, San Luis 1, to 102-104, San Paulo (Brazil), 1899, 1, to 98-100, Turkish Unified ⅛, to 92⅜-93, Japan 5 p.c. Cons. Loan ¼, to 46⅜-47¼. **Fall:** Argentine, 1886-7, ½, to 101½-102½, do. Treasury Convers. ½, to 98½-99½, do. 1897, 1898, 1899, and 1900 Issues ½, to 86½-87½, Chilian 4½ p.c., 1895, 1, to 88-90, Chinese, 1895, ½, to 103½-104½, do., 1896, ⅛, to 100½-101, do., 1898, ½, to 97½-97⅝, do. Nanking Line ½, to 104-105, Egyptian Unified Pref. ½, to 100½-101½, Greek, 1881, ½, to 52½-53, do., 1884, ½, to 52¼-52¾, do. Monopoly ½, to 52⅜-53¼, do. Rentes ½, to 40½-41, do. 1890, ⅜, to 50⅛-51, do. Rlys. Loan ½, to 92¼-92⅜, Japan 4 p.c. Silver Loan ¼, to 89-89½, Mexican Silver Loan ¼, to 51-52, Russian Ser. II. ⅛, to 72-73, do. Rentes 2, to 66-70, do. 3½ p.c. Bds. 1, to 60-64, do. 4 p.c. Loan 2, to 67-71, do. 5 p.c. Scrip. ⅜, to 9-8½ dis., Sao Paulo (State of) 1, to 92-94, Servian 1, to 79-82, Spanish (Sealed) ⅜, to 94⅞-95½, Venezuela 3 p.c. ¼, to 48½-49, Austrian Gold Rentes 1, to 96-98.

(Shansi Shrs.) 1/16, to 19-32—21-32, Peruvian Corp. Deb. ⅛, to 102⅛-102⅜.

FINANCIAL TRUSTS.—Rise: Bankers Invest. Def., 2, to 86-88, Foreign and Colonial Invest. Def. 1, to 128-131, Mercantile Invest. and Gen. Def. 2, to 94-96, Railway Debenture and Gen. 5 p.c. Deb. 1, to 107-110, U.S. and S. American Pref. 1, to 103-105, do. Def. 1, to 81-84. **Fall:** Bankers Invest. Pref. 1, to 105-107, Central Bahia "A" Crts. 1, to 82-84, Mexican Central "B" Stock 1, to 70-72, Omnium Invest. Def. 1, to 48-51, Stock Conversion L. and N. West. 2nd Pref. 1, to 87-89.

GAS.—Rise: Oriental 1, to 152-155. **Fall:** Gas Light and Coke 1, to 98½-99½, River Plate ¼, to 12⅜-13¼, Sth. Metropolitan Deb. 1, to 85-87.

INSURANCE.—Rise: Liverpool and Lon. and Globe ½, to 43-44, North British and Mercantile ½, to 38½-39½, Ocean Acc. and Guar. ½, to 22-23, Royal ½, to 47-48, Sea ⅛, to 16⅞-17½. **Fall:** Law Guarantee ⅛, to 1-1¼, Lon. and Lanc. Fire ½, to 21-22, Merchants Marine ½, to 3⅜-3⅝, Ocean Acc. and Guar. (£1 pd.) ½, to 4⅛-4⅜, Royal Echange 5, to 200-210, Thames and Mersey Marine ½, to 7⅞-8½.

IRON, COAL, AND STEEL.—Rise: Armstrong Debs. 1, to 102-104, Dunderland Deb. 1, to 89-92, MacLellan ½, to 11-12½, Stewarts and Lloyds ½, to 19-19½, United States 3½, to 51½-51½, do. Pref. 1, to 111½-112. **Fall:** Cammell, Laird ½, to 8⅞-9½, Consett ½, to 36-37, Dunderland ½, to 3½-4, Ebbw Vale (£10 pd.) ⅛, to 8⅞-9⅛, Swan, Hunter Pref, ⅛, to ⅞-1, Willans and Robinson Pref. ½, to 1⅜-2⅛.

SHIPPING.—Rise: Cunard (£20 pd.) ½, to 14½-15, P. and O. Def. 1, to 227-230, Royal Mail Ord. Stk. 1, to 52-54, Union of New Zealand ½, to 16½-17.

TEA AND COFFEE.—Rise: Dumont Pref. ½, to 7⅛-8⅛, Eastern Assam ½, to 5-5½, Imperial ½, to 5-5½, San Paulo Debs. 1, to 100-103.

TELEGRAPHS AND TELEPHONES. — Rise: Commercial Cable Deb. ½, to 96½-98⅛, Direct United States ½, to 15⅝-1⅞. **Fall:** Anglo-American ½, to 66-68, do. Pref. ½, to 112-113, do. Def. ⅝, to 24⅜-24⅝, Eastern Extension ½, to 14-14½, Eastern ½, to 144-147, Gt. Northern ½, to 35⅝-37½, Natl. Telephone Pref. ½, to 109-111.

TRAMWAYS AND OMNIBUS.—Rise: Brisbane Deb. ½, to 100-104, British Columbia 5 p.c. Pref. 1, to 108-111, Sao Paulo 1, to 138-140, do. Debs. ½, to 99-101, Sunderland Deb. 1, to 87-92. **Fall:** British Electric Traction 5 p.c. Debs. 1, to 107-111, do 2nd Deb 1, to 90-93, Metropolitan Electric Deb. ½, to 98-100.

WATERWORKS.—Rise: Consol. of Rosario ½, to 10½-11, do. Deb. 1, to 94-96.

On the invitation of Mr. Owen Philipps, Chairman of the Royal Mail Steam Packet Company, a large party of visitors made a trial trip on Saturday last in the Solent, on board the new twin-screw mail steamer *Araguaya*. The vessel, which was built by Messrs. Workman, Clark & Co., of Belfast, is 538 feet in length, 61 feet in breadth, 34 feet in depth, and has a gross tonnage of 10,537 tons. With splendid accommodation, and magnificently fitted, the general apartments include a dining saloon which extends across the full beam of the steamer, a social hall, smoke room, card room, music gallery and children's saloon. Three hundred saloon passengers can be accommodated, and provision has been made for about 100 second-class saloon passengers, while there is comfortable accommodation for third-class passengers. The "Araguaya" left Southampton on her maiden voyage to South America yesterday.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Chicago, Rock Island and Pacific Railway Company.

Here is another link in a combine, the covering or holding company in this instance and in the case of the St. Louis and San Francisco Railroad being known by the name of the Rock Island Company, but between it and the Chicago, Rock Island and Pacific Railway Company there stands the Chicago, Rock Island and Pacific *Railroad* Company, and how to follow the maze through which the finances of the three run baffles us. We shall therefore deal only with the railway company's figures. They show a total gross earning for the year ended June 30 last of $51,238,000, being an increase of $7,186,000 or 16.3 per cent. Working expenses came to $35,067,000 showing an increase of $4,009,000 or 12.9 per cent., so that the nett earnings were up only $3,177,000 or 24.5 per cent. to $16,171,000. Adding in other unspecified income the entire free income was $17,187,000. From this the taxes took $1,632,000 and interest and rental charges $8,769,000, so that altogether $10,401,000 has to be deducted, but even so the balance of $6,786,000 left is equivalent to rather more than 9 per cent. upon the $75,000,000 of share capital. In actual fact 6¼ per cent. was paid upon that stock, and the whole of the surplus of $2,108,000 left over after making that payment was appropriated to the special improvement and equipment fund. Thanks to that appropriation, the mothering Rock Island Company seems to have had no money to pay the dividend to its shareholders, but that does not matter so long as the property improves, and presumably the outside public is not yet much interested in the Rock Island holding company. Business was good last year because of the fine harvest, and it is said to be showing every prospect of being first-rate in the current fiscal year. How much capital has been drawn upon to produce this prosperity we cannot quite tell, but the funded debt was apparently increased by $3,480,000, and money seems to be sunk in indirect ways in what is called promoting industrial developments along the line of the railroad. The company also lays hold of small lines wherever available, and there are the usual shiftings about of securities in order to make the control complete. For instance, the Consolidated Indiana Coal Company has become a part of the enterprise as well as the Dering Coal Company of Chicago, and the ultimate result is an inextricable mixing up of interests which the foreigner cannot hope to unravel. As it stands, however, the funded debt of the Rock Island and Pacific Railway Company now amounts to $162,357,000 nett, and besides this there is a share capital of $75,000,000, property and franchises altogether standing at $257,337,000 exclusive of current liabilities of various kinds.

St. Louis and San Francisco Railroad Company.

This is the other property controlled by the Rock Island Company, and in its fiscal year ended June 30 last its gross earnings came to $32,047,000, an increase of $2,088,000 or 7 per cent. Working expenses were up $1,249,000 or 6.5 per cent. at $20,546,000, so that the increase in the nett earnings was $840,000 at 7.9 per cent., the total being $11,501,000. Other income aggregated $1,633,000, so that altogether the company had a clear revenue of $13,134,000 on its working account and investments. From this taxes took $944,000 and fixed charges of all kinds $9,881,000, or $10,825,000 all told. The free income therefore was $2,309,000, out of which the first preferred stock got its full 4 per cent. dividend and the second preferred stock 2 per cent., leaving $1,789,000 to be carried forward. No change was made during the year in the various capital stocks issued by the company, but the funded debt was increased by $5,452,000 to a total of $170,927,000. This makes the entire capitalisation of the property $321,000,000. No less than 361 new manufacturing plants are said to have located upon what in the barbarism of railway English is called the "'Frisco" lines during the year, and the total capital involved is said to be over $9,000,000. This, of course, means increased traffic in the future. During the past year $1,552,000 was spent on additions and improvements to the property.

Lehigh Valley Railroad Company.

In the year ended June 30 last this company's gross earnings amounted to $32,789,857, an increase of $1,514,014 on the previous year. Working expenses exclusive of taxes came to $20,152,211 or $1,222,509 more, so that the nett income of $12,637,646 was only $291,505 more than in the previous year. The percentage of expenses to receipts therefore rose by .04 per cent. to 61.46 per cent., and the labour disturbances in the anthracite coal region during April and May of last year are blamed for this increase. In spite of that the position of the company is one of remarkable prosperity, although, like the Reading Railroad Company, some considerable portion of this prosperity is obtained at the expense of the dependent Lehigh Valley Coal Company, whose nett income available for the parent company was only $318,489 last year. The Lehigh Valley Coal Company's board, however, transferred $250,000 from income to pay for certain improvements. Apparently the railroad is well maintained and continually improved, but the capital account continues to go up apace. First of all $4,000,000 in 4 per cent. general mortgage bonds was created last year, and half of this utilised to redeem various other obligations, leaving the other half in the company's treasury for future use. Then $19,000,000 of 4 per cent. collateral trust bonds were created and issued to buy up various coal companies, so as to increase the grip of the railroad company over its coal trade, and another debt of $2,600,000 in 5 per cent. first mortgage bonds under a mortgage of the Consolidated Real Estate Company has been created and placed in the Lehigh Valley Company's treasury in full reimbursement of the amount advanced for various expenditures. Also a further $653,717 was issued to pay for construction work on the Lehigh and Lake Erie Railroad Company, whose first mortgage bonds were taken over against this issue to the amount of $620,000, making the total amount thereof in the Lehigh Valley Railroad Company's treasury $1,200,000 There are various other items of capital outlay the effect of which it is difficult to follow, but the company is none the less strong, and its balance-sheet shows that current assets are $13,002,757 in excess of current liabilities, the amount of cash on deposit and in the hands of the treasurer being no less than $11,676,966. The capitalisation of the railroad company now amounts to about $121,000,000, of which $80,541,000 represents funded debt and equipment trust obligations. The capital of the Lehigh Valley Coal Company exclusive of current liabilities amounts to $25,470,000. It is stated in the report of the president of the railroad, Mr. E. B. Thomas, that the coal tonnage was 49.88 per cent. of the total tonnage hauled during the year and that the total weight of coal and coke transported, not including coal for the company's own use, amounted to 12,753,053 tons, an increase of 234,684 tons or 1.87 per cent. over the previous year, notwithstanding the strike in the anthracite coal region. Merchandise freight was at 12,815,198 tons, 1,559,280 tons or 13.85 per cent. larger than in the previous year, and, in fact, the revenue from the general goods traffic of the company amounted to nearly $700,000 more than the revenue from coal, showing at $13,934,127 an increase of $1,501,544 against a decrease of almost $282,000 in the receipts from coal freights, which aggregated $13,248,565. Thus of the entire income mentioned above upwards of $27,000,000 came from the coal and goods carrying businesses, and passengers yielded less than $4,000,000, or if we add in express and mail receipts little more than $4,500,000. All these branches, however, of the business showed improvements and emphasised the general prosperity of the company.

Central Uruguay Railway Company of Monte Video, Limited.

There was again a very fair improvement in the traffic handled by this undertaking during the twelve months ended June 30 last, although the increase shown was not so great as in the previous year, when business was recovering from the effects of the revolution. The gross revenue of the main line was £442,083, or an advance of £27,855, but the working expenses rose by £21,809 to £212,465, so that the gain to nett revenue was only £6,046 at £229,618. Passenger business showed a moderate growth, the numbers rising by 172,123 and the income by £9,517, and luggage and parcels improved by £4,467, but there was a drop of nearly £1,000 in sundries. Wheat, maize, wire, and posts showed the only important exceptions to an all-round increase in the goods traffic, the principal gains being in building materials, general goods, company's own business, wool and sheep skins, hay, sundry grains, and flour. A serious drought caused a complete failure of the maize crop, and in October last a violent hailstorm damaged the wheat crop to such an extent that in several cases it had to be entirely abandoned, the ground being ploughed up and resown with other seed. Wire and posts were smaller because of the large quantities forwarded early in 1905 for making good damage done during the revolution in 1904, and the gain in general goods is viewed with particular satisfaction because it is the best paying form of merchandise. The gain in building materials is principally the result of a large quantity of sand and stone transferred to Monte Video for building purposes, but the company has to carry this class of cargo at a low freight in order to allow of its being placed on the market at a cheap price. Despite a heavy falling off in horses, following the conclusion of the revolution, the number of live stock carried rose 88,107, cattle improving by 111,008 and sheep by 42,974. Fewer pigs were carried, as the failure of the maize crop enhanced the price of fattening food to an extent that rendered the preparation of the animals for market a very costly matter. Working expenses were increased in many ways. The larger traffic dealt with and the consequent increase in the mileage tended to augment the expenses in the form of heavier coal consumption and increase in wages. As in the Argentine the cost of labour has increased very considerably in Uruguay, and in order to keep the men working and to overcome the two general strikes which have occurred since the commencement of the year 1905 it has been desirable to increase the rate of wages in a great number of cases and reduce the hours of labour. The company has also been obliged to undertake many very necessary repairs to the permanent way and other property which for various reasons had not received the required attention previously. Including balance brought forward £18,042, year's interest on Government bonds £2,937, interest on Western Extension 6 per cent. debenture stock £33,992, and profit on remittances, &c., £11,978, the aggregate nett balance is £296,568. Debenture interest absorbs £111,806, North-Eastern Railway rent £51,828, Western Extension advance £8,863, income-tax £3,578, and the interim ordinary

stock dividend £40,000. The directors now propose to pay a further 3 per cent. on the ordinary stock, making 5 per cent. for the year, or ½ per cent. more, adding £2,000 to the pension fund and carrying forward £18,492. Shareholders may remember that the profit derived from working the extension companies during the year ended June 30, 1904, amounting to £22,278, was held in suspense to meet the cost of repairing the permanent way, &c., of the extension lines, the maintenance of which, owing to the revolution, had then fallen into arrear. During the past year £10,000 was charged against this amount and the balance of £12,278 has been transferred to the credit of the general renewal funds for the purpose of defraying this extraordinary expenditure. The negotiable securities to the amount of £85,000 received from the Government on account of their indebtedness for transport services rendered during the revolution have been realised. There are further claims against the Government, amounting to a considerable sum, which are now under examination by the authorities, and the board is daily expecting to receive advice that these have been liquidated satisfactorily. The company also sold a further $250,000 nominal value of the Uruguayan Unified Debt bonds, and the nett proceeds amounting to £45,243 have been credited to the general reserve fund. As a result of the ad-referendum arrangement come to with the Government of Uruguay in November last a contract was signed on April 20, 1906, for the prolongation of the Eastern Extension line and for the modification of the basis upon which the railway guarantee is calculated. The contractors of the new line have already commenced operations. Another point worthy of note is that the Belgian company working the Brazilian State Railways in the Province of Rio Grande is occupied upon the surveys of a branch to connect those lines with the Northern Extension at Riviera, and it is anticipated that the establishment of through rail communication between Monte Video and Brazil will have a beneficial effect upon the traffic of the railway. During the year under review the company spent £46,367 on capital account, a good deal of it on new rolling stock, so as to place the railway in a position to meet satisfactorily the requirements of the increasing traffic.

Central Uruguay Eastern and Northern Extensions.

The usual distinct statements are issued by these two lines, although they are worked by the parent Central Uruguay Company. On the Eastern section the gross revenue rose by £4,558 to £107,480, while the working expenses were larger by £3,300 at £52,188, leaving an increase in the nett profit of £1,258, the total being £55,292. There was also a balance of £2,040 brought in making £57,332, from which debenture interest requires £23,170, income-tax £1,044, and interest £599. In addition a sum of £1,659 is returnable on account of guaranteed advances, but as £1,059 was received during the half-year to December, 1905, the nett debit was reduced to £600. Another £12,250 was required for the interim dividend of 3s. 6d. per share and £19,668 is now left. It permits of the payment of a balance dividend of 5s. per share, making 8s. 6d. or 4¼ per cent. for the full year, being ½ per cent. more, with an increase to £2,168 in the balance carried forward. With this undertaking there was a decrease in the passenger receipts of £2,315, the numbers carried being less by 14,550. The wheat and maize traffic was also poorer as also that in posts, so that despite small increases in other commodities the total goods traffic fell off 12,570 tons. Revenue, however, was only £101 less, and as the live stock traffic increased sufficiently to produce an extra sum of £6,828 the balance of income was brought round to the right side. Preparations for the extension of the line from Nero Perez to Centurion, mentioned in the main line report, are well forward, and as the plans of the first section of 50 kilometres have been approved by the Government the construction of the road will be taken in hand without delay. The gross revenue of the Northern Extension was £63,437 or a decline of £3,265, and since the working expenditure could be reduced by £157 only to £38,062 the nett profit is smaller by £3,108 at £25,375. The drop in passengers was considerable, but as on the Eastern Extension this is accounted for by the absence of troop traffic in the period under review. Numbers declined 32,807 or 57.74 per cent., and the receipts were smaller by £4,862 or 24.01 per cent. General traffic, however, continues to develop in a satisfactory manner and nearly all classes of goods showed improvement. The principal exceptions were wire and hides and skins. Carriage of horses was quite trifling compared with the corresponding period, the revolution being again responsible, but the loss was partly made good by gains in sheep, cattle, and pigs. Including Government guarantee £46,804 and balance brought forward £2,459 the total disposable balance is £74,637 against £78,250, and after providing debenture interest and other fixed charges the dividend for the year is reduced by ¼ per cent. to 4 and the carry forward by £1,415 to £1,043.

Western Railway of Havana, Limited.

The volume of business handled during the year ended June 30 is stated by the general manager to have been the heaviest yet dealt with, but the brilliant achievement of the previous twelve months, when gross traffics rose by nearly £54,000, was not repeated. For one thing the tobacco crop was seriously injured by heavy and unseasonable rains, the damage being estimated at 50 per cent. of the value, and although only part of the crop was dealt with the traffic showed a reduction of 3,284 tons in weight and £4,456 in receipts. Sugar, sugar-cane, and molasses were all carried in larger quantities, but rates on these commodities would appear to be low, as increases of 3,908 tons in sugar, 40,647 tons in cane, and 1,611 tons in molasses gave improvements of no more than £1,702, £1,491, and £237 respectively. More building materials were carried, but receipts nevertheless were £2,230 down, and the same thing on a smaller scale occurred with regard to timber. A considerable business is being developed in fruit and vegetables for the northern markets, owing to the purchase of large areas of land in the district served by American companies, and the carriage of such went up by 4,114 tons and £1,326. In the result the goods traffic gave £2,530 more, and passenger receipts, despite a falling off in numbers, were £506 up, while line of rolling stock and other receipts rose by £469 against a decrease of £674 in animal traffic due to the smaller movement of cattle. Gross receipts for the year were consequently £2,830 better at £213,766, but working expenses required £4,444 more at £110,362, partly because of the considerable rise in the price of silver and partly because of the increased number of train miles run, and the ratio to receipts went up 1.41 per cent. to 51.62 per cent. Nett revenue, therefore, showed a decrease of £1,614 to £103,404, but a much larger balance of £5,407 was brought in, and with £113 from transfer fees and £1,038 from interest, an item which did not appear a year ago, the total available was £109,962 compared with £107,628. Outlay on special renewals, however, was £4,430 heavier at £11,360, and taxes, &c., took a trifle more, leaving £72,533 or £1,874 less to be dealt with after meeting debenture interest. Last year's dividend at the rate of 7 per cent. is maintained, although more is required to meet this owing to the new capital raised, so the directors place nothing to reserve against £20,000 transferred a year ago, and raise the balance forward to £17,433. The outlay on the extension from San Juan to Guane and other works during the year amounted to £58,636, but the debit balance on capital account after allowing for the premium of £10,885 on the new shares issued is only £8,561. Little new work seems to be contemplated beyond an extension of about a mile to bring the terminal station in Havana close up to the port. With regard to the current year the directors say that although the property suffered somewhat during the recent revolution the damage does not appear to have been very serious. The working of the line, however, was greatly interfered with, and for a time entirely suspended, but the ordinary services have now been resumed, and it is hoped that before long receipts will again become normal.

Bolivar Railway Co., Limited.

No revolution has broken out in Venezuela for quite a long time now, and this company reaped the benefit of the comparative quietude with an increase in its gross revenue for the 12 months ended June 30 of over £11,000 at a total of £52,391. Working expenses were very slightly higher at £31,854, so that the profit on operations was £11,297 better at £20,537. The company also received £7,801 on account of the award of the Anglo-Venezuelan Claims Commission and £552 came in as interest on deposits, transfer fees, &c., making the total nett credit £28,890. From this the year's debenture interest requires £15,000 and loss in exchange and commission on drafts took £1,663, leaving £12,227. Adding to this the trifle of £222 brought in, and the total for disposal is £12,448, and after carrying £3,000 to reserve against depreciation, being £2,000 more than a year ago, the directors propose to pay 3 per cent. on the preference shares and to carry forward £664. This dividend is the same as for the previous 12 months, the increase in the railway revenue being partly neutralised by the very much smaller sum received under the Anglo-Venezuelan award. The amount remaining to be collected on this account is now only £11,421. The directors say that the latest reports from Venezuela justify an expectation of continued improvement in the railway revenue, so that with the assistance of the award money still to come in the preference shareholders may again stand in for a modest dividend on account of the current year. After that, however, railway earnings must alone be depended upon, and unless business improves at a comparatively rapid rate the prospect is not altogether a rosy one, as the available balance last year after meeting the debenture interest and other charges does not represent much more than 1 per cent. on the preference capital.

Bank of Tarapaca and Argentina, Limited.

The recent earthquake disaster in Chile is naturally referred to at some length in the annual report of this progressive bank, and it is satisfactory to find that the institution was only very slightly affected. The bank has two branches within the disturbed area, one at Valparaiso and the other at Santiago, but only the former was damaged, even to a very slight extent, and at neither office were there any casualties amongst the staff. So far as can be seen at present, the catastrophe is not likely to involve the bank in any serious loss, but some time must necessarily elapse before its indirect effects upon business and the commercial community can be realised. It is just possible that, for a time at least, banking transactions may be stimulated by the earthquake, as a good deal of money must be spent in reconstructing buildings and making good damage in every direction. The gross profits for the 12 months ended June 30 amounted to the very large sum of £296,206, being an increase of over £70,000 compared with 1904-5. To this is added £18,608 or £8,276 more from the previous account, making the total credit £314,875 against £236,351. Charges at head offices and branches were about £10,000 larger at £105,088, income-tax was £4,434 and rebate of interest on bills, &c., not due £21,287, being an increase of £5,760. The balance of nett profit was therefore better by £62,458 at a total of £184,066, and we are

pleased to note that the reserve fund is given the benefit of the greater part of this advance. It will be credited with exactly twice as much at £100,000, and under the circumstances the shareholders are quite entitled to the additional 1 per cent., making their dividend 7 per cent., which they are to receive. The staff pension and guarantee fund gets £600 more at £3,600, but nothing is placed to reduction of premises account against £5,000, and the balance carried forward is over £9,000 larger at £27,966. A further large increase has taken place in the bank's resources during the 12 months, current, deposit and other accounts now appearing at £5,465,062 compared with £3,561,149. Under bills payable there is an advance of £1,394,561 at £3,939,314, and the total of the balance-sheet reaches £10,637,229 against £7,220,538. Cash in hand, at bankers and at call is now £1,225,359, being an increase of £523,971, but there is a reduction in the money lent at short notice from £189,118 to £95,431. Investments have scarcely altered at £449,270, but bills receivable have grown by £805,446 to £3,514,621, and the total of the advances, &c., is now £5,265,729, being a rise of £2,177,860. Bank premises, office furniture, &c., do not seem too heavy at £86,819, and the addition now made from profit raises the reserve to £400,000, against the paid-up capital of £750,000.

Enfield Cycle Co., Limited.

The directors of this company are nothing if not enterprising. Along with the annual report made up to June 30 they send out a statement exhibiting the company's record from the time of inception up to the present moment. It is rather an interesting display, and shows the effect of the severe slump from the boom period and the gradual recovery of the last two or three years. We are pleased to learn from another typewritten document that the company was one of the few which survived the collapse without being driven to the necessity of reconstruction, but we are not sure the board is altogether wise in attempting to disparage its competitors by saying that the demand for comparatively expensive Enfield machines is an eloquent commentary upon the alleged craze for "cheap and nasty" bicycles. We are rather of opinion that the price usually prevailing for ordinary standard machines is much above their real worth, and praise is probably due to those pioneers such as the Rudge Whitworth company, who were the first to supply machines at a respectable figure. This much said and we can congratulate the Enfield shareholders on the increase of £7,566 to £28,547 in the trading profits, including transfer fees. The allowance for repairs and depreciation is £6,905, or an increase of £794, income-tax is £621, bad and doubtful debts £1,134, professional charges £624, and directors' fees £600, as usual. The balance of nett profit is just about £6,000 better at £18,662, and after providing the preference dividend the ordinary shares receive 10 per cent., or 5 per cent. more, £5,000 is again added to reserve, and the balance carried forward is increased from £5,605 to £7,608. This dividend is the highest paid since 1899, when a similar distribution was made, but on that occasion the return was only maintained at the expense of reserve and the carry forward. The financial position has improved along with the profits, and while a smaller sum is owing to sundry creditors the sundry debtors are larger by £2,647 at £26,466 and the cash and bills have increased by £16,272 to £37,068. The freehold land, buildings, &c., show a very big reduction from £46,769 to £19,771. Shareholders no doubt remember that a new company called the Enfield Autocar Company was formed during the year, and this concern has taken over property to the value of £25,958. There is also a deduction of £1,041 for depreciation, bringing the property account to the figure named. It is, however, to be noted that there is an expenditure on new buildings of £6,899, stock-in-trade is larger by £2,000 at £21,912 and the investments have increased from £1,120 to £8,540. Goodwill, patents, &c., remain at the old figure of £58,074, and the reserve fund now reaches £25,000.

Eadie Manufacturing Co., Limited.

This company's profits again showed substantial improvement for the year ended August 31, the balance on trading account being £80,456, an increase of over £18,000 compared with the previous financial year. Dividends, interest and transfer fees produced a further £210, making a total of £80,666. Repairs and depreciation are allowed on a rather fuller scale, the total set aside being £14,263 against £11,893, further debits consisting of £331 for bad and doubtful debts, £1,043 for professional charges and income-tax, and £1,750 for directors' fees. This leaves a nett revenue of £62,378 and as £21,515 was brought forward there is a total of £83,894 for disposal. Of such sum the preference dividend requires only £842, and the board is able to add a 15 per cent. bonus to the regular ordinary dividend of 10 per cent., making the total return 25 per cent. against 20. Not only so, but an additional £5,000 at £20,000 is added to reserve fund, bringing it up to £60,000 against a goodwill, including shares in a company called the Combination Hubs of £67,071, and the financial position all round is a very sound one. Some more capital was raised in accordance with the authority given by the shareholders in May last, and we find that the nett outlay on property during the year reached the considerable sum of £26,347, raising the property account to £89,241, after allowing £4,523 for depreciation. The directors say that the additional works are now in course of erection, and it is hoped that the machinery will be installed and in full operation before the end of the year. Some freehold cottages are valued at £15,411, and on them there is a mortgage of £8,539, which seems rather unnecessary in view of the fact that the company possesses cash and bills to the amount of £93,194. No doubt the directors will realise the expediency of repaying this mortgage at the earliest opportunity. Sundry creditors are a trifle larger than debtors, but stock-in-trade is worth £49,754 and a trifle of £129 has been invested.

Gramophone and Typewriter, Limited.

We may perhaps be pardoned for saying that this enterprise has a wonderful record. There is evidently a perfect craze for gramophones, and although we believe the typewriter business has not fulfilled expectations the company continues to gather extraordinary profits. Twelve months ago the directors had to report a falling off of the severe sum of £71,521, but even so the nett revenue reached £140,229, and we now find that this reduction has been more than recovered, the balance of trading for the year ended June 30 being £212,237, or an increase of £72,008. The company also brings forward the huge amount of £397,797, a sum that would do credit to a business five times as large, and with this added the entire amount at the directors' disposal is £610,034. Interim quarterly dividends aggregating 10 per cent. on the ordinary shares and the full year's dividend on the preference have been already met, £10,960 has been written off matrix account, the directors' remuneration comes to £2,500, and income-tax to £9,649. These payments have absorbed £75,357, and it is now proposed to pay a bonus of 10 per cent., making 20 per cent. for the year, the same as before, and to carry forward £487,177. This without doubt is a very fine display, and apparently the shareholders can look forward to a still larger return for the current year, as the interim dividends to be paid during the twelve months ended June 30 next will be at the rate of 15 per cent. per annum instead of 10. The total of the company's balance-sheets is £1,203,410, and the directors include in their report a statement of the assets, including foreign companies and branches, irrespective of patents, trade marks, and goodwill. These assets reach a total of £750,171, the principal items being stock-in-trade £163,797, debtors £156,882, cash £138,791, investments £172,929, and buildings, machinery, plant, fittings, &c., £83,122. Deducting liabilities of £103,490 there is a balance left of £646,681, so that the capital of £600,000 can be considered quite intact. Certain plant and machinery standing in the last balance-sheet at £3,877 has been reduced to £970, partly by depreciations but chiefly in respect of typewriting machinery and plant sold during the year. The deduction mentioned will bring the matrix account down to £30,000, which the directors consider a conservative valuation, but large enough for the purposes of the balance-sheet.

Carreras, Limited.

This company, which sells several well-known brands of tobacco, had a fairly good experience during the year to July 31, but as the results did not permit of a start being made with a reserve fund in addition to the payment of a fair dividend to the shareholders, we must still regard the business as decidedly over-capitalised. In fact, the ordinary shares to the amount of £131,007 are just about equivalent to the goodwill and trade marks, £131,223, so that this part of the capital is a cross entry. The principal realisable asset is the stock valued at £42,687, and it is to be noted that the lease, fixtures, fittings, plant and machinery are worth only £7,805 between them. Moreover, £21,915 is owing to sundry creditors or on loan against debtors £18,528, cash £10,768 and investments £9,998. We must also take into account that there is an undivided profit of £19,873, practically offsetting the cash and investments, so that the finances of the undertaking are anything but strong. The gross profit, including transfer fees and dividends, amounted to £28,689, from which a variety of charges absorbed £10,309, leaving £18,380 as the nett profit. The most noticeable items amongst the expenditure were the managing director's commission £899, assistant managing director's salary £260 and general expenses, including advertising and provision for bad debts, £7,664. Including the balance of £7,743 brought in the aggregate nett credit is £26,123, which provides the 6 per cent. preference dividend and payments aggregating 10 per cent. on the ordinary shares, leaving £2,305 more at £10,048 to be carried forward. It would be better to pay a 5 or 6 per cent. dividend, and bestow some regard upon financial stability.

MINING NEWS AND NOTES.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Another dreary account has come to an end in the Mining market. During the entire fortnight prices continued to dwindle with irrepressible persistence, and Tuesday's making-up list was again a sad affair. In the Gold group the heaviest falls were 3/8 in such things as Modderfonteins, Geldenhuis Deep, Crown Deep, Central Minings and Wolhuter, 1/8 in Cason Gold Mines, 11-32 in H.E. Proprietary and Northern Copper, 1/4 in Cloverfield, 1/4 in Apex, City and Suburban, Ferreira, Nourse Mines, Robinson Central Deep and Rose Deep, with several falls ranging from 1/8 to 1/16. The only section in which there were any gains was the Diamond, where De Beers deferred made up 7/8 higher and the preferred 3/8, with Jagers deferred 1/4 better. In striking contrast with these changes was the fall of 1 1/4 in Premier Diamond deferred, for which there was no other ostensible cause than a persistent "bear" attack. The big drop in Cason Gold Mines is likewise somewhat perplexing, for nothing official has transpired to justify it. It is not so many months ago that this company entered the crushing list, and

high opinions were held as to its future. Now there are disagreeable rumours in the air of poor developments in the mine, likewise of contemplated amalgamation with other companies. What substance there is in these market reports we know not, but the decline in the price continues. This company belongs to the Farrar group, and all the world knows that one or two of the other mines have recently had unsatisfactory experiences. The fall in Modderfontein can only be explained by the disappointing character of the directorial report, which we analysed a week ago, the market quite agreeing with us, despite official optimism, that it was a very bad document. And this is the unceremonious reception it has met with, not unjustified. De Beers are bought because operators have pretty strong confidence—at any rate, they say so—that the next dividend will be higher than the usual 10s. per share. They are looking far ahead, for it is not due until March, and as the September dividend was only recently declared it is not easy to imagine on what grounds they foresee happenings six months hence. Still, gamblers must have some pretext for putting up the price, and this will do as well as any other.

Contango rates showed little change from those exacted at the previous settlement. Gold Fields were continued about ½ per cent. higher at 4½-5½ per cent., but on Modderfonteins it fell by 1 per cent. to 5-6 per cent., which was the charge on Rand Mines and Randfontein Estates. On others the contango was heavier at 6 to 7 per cent., East Rand Proprietary being a conspicuous exception with 3½-4½ per cent. In the Diamond group the rate on De Beers was 6-7 per cent., on Jagers 5-6 per cent., and on Premiers 5-7 per cent. Rhodesians, including Chartered, were generally carried over at 6 to 8 per cent., a slightly higher figure than last time. This was also the ruling charge in the West African and Egyptian markets. Once again there were givers of 7 per cent. on the majority of Westralian shares, but Great Fingalls were done at 3-5 per cent., Sons of Gwalia and Horseshoes at 4-6 per cent. and Kalgurlis at 5.7 per cent.

For the new account prospects in the Kaffir Circus look as black as ever, for no sooner does it open than the decline is resumed without abatement. If anything, business is less, if we can give it the name of business where little or nothing is done. Some in a desperate mood looked for a little rally, but have been disappointed. Not even the output for September, which is a comparatively good one taking into consideration the shorter month, has helped and cheered them. The dreariness is unrelieved, and it is still a sad prospect for operators for the rise.

Rhodesians, on the other hand, have been perkier, particularly Exploration shares, on the story of a promising land scheme. Rumour also says an extensive area of some 30 square miles has been acquired in the Tanganyika district, in which the Exploration is largely interested. A new company is to be formed forthwith, so gossip has it, but one would hardly deem this a propitious moment to float another large Rhodesian company. Anyway, it looks as if the insiders are preparing the way for something. Tanganyikas have likewise been good, and Bankets are a little better; in fact, there is more brightness in this market than there is in the Kaffir Circus.

The most active South African section is still the Diamond. It is the most interesting, too. De Beers have reacted after their big rise, the gamblers taking their profits, and it remains to be seen whether or not the ascent will be resumed. Jagers have been steady, but Premiers have not benefited from the dividend of 400 per cent. on the deferred shares. This is equal to 10s. per 2s. 6d. share, against a market estimate of 7s. 6d. It has come after a long suspension. The last declaration on the deferred was in March of last year, at the same rate as now. It was for the first half of the year 1904-5, but, greatly to the surprise of all, no final payment was made, the directors suddenly intimating that they wanted the money for capital purposes. The disappointment and chagrin were keen, justifiably so, and from that moment until now the price of the share has fluctuated incessantly. Often the ups and downs have been violent, for the "bull" and "bear" factions have constantly played with them. Instead of becoming a sound speculative share it is now a gambling counter pure and simple. All kinds of contradictory stories come from the other side, and the situation is so unsatisfactory, so obscure, that shareholders know not where they are from moment to moment.

West Africans and Egyptians are still inert and uninteresting, the movements in both sections from day to day being insignificant.

A very lively market has been in the West Australian. Interest in these has suddenly revived, and the leading shares have been advancing with one accord. This is based upon the news of promising developments in some of the mines. Kalgurlis have been in the van, but others, such as Golden Horsehoe, Great Boulder Props, Great Boulder Perseverance, Ivanhoe, and Hainaults have also shown unusual strength. At the record depth of 2,050 ft. for the Kalgoorlie field, diamond drilling in the property of the Great Boulder Proprietary has revealed 12 ft. of ore, assaying 12 dwts., and this is believed to be a hopeful indication of prospects at depth for all the mines. Colonial buying of the best shares has been considerable throughout the week, but there is little evidence that the public on this side are buying extensively. The market is still mostly in the hands of the professionals.

Rio Tintos in the Copper market have smartly risen on the dividend for the past six months at the rate of 50s. per share, which compares with 40s. for the two preceding half-years. This, however, was more or less discounted, but the rise was substantial all the same. The further rise in the price of copper has helped a little, but other shares have hardly responded. On the account Tintos made up ⅝ higher, Tharsis ⅛, and Cape Copper ⅛, but Anacondas lost ¼.

Indian shares continue firm, on the better news that still comes from the Colar gold field. One or two Mexicans have been bid for on a good report from the Mexico Mines of El Oro. The price of tin has weakened, and very little has been done in the Tin share market. Dolcoaths are, however, a trifle better.

Transvaal Gold Output for September.—It amounted to 505,111 ozs. in weight, of which 485,522 ozs. came from the Witwatersrand district and 18,589 from the mines outside. The value of the whole was £2,145,575, these figures showing decreases of 4,004 ozs. and £17,008 respectively. There was, however, some progress, if we make allowance for the shorter month, for the average per diem was 16,837 ozs., compared with 16,423 ozs. for August, an advance of 414 ozs. In comparison with the yield for the corresponding month of last year there is a considerable increase—viz., of 88,624 ozs. in weight and £376,451 in value. But the improvement has brought no renewed hope and life to the poor Kaffir Circus. Nor does the gain on the month seem commensurate with the nett increase of 1,612 in blacks at a total of 77,858, which possibly does not include those employed by the Robinson group of companies.

Consolidated Mines Selection.—Just a year ago this concern, which had met with a fair measure of success in years gone by, amalgamated with Messrs. A. Dunkelsbühler and Company, a South African firm with which it had been intimately connected. This necessitated the doubling of the nominal capital to £1,200,000, and at the same time an issue was made of £400,000 5 per cent. debentures, convertible into shares. Owing to the depression in the South African market during the financial year to June 30 the results are very poor and disappointing, and do not realise the hopes cherished at the time of the fusion. Income was comparatively tiny, consisting of £7,804 profit realised on the sale of shares, £21,100 from interest and dividends and £125 from transfer fees. These receipts are swollen by the transfer of £34,176 from the reserve and adding £11,856 from the previous accounts, the aggregate is £75,062. Outgoings total £60,387, including £10,000 for debenture interest and £20,757 written off sundry investments. But this sum conveys no adequate idea of the loss represented by depreciation. Owing to the acquisition of fresh assets taken over at the amalgamation sundry property and investments—a composite entry—now stand at £1,343,487, and with the exception of £96,578 represent South African interests. These are valued at cost, but on the basis of the market prices at the end of June show a depreciation of £311,990. The directors, however, believe this loss is not permanent, so they have not made provision for it. This seems too sanguine an opinion, for the paper must have depreciated considerably since June and the outlook is as hopeless as ever. Anyway, they have to regret they cannot pay a dividend against the 10 per cent. distributed in the previous year. Cash amounts to £204,038 and debtors owe £166,345, which considerably exceed the current liabilities.

Cloverfield Mines.—The directors, much to the surprise of shareholders and other simple-minded folk, have decided to stop operations. This company was only shaft-sinking, and hoped to get down to the reef in due time, but, as briefly intimated in the cable from the head office, this work is suspended, "in view of the uncertainty of future labour conditions," and in order to husband the financial resources. One cannot be very deeply impressed with the first plea, but one can easily imagine how desirable it is to eke out cash when it is so terribly difficult to get more. As for the future of labour, that really seems to us more hopeful than ever now that the Government has taken the matter energetically in hand. Greater efforts are being made to extend the area of recruiting, and there is every prospect of increasing the supply of blacks. Still, it would not do bluntly to say many things obvious to the feeblest intelligence. This company cannot employ any considerable amount of labour, and the directors do not say they have an insufficiency at present. They are projecting their minds into the distant future, and are making preparations for what may possibly happen years hence. If there is any uncertainty about the future, it must be partly imaginary and partly designedly created by the magnates generally. Only a fortnight back Mr. J. B. Robinson let the world into the inwardness of the situation, revealed to us how barriers are erected by the recruiting agencies, which the independent, like himself, find it so difficult to surmount. In the case of the Cloverfield we can understand how disturbing it must be to see money continually going out, none coming in, and the public indisposed to part with cash. Is there not the likelihood that eventually the whole of the working capital resources of this particular company will be exhausted, and none left wherewith to pay directorial fees? That would be terrible. Far better to cease work altogether, dismiss employees, and let shareholders wait all the longer for possible returns.

United South Africa Association.—Shareholders have just cause to feel dissatisfied with the results of the past year, and with the policy of the directors. Twelve months ago by dividing right up to the hilt the directors distributed 3s. per share, although the company had only just wiped off a large debit. Instead of another dividend forthcoming, the whole of the profit earned—£30,075—is utilised for depreciation of sundry shares held. In fact, as much as £42,400 has to be provided, so once again the balance-sheet carries a big deficit. Unfortunately,

this is not the extent of the loss, for the directors do not consider that the freehold and leasehold properties, claims and interests in claims, standing in the books at £109,352, are worth this figure, "and they are of opinion that unless some favourable developments occur the question of writing off a substantial portion of this amount will have to be considered later on." On the other hand, it is pointed out, the company's holding in the Premier Diamond mine still stands at cost, and shows a large unrealised profit. The principal losses seem to have been incurred in connection with tin mining, which should come as an additional warning to investors generally, for the experience here confirms the opinions we have frequently delivered upon this so-called industry. Developments on the properties in which the association is interested have been very disappointing, the report confesses. Since the close of the financial year Mr. W. E. Bleloch has resigned his position as one of the company's managers in Johannesburg, and it is intended considerably to curtail expenditure on prospecting operations. So altogether there is very little comfort for shareholders.

Nigel Gold Mining Company.—Better returns were again made by the Nigel Gold Mining Company in the twelve months ending June 30, when the quantity of ore crushed was 82,309 tons against 70,149 tons. At the same time, the yield per ton improved from 45s. 5d. to 46s. 2d., while costs were reduced from 30s. 7d. to 28s. 11d. per ton, raising the average profit to 17s. 3d. per ton. Gross receipts were nearly £30,000 higher at £197,412 and expenses, taxes, &c., £18,414 lower at £136,637, accordingly the net profit rose from £42,240 to £60,775. The two dividends paid aggregated 35 per cent. compared with 25 per cent. in 1904-5 and 20 per cent. in 1903-4, showing steady progression. An extra five stamps came into operation in the latter half of the past financial year, and this accounted for the increase in the tonnage milled. There was likewise an appreciable advance in the ore reserves, which at the end of June totalled 394,945 tons compared with 345,435 tons, sufficient to last the present battery over four years. So it is proposed to increase the equipment. As regards developments the chairman, in his address at the annual meeting, recalled that it had been his privilege to follow the opening-up of the Nigel mine from its earliest days to the present time, and believed the mine looked more promising than at any previous period of its existence. This company has a fairly long life before it, and may do better than in the past.

York Gold Mining Company.—It is no surprising fate that has inevitably overtaken the York Gold Mining Company; the only wonder is that the step now advised was not taken years ago, before more cash was dissipated in hopeless operations. Originally, it was the miserable Emma Company, and took its new name in the reconstruction of 1895. It was again reconstructed three years later, and after doing a little crushing in 1898 and 1899 this had to be stopped when the war broke out. Work has been suspended ever since. So a meeting has been held in Johannesburg this week to consider the advisability of winding up the concern, and authorising the liquidators to sell the property and assets either by private contract or public auction.

Roberts Victor Diamonds.—It looks as if this diamond mining company, a subsidiary of the Africa and European Investment, will meet with a fair measure of success. The return of diamonds for the month of September was small owing to an accident to the machinery. But the total output to date reaches 11,957 loads washed, yielding 8,327 carats, equal to 69.80 carats per 100 loads. It is said the stones are of exceptional quality, the first parcel sold realising £3 15s. per carat. Rumours have been in circulation in Johannesburg recently to the effect that the company's title to its property is defective, but an official denial is now given to them. The title, says the secretary, is in perfect order.

Rio Tinto Company.—In announcing the dividend of 50s. per share for the six months to June last the directors in a circular give some brief particulars of the operations during the current year. Deliveries of pyrites in the United Kingdom have so far been below those of 1905, but the Continental and United States consumption is higher. The sale of non-cupreous sulphur ore is largely in excess of that for the previous year, whilst the quantity of refined copper produced will probably show an increase. In the first half of the year the ore mined was of about the same quality as that obtained in 1905, but this year's output will likely be greater. Better prices have been obtained, and probably here is the source of the higher dividend. In the opinion of the directors, these high prices will continue, as the consumption throughout the world "increases at an even more rapid rate than the output of copper." This, of course, is a matter of opinion, for some experts say there is considerable manipulation going on.

Broken Hill Proprietary Company.—Notwithstanding the outbreak of fire in a neighbouring mine, this company again had a good time of it in the half-year to May 31, the profit showing an increase of £35,373 over the preceding six months, the profit per ton of gross ore treated averaging £1 0s. 2d. against 12s. 10d. The total output of silver was 2,202,364 fine ozs. compared with 2,896,585 ozs. and the average price 2s. 8d., an advance of 2d. Soft lead produced amounted to 27,865 tons against 34,479 tons, the price rising from £12 10s. 2d. per ton to £14 18s. The gross profit totalled £253,473 and the nett profit £232,332 after allowing £21,141 for depreciation. Two dividends of 1s 6d. each and a bonus of 1s. per share, absorbing £192,000, were distributed. A sum of £20,691 was spent on construction, of which £4,305 was on account of the zinc plant, £2,045 for the pottery plant, £7,184 for plant and machinery, with the balance distributed in other directions. To the reserve fund £25,000 is added, bringing it up to £175,000. The insurance fund, however, stands at £16,000, a total reserve of £191,000, but the directors say they propose to increase it to £225,000 by transferring a further £25,000 to the reserve account and £9,000 to the insurance fund. This company's splendid balance-sheet leaves nothing to be desired; it discloses a remarkably strong position.

Nerchinsk Gold Company.—In a circular to the shareholders the secretary gives a summary of events from the trial crushing at the Kluchi mine up to last July. After a short suspension of operations crushing was resumed in the third week of November of last year, and has continued with little interruption. It is said that a considerable amount of development work has been done, and has proved the value of the Kluchi mine. But in order to conduct operations on a dividend basis it is necessary to provide adequate working capital. Negotiations to this end are now pending, and the directors hope to announce their result shortly. So soon as this money is got the directors intend to develop other gold-bearing reefs on the concession.

Caucacus Copper Company.—During the financial year ending May 31 (Russian style) or June 13 (English style) no copper was produced, as smelting operations ceased on September 2, 1904. A 500-ton plant is being erected at the property, but some delay has arisen through a general strike. It is expected that a substantial part of the plant will be in active operation about the end of the present year

TRADE AND PRODUCE.

Wheat.—The London market has been dull all the week, yet prices do not show much change, in spite of the fact that holders of cargoes were prepared on one day to accept lower rates. Buyers did not respond and the temporary weakness vanished notwithstanding the absence of business, though at the close of the week the market was steady. In the provinces the firm attitude comparatively speaking of holders of foreign wheat has naturally reacted on farmers and deliveries are in consequence somewhat smaller while prices are slightly up. This is shown by the farmers' deliveries, which last week totalled 87,200 qrs. averaging 26s. 1d. compared with 89,579 qrs. averaging 26s. 9d. in the corresponding week of last year. Imports of wheat amounted to 319,223 qrs. and of flour 115,567 qrs. as against 214,247 and 102,367 respectively in the same week of last year. In the States there are rumours afloat of a big corner, but so far it has not yet materialised. Fine weather, bearish European advices, increasing receipts from the North-West and large stocks in Manitoba have all tended to repress so far any serious attempt to capture the market. Bradstreet's estimate of wheat in sight east of the Rockies was 61,154,000 bushels against 56,967,000 last week and 35,443,000 a year ago, and this by itself increased offerings, which were practically all taken by large interests, so perhaps there may be more lively times to come, especially for the "bulls."

Wool.—The immediate effect of the high range of values at the recent colonial wool auctions has been to restrict buying, as consumers are not prepared to pay big prices for raw material while those for the manufactured article remain comparatively low. For the moment, however, the dearer fleeces have not made much impression upon the manufacturing end and nearly everywhere mills are fully employed, though a great deal of the work turned out is of medium or low-grade quality, the prices for which it is impossible to raise in accordance with the fluctuation in wool values. For the auction commencing on November 27, the sixth of the series, 7,879 bales are on hand, 4,000 having been sent direct to Yorkshire, the Continent and elsewhere. Considerable interest is already being taken in the probable course of these sales, since it is clear that the supply of good combing descriptions will barely suffice to meet the year's consumption, and the hope at one time entertained of entering on the new Australian clip at a lower level may not be realised.

Linen.—Fair supplies of flax have been on offer recently, and whenever lots were of a choice description fancy prices were paid. No material alteration has taken place in the yarn market, except perhaps that spinners show more caution than ever as their commitments are abnormally heavy, and conditions are imposed and accepted regarding the delivery of the new contracts that were absolutely unheard of even so recently as a few months back. Foreign spinners have again taken the lead, and still further progress has been made in the withdrawal of prices. Therefore, as the *Linen Market* observes, a pause would certainly seem beneficial. With regard to linens there is little fresh to report. Business all round keeps brisk, and with new orders about balancing the current output the position of producers is one of steadily increasing strength. Indeed, taking into consideration the forward orders on hand, the new business placed week by week, and the certainty of a good autumn trade, it is many a long year since the linen industry has been in such a flourishing condition as it is to-day. Competition owing to Continental manufacturers being in a similar position as our own has been reduced to a minimum, and the current business in the cotton trade is also decidedly better than last year. Prices might certainly be higher, but at the same time they are in a very reasonable position, and will almost certainly move up before the close of the year. Therefore, taking it all round, prospects are decidedly cheerful, and the immediate future promises even better than the present.

Cotton (from our Manchester correspondent).—We have experienced a healthy and strong market throughout the past week.

In various directions a steady business has been done in both cloth and yarn. Hardening of the raw material in Liverpool has continued, and although the higher prices quoted are difficult to work, yet some sellers of cloth have not done at all badly. The market is healthy in practically all quarters. The fluctuations in American cotton have rather disturbed things, and buyers hardly know what to do, but the inquiry from abroad is of such a character that a number of transactions are arranged from day to day. Manufacturers on the whole have continued firm at current quotations. The margin of profit, however, at the moment is scarcely so satisfactory as compared with the orders which are now being executed. The strong position of American yarns is very much against those manufacturers who use bought yarn. In piece goods for India a steady trade has been done, Calcutta providing numerous orders. Buyers for Madras have also been fairly active, and the business all round for our Dependency is encouraging to sellers. Very little improvement can be recorded of the business coming round for China. Offers are occasionally mentioned, but very little headway can be made in booking orders. The minor markets of the Continent continue healthy, and a steady trade has been done in a miscellaneous class of goods. In some cases, however, the stiff attitude of manufacturers and the long delivery which has to be given have restricted operations. The South American markets have also been fairly active. Printing cloths have moved off a little better in some quarters, but most sellers have had to be satisfied with a reduced margin of profit. T-cloths and Mexicans are about the strongest thing in the cloth section. Prices are now looked upon as dear, and buyers hesitate before purchasing freely. In coloured woven goods and sateens a steady trade has been done. In the home trade houses a healthy demand continues from the country, and considerable pressure is being experienced from retailers for deliveries. Just recently a rather increasing trade has been done in dyed goods, wholesale clothiers giving out fair orders for the spring. American yarns for home use are very strong indeed. In practically all counts and qualities prices are very firmly held, and spinners only sell at a wide margin of profit. The medium numbers of weft are still scarce, looms being stopped in some districts for lack of supplies. Ring beams and warps are deeply engaged, and difficult to be obtained for early delivery. Coarse weft continues to do much better, and most producers have extensive engagements. In export yarns a fair trade transpires for various markets in different qualities. Cops for the Continent have moved off fairly well. In Bolton spinnings the position of producers is much stronger than a short time ago, and a healthy trade has been put through at full prices. Producers of doubling wefts are in a very strong position.

In New York the cotton market opened with an easy tendency from 15 to 19 points lower, but subsequently it became much firmer at an appreciable advance, on forecasts of frost in the south-west. Though shorts were eager to cover the rise was checked by realisation on the part of spot interests. A recovery came and the market developed strength and maintained this condition up to the close.

Coal.—Notwithstanding the mild weather the advance in domestic coal has not curtailed business, which is very active in all directions. Steams also continue satisfactory for both home and foreign consumption. The Baltic ports are still receiving heavy deliveries from Hull and Grimsby and in the North large orders are still on hand for the Continent generally and for Germany in particular, and prices go steadily up. The outlook in Wales is considered better than it has been for two or three years past. Prices for contracts for next year are 2s. or 2s. 6d. higher, and during the last nine months Cardiff's increase in exports to foreign countries has been 1,148,248 tons, and coastwise 95,084. Newport has increased 319,712 foreign and Swansea 512,145.

Copper.—Business on nearly every day this week was brisk and prices consequently have continued to move upwards, until it now seems only a question of a very little time before the £100 is reached. American quotations for spot and near dates are regarded as little better than polite fictions, since the leading producers there claim to have sold their output for months ahead, and if this be true there are hard times coming for those unhappy consumers who thought copper too dear at £50 and £60. The metal has continued in good demand right up to the close and final values are well higher at £97 10s. cash and £97 5s. three months.

Tin.—Eastern advices had an easier tendency during the early part of the week, and quotations here fluctuated in consequence within fairly narrow limits. Holders, however, maintained a firm attitude on the whole, and this rendered business dull at times. Towards the close of the week quietness as a rule prevailed and quotations are £195 5s. for cash and £194 three months.

Iron and Steel.—The iron and steel market is still very strong. In Middlesbrough there is a brisk demand for Cleveland pig-iron for forward delivery at an appreciable advance. Cleveland warrants have risen to the highest quotation for six months. There is likewise in the same quarter a steady inquiry for foundry and forge iron. The demand is not so strong for East Coast hematite pig-iron as it is for Cleveland iron, and prices have not improved so rapidly. In some cases makers have raised their quotation for mixed numbers East Coast hematite to 70s.; but 69s. 6d. is as much as consumers will pay, and it is difficult even to get this. Thus there has been rather a marked contrast between the state of the Cleveland and hematite iron markets. In spite of the increased production the stocks in Connal's warrant stores have declined to 594,968 tons, a decrease on the month of 3,087 tons. For manufactured iron and steel the demand has been quieter in several branches, and while contracts on the books are plentiful enough to keep the mills going regularly in most cases, new orders are not readily forthcoming. Notwithstanding the strike on the Clyde, business in Scotland is in a satisfactory condition.

Tea.—An increase of no less than 20 million lbs. has taken place in the total deliveries since the beginning of the year, says Messrs. W. J. and H. Thompson's circular. Re-exports have been particularly satisfactory, Rusia alone having taken nearly 4,000,000 lbs. more than in 1905, and as to imports they are some 11 million lbs. ahead. Taking advantage of the activity importers catalogued 51,407 packages of Indian for auction this week, and the market still showed some improvement upon last advances. The best liquoring Assam were perhaps in most request, but medium and common also advanced ¼d. to ½d. per lb., and the average for the week on 45,171 packages sold came to 8.26d. against 7.78d. last week and 8.17d. a year ago. Ceylon had a smaller auction of 16,004 packages and prices advanced further, about ¼d. to ½d., the average price coming to 8.35d. against 8.27d. last week and 7.71d. last year. Javas were few, only 1,094 packages being brought forward, but these sold at rather better prices.

Sugar.—The market has fluctuated between 9s. 5¼d. and 9s. 6¾d. for May delivery since last Thursday, says Mr. Czarnikow, the improvement being due to fears of a river strike on the Elbe and to crop reports issued by Licht of 5 to 10 per cent. less roots per acre, O. Licht giving a figure of 2,065,000 tons production for Germany, which was below general estimates. On the other hand, the Russian Government estimates stocks on September 1 at 122,000 tons, and the coming crop at 1,345,000 tons raw, which is a yield above the average, and has caused some surpsise. The estimate for Austria is considered high, and for France low; the shortage in Convention countries is very serious, so that our deliveries must fall off considerably if we mean to keep up a fair working stock. It is, however, still too early to place much reliance upon the estimates even of crop experts. September figures are only partly to hand, United Kingdom consumption being rather moderate, as expected; stocks have gone down 27,000 tons, the same as last year, but our imports remain so small that a further reduction during October must be looked for. The trade here has been again rather slow, as shown by very reduced imports, and as long as a premium is quoted for ready sugars it is natural that buyers should operate strictly for immediate wants. Refiners complain of slack demand, and only bought early sugars at 9s. 6d. to 9s. 6¾d., and a few prompt 78 per cent. seconds at about 8s. to 8s. 1½d. The American market has remained inactive at former quotations of 4 cents, equal to 10s. 7½d. c.i.f., 96 cents, and 9s. 6¾d. f.o.b. Hamburg, but with moderate arrivals and large meltings stocks have further decreased. Landings in the three ports were 36,000 tons; meltings 48,000 tons; stocks 174,000 tons.

Answers to Correspondents.

J. N.—(1) The fact that the stock hangs round about its present level is due to general influences rather than to anything in the stock itself, and we are still of opinion that it is a good security. (2) This also is a very fair investment security suffering from the same influences.

W. P.—We are disposed to say yes. The market seems to have touched bottom for the present and we may see some revival of activity with good results on prices.

S. (Leeds).—We regret we cannot answer your question, as no data are available on which to calculate such percentages as you desire. It is impossible to estimate the lives of the mines on this particular field, and as the value of the ore fluctuates a great deal no forecast can be made of future dividends. The formation is not so uniform as that on the Rand.

P. V. D.—You might hold on. As we said last week, the general managers are hopeful of an improvement in depth, and there is the possibility of their being right. The difference calculated by the writer of the letter has apparently disappeared in the revaluation of the ore reserves, which have not yet been treated.

North.—We have a poor opinion of this company's prospects and cannot advise a purchase of the shares, nor averaging.

L. B. A.—It is not possible adequately to explain why one share falls more heavily than another when the general cause is market dulness. One may be "beared" more vigorously than another, and this may account for the big decline in the share you mention. We have heard of no particular trouble in the mine itself, but the non-payment of the dividend did not make a good impression. And there is the doubt as to the policy the directors will in future adopt. Still, we should neither sell in the present market nor buy more. We have put balance to your credit.

T. A.—(1) Prospects are looking better, and some people expect higher dividends, but this the market has already discounted. (2) We do not think they are worth their price on merits. They have been hoisted with Yankee things generally, and the tendency is more likely to be downwards than upwards. (3) Future dividends are very doubtful. It is impossible to forecast when they will be paid, or what amount they will be when paid. Thus the shares are more speculative than most. (4) Any one of the three is worth buying as a fair speculative investment. Prospects are highly spoken of by officials and independent experts. (5) We look upon the venture as a highly speculative one. (6) Yes, they seem a promising purchase at the lower price and on more hopeful prospects.

MINING RETURNS.

Abbontiakoon Block 1.—Treated 5,800 tons, 3,061 ozs.

Abosso.—Crushed 3,483 tons, 1,950 ozs.; cyanide 2,965 tons tailings, 705 ozs.; total, 2,655 ozs.

African Gold Dredging and Mining Concessions.—No. 1 dredger 401 ozs.

Akrokerri (Ashanti).—Crushed 2,410 tons, 1,806 ozs. by amalgamation; assay tailings, 3 dwts.; 1,320 tons sands by cyanide, 99 ozs.; total, 1,905 ozs.

Alaska Mexican.—Crushed 21,247 tons ore, value $33,062; saved 324 tons sulphurets; value, $24,057.

Alaska Treadwell Gold.—Crushed 90,580 tons ore, value $90,788; saved 1,720 tons sulphurets, value $85,364.

Alaska United.—Crushed 21,140 tons ore; value $22,216; saved 316 tons sulphurets; value $10,071.

Angelo.—Tons milled 25,000, 6,628 ozs.: tons sands 18,517, 3,881 ozs.; tons slimes, 10,214, 1,703 ozs.; total, 12,212 ozs.

Antenior (Matabele).—1,260 tons, 498 ozs.; cyanide 700 tons, 113 ozs.

Ashanti Goldfields.—Obuasi: Crushed 4,585 tons, 3,265 ozs. Accumulated tailings.—Obuasi 137 ozs.; Ayeinm 132 ozs.; total, 3,534 ozs.

Ashanti Goldfields Auxiliary.—Gold recovered 397 ozs.; value £1,588.

Associated.—Milled 9,018 tons ore; treated 3,775 tons slimes; yield £18,497.

Associated Northern Blocks (W.A.).—Milled 3,470 tons; treated 416 tons slimes; yield £15,548.

Associated Queensland. — Kulamadau: 350 tons, 230 ozs.; 1 North Oriental: 604 tons, 674 ozs.

Ayrshire.—1,079 ozs. from 6,916 tons crushed; 719 ozs. from 6,120 tons cyanided; 668 tons reserve tailings cyanided.

Bernheim (Mazoe).—Crushed 1,400 tons, 572 ozs. (equals 8.17 dwts. per ton); tailings assay, 3 dwts. per ton.

Bibiani.—Crushed 3,389 tons, 1,719 ozs.; 4,250 tons tailings by cyanide, £3,787.

Bonanza.—Crushed 4,550 tons, 1,306 ozs.; cyanide and slimes 5,193 tons, 1,148 ozs.; total, 2,454 ozs.

Brilliant Block.—Crushed 515 tons, 166 ozs.; residues, tailings, and concentrates value £1,100.

Briseis Tin.—Black tin clean up, 87 tons 6 cwt.; No. 1, 30 tons 11 cwt.

British Broken Hill Proprietary.—1,792 tons crude ore produced 255 tons concentrates containing 161 tons lead and 6,630 ozs. silver.

Broken Hill Proprietary.—Fine silver, 327,784 ozs.; soft lead, 4,858 tons; antimonial lead, 69 tons.

Broomassie.—Crushed 1,110 tons, 1,230 ozs.; 5⅞ tons concentrates of an assay value of £29 13s. per ton.

Burbank's Main Lode (1904).—Crushed 740 tons, 550 ozs.; 690 tons by cyanide, 116 ozs.; totals, 666 ozs.

Burma Ruby.—170,000 loads washed, producing rubies value Rs.131,000; royalties Rs.23,000.

Cape Copper.—Ookiep, 1.003 tons of 17 per cent., equal to 170 tons fine copper. Nababeep, 4,053 tons of 4 per cent., equal to 162 tons fine copper.

Cason.—Milled 34,150 tons, 9,525 ozs.; sands 28,179 tons, 4,333 ozs.; slimes 12,459 tons, 2,995 ozs.; total 16,783 ozs.

Chillagoe.—Totals, 1,737 tons copper ore and 1,677 tons lead ore; producing 399 tons copper matte and 317 tons lead bullion, containing 159 tons copper, 317 tons lead, and 44,054 ozs. silver.

Chinese Engineering.—Output, 20,500 tons; sales, 18,000 tons; consumption, 1,275 tons.

City and Suburban.—Crushed 24,500 tons, 9,883 ozs.

Clitters United.—Ore treated 1,492 tons; mineral sold or on hand, tin and wolfram, 20 tons 4 cwt.

Consolidated Langlaagte.—Treated 19,071 tons, 6,461 ozs.

Consolidated Main Reef.—Crushed 17,934 tons, 3,903 ozs.; sands and concentrates by cyanide 17,934 tons, 2,389 ozs.; total, 6,272 ozs.

Crown Deep.—Crushed 30,030 tons, 7,776 ozs.; sands by cyanide 19,200 tons, 2,708 ozs.; slimes 10,182 tons, 655 ozs.; total, 11,139 ozs.

Croydon Consols.—Papuan Brilliant, 512 tons for £2,289; Golden Gate Consols, 995 tons for 4,040 ozs. gold.

Crown Reef.—Crushed 19,920 tons, from mill 6,617 ozs.; from sands and concentrates 2,636 ozs.; from slimes (current and accumulated), 1,274 ozs.; total, 10,527 ozs.

De Lamar.—Crushed 1,041 tons, yielding $11,500.

Driefontein.—Milled 19,000 tons, 3,965 ozs.; sands 13,103 tons, 1,958 ozs.; slimes 4,739 tons, 563 ozs.; total, 6,486 ozs.

Duff Development.—Recovered 156 ozs.

Durban Roodepoort.—Quartz milled 10,630 tons, 3,401 ozs.; tailings 6,800 tons, 827 ozs.; slimes 3,605 tons, 238 ozs.; total, 4,466 ozs.

Durban Roodepoort Deep.—Crushed 10,512 tons, 2,855 ozs.; sands by cyanide 6,878 tons, 629 ozs.; slimes 3,678 tons, 249 ozs.; total, 3,733 ozs.

Durham Prospect Gold.—Crushed 900 tons, 301 ozs.

East Gwanda. — Crushed 4,762 tons, 2,430 ozs.; concentrates 212 tons, 762 ozs.; Geelong cyanide, 3,400 tons, 220 ozs.; total, 3,412 ozs.

Etruscan Copper.—Value of copper £3,750.

Ferreira.—Crushed 20,400 tons, 8,564 ozs.; sand 14,560 tons, 3,402 ozs.; slimes 7,777 tons, 965 ozs.; total, 12,931 ozs.

Ferreira Deep.—Crushed 21,998 tons, 8,980 ozs.; sands by cyanide 15,200 tons, 3,100 ozs.; slimes 6,578 tons, 656 ozs.; total yield, 12,736 ozs.

Fremantle Smelter.—Shipped 49 tons lead bullion, containing 1,350 ozs. gold and 2,000 ozs. silver; also 3½ tons metallic copper, containing 300 ozs. gold and 40 ozs. silver.

French Rand.—Crushed 17,700 tons, 3,972 ozs.; tailings and slimes 17,794 tons, 2,381 ozs.; total, 6,353 ozs.

Gaika Gold.—Crushed 1,349 tons, 664 ozs.

Geldenhuis Deep.—Crushed 29,300 tons, 6,759 ozs.; sands by cyanide 18,102 tons, 2,897 ozs.; slimes 9,480 tons, 574 ozs.; total, 10,230 ozs.

Geldenhuis Estate.—Crushed 16,860 tons, from mill 4,439 ozs.; from tailings by cyanide, 2,047 ozs.; from slimes, 707 ozs.; total, 7,193 ozs.

Giant.—Treated 4,320 tons, 2,294 ozs.

Ginsberg.—Treated 7,376 tons, output 2,339 ozs.

Glen Deep.—Crushed 18,780 tons, 4,152 ozs.; sands by cyanide 12,450 tons, 2,114 ozs.; slimes 6,268 tons, yield 500 ozs.; total, 6,766 ozs.

Glencairn Main Reef.—Crushed 16,100 tons, 4,624 ozs.

Globe and Phœnix.—Crushed 6,897 tons, 3,103 ozs.; tailings, average assay value per ton, 2·88 dwts. fine gold; cyanide, 4,000 tons, 489 ozs., equal to 1.89 dwts. fine gold per ton; total, 3,592 ozs.

Golden Gate.—South Glamire, 1,352 tons, 541 ozs.; No. 1 South Great Eastern, 201 tons, 129 ozs.

Golden Horseshoe.—Treated 20,235 tons, 12,204 ozs.

Glynn's Lydenburg.—Results for Sept.: Crushed 2,200 tons, 479 ozs.; cyanide, 1,504 tons, 609 ozs.; slimes, 696 tons, 272 ozs.; total, 1,360 ozs.

Great Boulder Perseverance.—Treated 14,671 tons, for 6,689 ozs. fine gold and 726 ozs. fine silver.

Great Boulder Proprietary.—Treated 12,206 tons, 11,829 ozs.; tailings (old), 2,471 tons, 440 ozs.; total, 12,269 ozs.

Great Fingall.—Ore 21,485 tons, 4,036 ozs.; tailings by cyanide 22,951 tons, 3,146 ozs.; concentrates 397 tons, 2,252 ozs.; total, 9,434 ozs.

Hainault.—Crushed 4,821 tons, 1,653 ozs.

Hannan's Reward and Mount Charlotte.—Crushed 2,050 tons, 435 ozs.

Ivanhoe.—Crushed 17,000 tons, 2,737 ozs.; sands 8,050 tons, 1,802 ozs.; slimes 7,350 tons, 2,506 ozs.; concentrates 1,600 tons, 3,029 ozs.; total, 10,074 ozs.

Jubilee.—Crushed 5,495 tons, 1,257 ozs.; cyanide 4,018 tons, 612 ozs.

Jumbo Gold.—Crushed 1,679 tons, 1,066 ozs.; cyanide 873 tons, 346 ozs.

Jumpers.—Crushed 10,849 tons, 3,288 ozs.; tailings by cyanide 1,501 ozs.; slimes 353 ozs.; total, 5,142 ozs.

Jumpers Deep.—Crushed 18,941 tons, 4,369 ozs.; sands by cyanide, 12,040 tons, 1,636 ozs.; slimes, 6,900 tons, 486 ozs.; total, 6,491 ozs.

Kelantan Gold.—Recovered 138 ozs.

Kelly's Queen Block.—Treated 1,082 tons; value, including residues, £3,300.

Killarney Hibernia.—Crushed 4,075 tons, 1,463 ozs.

Knight's Deep.—29,731 tons, 10,619 ozs.

Lake View Consols.—Treated 11,358 tons, 3,553 ozs.

Lancaster.—Crushed 15,083 tons 2,932 ozs.; cyanide 10,504 tons, 1,486 ozs.; cyanide gold includes by-products containing 22 ozs.; total, 4,478 ozs.

Lancaster West.—Crushed 6,473 tons, 1,305 ozs; cyanide treated 5,419 tons, 803 ozs.; cyanide gold includes by-products, containing 5 ozs.; total, 2,108 ozs.

Langlaagte Deep.—Crushed 21,625 tons, 5,199 ozs.; sands by cyanide 13,462 tons, 2,153 ozs.; slimes 7,126 tons, 328 ozs.; total, 7,680 ozs.

Langlaagte Estate.—Ore crushed 28,248 tons, 5,376 ozs.; concentrates, cyanide 600 tons, 930 ozs.; tailings, cyanide 17,550 tons, 1,860 ozs.; slimes 13,030 tons, 1,157 ozs.; total, 9,323 ozs.

Le Roi.—Shipments 11,880 tons, containing 4,400 ozs. gold, 6,100 ozs. silver, 221,350 lbs. copper.

Luipaard's Vlei Estate.—Crushed 18,800 tons, 2,593 ozs.; tube mill, 565 ozs.; cyanide, 10,188 tons, 1,462 ozs.; slimes, 3,612 tons 207 ozs.

Matabele Reefs.—Banket.—Crushed, 2,102 tons, 615 ozs. Alice.—On tribute, crushed 550 tons, 192 ozs.; wolframite output, 3¾ tons; wolframite shipments, No. 3 consignment, 6 tons despatched. Diamonds.—660¼ carats received from Somabula Fields, and realised £2,726.

May.—Crushed 13,700 tons, 3,391 ozs.; cyanide 9,895 tons, 2,160 ozs.; slimes 4,074 tons, 309 ozs.; total, 5,860 ozs.

Meyer and Charlton.—Crushed 12,160 tons, 2,225 ozs.; cyanide, 3,740 ozs.; all sources, 5,965 ozs.

Mills' Day Dawn United.—Crushed 2,055 tons, value, including residues, of £10,000.

Montana.—Drumlummon: Mill clean up $1,000; treating 3,424 tons tailings and fines value $8,000; total represented by 370 ozs. gold and 3,270 ozs. silver $9,000. Lucky Girl, Nevada—Crushed 1,850 tons, producing bullion bars and cyanide precipitates represented by 650 ozs. gold and 650 ozs. silver; value $13,500.

Morven (Rhodesia).—Crushed 1,623 tons, 477 ozs.; 1,086 tons tailings by cyanide, 105 ozs.

Mount Boppy.—Clean-up from 6,630 tons, 1,218 ozs.; cyanide 4,314 tons, 1,564 ozs.: slimes 2,112 tons, 1,002 ozs.; concentrates 25,200 ozs.; total, 3,984 ozs.

Mount Morgan (Queensland).—Chlorinated 18,576 tons, 9,785 ozs.; Blister copper 277 tons.

Mount Zeehan.—700 tons silver-lead ore, containing 250 tons lead and 20,000 ozs. silver.

New Comet.—Milled 20,250 tons, 4,087 ozs.; sands 13,797 tons, 2,876 ozs.; slimes 6,466 tons, 784 ozs.; total output, 7,747 ozs.

New Goch.—2,609 ozs. from 20,604 tons crushed; 4,342 ozs. cyanide; 6,951 ozs. all sources.

New Heriot.—Ounces, 4,281; tons crushed, 9,200.

New Kleinfontein.—Milled 32,012 tons, 8,284; sands 22,313 tons, 3,290 ozs.; slimes 9,196 tons, 637 ozs.; total, 12,211 ozs.

New Modderfontein.—Crushed 19,000 tons, 5,151 ozs.; tailings 10,566 tons, 1,139 ozs.; total, 6,290 ozs.

New Primrose.—7,232 ozs., 15,022 tons treated.

New Queen Gold.—Crushed 503 tons, 407 ozs.; £450 from 876 tons cyanide; concentrates, £330; from public crushing, £225.

New Rhodesia.—Ophir: Crushed 1,403 tons, 534 ozs. Imani: Tributors 781 ozs.

New Rietfontein.—Treated 16,969 tons, 8,675 ozs.

New Unified Main Reef.—8,447 tons, 2,566 ozs.

New Zealand Crown.—Crushed 1,974 tons ore, value £4,727.

Nigel Deep.—3,641 tons, 1,656 ozs.

Nigel Gold.—Crushed 7,800 tons, 3,799 ozs.

No. 2 South Great Eastern.—5,210 tons for 1,750 ozs.

Northern Broken Hill.—Plant treated 1,720 tons crude ore, producing 315 tons concentrates containing 222 tons 14 cwts. lead and 5,040 ozs. silver.

North Randfontein.—Ore crushed, 15,403 tons, 3,476 ozs.; concentrates, cyanide, 1,425 tons, 453 ozs.; tailings, cyanide, 8,820 tons, 1,673 ozs.; slimes, 448 tons, 536 ozs.; total, 6,138 ozs.

North White Feather.—Mill crushed 850 tons, 412 ozs.; cyanide, 598 tons, 51 ozs.; total, 463 ozs.

Nourse.—Crushed 28,410 tons, 7,594 ozs.; sands by cyanide, 17,857 tons, 3,266 ozs.; slimes, 9,659 tons, 828 ozs.; total, 11,688 ozs.

Oroya Brownhill.—Crushed 10,640 tons, 12,293 ozs.

Pena.—Output of ore, 14,606 tons; shipments of ore, 11,645 tons; about 84 tons fine copper in precipitate produced.

Penhalonga.—Crushed 7,500 tons, 807 ozs.; concentrates, 150 tons, 770 ozs.; total, 1,577 ozs.

Porges Randfontein.—Crushed 14,321 tons, 4,054 ozs.; concentrates, cyanide, 1,063 tons, 514 ozs.; tailings, cyanide, 8,568 tons, 1,310 ozs.; slimes, 4,202 tons, 336 ozs.; total, 6,214 ozs.

Princess.—Crushed 7,514 tons, 2,532 ozs.; cyanide, 5,421 tons, 970 ozs.; total, 3,502 ozs.

Queensland Copper.—Treated 1,203 tons; production, 230 tons matte, containing 130 tons fine copper.

Raub Australian.—Crushed 5,440 tons, 880 ozs.

Rezende.—Crushed 3,400 tons, 749 ozs.; 2,525 tons sands, 305 ozs.; 22 tons concentrates, 123 ozs.; total, 1,177 ozs.

Rice-Hamilton.—Sabiwa: Crushed 4,839 tons, 874 ozs.; cyanide, 2,930 tons, 614 ozs.

Rhodesia Goldfields.—Crushed 1,440 tons, 291 ozs.; cyanide 620 tons, 155 ozs.

Rhodesia.—Crushed 761 tons, 259 ozs.; 344 tons by cyanide, 252 ozs.

Rhodesia Consolidated.—Nelly—Crushed 1,600 tons, 995 ozs.; cyanide 974 tons, 368 ozs.; total, 1,363 ozs.

Robinson.—Crushed 30,730 tons, from mill 15,177 ozs.; from tailings (by cyanide), 4,465 ozs.; from slimes, 1,401 ozs.; total, 21,043 ozs.

Robinson Central Deep.—Crushed 16,538 tons, 8,353 ozs.; sands and concentrates by cyanide 10,400 tons, 1,987 ozs.; slimes 5,544 tons, 508 ozs.; total, 10,848 ozs.

Robinson Deep.—33,286 tons, 16,768 ozs.

Robinson Randfontein.—Ore crushed 15,822 tons, 3,923 ozs.; concentrates, cyanide, 1,375 tons, 364 ozs.; tailings, cyanide, 9,000 tons, 1,743 ozs.; slimes 5,209 tons, 521 ozs.; total, 5,921 ozs.

Roodepoort Central Deep.—Crushed 7,779 tons, 2,109 ozs. cyanide 5,227 tons, 1,046 ozs.; cyanide includes bye-products,; containing 8 ozs.; total, 3,155 ozs.

Rose Deep.—Crushed 26,500 tons, 6,675 ozs.; sands by cyanide 16,000 tons, 2,344 ozs.; slimes 10,515 tons, 677 ozs.; total, 9,696 ozs.

St. David's.—Crushed 1,037 tons, 23.16 ozs.

Selukwe.—Crushed 6,601 tons, 1,016 ozs. (equals 3·07 dwts. per ton); tailings assay 2·08 dwts. per ton; cyanide 4,840 tons, 497 ozs.; total, 1,513 ozs.

Simmer and Jack East.—34,514 tons, 10,971 ozs.

Simmer and Jack Proprietary.—60,010 tons, 22,853 ozs.

Sons of Gwalia.—Crushed 12,490 tons, 2,857 ozs.; tailings by cyanide 6,840 tons, 933 ozs.; concentrates 242 tons, 574 ozs.; total, 4,364 ozs.

South Kalgurli.—Crushed 8,510 short tons, 3,306 ozs.

South Randfontein.—Crushed 41,878 tons, 3,466 ozs.; concentrates, cyanide 1,500 tons, 497 ozs.; tailings, cyanide 8,635 tons, 1,320 ozs.; slimes 4,467 tons, 416 ozs.; total, 5,696 ozs.

Surprise.—Crushed 2,966 tons, 1,147 ozs.; equivalent to 7·73 dwts. per ton; cyanide 4,265 tons, 723 ozs.

Talisman.—Tons of ore 3,940, value £13,266.

Tanganyika Concession.—Ruwe: output of gold by sluice boxes 736 ozs.

Tasmanian Copper Blinman.—Treated 3,932 tons ore, fluxes, &c., producing 165 tons matte, assaying 61 per cent. copper.

Tasmanian Smelting.—Silver-lead bullion shipped contained 780 tons lead, 132,000 ozs. silver, 280 ozs. gold.

Theta.—Crushed 1,550 tons, 1,000 ozs.; cyanide 809 tons, 160 ozs.

Tolima.—60 tons, value £3,500.

Tomboy.—Mill crushed 8,700 tons, value $54,500; concentrates shipped 395 tons, value $35,000.

Treasury.—Crushed 8,800 tons, 1,724 ozs.; sands and concentrates by cyanide 8,800 tons, 1,037 ozs.; total, 2,761 ozs. Estimated profit, £755.

Transvaal and Delagoa Bay.—Output, 27,250 tons.

Van Ryn.—Crushed 22,620 tons, 6,624 ozs.; cyanide 14,400 tons sands, 2,293 ozs.; slimes 7,954 tons 723 ozs.; total, 9,640 ozs.

Victoria Proprietary.—Crushed 480 tons, 124 ozs.

Village Deep.—Crushed 24,697 tons, 4,289 ozs.; sands and concentrates by cyanide 18,900 tons, 2,883 ozs.; slimes 6,461 tons, 609 ozs.; total, 7,781 ozs.

Village Main Reef.—Crushed 36,790 tons, 9,558 ozs.; sands and concentrates by cyanide 24,558 tons, 4,208 ozs.; slimes 11,123 tons, 805 ozs.; total, 14,571 ozs.

Vivien.—Milled 2,850 tons, 614 ozs.; tailings 1,900 tons, 202 ozs.

Vogelstruis.—Quartz milled, 7,310 tons, 2,086 ozs.; tailings, 5,240 tons, 550 ozs.; total, 2,636 ozs.

Wanderer (Selukwe).—Cyanide, 15,579 tons, 2,319 ozs.

West Rand Central Gold.—Crushed 2,325 tons, 508 ozs.; cyanide, 1,930 tons, 531 ozs.; total, 1,039 ozs.

Willoughby's.—Crushed 1,448 tons, 787 ozs.; cyanide, 735 tons, 271 ozs.

Windsor Gold.—Crushed 4,769 tons, 563 ozs.; cyanide, 3,647 tons, 639 ozs.; total, 1,202 ozs.

Witwatersrand.—Treated 32,590 tons, 10,598 ozs.

Witwatersrand Deep.—Crushed 27,010 tons, 8,065 ozs.; sands and concentrates by cyanide 23,056 tons, 3,082 ozs.; total, 11,147 ozs.

Wolhuter.—Crushed 18,300 mill tons; sands and slimes 18,300 tons, from mill 3,615 ozs.; from sands, 2,585 ozs.; total, 6,200 ozs.

Worcester.—Crushed 2,700 tons, 843 ozs.

Ymir.—Crushed 1,240 tons, 331 ozs.; shipped 120 tons concentrates.

Zeehan-Montana.—320 tons silver lead ore, containing 200 tons lead and 25,000 ozs. silver.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Argentine Great Western.—Balance of 3½ per cent. on the preferred and ordinary stocks, making 6 per cent. for year ended June 30.

Carrizal and Cerro Blanco.—2 per cent. for half-year ended June 30, carrying $8,213 forward.

Great Indian Peninsula.—24s. per cent. for year ended June 30 on the 3 per cent. stock, in addition to the guaranteed interest, making £2 14s. per cent. for half-year.

Western of Havana.—Balance of 8s. per share, making 7 per cent. for year, carrying forward £17,433.

MINES.

Broken Hill Proprietary Block 14.—1s. per share on the preference and ordinary shares, also 3s. 6d. per share on the preference shares, being 10 per cent. interest from April 1 to Sept. 30 last, payable Nov. 15.

Forbes Rhodesia Syndicate.—Further of 2s. per share for three months ended Sept. 30.

Premier (Transvaal) Diamond.—400 per cent. on the deferred shares.

MISCELLANEOUS.

A. and F. Pears.—For the half-year ended June 30: On the ordinary shares at the rate of 12 per cent. per annum, making 10 per cent. for year, and on the deferred shares at the rate of 5 per cent. for the year, placing £3,500 to reserve and carrying forward £2,090.

Aerated Bread.—For year ended Sept. 30, of 4s. 6d. per share.

Alianza.—Interim of 6 per cent.

Anglo-American Telegraph.—Interim for quarter ended Sept. 30 of 15s. per cent. on the ordinary stock, and £1 10s. per cent. on the preferred stock, payable Nov. 1.

Bankers' Investment Trust.—Interim at the rate of 4½ per cent. per annum on the preferred stock and 4 per cent. per annum on the deferred stock for half-year ending Oct. 31.

Blackpool Tower.—6 per cent. on the ordinary shares, for year ended Sept. 30, carrying £1,794 forward.

British and Australasian Trust and Loan.—Interim of 1s. 3d. per share, being at the rate of 5 per cent. per annum for half-year ended June 30, payable November 1.

Ceylon Tea Plantations.—Usual interim of 7 per cent. (being 14s. per share) on the ordinary share capital, payable Oct. 29.

City of Santos Improvements.—Interim of 2½ per cent. for 1906 on the ordinary share capital, payable Nov. 1.

D. and W. Murray.—10 per cent. per annum on the ordinary shares, and a bonus of 1 per cent., for year ended July 19, placing £18,107 to general reserve, £5,000 to a special reserve, and carrying £7,439 forward.

Hodgson's Kingston Brewery.—At the rate of 12 per cent. per annum, being 6s. per share for six months ended Sept. 30, making 10 per cent. per annum.

Indo-European Telegraph.—Interim for half-year ended June 30 at the rate of 5 per cent. per annum.

Industrial and General Trust.—Interim for half-year to Sept. 30 on the ordinary stock at the rate of 6 per cent. per annum.

Lipton.—Interim on the ordinary shares for past half-year at the rate of 5 per cent. per annum.

London Motor Omnibus.—At the rate of 10 per cent. per annum for period ended June 30, placing £4,000 to reserve and carrying forward £053.

New Dimbula.—Final of 15 per cent. and 4 per cent. bonus, making 24 per cent. for year ended June 30.

New Zealand Shipping.—5 per cent. (of which 2½ per cent. was paid in April last).

Northern Assurance.—Interim of £1 per share, being at the rate of 10 per cent. for 1906.

Short's.—Second interim for year ending March 31, 1907, of 1s. per share on the deferred ordinary shares.

COMPANY MEETING.

BUENOS AYRES WESTERN RAILWAY.

The 17th ordinary general meeting of the Buenos Ayres Western Railway, Limited, was held on Wednesday at River Plate House, E.C., Mr. Henry Bell presiding.

The Secretary (Mr. F. Eustace Faithfull) read the notice and the auditors' report.

The Chairman said he was glad to say the company had been free from any serious labour troubles during the year under review. Mr. Faithfull and he visited Buenos Ayres in April last, and what struck him most in connection with their own line was the altered nature and conditions of the traffic. Four years ago, when he travelled over the line, almost all the traffic was seen going towards Buenos Ayres and only empty or nearly empty trains were coming from it; but now the outward traffic was immense, and the conditions of handling it had greatly altered. He was not speaking particularly of the great increase in grain and passenger traffic, but those changes were also very evident and made the line now very busy. Four years ago general goods and company's material represented 349,847 tons and 112,166 tons respectively, or a total of 462,013 tons, whereas the total of those two classes last year was 652,742 tons. The published Custom House returns of Argentina for the first six months of this year gave a decrease compared with the corresponding period of last year of $11,000,000 gold in exports and an increase of $20,000,000 in imports, part of which would be outward goods for this railway, so the shareholders could see what a large traffic that might grow into. Last year the shareholders were asked for money to make some short extensions and to enable the board to deal with the existing and to be looked for traffic; and, having put themselves fairly right as to those points, they now asked the shareholders for further capital to make extensions which had become necessary. Owing to the failure to come to terms with the Province of Buenos Ayres, and the apparent unwillingness of the Provincial Government to grant them concessions, it was decided in May last to petition the National Government for the concessions shown on the map accompanying the report, which were slightly different from those originally asked from the Provincial Government. Confident of the support of the shareholders, the board had applied for four concessions—one from Roberts to Pampa Central, another from Las Toscas to Pampa Central, another the continuation of their line from Gorostiaga in a south-westerly direction till it met their line from La Zanja to Carhue, and the fourth an underground line giving them direct communication with the Buenos Ayres docks for goods traffic, and landing all suburban passenger traffic in the most eligible site in Buenos Ayres. The last-mentioned scheme had received severe opposition from parties interested in other concessions, and the surface tramway companies, but the Senate had granted the petition, and it had now to be passed by the Chamber of Deputies before it became law. It had been granted to them for 99 years, after which it reverted to the nation. Regarding the resolutions providing for the increase of capital, he explained the terms on which the directors proposed to make the issue. They were advised that they ought to try and widen the field of their *clientèle*, and were recommended to make an issue of 4½ per cent. non-cumulative preference shares. This they proposed to do at par, issuing them to all holders of ordinary stock and shares in the proportion of 30 per cent. of their present holdings. The nett revenue account showed a profit of £535,708, out of which they proposed to transfer £100,000 to the general reserve fund, £45,000 to permanent way renewal fund, to pay a balance dividend of 4 per cent. on the ordinary stock, making 7 per cent. for the year, and to carry forward a balance of £103,458. The Chairman concluded by moving the adoption of the report and accounts.

Mr. J. White Todd seconded the motion, which was carried unanimously, and a resolution increasing the capital of the company from £13,000,000 to £16,000,000 by the creation of 300,000 shares of £10 each was unanimously agreed to.

NEXT WEEK'S MEETINGS.

MONDAY, OCTOBER 15.

Ceylon (Para) Rubber.—138, Leadenhall Street, 2.30 p.m.
Golden Grain Bread.—Cannon Street Hotel, noon.
Gramophone and Typewriter.—21, City Road, 2.30 p.m.
Montevideo Telephone.—Winchester House, 12.30 p.m.

TUESDAY, OCTOBER 16.

Leonor Nitrate.—27, Leadenhall Street, 2.15 p.m.

WEDNESDAY, OCTOBER 17.

Bank of Tarapaca and Argentina.—Winchester House, 2 p m.
Buenos Ayres Great Southern Railway.—River Plate House, 11.30 a.m.
Dumont Coffee.—Winchester House, 11.30 a.m.
Enfield Cycle.—Birmingham, noon.
Eland's Drift Diamond Estates.—Winchester House, 3 p.m.
Sheba Gold Mining.—Winchester House, noon.
Suakin Mining Syndicate.—6, Queen Street Place, 3 p.m.

THURSDAY, OCTOBER 18.

Crisp and Co.—Seven Sisters' Road, noon.
Central Uruguay Railway of Monte Video.—River Plate House, 11 a.m.
Central Uruguay Northern Extension Railway.—River Plate House, 11.30 a.m.
Central Uruguay Eastern Extension Railway.—River Plate House, 11.45 a.m.
Eadie Manufacturing.—Birmingham, noon.
Las Cabezas Estancia.—River Plate House, 4 p.m.
United South African Association.—Cannon Street Hotel, noon.

FRIDAY, OCTOBER 19.

Consolidated Mines Selection.—Winchester House, noon.
Demerara Railway.—Cannon Street Hotel, noon.
Deccan Goldfields Development.—Winchester House, noon.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and October 6, 1906:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1906-1907.	Total Receipts into the Exchequer from April 1, 1906, to Oct. 6, 1906.	Total Receipts into the Exchequer from April 1, 1905, to Oct. 7, 1905.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 459. SATURDAY, OCTOBER 20, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied for less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

"Shell" Transport and Trading.

The annual report of this great oil-producing and distributing enterprise is issued about two months earlier than usual. Its publication has been expedited in consequence of the arrangement come to for a fusion of interests with the Royal Dutch Company and the transfer of a considerable block of shares to that concern. An outline of the proposed plan was given in a circular issued about a month ago, the directors expressing a hope to have the details of the scheme sufficiently determined to make it possible to put definite proposals before the shareholders of the two concerns in time to bring the arrangement into effect by January 1 next. Nothing final has yet been done, and we assume that everything there is to say will be told by Sir Marcus Samuel at the meeting to be held on Tuesday next. Before proceeding, it may be well to recapitulate the position between the English and Dutch companies as known at present. For reasons obvious to themselves only, the "Shell" directors consider it desirable to bring about a fusion with the Royal Dutch Company. Each concern will be represented on the management and retains its individuality as a participant in the results of the joint working, the Royal Dutch Company to get 60 per cent. and the Shell Company 40 per cent. The bargain will, as it were, be closed by the transference of 25 per cent. of the ordinary share capital of the "Shell" Company to the Royal Dutch Company at the price of 30s. per £1 share, the sale to be completed by January 1, 1907. There is no question of the arrangement going through, because Messrs. Samuel and Co., who practically control the business, will supply any shares which the independent proprietors do not, but the latter are to have the opportunity of selling at 30s. per share up to 25 per cent., and possibly more, in order to fill up gaps caused by those who do not desire to transfer. To any ordinary shareholder who picked up shares in the market at a low price, say £1 or thereabouts, we should say sell and be thankful, but how about those unfortunate individuals who were graciously allowed by Sir Marcus Samuel to buy vendors' shares from him at £2 10s. each? To them the transfer means an irrevocable loss of £1 per share, and it would surely be only fair to put forth all possible information concerning the position and prospects of the Royal Dutch Company before asking proprietors to agree to such a serious step. The fact has always to be borne in mind that the independent proprietors of this "Shell" Company know next to nothing of its real position—never have known—and cannot exercise the slightest influence over its affairs. The vendors are all-powerful with their shares carrying five votes each.

We do not wish to appear too antagonistic, and have much sympathy with the company in its fight with the unscrupulous Standard Oil crowd, a battle in which it has apparently been so far beaten. At least, that is what we take the meaning to be of the statement that owing to the unsatisfactory nature of the trade in Europe the directors have arranged to withdraw altogether from the European kerosene business, and have sold at par the shares held in the European Distributing Company. How much has been lost in the struggle with the Standard Oil? Some say it is £250,000, and it must be very nearly that. But have Rockefeller and Co. come off scatheless? By

no means. The "Shell" too was worsted in its attempt to encroach on the preserves of the company serving the Indian markets, and in various ways seems to be encountering much adversity. In dealing with the Eastern business, the directors say that the results of the trading for 1905 were adversely affected by the war in prices which prevailed in portions of the East, but they omit to say that the fight was of their own seeking, which we believe to be the case. Conditions have since improved, it is said, but that is only a nice way of telling the shareholders that the company has withdrawn from the fight and is not now making any losses. Happily, business in other directions is increasing, although the sudden drop in the shipments of crude oil and sundries takes some of the bloom off the subjoined comparison:—

	1906. Tons.	1905. Tons.	1904. Tons.
Kerosene	92,582	85,694	50,638
Liquid fuel	114,904	110,658	93,810
Benzine	12,673	3,550	—
Crude oil and sundries	8,405	33,839	9,950

The production of the Borneo field is described as satisfactory, but during the present year full use has not been made either of the productive power of the fields or of the refineries, because of a large accumulation of stocks at the beginning of the current marketing conditions. That is a vague kind of statement, which may mean much.

It is rather difficult to follow the bewildering changes which take place year by year in the company's affairs and the position of its offshoots and dependencies, but we may as well record the fact that the extension of the Eastern business has necessitated the calling up by the Asiatic Petroleum Company of £300,000 additional capital, of which the "Shell" Company subscribed its third part share. Then the Dutch Petroleum Company has decided to convert its bond indebtedness into ordinary shares, and for this and other purposes to increase the capital to 20,000,000 florins. The shares as issued will be offered to the existing shareholders, but what happens to the Shell Company's advances of £840,000 represented by an "undertaking" to issue 5 per cent. bonds? This Dutch concern also owes £33,817 more at £103,590 on current account, but the indebtedness of the Asiatic Petroleum Company has been reduced almost £110,000 to £69,773. That, however, is only in the nature of a transfer, due to the fresh capital called, as the holding of shares in the company has increased by £100,000 to £300,000. Shares in the Dutch company still stand at £183,622, and at the date of the balance-sheet, December 31, 1905, the shares in the European Distributing Company were still held. They will no doubt disappear from the next accounts, the company making a loss of £13,500 on their realisation. The severance of connection with this concern also involved the sale of four steamers, and the realisation of the remainder of the company's stocks consigned to the Distributing Company will be completed by November 1 next. Will there be any loss? On December 31 last the European Distributing owed the "Shell" £127,955, but this notwithstanding, the total crditors were reduced by £72,980 to £753,166, still a very heavy sum. Debtors on current account £67,029 show an increase of £9,243, and the cash balance is up from £131,871 to £153,601, but bills receivable are lower by £18,924 at £5,931. Taking all the facts into consideration, the business perhaps did well to earn a nett profit of £418,146 in the twelve months to December 31, 1905. True, that is a decline of £47,076 against the preceding year, but the earlier period included certain profits of the Asiatic Petroleum earned in 1903, but not previously credited. The drop in profits was more than balanced by an increase of £48,963 to £107,816 in the sum brought forward, so that the aggregate for disposal was £525,962, against £524,075. Management expenses, including directors' and auditor's fees, were £23,256 or £1,106 more, depreciation £103,356 was about the same, another £10,000 has been written off cost of preference share issue, and £4,000 off the American expenses, but income-tax, being for only one year against two, required £4,000 only instead of £8,064. Cost of working the European oil business, including provision for results of trading to April 30 last, was £113,384, and when we add to that the loss of £112,685 incurred in the previous year we find that the company has dropped the tidy sum of £226,000 in the European trade. The fight against the Standard Oil, with its illegal rebates and other pleasant scalping methods, was probably doomed to failure from the start, and it was, perhaps, needless to deny the story that the American trust had offered six millions for the "Shell" business. We never supposed there was any truth in it, and yet the "low flash" people may have lost a few millions. After meeting all these charges, the balance of profit is £267,965, or about £10,000 more, from which the preference dividends and the 5 per cent. paid on the ordinary shares on January 1 last absorbed £150,000 leaving £117,965. Out of this £19,110 has been appropriated to the extinction of the outstanding balance of the preference share issue expenses, £13,500 is required to meet the loss on the sale of the European Distributing shares, and £85,355 is carried forward. No doubt a 5 per cent. ordinary dividend for the current year will be paid on January 1 next, but the prospect of any better return seems so remote that some proprietors may feel disposed to sell more than 25 per cent. of their shares to the Royal Dutch Company. Is it true that the securities of that concern fell heavily when the news of the fusion with the "Shell" became known?

Economic and Financial Notes and Correspondence.

Mr. Haldane's "Severity."

Whatever party newspapers may say, the country at large is profoundly disappointed over the punishments meted out by the Secretary of State for War to those who have been mixed up with what is called the South African stores scandals. Even, however, the most reactionary type of public print appears to be ashamed of the leniency shown, so that grumblings are heard in all quarters. It is not surprising. We have never put any faith in the resoluteness or thoroughness of the inquiries started to sift these scandals to the bottom. There was no vigour about most of them, and witnesses before the Royal Commission were allowed to dodge investigation in a manner that sometimes shocked the minds of even the most callous. At the end it was felt that only the very outer defences of a great conspiracy had been entered, only the beginnings of a far ramifying system of robbery indicated and unmasked. Look at the wholesale destruction of incriminating documents. Is there anybody responsible for the custody of these documents, anybody capable of being brought to account and punished for their disappearance? It would seem not. What would be thought in City business circles if the board and responsible managers of a great bank were found to have allowed ledgers to be tampered with or mutilated, correspondence to be hidden away or destroyed, with a view to hide up some stupendous fraud, and to lie supine when the crimes were found out. Would there not be a clamour for the punishment of men supinely permitting such deeds to be done, and no matter how individually innocent many of them might be would not public sentiment be justified in treating them as all alike guilty of a neglect of duty amounting to a crime? Why has no punishment been administered to those who allowed documents to be abstracted wholesale in connection with this South African war system of robbery? Has any attempt been made to discover who destroyed the incriminating evidence? What the nation now sees is a few miserable underlings, privates and non-commissioned officers, ostentatiously degraded and dismissed the service, a few commissioned officers—who probably had no family or petticoat influence to back them

—dismissed the service, sundry others sent away on half-pay, while either excuses are found for those in high places, or their intromissions in the foul business are discreetly veiled in absolute silence. Does Mr. Haldane expect that public confidence in the administration of the War Office or in the moral condition of the army as a whole will be restored by a Gilbertian comic opera sort of punishment of this description? If he does, we hope he will be taught better before the House has been many days in session. As it stands, this eclectic visitation of punishment upon some of the guilty, but not the most guilty, is little better than a broad hint to the service to go and do likewise on the first opportunity. There is obviously no danger in thieving, provided you steal boldly and know how to enter into combination with the proper sort of contractor, who will see to it that you are kept safe and that the money you receive from him is untraceable. Mutual help and confidence between contractor and the rulers of the army is the plan to follow. If a few scapegoats are necessary at the end of the business, probably it can be made worth their while.

Our Fire Offices in San Francisco.

Last Monday's issue of the "Financial and Commercial Supplement" to the *Times* contained an interesting and well-informed article upon this subject. It was prompted by a letter received from an attorney at law in San Francisco, in which some unpleasant remarks are made about the behaviour of the insurance companies, British and other. The writer of the letter, Mr. Samuel Rosenheim, said that no German insurance company had paid more than a percentage of its debts, and that the Austrian Phœnix, the only company of that nationality doing business in California, had not paid a single dollar to anybody at the date of his writing. It appears, however, that out of a total risk of £50,000,000 sterling some £40,000,000 has already been paid, and as the writer of the *Times* article shows, British offices have behaved with their usual generosity when confronted by this calamity. They have rarely stood upon the letter of their contract, and have as a rule paid up with promptitude and liberality. The *San Francisco Examiner* does not quite give this impression. It has published a list of the English and American companies that have paid, subdividing it into classes "A," "B," "C," and "D," for all the world as if they were a batch of *Times* Book Club new and second-hand volumes given away with a threepenny journal. Class "A" consists of those offices that have already paid in full, or in full less a moderate discount for immediate settlement. In class "B" is embraced those that have paid from 75 cents in the $ upwards; class "C" consists of companies which are offering from 50 to 75 cents in the $ to avoid lawsuits, and class "D" embraces a few companies that have not yet paid anything. This last is described as the "waiting list." But, as the writer of the article points out, this is hardly a fair classification. Small policyholders have mostly been paid in full, and there are no British companies at all in class "D," for no British company has refused to meet its claims, although many may have held back some portion of the money until the validity or justice of the demand made was clearly established. For British companies, therefore, the record of honourable dealing has not been broken in connection with this San Francisco fire. As the writer says, they have only made a stand against extortion. All proper claims have been paid in full, and the average disbursement has been considerably more than the 75 per cent., much nearer 90 per cent., of the sums insured. We should like to know how much they have paid from first to last, and how much remains to be paid, but meantime it is interesting to note how smoothly this transaction has been carried through. The London Money Market has not suffered visibly by the withdrawal of these sums of money, and there has been no violent depression on the Stock Exchange caused by heavy sales of first-class securities. But the fire was all the same a godsend, in a sense, to Wall Street, because it put London heavily in debt to San Francisco and helped New York to take away our gold at less cost to its credit resources than would otherwise have been the case.

Linotype and Machinery, Limited.

Shareholders in this concern have learnt to be thankful for very small mercies, and will therefore be able to derive a little satisfaction from the report for the year ended June 30 just issued. They are not told on this occasion how much has been provided for depreciation and bad and doubtful debts nor how much has been written off accruing instalments, although such information was vouchsafed a year ago; but gross profits from sales of machines and duplicate parts, &c., royalties on machines let on hire and interest on instalments, after deducting these allowances, are brought out at £177,004 or an increase of £487. The improvement is trivial, and the directors explain that this inelasticity is due to the enhanced price of materials and to the exclusion of the profits on certain completed orders owing to deliveries of machines being delayed for customers' convenience. Income from rents, dividends and interest, and transfer fees, however, rose by £2,088 to £7,864, and as a modest saving of £483 at £28,446 was effected in administration charges the nett profits were £3,058 higher at £156,422. Interest on debenture stocks and loans required £7,604 less at £64,688, and premiums on debenture stock redemption policies were £113 down at £9,351; but an extra £290 at £9,704 had to be found for dividends on the Printing Machinery Company's capital under the guarantee, so that the surplus on the year's working came to £72,678 or an increase of £10,486. This was more than sufficient to meet the preference dividend, but the directors do not consider it prudent to make any cash distribution on account of arrears of dividend until the balance of temporary loans is paid off and an adequate cash reserve established. The amount is therefore added to the balance brought in, making the accumulated profits £189,142, and the directors express the hope that it will be possible to recommend the payment of an instalment on account of preference dividend next year. We fear there are no good grounds for holding out any such hope if the directors are in earnest about putting the company's finances on a really sound footing, as there is still a formidable amount of dead weight to be got rid of. Some progress in this direction was made during the year, when loans were reduced by £43,261 to £44,669 and amounts due on open accounts and bills payable by £36,553 to £27,242, the total of floating liabilities, including debenture interest and guaranteed dividends accrued, being £73,118 down at £113,406. But this is only a beginning, and much more will have to be done before there can be any thought of dividends. Notwithstanding their wasting nature, patents and goodwill have never been written down at all, and with the additions of the twelve months are valued at £1,836,967, a figure totally disproportionate to the business done. Against this there is a tiny reserve of £16,191, of which £9,156 has been created by taking into account the surrender value of the debenture stock redemption policies, a device for which we see no justification. Yet another item requiring drastic treatment is that of shares and debentures, principally in associated companies, which, including £79,516 or £51,581 more of the company's own debenture stock, stands at £412,407, and judged by the income derived from investments is yielding less than 2 per cent. Freehold land, works, machinery, &c., after allowing for depreciation, are up £3,162 to £338,416, but stocks of machines in hand or let on royalty, spare parts, and materials show a further small reduction of £3,695 at £382,762. Debenture balances on open accounts, bills receivable, and instalments not yet accrued under hire purchase agreements have risen by £8,448 to a total of £578,526, and on this £52,787 or £100 less than a year ago is provided "for bad and doubtful debts and to write down accruing instalments to pre-

sent value." The credit to customers involved in this item has all along been a heavy burden on the company's resources, and the directors state that they have constantly kept under consideration the question of placing some part of the unissued balance of debenture stock in order to set free part of the working capital locked up, but have decided to do nothing until a satisfactory price can be obtained. This does not promise well for the liberation of the amalgamated company from its many financial complications.

Joint-Stock Bank Acceptances.

From time to time recently there has been a good deal of carping gossip in the City on this subject, and one or two banks have been singled out for sharp criticism because of their alleged complicity with the Standard Oil and other financial groups on Wall Street in flooding our market with paper, the discount of which enabled the Yankees to draw away our gold. We have had the curiosity to look up the acceptances record of some of these banks, and have to confess that it does not quite bear out the strictures of the market. At the end of September, 1905, there were £14,970,000 in acceptances afloat on the market, on the credit of the Union of London and Smiths, the London City and Midland, the London Joint Stock, the London and Westminster, the London and County and Parr's Banks. We have not got the London and County figures for the same month in 1904, but assuming them to be no larger than at the end of last month the aggregate then shown would be about £5,000,000 greater than at the end of September, 1904, but quite £1,500,000 less than in September, 1905. Last month's total, in fact, was only £13,250,000. This is only a very small amount to go towards making up that £100,000,000 to £120,000,000 which the Yankee financiers are said to have borrowed here, and instead of increasing for the past month the figures actually show a reduction. The reduction, moreover, is entirely due to a shrinkage in the acceptances afloat of the London City and Midland and London and County Banks. Contrasting the two years, we find that the Union of London and Smiths had £3,829,000 of acceptances afloat at the end of September, 1905, and at the end of last month £4,408,000, while at the same two dates respectively the London City and Midland had £3,912,000 and £3,228,000. The London Joint Stock Bank's acceptances went up from £1,096,000 in September, 1905, to £1,415,000 last month, those of the London and Westminster from £1,045,000 last year to £1,472,000 this year, while those of the London and County fell from £3,247,000 a year ago to £2,378,000 at the end of September this year.

We do not see that any very grave censure is deserved by these banks even when they show considerable increases in their liabilities under the head of acceptances, and the London City and Midland cannot be said to have stretched its credit much recently in favour of New York. Theoretically, there is an objection to banks that draw so much of their resources from deposits bearing interest, entering the open money market and pledging their credit over again by discounting their acceptances. That is theoretically supposed to be the business of the merchant banker, but it is a branch of banking which has for many years been successfully conducted by some of our leading joint-stock banks, and the increases some of them show in their acceptance liabilities compared with two years ago may be quite legitimately due to the expansion of the country's commerce. Two years ago, for example, the Union of London and Smiths Bank had only £2,445,000 of its acceptances on the market, and the London City and Midland only £2,105,000, while the London and Westminster had little more than £301,000 out and the London Joint Stock only £903,000. Contrasted with two years ago, there is consequently a remarkable increase now shown in the acceptance liabilities of these banks, but during the same period there has been an unexampled expansion in the country's foreign trade, and we have no reason whatever to conclude that the growth in the acceptance liabilities of these banks thus shown is not the outcome of that expansion, a fair product of the ordinary business of the country. In any event, it must be by some other methods that the bulk of the money borrowed here by United States financiers has been procured. It may be that some of the large merchant banks dealing with the United States have allowed themselves to be used as the channels through which accommodation paper has been put on our market to the tune of many millions, or it may be that the finance trust companies in New York, either under control of the insurance companies or of the Standard Oil and other groups, have created credit and sent their "kites" here to be accepted by their London agencies and put upon our money market through channels quite distinct from our great banks. Probably all these methods have been employed, but it must remain true that the largest borrowings must consist of advances obtained upon directly pledged securities, and if we could see to what extent our joint-stock banks are at the present time carrying for their customers the stocks of American railroads and American industrial trusts, we should have a much more just conception of the extent to which they are committed to Wall Street finance than can be obtained by anything the statistics of their acceptances reveal.

Two Rhodesian Companies: East Gwanda and Matabele Reefs.

Two ponderous reports have been issued by a couple of Rhodesian concerns located in the same office, therefore closely allied. The East Gwanda Mines is not yet as familiar as were the names of the four companies of which it is an amalgamation, viz.: The Geelong, West Nicholson, Jessie, and Eagle Vulture, all failures. They were heaped into one bag, as it were, because it was argued they would thus not be so burdensome to carry. Whether they prove to be lighter or heavier than of yore will greatly depend upon the distance shareholders will still have to trudge towards that elusive dividend. Neither has made a promising start on the new road. The accounts of both look a little antiquated, for they are dated December 31, 1905, but the reports certainly give later data. At the East Gwanda crushing did not commence until June, 1905, so the profit and loss account covers six months only, the expenditure for the first half of the year being capitalised. The gold won realised £32,966, royalties from tributors amounted to £2,426, and transfer fees gave £145, total £35,536. But as the expenditure, including depreciation, came to £54,549, there was a loss of £19,012. To this should, of course, be added the deficit for the first six months, £14,067, making £33,079 to be provided out of future earnings before profits become available. We would not like to say the company will not earn profits, but there is considerable doubt if the profit can ever be large enough to yield dividends. In recent months the returns have gradually increased, and there is hope in this. No work has yet been done on the West Nicholson or Eagle Vulture mines, as it was found expedient to bring the several mines into operation gradually. Thus the maximum of production has not yet been reached, though it does not follow that when it is reached the low-grade ore from the mines will pay. Moreover, the reduction plant will have to be greatly enlarged before the West Nicholson is unwatered and worked, and the directors hope by that time the working costs will be considerably reduced. At the Jessie mine large portions of the reef between the first and second levels were of too low a grade to be mined at a profit, and this is not a hopeful symptom. Under the most favourable circumstances we cannot look for much success for this amalgamated company.

The Matabele Reefs and Estates is the result of a fusion in March, 1905, of two other Rhodesian failures —the Matabele Mines and the Matabele Gold Reefs and Estates Company, the latter being the parent of the four companies comprising the East Gwanda Mines. In the last-mentioned it holds 222,576 £1 shares out of 460,107 issued. At its formation it

acquired 1,155 claims, but 290 had to be abandoned last year, and it is as likely as not that in the course of time many more will have to be thrown up. As crushing did not commence until the first day of the present year, the accounts show no income from gold. Revenue totalled £6,013 from interest, dividends, rents, royalties on timber, claim licences, hut taxes, transfer fees, &c., and as expenses absorbed £14,352, there is a first loss of £8,339. Current liabilities amount to £30,714, against which cash is £16,900, and debtors owe a little. There is, however, a conglomeration of shares and debentures in other Rhodesian companies, to which an aggregate value of £133,713 is given. It is officially admitted that the market value of these at the date of the accounts was £128,031, including £43,472 for shares and debentures which have no quotations. Since the end of last year the directors have acquired a one-tenth interest in the Somabula Diamond Concession. But the company is not likely to get much of a revenue out of this, nor out of its East Gwanda and other holdings for many a year to come. In its combined form the prospects of the venture hardly look more promising than when the original companies had separate existences. Only 15 stamps are working, and though small profits are earned monthly these are devoted to the reduction of the price paid for the mill and to development work. So they will not be available yet awhile for division.

The National Assurance Company of Ireland.

It is surely not possible that the affairs of this once prosperous busines can be allowed to drift in the manner indicated by that cogent article in the *Irish Investors' Guardian,* to which we alluded last week. It points out that within a period of six years, between £500,000 and £600,000 has disappeared—viz., the whole of the paid-up capital, the whole of the fire fund and the £75,000 to £100,000 received by the company from the Yorkshire Insurance Company for part of its business, plus the call of £6 per share, which if it were paid up in full would bring in another £240,000. Yet between 1876 and 1886 inclusive the company never paid less than 12 per cent. to its shareholders, and for nine of the years embraced in this period the dividend was 14 per cent. Then it dwindled until for 1893 nothing was paid, and from 1900 down to the present time the shareholders have also received nothing. Altogether, however, since 1871 they have received £301,500 in dividends, but for the whole of that period there has actually been a loss upon the fire business done. What is the meaning of this? It cannot be due altogether to misfortune; there must be some hidden cause or causes, which it is the duty of the shareholders to bring to light. As we said last week, the board is resisting any examination of the books and documents, but surely the shareholders by combining can compel discovery, and no one of their number ought to pay the call now demanded without having satisfaction as to the position of the company. Such a call means ruin for some of the shareholders and grievous loss to all. It may be followed by others, too, for in an affair of this kind there is no finality until the last shareholder has been exhausted or the last shilling of liability paid up. On present lines the business is obviously insolvent and the best thing to be done would be to wind it up compulsorily under the supervision of the Court, so that a thorough investigation may be made into the mismanagement which has brought the once prosperous business to its present wretched position. Should an examination into its affairs lead to demands for restitution upon the members of the board, some of them may be wealthy enough to be able to make good, in part at least, the loss suffered. Since 1900 nearly £370,000 has been lost through the business done and an enormous amount of money has been swept away in commissions and expenses, perfectly monstrous amounts judging by the results attained. Who got these commissions and in what directions did the agents of the company seek for business which brought such disastrous results upon the fire department?

"Flourishing" Russian Finance.

We should judge that another Russian loan is being prepared for, since diligent efforts are being made to create a favourable impression regarding the actual position and outlook of Russian Imperial finance. In Thursday's *Times* City article, for example, a letter is printed, described as having been "received by an influential firm in the City from a well-informed correspondent in Petersburg," and this letter makes out everything to be in a most satisfactory position, not least in relation to the Jews towards whom more liberal treatment is being meted out. This nice story should placate the Jews in this country, whom the "pogroms" have so horrified, and induce them to further the issue of another loan. And the finances are really in an astonishingly fine state, so that the bureaucracy can well afford to go on killing tax-paying citizens daring enough to try to claim the rights of freemen at the rate of two or three dozen a day, without danger of interfering with fine budget surpluses. It is admitted that the harvest has not been good, but taxes are none the less coming in as if they grew like weeds, and for the first eight months of this year are said to have yielded £141,300 000, or £11,700,000 more than in the corresponding eight months of last year. Then the State railways show an increase of £2,200,000 in the receipts, the total to date being £31,250,000, taking the rouble always roughly at 2s. And although there was a deficit on January 1 last on account of general and war expenses amounting to £81,100,000, brought up to £94,400,000 by extra expenses authorised by the Council of the Empire before the Duma met and by famine grants, there is now actually a deficit of no more than £7,000,000 or £8,000,000, which, the letter says, should be easily covered either by a continuance of the increased receipts from taxes during the last months of 1906 or "by a Treasury operation." In order, however, to fine down the deficit to this small figure the £67,700,000 netted by the last big European loan, together with £3,400,000 raised by sales of 4 per cent. Rentes are taken into account, and we suspect that "Treasury operation" will be necessary to cause the remaining shortage to disappear. How much does the Government want to raise, £25,000,000 or £50,000,00, or what? Is it making much money by confiscating the belongings of the squads of people daily done to death by drumhead court-martial?

Lake View Consols.

In the recent revival in the West Australian market even Lake Views were carried upwards with others, on irresponsible market gossip that things were looking better at the mine. This week the directors have issued their report for the financial year ending June 30, and it offers not the slightest evidence of improvement, no justification even for the shares standing at par. True, the mine is not exhausted and may last a few years yet, but the ore, low grade as it is, is getting poorer, so it is a great struggle to mine at a small profit. This would not be possible did not the skilful managers, Messrs. Bewick, Moreing, and Co., continually reduce the working costs. In 1902-3 these averaged £1 10s. 3d. per ton, in 1905-6 they were cut down to £1 0s. 8d., and last month, September, they averaged as low a figure as 18s. 9d. per ton. This is a decidedly creditable achievement, for to it alone the shareholders owe the small dividend they are now receiving. In the twelve months 125,637 tons (against 110,326 tons) and 39,975 tons of old tailings were treated, and receipts were £193,362 or only a few pounds less than in 1904-5, but this includes £29,690 from the old tailings. If we exclude this there was a big drop in the gold revenue, which was made up to £198,205 against £200,639 with receipts from interest, rebates, transfer fees, &c. Despite the reduction in expenses the nett profit fell from £25,146 to

£21,414. Only £1,301 was brought in, owing to the payment of £4,965 as cost of the Golden Link leases and £4,999 cost of interest in the Inca Development Corporation of Peru. Still, the directors are able to distribute the same amount as in the preceding year—1s. per share—and to carry forward £5,074. For some years the annual distribution has been steadily dwindling, and it would not be surprising if it quite vanished shortly. For there is no great promise in the fact that the ore reserves have increased, since the grade has further depreciated. The total is only 121,474 tons compared with 87,001 tons, an increase of 34,473 tons, hardly enough to last twelve months. "It must be remembered," is the warning of the general manager, "that the values in this ore are very irregularly distributed, and that estimates where the margin of profit and loss is so narrow are by no means matters of certainty." The directors have long known that the mine cannot last much longer as a payable proposition, and it is no secret that they have been casting their eyes around for other sources of investment. We cannot think their search has been very successful, for we have no flattering opinion of the following, in which £83,639 of the company's funds has been sunk:—Broken Hill South Blocks, Burma Mines Railway and Smelting Company, Hampden Syndicate, Inca Gold Development Corporation of Peru, Kalgoorlie Power and Lighting Corporation, and the Siberian Gold Dredging Company. They tell us they have recently realised the interest in the Hampden Syndicate at a profit. It is hoped the plant of the Burma Company will be working early next summer, whilst the Siberian undertaking may likely turn out very costly. After providing this company with a further £2,000 for working capital in order to get its dredge started, the results of the dredging operations are acknowledged to have been disappointing. In fact, the directors admit that while the £7,000 advanced on first mortgage debentures is probably safe, "no profit is anticipated from this enterprise." So altogether prospects look anything but alluring.

Lewis and Allenby, Limited.

We have no desire to be too hard on the directors and management of this Regent Street business of silk mercers, &c., but the manner in which profits have declined since it was converted into a limited liability company rouses the suspicion that the business was a declining one when sold to the public. It is impossible to subscribe to the directors' statement that the distressingly poor result produced for the 12 months ended July 31 is even partially due to the fact that there was little or no London season and to the continued depression in high-class trade. The latter assertion in particular will not bear investigation, because practically every kind of business has shown distinct improvement during the past 12 months. It is therefore necessary to seek other reasons for the serious position in which the company finds itself, and when the meeting is eventually held we shall hope to find the board taking the shareholders fully into their confidence. This meeting will not be convened for some little time yet, as certain negotiations are in progress which, it is believed, will have the result of placing the company in a much more favourable position. It is hoped to have the arrangements, whatever they are, completed very shortly, and then the annual gathering will be called, probably in November or December next. Clearly something must be done if the business is to be saved from drifting hopelessly to the bad, as the past year's trading resulted in a nett profit of under £103. This is nothing short of a disaster for a company possessing a share and debenture capital of £270,000, and for the first time the cumulative preference dividend begins to fall into arrear. It may be remembered that 12 months ago the directors found it necessary to transfer £2,000 from the reserve fund, in addition to which there was a credit brought forward of £511, making with last year's trifling profit a total of £2,613. But the directors have already distributed £3,850 in providing preference dividends for the two half-years ended on January 31 last; that is one payment for the final part of the last financial year and one for the first half of the period under review. These distributions have left a debit balance of £1,236, and although yet another £2,000 is to be taken from the reserve to make this good and leave a small credit in hand, it is obvious that the preference dividend for the half-year ended July 31 last cannot be met. The reserve fund will now be reduced to £2,000, and the only other accumulation possessed is the leasehold depreciation fund of £7,117. Of the last-named sum £4,063 has been deposited with the Debenture Securities Investment Company for separate investment on account of leasehold amortisation. Business premises and workshops appear in the balance-sheet at £123,415, and fixtures, fittings, furniture, &c., and goodwill are valued at £71,830. Alterations and additions to premises, however, remain at the old figure, £5,573, and the auditors point out that the amount of £929 hitherto annually charged against profits and written off this item has not been provided on the present occasion. Including a loan of £9,046, secured by an issue of £20,000 second mortgage debentures, the total floating liabilities amount to £31,557 against which there are debtors £41,886, stock £62,109 and cash and bills £1,693. With a position like this shareholders will await the outcome of the negotiations now going forward with no little anxiety, but the directors have a great incentive to do everything possible to bring back to the company some of its former prosperity, because the whole of the ordinary shares are still in the hands of the vendors, and no dividend has been paid upon them since 1902.

Bankruptcy in 1905.

A rough but by no means inaccurate guide to the prosperity of the country may always be found by taking the Bankruptcy Returns for a given year and comparing them with previous statistics. When trade is reviving insolvencies have always shown a tendency to decrease, and it is only in years of abnormal prosperity coupled with wild speculation and years of extreme depression that their numbers rise. Looked at in this light, the Bankruptcy Returns for last year would show that if the year was not one of great prosperity, there were at least signs of better times ahead, and that the country as a whole had at last in some measure adjusted its back to the burden of war taxation and other legacies bequeathed to it by the South African War. The total number of failures under deeds of arrangement and bankruptcies was 28 less than in 1904, with a considerable decline in the amounts involved. Unfortunately, the whole of decrease in number was entirely due to the smaller number of deeds of arrangement registered, these being 246 less than in the previous year, and this, together with the fact that the number of bankruptcies was the highest for the past ten years, would appear to indicate a growing preference on the part of creditors to have defaulting debtors' estates realised under the eye of the Court. But though the actual number of insolvencies dealt with at Carey Street and in the County Courts was greater, the amounts involved were considerably less, and with one exception no failure was recorded equal in size to the big smashes among bankers and solicitors that were so unpleasant a feature in recent years. As usual of the bankruptcies involving liabilities of £20,000 and over, those caused by financial and speculative enterprises, apart from ordinary trading, showed the highest total, yet even so this was far below that for 1904. Included under this class is, we presume, the failure of a gentleman who described himself as an accountant, but whose real vocation might be better described as that of a "financial agent." This person's liabilities amounted to £587,000, but only £30,000 of it represented moneys actually received, the remaining £537,000 being for bonuses and interest, with promises of which he had induced credulous persons—and

they must have been very credulous—to entrust him with their cash for investment in Rhodesian and other speculative shares. Gambling and extravagance, those fruitful sources of bankruptcy, accounted for four failures of over £20,000, with aggregate liabilities of £221,000, two less in number than in 1904, but some £40,000 more in money. But as to the number of smaller fry ruined by the same causes the returns are silent, though one has only to look at the columns of the daily papers to see how often living beyond his means and a thirst for horse-racing and cards are given as the explanation of a sporting tradesman or clerk's appearance in Court. Of the 64 classified trades and occupations given in the comparative tables, 20 showed an increase and 45 a decrease in liabilities. Of those that increased, accountants and stock and share brokers were the more important, while of the decreases, bankers, solicitors, the metal, timber, building, and cotton trades and directors and promoters of public companies were the most noticeable. But although the liabilities in some of the latter groups were less than in 1904, their total still exceeded half a million; building, wine, beer, and spirits, grocery and provisions, and accountants all involving creditors to well over this amount. Women as well as men figure in the tables, and, sad to relate, the number of married women who failed in business last year was higher than in 1904, though their unmarried sisters and widows evidently managed their affairs with more circumspection, since their appearances were fewer. The trades most patronised by women—the Returns are more polite than some others issued by the Board of Trade which speak of females—are naturally drapers and haberdashers, milliners and dressmakers, lodging-house keepers, grocers, and publicans and hotel keepers, in all of which some found it impossible to make ends meet last year. One peculiar point common to all Bankruptcy Returns is the small number of failures in Scotland and Ireland as compared with those in England and Wales, but whether this is due to a higher degree of commercial morality or to the smaller population we decline to express an opinion.

United States Banking.

It was stated in a recent issue that the circulation of bank notes within the North American Union was at the end of August last about $570,000,000, or say £114,000,000. As recently as the end of 1903 the total circulation was only about £84,000,000, so that in the interval the paper money of the Union provided by bank notes has expanded no less than £30,000,000. And it is all paper, banking in the United States being very much in the position of banking in England in the second half of the eighteenth century. The great consolidations with which we have been familiar during the last 20 years, and out of which have grown some dozen gigantic joint-stock banks, do not exist on the other side of the Atlantic. There under the law which Mr. Lyman Gage got passed when he was Secretary to the Treasury in Mr. McKinley's Cabinet banks may be started with a capital of £5,000, and they can immediately issue notes to the full amount of their capital. And under the later arrangement, brought about by the continuous clamour for money, money, more circulating medium, they can issue notes to the amount of this capital on the security of their assets, such assets consisting first of the United States Government 2 per cent. bonds, and next of municipal or State securities. So far as we understand it, there is really nothing to hinder the originators of a new township from starting a bank and issuing notes upon the security of its capital to a large extent sunk in local building enterprises of their new town. It is, therefore, no wonder that at the present time there should be 6,162 banks in the United States, all independent, all struggling to make a profit, and very few of them trusted with large amounts of depositors' money. The 54 banks incorporated in the New York Clearing House, for example, have incurred altogether a smaller liability on deposits than four of the biggest banks in this country. At the date of the weekly return which showed a serious deficit in their reserve averages, the aggregate liability of these 54 banks to depositors of all kinds was only about £203,000,000. It may be mentioned, by-the-bye, that in that week 34 banks out of the 54 held reserves below their legal minimum. One bank, called the Metropolis, had only 16.9 per cent. of reserve, instead of the legal 25 per cent., and it owed £1,700,000 on deposit and current account.

There is probably safety, in one sense at least, in this multiplicity of banks. Were scores of them to fail the banking credit of the Republic as a whole might not be seriously interfered with, whereas were one of our ten or a dozen great banks to stop payment the whole credit of the United Kingdom would be shaken to its foundations. At the same time and while this is true, the weakness of even the biggest of these United States banks makes them a prey to the designing financier in far greater degree than ought to be possible in this country. Everybody is familiar with the dominant position occupied by the City Bank in New York, the Standard Oil Bank it is called. It is entirely in the control of the Rockefeller gang, and by its intimate connection with these men and with the big insurance companies it is in a position to finance gigantic schemes of public robbery without let or hindrance. Even that bank, in spite of its large creation of accommodation bills, accepted and discounted principally on the London market, was short of its legal reserve in the middle of last month. Less than 1 per cent. short, but still under the minimum, and it owed in some form to its depositors at that date nearly £28,000,000, being thus by far the most formidable credit user and creator within the American Union. The mere fact of the existence of such an institution in New York warns us that however much safety may lie in the multiplicity of small banks, there are one or two big banks in New York and in Chicago whose stoppage would play havoc with Wall Street finance, and possibly with the London market, the consequences of which it would take many years of hard work to obliterate.

Much might be said about the paper money commitments of these banks, but as long as the credit of the Washington Government remains what it is, there is no particular danger in the multiplicity of small note issues. The mischief they do is obvious enough in some directions, and in the mass so much fiduciary money prompts inflation, over-trading, and other evils of the kind this country was painfully familiar with between 1770 and 1844. But if the Washington Government were not itself so overburdened with liabilities on account of its paper money, the banks might be allowed to work out their destiny without interference. We cannot, however, enter into this branch of the subject now.

American Business Notes.

Last week's statements of the New York Associated Banks revealed some interesting changes, indicating that Wall Street financiers have been compelled to take back some of their stock heretofore carried in the London market. Loans went up by $13,327,000, and the advances thus created helped to raise deposits to $19,437,000. There was also an increase of $10,427,000 in the specie, although legal tenders were down nearly $2,000,000. As a result, however, the general reserve was up $8,461,000 and the legal reserve was higher by $4,859,000, so that the surplus reserve was larger by $3,601,000 compared with the previous week. The question therefore is, how far will the New York banks be able to continue this system of taking home their securities? Can their local banks go on creating credit so as to be able to relieve our market of a very inconvenient and dangerous burden? We shall see, but the struggle is going to be a keen one.

The president and directors of the Mutual Life are acting with the agents of the company in a manner which can hardly increase their popularity or add to the business of the concern. On September 20 the New

York office of the company sent out to its managers and agents the following telegram :—

All persons connected with the company are called upon to sustain the administration ticket wholly and unreservedly. Any report that any one in this office is not supporting the administration ticket solely and with all his energy is false and malicious.

Charles A. Peabody, President.
Emory McClintock, Vice-President.

The effect of this was the resignation of several agents. The manager at Detroit, in response to an inquiry from the president, Mr. Peabody, as to his position, wrote :

I beg to say that I shall continue to remain loyal to my appointment and manage the company's business in my territory to the best of my ability. It is my intention to take absolutely no part in the campaign for votes and in no way instruct or try to influence the agents under me, believing this to be the only course in harmony with the law, as recently enacted upon recommendation of the Armstrong investigation committee, and trust same will meet with your approval.

A conversation with the president followed, which resulted in the writer's dismissal by the agency committee. The manager at Springfield, Mass., who was called on to explain his refusal to support the administration ticket, did so in the subjoined communication to President Peabody :—

Referring to your telegram of the 20th, in which you state that all persons connected with this company are called upon to sustain the administration ticket of nominees for the board of trustees wholly and unreservedly, and your statement in our interview of the 25th that it is mandatory upon managers to electioneer for the administration ticket actively and positively, I feel compelled to inform you that such a course is not in harmony with my convictions as to the interests of the company nor my ideal of the position of manager nor my conception of my rights as a policyholder, nor my understanding of an honest election by policyholders of trustees to care for their property.

Re-election of those trustees who served with Mr. McCurdy now in nomination, mainly by force of subordinates acting in fear of dismissal from their positions, would harm the company more, in my opinion, than all that has gone before under their administration. A manager paid with policyholders' money to get business for the company would belittle himself to use his time largely electioneering for trustees seeking to re-elect themselves by such methods. I am unwilling to call upon my agents to do that which I am not willing to do.

Forestalling the action of the company, this manager resigned. The general manager for Kentucky was the next tackled by Mr. Peabody, but that gentleman had begun to find out his mistake, and at last accounts the Kentucky general manager was holding his ground. Meantime, a correspondence between Mr. Peabody as president of the Mutual Life and a Mr. Cassius Carter, of Diego, California, a policyholder came to light, in which the former fell foul of the New York *Evening Post* for having spoken unflatteringly of the way in which the investigation at the beginning of the scandals was stopped at a critical point. The *Evening Post* restates the case, and challenges Mr. Peabody to contest its facts. It was stated that Mr. Peabody had declared his intention of resigning if the trustees belonging to the old McCurdy ring are defeated at the approaching election. The New York Life, acting more wisely and with a greater sense of propriety, has issued a circular to its agency directors and cashiers of branch offices, which speaks for itself. It reads as follows :—

(1) You are to furnish promptly and courteously all information in your power in answer to inquiries from policyholders concerning the election referred to.

(2) In complying with the foregoing, you are to observe a strict neutrality on the subject of the various tickets which may be in the field.

(3) None of the funds of the company are to be used in any way whatsoever (for postage or otherwise) for the purpose of influencing or advocating the election of any ticket—administration or opposition.

Whatever your personal views may be in regard to the election, you must at all times remember you are in the employ of the company, composed of all the policyholders. You will be held accountable for strict compliance with the foregoing instructions.

Yours very truly,
Thomas A. Buckner, Vice-President.

We must not, however, praise too soon. The latest news from New York is that the New York Life's declaration of neutrality in the coming elections of trustees was a deception. In proof of this it is asserted that letters enclosing circulars advising the policyholders to vote for the official candidates of the company's administration, costing as much as 20 cents per letter for postage and cost of paper, envelope and printing, were being sent out by thousands to individual policyholders. One of these letters fell into the hands of the Policyholders' Committee through the recipient. Two of the enclosures were of special significance in view of the action by the gentlemen whose names are concerned. One was the copy of a letter from Cardinal Gibbons, Archbishop of Baltimore, to a gentleman in that city, explaining his reasons for withdrawing from the International Policyholders' Committee. The other was a letter from a Mr. J. Wilbur Chapman, an evangelist, to Bishop McCabe, of the Methodist Episcopal Church, congratulating him on having severed his connection with that committee. Another letter was received from a gentleman in Chicago, in which he sent to the Policyholders' Committee one from the general agent of the New York Life at Cleveland in Ohio, urging him to sign and forward a communication in support of the administration candidates for trustees. The matter was to be put before the Convention of State Superintendents of Insurance which was about to meet at Washington.

The New York State Railway Commission, which met on October 4, authorised the New York Central Railroad Company to increase its capital stock from $150,000,000 to $250,000,000. Authority was also given to issue at once $29,839,560, which includes $557,500 left over from a previous issue of $35,000,000. Explanations by officials of the company were made to the effect that payments on improvements to cost $57,000,000 had already been made to the extent of $18,000,000, and that the new equipment would cost another $9,000,000. The electrification of the main and branch lines from the New York Central Station in New York, which included construction work, would amount to $70,000,000, and it was intended to expend $20,000,000 on other improvements. It is worth bearing in mind that under its charter the New York Central Railroad Company whenever the dividend on its capital exceeds 7 per cent. can be called on to hand over the excess to the State, which may also take over the property and the line under a valuation. To prevent this expenditures have been devised for years back to keep down dividends, and so enable the ring which controls the line to profit inordinately at the expense of the public while giving it very indifferent service, to say nothing of the terrible accidents of late years that have made travelling on the line proverbially dangerous.

The president of the National Bank of North America has propounded a plan for currency reform in a circular which he has issued. He suggests the appointment of a commission to revise the National Bank Act, and would make national banknotes part of the legal reserves of national banks, and that the Government receipts of revenue from all sources be deposited in the national banks on the day they are received, the banks paying 2 per cent. interest. He believes that the return of what he calls the people's money to the people's banks will solve the currency question.

The monthly statement of the Controller of the United States Currency up to September 30 showed that on that day the amount of national banknotes outstanding was $573,903,108, an increase for the year of $57,550,868, and for the month of $4,050,805. The amount of circulation based on United States bonds was $257,768,924, an increase for the year of $46,135,398, and for the month of $3,329,764. That secured by "lawful money" was $46,134,184, an increase for the year of $11,415,470 and for the month of $721,042. The amount of bonds on deposit to secure circulating notes was $530,772,270, and to secure public deposits $136,794,825.

The Swiss Bankverein will pay on and after November 1 the half-yearly coupon on the Colorado and Southern Railway 4½ per cent. Refunding and Extension Mortgage Gold Bonds at the fixed rate of exchange of 4s. 1½d. per dollar.

Passing Events.

The fusion of the Argentine North-Eastern and East Argentine Railways may now be considered an accomplished fact. The former company has notified its shareholders that a law has passed the Argentine Congress sanctioning the amalgamation and authorising the construction by the combined undertaking of important extensions. When the text of the law is received meetings of both companies will be convened for the consideration of amalgamation terms and obtaining the necessary authority for the construction of the proposed additional lines.

A scheme has been devised for dealing with the dividend arrears of the Kalgoorlie Electric Power and Lighting Company. These amount to a considerable sum, and it is proposed to form a new concern with a similar title possessing a capital of £225,000 in 175,000 6 per cent. preference £1 shares and 100,000 ordinary shares of 10s. each. The preference shares of the old and new companies will be exchanged share for share, and for each two preferred shares will be given one 10s. fully-paid ordinary share as consideration for the cancellation of the dividend arrears. Then each holder of a deferred £1 share will receive instead one 10s. fully-paid ordinary share. These exchanges will absorb £200,000 of the capital, leaving £25,000 for future issue in the form of preference shares. The new concern will take powers to issue £60,000 debentures, of which £33,000 will be absorbed in redeeming the present debenture issue, and £27,000 will remain in hand for future requirements. There is only one question we desire to ask, and that is whether the new preference shares will be cumulative. If not the principal object of the scheme seems to be to bring the deferred shares nearer a dividend rather than the cancellation of the preference arrears.

We wonder if buyers of Nitrate companies' shares at the present extravagant prices have taken the trouble to examine the position at all closely to try to discover if the quotation of any particular security is high or low measured by its quota, the company's capital, and the cost of production, which, we believe, varies as much as 25 per cent. one company from another. It is extremely doubtful if these precautions are ever taken, but they must be if excessive risks are to be guarded against. Moreover, is it properly realised that a large number of new oficinas will come into operation next year, and that even if consumption be kept up and prices maintained the existing quotas must be greatly reduced? Sixteen Chilian companies alone have been allotted initial quotas of 11,950,000 quintals, which are not included in the current year's combination total, because the works are as yet uncompleted. This Nitrate Securities Trust, lately formed, has much to answer for, and the presence of two leading market jobbers among the signatures to the company's memorandum of association sets one thinking. Meanwhile, prices of the fertiliser have suffered a sharp reaction, and during the last few days share values have had a tendency to do likewise. It will be wise to keep clear, because in some cases we fear the inflation is quite monstrous.

The recent issue of bonds made by the Canadian Northern Railway Company for its Quebec section fell on an untoward time. The public did not absorb half the amount offered, and we hear that 58 per cent. went to the underwriters, who, however, received a commission of 3 per cent. on the total amount of their risk. They can, therefore, afford to hold until a better market appears.

The New South Wales Legislative Assembly has passed the Mining Bill which consolidates, simplifies, and liberalises the mining laws and enlarges the opportunities for mining on Crown and private lands, making available big areas hitherto closed against mining. The procedure to be followed in connection with mining enterprise will be further simplified by the regulations to be framed under the new law. Special conditions are laid down for the exploration of the mineral country, including the award of areas for new discoveries, the conditions of mining leases are made more liberal, and additional powers are given to the Warden to suspend the labour conditions and to grant statutory exemption for excess labour. Welcome though this more liberal law may be it would be premature to conclude that it will ensure the establishment of a profitable mining industry in the State. It has not been a very prosperous one in the past, and it does not follow that the big areas now to be thrown open will be richer than those hitherto exploited.

The public have not responded with enthusiasm to the inside attempt to stimulate the West Australian market. They have left the game entirely in the hands of the market players, which is not imprudent, desirable though an outburst of genuine activity would be here. True, in two or three of the leading mines there have recently been some promising discoveries, but these in themselves are not powerful enough stimuli to revive public confidence. We may witness its re-birth some day, but the advent of that hour is not presaged as yet by visible signs—not even by the dividends declared, good though many are. For instance, in the past quarter the amount distributed aggregated a little over half a million—£504,161, to be correct—but it is less than the second quarter, £548,575, though much in excess of the first quarter, £419,000. The following gives the individual achievements:—

Company.	Dividend per Share.	Date.	Amount £
Associated	2s.	July	49,536
Golden Horseshoe	5s.	Aug.	75,000
Golden Pole	6d.	July	5,000
Great Boulder Perseverance	6d.	Sept.	35,000
Great Boulder Proprietary	9d.	Aug.	65,625
Great Fingall	5s.	Sept.	62,500
Hainault	1s.	Sept.	6,500
Ivanhoe	5s.	July	50,000
Kalgurli	7s. 6d.	Sept.	45,000
Oroya Brownhill	4s.	Aug.	90,000
South Kalgurli	2s.	Sept.	20,000
Total			504,161

Some months ago the announcement was made of the contemplated amalgamation between those two unsuccessful Far-Eastern undertakings, the Pahang Corporation and the Pahang Kabang. This project was the subject of considerable comment and criticism at the time, for there seemed no bright hope that the companies, when incorporated, would meet with that success which had eluded them individually. After a fairly long interval circulars are issued telling us how affairs have gone on. From these we learn that the provisional agreement for the sale of the properties to a new company—the Pahang Consolidated—has been carried out. This new concern has already made a public issue of ordinary shares, fully subscribed, and as the sale of the property has now been completed there is nothing to prevent the issue and distribution of the shares due to holders in the old companies. For this purpose it will be necessary for both companies to go into liquidation, so the necessary meetings are convened for the 23rd inst.

The important news is sent by the Johannesburg correspondent of the *Financial Times* that two of the leading mining groups have decided to declare quarterly the amounts of gold held in reserve for the purpose of adjusting outputs. Names of these groups are not given, but it will come as a revelation to most people that this policy of secret reserves has been in vogue on the Rand. Those who venerate the bosses as honest, scrupulous men will be grieved to hear that they can thus "adjust" the monthly outputs and thus to some extent mislead us. The same system is adopted in Western Australia and is generally regarded there as justifiable and honest. This depends upon the point of view. But who thought the sacred cosmopolites were capable of any trick that looked like manipulation? The correspondent who thus enlightens the world thinks other groups will follow the example thus set. "The decision implies the practical abandonment of the principle of maintaining such reserves, as the practice would be useless unless the amount of gold

held for the purpose were kept secret. In some instances it is believed that the amounts are large and their notification will probably give an impetus to the market, the reserves constituting additional visible profit for the shareholders." So it is really an ingenious and despairing kind of attempt to galvanise the market.

Kynochs have taken a bold step. Tired of waiting for the action of the Government, they announce that they will adopt the metric or decimal system in their business. We wish them every success. No complaint is more frequent in the reports of our Consuls abroad than that directed against our antiquated system of weights, measures and money. Yet there is much to be said for our confused-looking usages, and some injustice will undoubtedly be done to the small consumer should a decimal coinage, for instance, be introduced and made compulsory within the United Kingdom. Our unscientific pounds, shillings and pence form a much more divisible monetary system than the decimal one, and will be clung to by the inhabitants of the three Kingdoms, no matter what scientific pressure or instruction may be brought to bear upon them to accept a change. For all that, the metric and decimal system is the only scientific one in existence, and as it is already in use pretty well all over the world except in the United Kingdom, its value in helping our international business justifies a firm like Kynochs in making the change so far as its weights and measures go. Our foreign trade is unquestionably hampered by the peculiarity of these and the unscientific character of our coinage. It is therefore necessary for firms having large connections abroad to enter into elaborate calculations so as to be able to state their weights, measures and prices in terms capable of being understood by their foreign customers. We hope the example set by Kynochs will be followed widely by manufacturers throughout the country having foreign connections. Nothing but good should result to them and to the countries abroad from the change.

The Ontario Bank is not a very formidable affair; still the aggregate of its balance-sheet foots up to about £3,000,000, and it has a liability on deposit and current accounts of £2,500,000. Its misfortunes, moreover, would seem to have arisen from dishonesty and not from inconsiderate plunges into the unrestrained speculation which has dominated Canadian stock markets for some years back. At any rate, Mr. Charles McGill, formerly manager of the Bank, has been arrested and charged with falsifying the Government returns. The loss is said to be about £200,000, and Mr. Cockburn, the president of the Bank, has been served with a summons charging him with signing these false reports. Happily no banking crisis can follow, because the Bank of Montreal has taken over the business of the Ontario Bank and will doubtless see to it that depositors suffer no loss.

Thursday's *Times* contained Mr. John Murray's new advertisement. He stated at a recent meeting of the Publisher's Association that he would work out his space contract with the *Times* for advertisements by inserting therein an intimation that particulars about his new publications would be given in other papers, and he has fulfilled this pledge. In reading his temperately-worded announcement, we cannot help a feeling of keen regret that the *Times* should have provoked a quarrel of this description. It is much easier to lose revenue of that kind than to get it back again. Mr. Murray's announcement runs thus: "This space was engaged before the declaration of war by the *Times* against proprietors of copyright. In consequence of the regrettable dispute which has arisen in regard to the *Times* Book Club, readers are requested to refer to the advertisement columns of the other leading daily and weekly Press for details of Mr. Murray's new and forthcoming books. Catalogues and explanation of this advertisement will be forwarded gratis on application." From many points of view, that is the most unpleasant thing we have read in the *Times* for many a long day, and our memory goes back to the time when the *Times* used to enjoy the exclusive privilege of a page advertisement from Mr. Murray when his new books were ready. How proud it was of that page! And now it stoops to allow a correspondent to accuse him of fraud.

A pertinent circular has been issued by the International Policyholders' Committee in reference to the struggle now going on between it and the Standard Oil and other New York financiers for possession of control over the destinies of these big American life offices. We hope readers will note the statements made in that circular and send their proxies to Mr. Robertson Lawson, for if they remain supine the next step they may have to take will be to drop their investments in these American offices altogether. For the time the crisis may have been tided over and some small economies introduced, but the vicious system under which uncounted millions of policyholders' money were risked and imperilled to serve the interests of Wall Street market leaders, combination and monopoly framers and such like remains unchanged. The circular points out that in the case of the Mutual of New York Life Office the existing board is, with the exception of four members of the International Policyholders' Committee, altogether of the old type. Out of 36 members 15 of the old lot remain and 17 seem to have been co-opted by that rump. This must be put an end to, or the last state will be worse than the first.

Shareholders in Harringtons, Limited, have been long suffering, but they have turned at last, and at the meeting on Wednesday a complaint about the way in which the report and accounts were drawn up met with so much support that the meeting refused to adopt them. They went still further, and declined to reappoint the retiring auditor, and altogether the meeting appears to have been a lively one. A glance at the record of the company since its incorporation in 1892 shows that the unfortunate shareholders have good cause to grumble. The nominal capital is only £75,000, and £55,000 has been issued, £30,000 as preferred ordinary shares, entitled to a fixed dividend of 9 per cent. per annum and half any surplus, and £25,000 as deferred shares. For the first three years the deferred shares received dividends of 5, 2, and 9 per cent., but they have had nothing since, while the preferred shares have seen their return fluctuate between 4½ and 2 per cent. In 1903-4 there was a debit on working of £534, which was increased in the following year to £2,016, and in the twelve months just ended a further loss of £122 was incurred. No wonder the shareholders have got tired of the business, and want it wound up.

The sequel of the action of the Native Labour Association in informing the Robinson group of mines that they must withdraw from the institution if they persist in recruiting independently in Portuguese territory is the announcement that the group have thrown up their membership. A threat was held out to the companies that all the share capital and deposits were liable to forfeiture, though arrangements might be made to repay these if the withdrawal from the association were voluntary. It was argued, in defence of such arbitrary conduct, that the action of the group in recruiting independently was a breach of the explicit agreement between the members. However, the group prefer liberty of action and have resigned, their share in the capital and the deposits being refunded. This independence is to be applauded, and it is to be hoped the group will be backed up by the Government in every possible way in order to defeat a monopoly that has done so much harm to the industry, created chaos in South Africa, and ruined many an investor.

Sir J. Edward Johnson-Ferguson, Bart., has resigned his seat at the board of Williams Deacon's Bank, Limited, in consequence of the increased demands upon his time, following his appointment as chairman of Bolckow, Vaughan, and Co., Limited. Mr. Edward Alexander James Johnson-Ferguson has been appointed a director of the bank in his place.

Critical Index To New Investments.

Britannia Nitrate Company, Limited.

Formed with a share capital of £100,000 in £1 shares, of which 75,000 have been issued, this company has acquired eight Chilian estates, of 1,000,000 square metres each, of nitrate grounds in the Refresco district of Taltal, Chile. For these it gave £74,500 in shares, and £500 in cash, and in order to provide funds for the building of the oficina and other works £70,000 in 5 per cent. 1st mortgage debentures were created and sold to Messrs. Balfour, Williamson, and Co., who, in turn offered them for subscription at 98½ per cent. The nitrate grounds are estimated by various experts to contain from 13,425,000 to 14,000,000 quintals of commercial nitrate of soda, and as the company is coming into the Nitrate Combination the directors estimate that even with a cost of production of 5s. 8d. per quintal of 96 per cent. nitrate, f.o.b. Taltal, a substantial profit should be earned. The debentures are to be redeemed by annual drawings at 102 per cent., commencing in January 1, 1909, or by purchase in the open market, and should be a good enough security.

City and South London Railway.

An issue of £150,000 5 per cent. preference stock (1903) is announced by this company to provide part of the capital required for the extension of the line from the Angel at Islington to Euston Station. The stock ranks after the existing preference stocks and is offered through Martin's Bank and Messrs. Glyn, Mills, Currie and Co., at the price of 105 per cent., payable 5 per cent. on application, 10 per cent. on allotment, and 90 per cent. on November 15. Although the stock will be paid up in full at such an early date the dividend does not commence to accrue until March 1, and the first payment will be in respect of the period from that date to June 30, 1907. The directors hope for a considerable increase in business from the interchange of traffic with other tube lines, and from the linking up of the system with some of the big trunk railways, but even without that the margin of nett revenue is large enough to cover the dividend requirements of the new stock. It is stated that under the provisions of the Trustee Act, 1903, trustees may invest in this stock, and the yield of £4 13s. 9d. per cent., therefore, looks tempting.

Wheal Kitty and Penhalls, United, Limited.

This is a new Cornish tin mining company formed with the moderate capital of £35,000, in 70,000 shares of 10s. each. The whole, however, is not to be issued at once, only £23,000 of it. The company will take over as a going concern the old and well-known mine of Wheal Kitty, and the capital is wanted not only to develop and equip this property, but to work also the adjoining Penhalls mine. Wheal Kitty itself is about 200 acres in extent, and is traversed by at least five lodes, but it is thought that other lodes exist in the property, though yet unproved. Penhalls has an area nearly as large. The directors believe it will be possible to open out these lodes and get large and profitable returns from them, and we should say this is quite likely with the help of the present high price of tin. The mines, too, adjoin the famous West Kitty, whose lodes are believed to traverse them. Mr. Tamblyn, the present manager of the East Pool and Agar United mines, expresses his opinion that the Wheal Kitty will prove one of the best mines in the county of its size. The lease will be for a period of 21 years, "on favourable terms," says the prospectus, whilst the price to be paid for the properties is the modest one of £13,000, of which £1,000 is in cash, the rest in fully paid shares. Out of this the vendor company undertakes to get subscriptions for 20,000 shares out of the present issue of 46,000, and bear all costs down to allotment. It looks a promising venture.

Transvaal Coal Trust Company, Limited.

The directors invite subscriptions for £100,000 first mortgage debentures bearing interest at the rate of 5½ per cent. per annum. Shareholders are offered these at par in the proportion of £20 debentures for every 100 shares. Any debentures not taken up by them the guarantors will take for a commission of 5 per cent. They are convertible into fully-paid shares at the rate of £1 share for every £2 debenture up to December 31, 1909. The proceeds are required for the opening up of new coal properties, particularly to sink a shaft on one of them. It is possible that the company will be able to earn the interest on these debentures, which, however, are not highly attractive.

The Sugarloaf, Mount Morgan, Mining Company, Limited.

Mount Morgan is a name to conjure up wonderful riches, and, though the Sugarloaf is a property adjoining it, we do not believe it is destined to rival its famous neighbour. In the prospectus offering 35,000 £1 shares at par out of a capital of £120,000, the directors make a great deal of this vicinity to the Mount Morgan, and talk glibly, a little too glibly, of what this mine has done and is likely to do. The present company is taking over the Sugarloaf Gold Mines, in liquidation, which hardly sounds promising. It is the intention at once to resume sinking the main shaft. This has already been sunk to 450 feet, and has proved the lode, so the prospectus says, as well as the levels, to be of great size and heavily mineralised throughout. The whole of the consideration to be paid by the vendor company is to be satisfied by shares, no promotion money is to be paid, and all preliminary expenses, estimated at £750, are payable by it. But it looks a highly speculative venture, and should attract speculators only.

Worcestershire County Council.

The County Council desires to borrow £47,900 for general county purposes, and offers 479 debentures of £100 each bearing 3½ per cent. interest at par. These debentures will have a currency of from one to 29 years and will be secured upon the County Fund and the County Rate. The present rateable value of the Administrative County is £2,055,989, while the outstanding debt on September 30, 1906, exclusive of the education loans, was only £247,460.

ISSUES BY TENDER.

Bournemouth Gas and Water Company.—This company is erecting new gasworks at Poole with all the latest improvements, and requires funds both for this and for extension of the existing works and plant. The directors, therefore, invite tenders for 2,180 6 per cent. preference shares of £10 each at a minimum price of £14 per share, payable in full on or before December 31. Since 1903 the dividend on the original shares has been at the rate of 10 per cent. per annum, with an addition at the rate of 4 per cent. per annum on the "B" shares, and on the preference at 6 per cent. per annum. Nett profits for the year ended June 30 last were £31,295, after providing for all charges and writing £6,000 off the old works at Poole, and as the dividends on the whole of the preference capital, including the present issue, will only take £4,500 per annum, there is ample margin.

Answers to Correspondents.

W. G.—(1) Last year's dividend was the first ever paid, and as the company's business depends so much on a particular crop, the prosperity it is now said to be enjoying may come to a pause very quickly. The present price is too high to make the preference shares worth picking up. As for the ordinary shares, they are not quoted in London, but we regard the nominal price on provincial Stock Exchanges as being also unreasonably dear. (2) These have risen too much to make a further purchase just now advisable. There are no ordinary shares in existence, and only a very moderate amount of deferred, most of which are in the hands of the Government. (3) No. The company can barely make ends meet now, and so far as we can see there is nothing to encourage the hope of any great improvement in the near future. (4) These shares will get no dividend until the full interest is paid on the debenture stock, a contingency which still seems so very remote that the shares are hardly worth buying even as a lock-up. (5) This is a little more promising, although even with it your wait for a return will be a long one. (6) Yes, the company is honestly managed, and prospects seem very promising, and the shares may be held for future dividends. We have also heard that they have been bought on colonial account. (7) The stock is not quoted on this side, but apart from that it does not seem suitable for a lock-up, as it has never received

a penny, and does not seem likely to for a very long time yet, if it ever sees a dividend at all.

H. B.—(1) The company is passing through what may be called a transition period, as it is reorganising its business, but the prospects seem very fair. All its stocks, however, are now fully paid, and not partly paid, as you state, the last call having been paid quite recently. (2) As the company is still only in the experimental stage, it must be looked upon as a speculative enterprise, though one with fair promise should the present high price of copper be maintained. It is impossible to say yet what profits it will earn. (3) A very promising mine, and spoken of highly by experts. It should continue to pay its present moderate dividends for many years to come. (4) Is improving its position somewhat slowly, but surely, and promises to pay small and regular dividends in the near future. Hardly good enough to buy, however, for a sound investment. (5) Yes, they look a promising purchase at their lower price, but only buy a moderate quantity. (6) This company has made very steady progress during the past few years in building up an excellent business, and its shares should be a fair investment.

Nofir.—(1) The undertaking appears to be cautiously managed, and its stocks are sound enough investments. We see no reason why the preferred should not be held under the circumstances you give. (2) We have worked out the yield again in two or three ways, and still bring out the result as 25 per cent. Though the price looks low, we hardly think it advisable to average. (3) The stock should be all right, as it depends more on the value of the land owned than upon earnings, and we are given to understand that its holdings have risen in value substantially of late owing to developments in the neighbourhood. You might, therefore, average your holding with advantage. The stock should also do in part for the lady.

W. F.—(1) This stock is certainly a very fair security, and you will not go far wrong if you buy at the price you mention. The market, however, is so governed by money conditions just now that you must be prepared to see the price go down rather than up in the immediate future. (2) Although matters are improving in that country they are far from being in a healthy state yet, and we hardly think the time has come to buy the shares.

D. J. F.—(1) We are inclined to think that the profit on these bonds should be taken, but there need be no hurry to invest in the others. (2) Rather a small issue, and the bonds would not be readily realisable, but otherwise there is nothing to be said against it. (3) This is larger and looks reasonably priced. The security is quite good. (4 and 5) There is really very little to choose between these two securities, and both provide fairly good investments. (6) We do not like to tell you to accept so severe a loss, and think you should wait a little, but sell on any good recovery. (7) Quite a good security, but hardly worth a premium, because of the redemption provisions.

Wellington.—Insiders are manipulating these shares on the rise of the price of copper. Thus they have come to the front quite suddenly, which justifies suspicion. There is the great risk, therefore, that a buyer now would come in at the top. On the other hand, a holder might sell out to great advantage.

H. E. H.—(1) You will have to face a big loss on these whenever you sell, as they are not likely to reach the price you gave for them. Still, you may as well hold a little longer in the hope of being able to sell in a better market, and of reducing your loss a trifle. It is a small hope though. (2) These are not likely to go higher, and as your loss would not be great, you had better sell out. (3) We should hold these, as the mine is still doing well. (4) A very speculative share, which flies up and down in bewildering fashion. Sell out should the insiders put them up at any future time by a few shillings; we do not look for any appreciable decline in the present price. (5) These may also be held a little longer in the hope of eventually reducing your loss. (6) Good shares to keep on dividend prospects; the mine has a long life. (7) Better hold these for the present. The company pays a good dividend, and we believe it has found markets more favourable for its business recently. (8) A gambling counter. Your only chance is a possibility of an outburst of speculation putting them higher temporarily. (9) The position is now on the mend, and on the better outlook you might keep your shares. (10) We do not expect the shares to see your price again, so you may as well clear out without delay. (11) You seem to have a big profit on these, take it. (12) Are confidently talked higher on encouraging reports, which the market says will be written by the engineers sent out. If they should go higher, and give you even a modest profit, secure it. (13) As your loss would not be very serious, you might face it and clear out. (14) We do not like the look of this company's prospects, but the price may eventually advance, and reduce your loss a little. (15) Though speculative, they belong to a good group, and you are not likely to lose anything more by waiting, so you might wait awhile. (16) Not worth holding. (17) Neither should these shares be kept. Sell at the best price you can get. (18) As you have held them so long, do not sell on the present distressed market. The company's future is very uncertain, but if you have patience you may see the price go a little higher some time in the future. We hardly expect them to go lower.

The Union Bank of Australia, Limited, notify that they have opened branches at Traralgon and Yarram Yarram, both in Victoria.

RHODESIAN MINING RETURNS.

After the big spurt in August a decline comes for September, the total for the past month being 48,470 ozs., compared with 50,127 ozs. for the preceding month, a drop of 1,747 ozs. Compared with the return of 35,785 ozs. for September, 1905, there is a considerable increase. Judged by figures, therefore, progress is being made, but dividends are still wanting as evidence of prosperity. Of other minerals the outputs were:—Silver, 11,719 ozs.; lead, 79 tons; wolframite, 3 tons; coal, 8,473 tons; copper 6 tons, and chrome ore, 875 tons.

TRADE AND PRODUCE.

Wheat.—The stronger tone prevailing in the American market tempted holders here to maintain rates, notwithstanding the heavier shipments, but buyers steadily refused to be drawn, with the result that while no appreciable change was made in prices, a decidedly easier tendency for cargoes existed towards the close of the week. Quotations for English wheat are still firm in most of the provincial markets, though in some cases the need of farmers for ready money has compelled them to part with the corn on buyers' terms. Deliveries for the week totalled 80,630 qrs., averaging 26s. 3d. per qr., as against 85,449 qrs., averaging 26s. 11d., last year; imports amounted to 182,023 qrs. of wheat and 125,233 qrs. of flour, compared with 443,007 qrs. and 101,000 qrs. respectively a year ago. In the States certain interests are apparently unable to learn from the past, for it seems an attempt is being made to engineer another corner. Every advice and rumour that has a bullish flavour is eagerly seized upon as a pretext to lift prices up, and immediately profit selling takes place speculative buying invariably appears to prevent a relapse. Towards the close of last week, and the beginning of this, much was made of the unfavourable reports of the Argentine harvest, the rumoured failure of the potato crop in Germany, and the strong European position, with the result that quotations on the whole moved steadily upwards. Later on, however, more favourable news from Argentina and smaller buying for export produced a sagging tendency, which was only checked by speculators coming in to support the market. Bradstreet's estimate of the wheat in sight east of the Rockies put the quantity at 64,536,000 bushels, against 61,154,000 last week, and 39,385,000 last year.

Wool.—The unsettled state of the market for fleeces has had a depressing effect on the manufacturing end, and consumers, especially those using medium or high-grade wool, are for the present limiting their purchases to the smallest possible dimensions. Low grade wools, on the other hand, are lower in price since the last London auctions, and users have bought fairly freely. Around Leeds most manufacturers are busy, and ask for comparatively long deliveries. Factories turning out men's clothing are particularly well employed, and many have already secured repeat orders for winter goods. Elsewhere the mild weather and the high values asked for wool hamper business to a large extent, though as a matter of fact the majority of mills and factories have still considerable orders on hand to keep them occupied.

Linen.—The demand for flax is steadily growing, and prices are a turn higher, while the quantity of new fibre coming on to the farmers' markets is also slowly increasing. Yield at the Scotch mills, however, still continues unsatisfactory in too many cases. Fresh advances in nearly every class of yarns have again

to be reported, and the market continues to harden more and more. Yet, in spite of this, the volume of business passing grows rapidly, though doubts are arising both as to the permanence and final results of the present unceasing and seemingly irresistible movement upwards, which even now has far exceeded the most optimistic forecast. In the manufacturing end no feature of special interest has occurred, but business all round has been well maintained, and is, if anything, slightly larger than recently. Forward business in all departments is substantial, and there are also more than the average number of current orders being placed. Home, colonial, and foreign markets for bleached and finished linen cannot be regarded as anything but highly satisfactory, and the improved tendency apparent of late, if not strengthened, is certainly no weaker.

Rubber.—Messrs. W. J. and H. Thompson, in the fortnightly circular dealing with this commodity, state that, judging by the heavy American deliveries during the past three months, a good business must have been done in the States in Para rubber, but the heavy stocks held in Europe prevented any material rise in prices from this cause. From now onwards until the end of March next we should see increasing supplies, and, therefore, unless a very active demand of an unexpected nature springs up, higher quotations are not likely to be justified. Visible supplies of Para grades, including Caucho, at the end of September, were 2,546 tons, compared with 2,708 the previous month and 2,391 on September 30, 1905.

Cotton (from our Manchester correspondent).—The tone of our market during the past week has been rather unsettled, and business has been considerably restricted owing to the stiff prices which sellers have held for. It seems practically impossible for anything more than retail operations to be carried on on the present level of values. Here and there odd transactions have occurred, but buyers do not consider that the present time is opportune for speculative purchasing. The raw cotton situation is still very uncertain, and although the fluctuations towards the close have not been very violent, yet there is a general lack of confidence in the present state of affairs. In piece goods for export a fair amount of inquiry has been dealt with, but offers have been too low in the majority of cases for manufacturers to accept them. Numerous offers have come forward from India, and shirtings have been in request, but the turnover for our Dependency may be described as small. Odd lots have been put through for Japan, and for one or two of the smaller markets of the Far East, but China buyers have again been inactive, few sales of weight having occurred. For the Levant and Egypt buyers for the most part have held aloof, and not much has been put through for the South American outlets. Healthy advices continue to come forward from most of our markets abroad, but it seems to be almost impossible for exporters to pay the prices which manufacturers are holding for. Prices for cloth, however, although dear, are not leaving a very satisfactory margin for makers. The stiff attitude of American spinners is cutting into the margin of manufacturers, and to buy yarn and produce, say Burnley printing cloths, to-day is a lean business. T-cloths and Mexicans are strong, owing to deep engagements of manufacturers. These cloths are about as healthy as anything in the piece goods section. The home trade houses continue busy, more orders being received from retailers in the country. American yarns for home use have continued well held, owing to most spinners having deep engagements. The turnover has not been large. Users wherever possible have held aloof. Here and there, however, in odd lots, sellers have not done badly. Considerable scarcity continues in certain numbers of weft. In export bundles the trade at the moment is not at all important, shippers not being in the position to pay the stiff prices of producers. A very fair trade, however, has been done in cops for the Continent. Gassed yarns continue very healthy and strong. In Egyptian yarns the turnover cannot be described as large, but most spinners have extensive order-lists, and full quotations have been held for.

The New York market opened with a very firm tendency, several points higher, and this strength was maintained for some time. A bullish weekly Government weather report started some "bear" covering, but later selling became general, "shorts" pressing the market. There was a temporary rally on too much rain in the Eastern cotton belt, but the decline was resumed. At the close the market is much steadier.

Coal.—Business in the coal trade continues very healthy and satisfactory, the outlook being looked upon as promising, as more is expected to be done when the coal tax is abolished. The activity at present is greater than it has been at this season of the year for many a year past. There is still a good demand from Germany, and exports to the Continent generally are considerably larger than they were last week. Prices, therefore, keep very firm, especially for forward shipment. At Cardiff best Admiralty steam coals are quoted 15s. to 15s. 6d., and are expected to go higher still. Best seconds are 14s. 3d. to 14s. 9d.; seconds, 13s. 6d. to 14s. Best ordinaries, 7s. 6d. to 7s. 9d.; seconds, 7s. to 7s. 6d.; inferiors from 6s.

Copper.—Matters get worse and worse every week in this market, and a famine in this metal is now almost certain. Already the American producers have hoisted signals of distress, and their control of the market has vanished in face of the clamour by consumers for material. To meet their early requirements American manufacturers have been compelled to come over here for metal, and this alone would have been sufficient to lift prices up again without home demands and speculation. A sharp set-back, however, came on Thursday, when quotations dropped from £102 2s. 6d. for cash and three months to £99 17s. 6d. cash and £99 12s. 6d. three months, and further fell to £99 12s. 6d. cash and £99 7s. 6d. three months.

Tin.—A sharp upward movement has likewise taken place in the quotation for this metal, though temporary fluctuations have been more apparent than in copper. Still, these notwithstanding, prices are considerably higher than last week, and, with the East holding firm, and a fairly large demand from the States, look like keeping up. On Thursday the market was a little easier in sympathy with the set-back in copper, closing quotations being as much as 25s. lower for cash and 20s. for three months. Yesterday there was a slight recovery to £198 5s. cash, and £197 10s. three months.

Iron and Steel.—This week there has been considerable buying of Cleveland pig-iron on American account. It was, however, not unexpected, but has been looked for for a long time past. This has naturally greatly strengthened the position of the Cleveland pig-iron market, and prices have substantially improved. In fact, they have risen to the highest figures since the autumn of 1900. Business, on the other hand, has been quiet in the East Coast hematite iron trade, and prices have scarcely moved. Consumers are not inclined to give more than 69s. 6d. per ton for mixed numbers of hematite pig-iron, whilst some business has been done at 69s. 3d. In the manufactured iron and steel branches demand has slackened off somewhat, but producers show little or no disposition to reduce their prices, as they are still well supplied with contracts. The only orders reported in the shipbuilding trade are for some submarines for the British Admiralty. There is hardly any change to note in the condition of things in Scotland, as the strike on the Clyde is still exercising a depressing effect.

Tea.—A considerable increase to 54,686 packages in the quantity of Indian tea brought forward this week prevented any further improvement in values, but prices on the whole remained wonderfully firm. Messrs. Gow, Wilson, and Stanton report that the bidding for medium and good teas was decidedly strong, but less competition was experienced for lower grades, except such as were suitable for export. The average price realised on 47,172 packages sold was consequently slightly less at 8.12d. compared with 8.26d. a week ago and 8.02d. last year. Exports to the United Kingdom for the first half of October amounted to 16,740,000, against 11,760,000 lbs. for the corresponding period of 1905, and the total from April 1 shows an increase of 8,742,000 lbs. at 114,339,000 lbs. Supplies of Ceylon tea were also larger at 20,772 packages, but the quality in many cases has fallen off a little, and although prices of the better grades were well maintained the average came out at 8.20d., against 8.35d. last week and 7.75d. in 1905. Exports to this country for the first half of the current month only reached a total of 3,000,000 lbs., or a decrease of 1,250,000 lbs. The quantity of Java tea offered rose from 1,094 packages to 2,880 packages, and contained a large proportion of the better liquoring kinds. Prices were perhaps a trifle weaker for the poorer qualities, but, on the whole, there was a fair demand, and prices were much about the same as a week ago.

Sugar.—The copious warm rains early in September, as Mr. Czarnikow points out, were followed by dry, cooler weather in the second fortnight, whilst the first half of October has been exceptionally favourable for the time of year. Though these are only Magdeburg returns, the news from other countries, especially France, was equally good; therefore, if weather counts at all, it should be in favour of full figures. But even the highest estimates show a deficiency of 700,000 tons in Convention countries, whilst the Russian figure is a secondary consideration. The old stocks there are only 122,000 against 262,000 tons, which reduces the comparative supply by 140,000 tons; the Refiners' Syndicate seems dissolved, but the official allotment system for home consumption still allows old sugars to participate in the new yearly allotments, which, to a certain extent, prevents exportation. Prices of May beet only moved from 9s. 6¾d. to 9s. 7d., until the publication of F.O. Licht's higher estimates confirming the impressions already produced by the weather, when holders sold down to 9s. 4½d. The September figures show 93,000 tons less production and 53,000 tons more consumption, half of the latter is artificially caused by the Austrian Cartel, and part of it seems due to a correction of previous figures in France, as the French Treasury receipts pointed to September deliveries of 10,000 tons less. These corrections, especially in Germany, are disturbing, but may not be entirely avoidable, as sometimes refined is reduced to raw by adding ½, and sometimes 1·9. But this only accounts for a small part of the corrections; it should, however, be taken into account in calculating European exports elsewhere, because U.K. imports reduced to raw are larger than the weight of raw and refined really imported here. Anyhow, the corrections ought to be spread over the season, not over a single month. The European excess is now only about 125,000 tons, and half the total stock is held in France, whilst our moderate stocks are still decreasing, with the absurdly small imports. The trade are evidently afraid of the small premium, even with the strike in Hamburg, which allows only rail-borne sugar to be shipped. The American market has been lifeless.

Parr's Bank.—Liabilities on current and deposit accounts, &c. on September 27 amounted to £28,264,469, and on drafts current, acceptances on behalf of customers, &c., to £1,820,302, against which cash in hand and at Bank of England stood at £4,366,309, money at call and short notice £5,869,885, Government and other first-class securities £3,493,384, bills of exchange £2,840,728, and loans and advances to customers £14,671,846.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for week ended October 14, $3,753, decrease $893.

Argentine North Eastern.—Traffic receipts for week ended September 14, $20,710, increase $2,205; aggregate from January 1, $724,696, increase $70,927.

Assam Bengal.—Traffic receipts for week ended September 8, Rs. 1,02,784, increase Rs. 26,565; aggregate from July 1, Rs. 7,81,777, increase Rs. 1,38,325.

Canadian Northern Railway.—Traffic receipts for week ending October 14, $186,600, increase $64,300; total from July 1, $2,173,800, increase $8,19,800.

Lucknow Bareilly Railway.—Traffic receipts for week ended September 15, Rs. 19,860, decrease Rs. 7,062.

Quebec Central Railway.—Traffic receipts for the 2nd week of October, $16,761, increase $2,266; aggregate from January 1, $735,097, increase $100,014.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended September 15, Rs. 15,908, increase Rs. 4,728.

White Pass and Yukon Railway.—Traffic receipts for the week ended September 14 amounted to $65,533.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending October 13, £1,260, increase £42; aggregate from July 1, £17,932, increase £107.

Cockermouth and Keswick Railway.—Receipts for week ending October 13, £795, increase £38; aggregate from July 1, £15,695, increase £801.

East London Railway.—Traffic receipts for July, £4,235, increase £17.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending October 13, £388, increase £20; aggregate from July 1, £5,051, increase £274.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending October 10, £817, increase £92; aggregate from January 1, £34,686, increase £6,266.

Blessington and Poulaphouca.—Traffic receipts for week ending October 10, £12, decrease £2; aggregate from July 1, £478, increase £35.

Bristol Tramways and Carriage.—Traffic receipts for week ending October 12, £5,078, increase £53; aggregate from July 1, £82,383, increase £3,540.

British Electric Traction.—Receipts of all the Associated Companies for the week ending October 12, £29,042, increase £964; total increase from January 1, £119,802; 432¾ miles, against 438½.

Burnley Corporation. — Traffic receipts for week ending October 13, £1,199, increase £113; aggregate from July 1, £18,888, increase £1,593.

Dublin and Blessington.—Traffic receipts for week ending October 10, £134, increase £12; aggregate from July 1, £2,618, increase £115.

Dublin and Lucan.—Traffic receipts for week ending October 12, £114, increase £2; aggregate from July 1, £2,119, decrease £37.

Dublin United.—Traffic receipts for week ending October 12, £5,374, increase £364; aggregate from July 1, £85,003, increase £4,800.

Edinburgh and District.—Traffic receipts for week ending October 13, £4,975, increase £85; aggregate from January 1, 1906, £205,148, increase £4,429.

Hastings and District. — Traffic receipts for week ending October 11, £923.

Isle of Thanet.—Traffic receipts for week ending October 13, £482, increase £124; aggregate from October 1, £922, increase £172.

London County Council.—Traffic receipts for week ending October 6, £26,927, increase £12,303; aggregate from April 1, £714,630, increase £304,333. Miles 106⅛, against 51¼.

London General Omnibus.—Traffic receipts for week ending October 13, £24,563, increase £1,925; aggregate from July 1, £354,167, decrease £5,394.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending October 13, £4,220, increase £2,633.

London Road Car.—Traffic receipts for week ending October 13, £8,313, increase £597; aggregate from July 1, £121,075, increase £2,289.

London United.—Traffic receipts for week ending October 12, £6,326, increase £1,084; aggregate from January 1, £259,813, increase £19,743.

Rossendale Valley.—Traffic receipts for week ending October 12, £213, increase £8.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending October 14, £889, increase £180; aggregate from January 1, £34,376.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending October 14, £16,526, increase £2,295; aggregate from January 1, £613,037, increase £68,894.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 303. Total receipts from August 1, 1903, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of August, 1906, £14,186, increase £1,415.

British Columbia Electric.—Nett earnings for August $44,790, increase $6,097. Nett earnings from July 1 to August 31, $102,385, increase $17,835.

§ From July 1.

Under the title of "Tours, West-East," the Royal Mail Steam Packet Company have just published a very attractive pocket booklet, containing brief outlines of tours that can be made in the luxurious vessels of their fleet. The booklet is copiously illustrated, and the sketches on the covers are from designs by the well-known artist, A. S. Forrest.

The Investors' Review.

The Week's Money Market.

BANK RATE 6 PER CENT. (Advanced from 5 per cent. on Friday, October 19.)

Norfolk House, Friday Evening.

Throughout the week dealers in credit have been working under a sense of nervous apprehension that a 6 per cent. Bank rate was at hand. When yesterday passed without a rise some of them began to hope that after all we might scrape through with a 5 per cent. rate, thanks to the help of African and Australian gold. There was no other source of comfort, and it has proved illusory, for the Bank directors put their rate up to 6 per cent. this morning, and in doing so stunned the Money market. There have been stories all the week of dangerous foreign demands upon our gold; every country in the world pretty well was represented as waiting to pounce upon such supplies as came into the open market, and to haul the metal away from the Bank of England. Something like £1,000,000 was declared to be under engagement for Egypt to be taken out on Saturday, and in actual fact £1,200,000 may go. The New York Exchange, too, has been flickering down towards the point that would enable American bankers to be amongst the keenest competitors, and the offer of American bills in the market yesterday was taken as a hint that the Yankees were again after the metal. But Germany, Russia, Brazil, Argentina, Constantinople, all want gold. Every rumour may not be well founded, but the Bank has been allowed to become so weak in bullion, possessing now less than £29,200,000 all told, that it could not permit more of its stock to be drawn away without raising the rate to 6 per cent., and from the suddenness with which that step has now been taken the market may well fear that 6 per cent. is not the end of it.

Last time we had a 6 per cent. Bank rate was in December, 1899. It was put up on the last day of November, and remained at 6 per cent. until the first week in the New Year. At the date when the advance took place the total stock of coin and bullion in the Bank was about £2,000,000 more than it is now, and the reserve in the banking department was about £500,000 larger. It was therefore time the advance was made, for in many other ways the position is now worse than it was then. Further exports of gold are probable enough next week, and these cannot take place without straining credit at home, for the gold will have to be borrowed, and our banks will be driven back on the Bank of England in order to finance the exports. It is therefore the home consequences we most fear. The Bank of France moreover may raise its rate next week—is certain to do so if it cannot keep its gold by charging a premium, and that will still further complicate the position of our market.

Owing to the unusual mass of credit available for the market at the beginning of the month short loans have been easy most of the time, and only managed to harden up yesterday to 3¾ per cent. for seven-day advances. Earlier in the week the rate was only 3½ per cent., and call money was generally to be had about 3 per cent. On Tuesday the payment of upwards of £1,000,000 of the new issue of Irish Land stock swept into the Bank's control a considerable portion of the surplus balances, and it has been taking up the Japanese money lent in the open market as the dates when other borrowers had to repay it came round. Because of this Japanese money the market is probably now much poorer than it looks. Other deposits are £42,389,000, or £2,974,000 less than they were a week ago, but some millions of this may be Japanese money, and it need surprise no one if short loan rates now become inconveniently dear, causing bill brokers and other credit users no small embarrassment. Open market rates were adjusted this morning before the Bank rate was raised, and the banks got 4 per cent. on seven-day loans, but afterwards 4½ per cent. was quoted, and a considerable amount was lent this afternoon by the Bank of England to both the stock and bill markets at 6½ per cent. for a week. This represents trouble to many, and not least to the bill discounter. The joint-stock banks have put up their deposit rates to 4 per cent., and the discount houses quote 4¼ per cent. for call and 4½ per cent. for notice money.

The position of the bill broker is indeed a difficult one, and he has had a very trying time of it all this half-year. Most of the time money has been against him, and in the brief season, when discount rates have been well above loan rates, he has either not been free to work or has found his profits threatened at frequent intervals by sharp changes in the open Money market. Not only so, but all credit jobbers continue to suffer acutely from the depreciation in Consols and other Government stocks held by them as floaters, securities upon which to raise money for use in the ordinary course of their trade. The drain upon them for margins together with the high rates they have frequently been driven to pay for money must have been a cruel strain upon the weak brokers. They have been struggling throughout this week to get the three months' Bank bill rate up to 4⅞ and 4⅞ per cent., and have been beaten most of the time by adventurous competitors who have been tempted by transitory

cheap money to work at finer rates. Early in the week, for instance, three months' bills were being taken at 4⅝ to 4 11/16 per cent., and it has all along been difficult to get more than 4¾ per cent. on such paper, while long-dated bills have seldom been obtainable by the market at more than 4½ per cent.

Even the highest of these rates may involve holders of bills on credit in material loss now that money has become dear. After the Bank rate was raised to-day leading discount houses put up their rate on three months remitted paper to 5⅞ per cent., but business was done at 5 11/16 and in short bills at 5⅝ per cent., while for long-dated bills the quotation was still no better than 5¾ per cent. Inland white paper of any usance was quoted at 6 per cent., but business was paralysed, and it entirely depends upon gold movements whether the market keeps up or not. For some little time to come, however, the market will work with the dread of a 7 per cent. Bank rate ever in its mind.

Silver.

The announcement that the United States Government would receive tenders three times a week instead of once as hitherto led the market to conclude that a largely increased demand may be expected from that quarter. At the same time the requirements of the Mexican Mint are becoming more important, and as the supplies available are at best only moderate holders were somewhat reluctant to sell. A French Mint order for 25,000 kilos in the middle of the week helped to keep the market firm, and quotations gradually advanced to 32⅜d. per oz. for cash and 32 3/16d. per oz. for delivery two months forward. To-day there was a slight reaction in the spot price to 32 5/16d., but future metal hardened to 32¼d. per oz., due mainly to the rise in the Bank rate. Tenders for the Rs. 80,00,000 Council drafts on India on Wednesday amounted to Rs. 3,10,00,000, of which Rs. 2,02,00,000 were in bills and Rs. 1,08,00,000 in telegraphic transfers. Of these Rs. 52,13,000 were accepted in bills and Rs. 27,87,000 in transfers, applications at 1s. 4 1-32d. and 1s. 4 1/16d. respectively receiving about 25 per cent. The amount to be offered next week is reduced to Rs. 60,00,000.

Stock Market Notes and Comments.

An advance in the Bank rate to 6 per cent. on a Friday, or on any day in the week other than the habitual Thursday, is an event which cannot fail to disturb most minds throughout the country and credit markets the world over. It is too early, writing as we do on Friday afternoon, to attempt any forecast of the effects likely to flow from this sudden though not unexpected step. Stock markets are depressed, of course, but we shall have to wait to see whether credit-shattering failures occur before trying to guess what the motives impelling the Bank directors were or how far the solid fabric supposed to underlie the fair surface of British credit has been undermined by the finance of the last 15 years. Our markets, whether money or stock, have never been really healthy since the Baring crisis of November, 1890. The credit of the Empire was then enlisted in order to avert a catastrophe in private credit which would have sobered us for a generation, and probably have prevented most of those exhibitions of financial rapacity and dishonesty by which we have been afflicted and ravaged through the intervening years. It is useless to lament over this misspent period now, but it has been misspent in many ways so far as finance is concerned, and it has been a time of growing laxity, not to say corruption, in business morals; but we must take care that should a financial crisis be once again about to burst upon London it will not this time be propped up and prevented from working out to its natural end by help of the Imperial credit enlisted through the Bank of England. There must be no shoring up and hiding away this time, whatever the consequences. Let us know the worst that we have to encounter, and face it like men.

That there is financial rottenness on every side has been obvious these many years back to observers in the City. We have fallen into an artificiality of dealing, of manufacturing and handling values, which has made the business and credit position more and more hollow as the years went by. The fair structure of City credit has been undermined, not merely by dishonest company promotion, by demented "rigs" of prices upon the Stock Exchange, by the dangerous habit of contracting enormous liabilities, through underwriting new securities, but by the monstrous extravagance of the national expenditure and the waste upon profitless wars; so that there is a long reckoning now to pay, and we must be prepared to suffer many disappointments, perhaps much grievous loss, before the effects of the inflation have been removed. A 6 per cent. Bank rate, even if it does not involve the stock markets in disastrous losses through bankruptcies, is sure to accentuate the poverty of business and to weed out multitudes of the needy punters by whom so many market men have been kept in clothes and their motors in petrol.

The Week's Stock Markets.

The Stock Exchange has a gloomy prospect before it for the remainder of the year. There was a little investment business passing during the early days of the past week, but speculation has practically come to a dead stop, and is hardly likely to revive with money bound to be excessively dear during the next two months. Like the discount market the Stock Exchange has been frightened by the gold rumours lately current, and if only a part of the stories have any foundation even the 6 per cent. Bank rate so unexpectedly established yesterday might not be enough. Five per cent. proved ineffective in turning the foreign exchange sufficiently in our favour to bring gold to London, and the outlook is most dismal. Bankers will exact a very high charge for loans over the next account, and if, as seems more than probable, the Money market is next week completely in the hands of the Bank, very little accommodation will be obtained under 6¾, and the rate is just as likely to be 7 per cent. Charges will doubtless become higher still as the end of the year approaches, and we must be prepared for a wholesale shake out of the many weak accounts which are weighing down stock markets at the present time. Last week stale "bulls" were said to be realising freely, being unable to longer bear the strain of stiff carry-over charges and continually accumulating differences. Selling to reduce commitments was specially noticeable in the Home Railway market, where prices continued to make new low records for the year. Consols at first were steady, but almost collapsed yesterday when the Bank rate went up, and statements were current that further heavy shipments of gold to Egypt and other countries would take place immediately. The closing price is well under 86, and it is rather significant that some of the discount houses were said to be selling during the last two or three days. Other British Funds experienced an all-round decline, with particular weakness in Irish Land stock. London County issues were specially flat amongst Home County and Corporation stocks, but the Colonial list kept up fairly well.

A good deal of irregularity prevailed in the Foreign bond market, although business was on a very small scale. The most noticeable incident was the good support at one time extended to Russian bonds. Bad news from the country has been conspicuously absent for some time now, and buying from Paris together with some local interest caused the new 5 per cent. loan to improve to 7⅛ discount. This is nearly £6 above the lowest figure which the loan has touched, but the best price was not maintained, partly owing to unrest in Paris caused by the failure of a Turin house there. A little forced realisation resulted, which spread to most of the leading European securities, including Spanish and Turkish. Earlier in the week the Continental group had shared the strength of Russians, and the whole of the previous advance was not lost. Argentines and Brazilians, after being steady on small Berlin buying, gave way with other things, and moderate fluctuations in Peruvians finally left prices lower. Buenos Ayres cedulas were somewhat dull, and in the Central American group Venezuelan had a fall of 1. Chinese bonds were quietly supported, in anticipation of a new railway loan, it was said, and Japanese were slightly affected by a few small realisations supposed to come from America.

The very moderate interest shown in Home Railway stocks soon evaporated and the market is, if anything, more dispirited than ever. Such things as satisfactory traffic figures are quite unheeded nowadays, and in spite of another favourable batch of returns prices dwindled steadily. Realisations by tired bulls knocked a good round sum off the price of Great Northern deferred early in the week, but the selling by the public was most pronounced in Great Western, which was driven down 2½, while the scrip fell 2. North-Western was also offered freely, and Great Eastern, Hull and Barnsley, North-Eastern, Brighton preferred and deferred, South Western issues and South-Eastern preferred and deferred all suffered fairly heavy losses. A little support was forthcoming for Caledonian ordinary and preferred stocks, and they recovered a fraction or two, but North British deferred was a trifle lower on the week. Metropolitan Surplus Land stock was exceptionally firm and £1 up on buying induced by the talk of an improvement in the value of the company's property.

Wall Street has been too much under the influence of the coming elections to be able to devote much energy to the business of keeping prices moving upwards, and business has been on a comparatively small scale. New York bankers, too, are inclined to discourage any speculative activity while the credit uncertainty continues, and the opinion was gradually spreading that a movement to depress prices would not meet with much opposition. Talk of Government action being taken against the Union Pacific for its dealings in land gave the "bears" an opportunity of which they have not been slow to avail themselves, with the result that between $4 and $5 was knocked off the quotation in a very short time, and the decline spread throughout the list. Rumours that the Northern Pacific would pay a large dividend in scrip failed to arouse any enthusiasm, and the market at the close was lifeless except in one spot. Considerable activity was developed in National Railroad of Mexico issues, sending the preferred up no less than 4, while the seconds put on 1½.

A sharp spurt in Canadian Pacific shares, which lifted them at one time to 187½, led to a report that the financiers who have on previous occasions engineered an advance had again taken these shares in hand. They did not maintain this price very long, as the high figure tempted holders to secure their profits and the nett gain on the week was only ½. The partly-paid scrip, however, finished 1½ higher and the preference stock improved 1. Grand Trunk stocks have hardly moved from day to day, and even a better traffic return than had been expected failed to put any life into them, so that the ordinary and third preference were a trifle up at the close. Of other Canadian things, Alberta advanced 2 and Canadian Atlantic first mortgage bonds were 1 higher. Amongst Indian Railways, Delhi-Umballa-Kalka stock put on 1½ and East Indian deferred annuities and Great Indian Peninsula guaranteed 3 per cent. stock rose 1 each.

Argentine railways were firm at the outset on the crop reports, but, as in all other sections, there was very little foundation for the strength displayed, and the market was sensitive to the least adverse influence. For this reason the early improvements were not held in their entirety, and several of the leading stocks show substantial declines on balance. Buenos Ayres and Pacific ordinary and Buenos Ayres and Rosario ordinary and deferred, however, finished with gains of 2 to 3. Argentine North-Eastern ordinary debenture

stocks were also 2 higher, and Great Western and East Argentine both improved 1. Central Uruguay ordinary stock was 1 better, but the movement was exceptional, and other Uruguayan things, where they moved at all, showed substantial declines. Mexican Railway stocks improved at first on the talk of a re-arrangement of rates between that company and the Interoceanic, which would be to its advantage; but they, too, were soon neglected, and only the second preference ended with an improvement on the week. United Railways of the Havana stocks were depressed on the report, the ordinary losing as much as 4 and the scrip and preference falling 1 and 2. Cuban Central ordinary also suffered owing to the failure to pay a dividend, and Western of Havana dropped back in sympathy. Leopoldina ordinary stock and San Paulo ordinary and preferred were all heavy, and Paraguay Central debentures were 1 down, but Guayaquil and Quito second bonds were in request and improved 4½.

The sensation of the week in the Miscellaneous market has been the further wild outburst in Hudson's Bay shares. The price of 100, so long predicted by the gambling clique responsible for the latest movement, was reached and passed on Tuesday, the quotation on that day touching 103½. It went higher still before showing much sign of reaction, but the closing figure is a point or two below the top, a few prudent speculators having decided to take what must be handsome profits. We are assured that the rise is by no means finished yet, and it is said that some speculators will not be satisfied until the present price has been doubled, but outsiders should remember the words of caution always uttered by the chairman of the company when he meets the shareholders at the annual meetings. Other securities have been largely overshadowed by the excitement here, but changes are still fairly numerous, although in the past week they did not mean much business. Foreign banking shares continued to show strength, but weakness was again noticeable in the shares of the Standard Bank of South Africa. Several severe falls occurred in the Home Brewery list, but Bieckert's ordinary stock continues to fly upward. London Docks stocks enjoyed a moderate rise, and in the Catering group Aerated Breads were well sustained by the recent good dividend. Russian oil shares, after showing improvement, were inclined to fall back again, and those who recently bought a few Associated Cement shares, in the hope that the report would be a good one, continue to drop them out as opportunity offers. Textile shares were a little irregular with rather less doing than usual, but English Sewing Cotton were supported at one time, and Coats were also firm before they eased off just near the end. Several cycle companies' shares have been in moderate request, owing to the greatly improved reports now being issued, and a little attention was even bestowed upon Dunlop Tyre shares. They seem to have been quite an excited market in the Dublin Stock Exchange, where most of the dealing takes place. Meat companies' shares were inclined to dulness, but Lipton's recovered from their dividend disappointment, and rallied almost to par. The issue of the Linotype and Machinery report caused a momentary improvement in the shares, but when it was realised that no preference dividend would be forthcoming the market again became heavy. A rather severe drop took place in the shares of the Salt Union Company, but there did not seem to be good reason for the fall, and prices rallied. Gramophones were irregular, but any shares offered were quickly absorbed, and the market again closed strong, very near the best. The Nitrate share group had a distinctly easier tendency, and speculators are evidently beginning to take some heed of the warnings that have been uttered. The market was getting quite out of hand, and a pause had become highly necessary. The shares of Millar's Karri and Jarrah, the Australian hard wood company, met with considerable support on rumours that the labour difficulties which have so much disturbed the business during the last three or four years have at last been settled. Pekin Syndicate shares gained ground at one time, only to lose it again when all markets weakened and Gas Light stock fell to 98. There was no pronounced tendency for Insurance shares, but most of the movements were favourable. Iron and Steel issues were comparatively neglected, but a distinct revival took place in Tea shares, many of which were marked substantially higher. Anglo-American Telegraph securities were a rather uncertain market, but closed fairly steady.

Stock markets were fairly stunned by the unlooked for change in the Bank rate, and prices wilted all round. Before the close Home securities were a trifle better than the worst. Consols, which had been knocked down to 85⅝, recovered about ⅛, but there was no rally in the Yankee Railroad market or in Kaffir shares. Here large offerings of Rio Tinto shares were made, and also Anacondas, but France took Tintos freely, and the Yankees supported Anacondas in spite of the somewhat demoralised appearance of their Railroad share market. It is too early yet to form any estimate of the consequences likely to ensue on the stock markets at the settlement next week, but those who are carrying securities on credit may depend upon it that contango rates will be high, and money dear, even on term loans with their bankers. Why, by the way, is the English public throwing away its Home Railway secured stocks? Most of them are a good deal better than any foreign security they could buy, and surely better than a mine share. Hudson's Bays staggered down to 102 from 105, but steadied at the lowest. Canadian Pacific shares were also limp, and dropped to 183 1/16, recovering, however, to 183⅜. The weakest stock of all is Dover "A."

THE WEEK'S PRICE MOVEMENTS.

GAS.—Rise: Bromley "A" 1, to 120-124, Maidstone 5, to 145-150, Primitiva 1, to $7\frac{3}{4}$-$8\frac{1}{4}$, do. Pref. $\frac{1}{8}$, to $5\frac{1}{8}$-$5\frac{3}{8}$. **Fall:** Cape Town and District $\frac{1}{4}$, to 14-15, Continental Union 1, to 122-125, Gas Light and Coke 1, to 97-99, San Paulo $\frac{1}{4}$, to $13\frac{3}{4}$-$14\frac{1}{4}$.

INSURANCE.—Rise: British and Foreign Marine $\frac{1}{4}$, to $18\frac{1}{4}$-$18\frac{3}{4}$, Clerical Medical $\frac{5}{8}$, to $17\frac{3}{4}$-$18\frac{1}{4}$, Commercial Union 1, to $77\frac{1}{2}$-$78\frac{1}{4}$ London Guar. and Acc. $\frac{1}{2}$, to $21\frac{1}{2}$-$22\frac{1}{2}$, Royal $\frac{1}{2}$, to $47\frac{1}{2}$-$48\frac{1}{2}$, Sun Life $\frac{1}{4}$, to $16\frac{3}{4}$-$17\frac{1}{4}$. **Fall:** Central $\frac{1}{16}$, to $\frac{1}{2}$-$\frac{5}{8}$, Liverpool and Lon. and Globe $\frac{1}{2}$, to $42\frac{1}{2}$-$43\frac{1}{2}$, North British and Mercantile $\frac{1}{2}$, to 38-39, Ocean Acc. and Guar. (£1 pd.) $\frac{1}{8}$, to 4-$4\frac{1}{4}$, Rock Life $\frac{1}{4}$, to $3\frac{1}{2}$-4.

IRON, COAL, AND STEEL.—Rise: Brown Pref. $\frac{1}{4}$, to $11\frac{3}{4}$-$12\frac{1}{4}$, Dorman Long 2nd Deb. $1\frac{1}{4}$, to 100-103, Dunderland Pref. $\frac{1}{4}$, to $3\frac{3}{4}$-$4\frac{1}{4}$, do. Deb. 1, to 90-93, Ebbw Vale 1, to 11-12, do. (£10 pd.) $\frac{3}{8}$, to $9\frac{3}{4}$-$9\frac{3}{4}$, Guest Keen Pref. $\frac{1}{16}$, to $6\frac{1}{16}$-$6\frac{5}{16}$, North British Locomotive Pref. $\frac{1}{8}$, to $12\frac{3}{8}$-$12\frac{5}{8}$, Rhymney $\frac{1}{16}$, to $2\frac{5}{16}$-$2\frac{7}{16}$, do. (New) $\frac{1}{16}$, to $2\frac{1}{4}$-$2\frac{3}{8}$, Richardson's Westgarth Pref. 1-32, to 1 1-32-1 3-32, Vickers 2nd Debs. 1, to 104-106. **Fall:** Armstrong $\frac{1}{8}$, to $2\frac{1}{8}$-$2\frac{1}{16}$, do. Pref. $\frac{1}{8}$, to $5\text{-}5\frac{1}{4}$, Brown $\frac{1}{16}$, to $1\frac{5}{16}$-$1\frac{5}{8}$, do. (£1 pd.) $\frac{1}{16}$, to $1\frac{1}{16}$-$1\frac{1}{8}$, Clayton and Shuttleworth B Deb. 2, to 95-98, Consett 1, to 35-36, Guest Keen Deb. $\frac{1}{4}$, to $104\frac{1}{2}$-$106\frac{1}{2}$, Stewarts and Lloyds $\frac{1}{4}$, to $18\frac{3}{4}$-$19\frac{1}{4}$.

SHIPPING.—Rise: Cunard (£20 pd.) $\frac{1}{4}$, to $14\frac{3}{4}$-$15\frac{1}{4}$, Ellerman Pref. $\frac{1}{4}$, to $9\text{-}9\frac{1}{2}$, Furness Deb. 1, to 109-111, Houlder $\frac{1}{4}$, to $1\frac{1}{2}$-2, India General Pref. $\frac{1}{4}$, to $8\frac{1}{4}$-$8\frac{3}{4}$, Indo-China $\frac{1}{4}$, to 8-9, Pacific Steam 1 to $25\frac{1}{2}$-$26\frac{1}{2}$, P. and O. Def. 1, to 228-231, Royal Mail Ord. Stk. 2, to 54-56, Union of New Zealand Deb. 1, to 99-101, West Hartlepool Debs. 4, to 92-95. **Fall:** Leyland Pref. $\frac{1}{4}$, to 5-$5\frac{1}{4}$, New Zealand Deb. 1, to 94-96.

TEA AND COFFEE.—Rise: Amalgamated Pref. $\frac{1}{4}$, to $6\frac{1}{2}$-7, Associated Pref. $\frac{1}{2}$, to 5-6, Bengal United $\frac{1}{4}$, to $8\frac{1}{2}$-9, do. Pref. $\frac{1}{2}$, to $8\frac{3}{4}$-$9\frac{1}{4}$, British India $\frac{1}{2}$, to 2-$2\frac{1}{2}$, Chubwa $\frac{1}{2}$, to $5\frac{3}{4}$-$6\frac{1}{2}$, Consolidated Tea and Lands 1st Pref. $8\frac{1}{4}$-$8\frac{3}{4}$, do. 2nd Pref. $\frac{1}{4}$, to $6\frac{3}{4}$-$7\frac{1}{4}$, Dimbula $\frac{1}{4}$, to $5\frac{3}{4}$-$6\frac{1}{4}$, Dumont Pref. $\frac{1}{4}$, to 8-$8\frac{1}{2}$, Eastern Assam $\frac{1}{4}$, to $5\frac{1}{4}$-$5\frac{3}{4}$, Imperial $\frac{1}{4}$, to $5\frac{1}{2}$-6, Jetinga $\frac{1}{4}$, to 4-$4\frac{1}{4}$, Jokai $\frac{1}{4}$, to $10\frac{3}{4}$-$11\frac{1}{4}$, Nedeem Pref. $\frac{1}{4}$, to $8\frac{1}{4}$-$8\frac{3}{4}$, Singlo $\frac{1}{2}$, to 2-3, do. Pref. $\frac{1}{4}$, to $3\frac{1}{2}$-4.

TELEGRAPHS AND TELEPHONES. — Rise: Commercial Cable Deb. $\frac{1}{4}$, to 97-99, Cuba Submarine $\frac{1}{8}$, to $8\frac{3}{8}$-$9\frac{1}{2}$, do Pref. $\frac{1}{2}$, to $17\frac{1}{2}$-$18\frac{1}{4}$, Direct Spanish Pref. $\frac{1}{8}$, to $8\frac{7}{8}$-$9\frac{3}{8}$, do. Deb. $1\frac{1}{2}$, to $99\frac{1}{2}$-$102\frac{1}{2}$, Direct United States $\frac{3}{8}$, to 16-$16\frac{1}{4}$, Direct West India Debs. $\frac{1}{2}$, to $100\frac{1}{2}$-$102\frac{1}{2}$, Halifax and Bermudas, $\frac{1}{2}$, to $101\frac{1}{2}$-$102\frac{1}{2}$, Marconi $\frac{1}{8}$, to 1-$1\frac{1}{4}$, Montevideo 3-32, to 1 3-32-1 7-32, West India and Panama 1st Pref. $\frac{3}{8}$, to $6\frac{3}{8}$-$6\frac{7}{8}$. **Fall:** Anglo-American Def. $\frac{1}{4}$, to $24\frac{1}{2}$-$24\frac{3}{8}$, Great Northern $1\frac{1}{2}$, to 34-36.

TRAMWAYS AND OMNIBUS.—Rise: Potteries Electric Traction Deb. 1, to 101-104. **Fall:** London Motor $\frac{1}{16}$, to $1\frac{1}{4}$-$1\frac{3}{8}$, Metropolitan Electric Deb. $1\frac{1}{2}$, to 95-100, Sao Paulo $4\frac{1}{2}$, to 133-136, do. Deb. 1, to 98-100.

The New Zealand Budget.

The Hon. Sir Joseph George Ward in his capacity as Colonial Treasurer is this year openly responsible for the Budget statement presented by him to the New Zealand House of Representatives on August 28. His essay is so exactly in unison both as to form and substance with the many Budgets of the late Mr. Richard Seddon as to give colour to the gossip that although Seddon fathered, Ward was the real builder of all those Budgets. We have the same parade of surpluses, the same juggling with debt, and the same outlines of socialistic legislation, together with the customary parade of what is called the "national assets." In reading these annual statements we have never been able to get over Sir Joseph Ward's past, and New Zealand finance has accordingly borne always something of the aspect of his own financial history. The Government's system of finance is the J. G. Ward New Zealand Farmers' Association enlarged, and we have the fear always that in the one case as in the other the assets may not equal the liabilities when balancing day comes along. Obligations are played with, converted into temporary assets, and then debited back again when the new account is opened. Many people, we suppose, have forgotten Sir Joseph Ward's history, the story of his Farmers' Association, and of its connection with the unfortunate Colonial Bank of New Zealand, which it was one of the active agents in bringing to the ground. A long investigation, however, took place some years ago into the affairs of this association, when the Colonial Bank was being wound up, and Mr. Justice Williams had some very pertinent observations to make when the time came to give judgment. He pointed out that Mr. Ward had used the credit of the association for his own speculations, by which he had heavily lost. "Here is a company," he said, "with a capital actually paid up in cash of £12,450. When it has been only three years in existence that capital has been lost, and the association has become hopelessly insolvent, showing a deficiency of over £100,000." Yet Mr. Ward's private account with the association was £55,150 to the bad, and the judge declared him to be now "hopelessly insolvent," "a few pence in the £ is the utmost that his estate can be expected to realise." "What under ordinary circumstances would have happened would be that the association would go into liquidation and Mr. Ward become bankrupt." It was the judge's opinion that this course ought to be followed, but Mr. Ward was a friend of Mr. Seddon's and a member of his Government; therefore, the whole affair was withdrawn from public observation and the loss buried, by the help, we believe, of the Bank of New Zealand. It was a very ugly story from beginning to end.

Why do we recall facts like these? You may be sure it is out of no hostility to the present Premier and Colonial Treasurer of New Zealand. The Hon. Sir Joseph Ward is a man whom we have never met or had any dealings with, and who therefore can as an individual excite no feelings in the mind one way or another; but the presence of such a man at the head of the Government of one of the most beautiful and important settlements of the English people in the Southern ocean is a matter of very serious import, not only for the future of the colony's finance, but for the condition of its people at large, and it is our deliberate opinion that, tested by his past, this man has no business to be where he is. We feel, in short, that a man capable of displaying the moral imbecility or weakness—to put it gently—that characterised Sir Joseph Ward's dealings with his Farmers' Association and the Colonial Bank of New Zealand, with creditors of all kinds, must be constitutionally incapable of dealing squarely, let alone wisely and thriftily, with the finances of a young nation. This said, we shall now look at some of the Budget statements. According to the Premier and Treasurer's speech, the ordinary revenue for the year ended on March 31 last was £7,584,395 or £301,489 more than in the previous year. Compared with the estimates, there was an increase of nearly £182,000, and of the actual increase on the previous year about £121,000 came from railways, £65,427 from Customs, £41,144 from stamps, and nearly £41,000 from land and income tax, but there was a decrease of nearly £12,000 in the receipts from cash sales from land. Expenditure took £7,122,340, exclusive of £500,000 paid over to the public works fund out of those fairy "surpluses," and showed an increase of £486,438, of which £199,135 represented permanent additions to the outgoings. That is to say, nearly £93,500 additional was required for interest and sinking fund charges on debt, and about £60,000 more for old-age pensions, besides other increments. This looks a large revenue and expenditure for a colony of only about 1,000,000 people all told to raise every year, but it is not so devouring in one sense as it looks, because the gross revenue and working expenses of the railways are included in the receipts and expenditure.

Even allowing for this, however, the colony does not seem to us to be justified in laying out such a large amount of money as it does every year in governing itself, in making pretences of providing for its defence, in socialistically endeavouring to gather a variety of branches of business into its Government's hands. It is still dependent to a most unpleasant extent upon help from loans. The Budget contains the now usual Seddonian provision for raising £1,000,000 to be spent upon public works, not necessarily self-sustaining or, in colonial cant language, "reproductive" works. The regulation loan is this time to be raised locally—that, at least, is the boast of the Budgeteer; but we cannot guess where the money is to be found, for this is by no means all the borrowing. Every year parade is made of £1,000,000, just for those "public works," you know, and every year the actual debt of the colony as a State is increased by more than £2,000,000. On

March 31 last, for instance, its gross total was £62,191,000 or an increase of £2,279,000 on the total at the end of the preceding March. As Sir Joseph Ward says, upwards of £2,250,000 added to the debt in one year—he might say year after year—is undoubtedly a large sum, but he proceeds to arrange for another application of the same stimulant, and the money is distributed in ways calculated to inflate prices in all directions, especially the price of land, to spread abroad an appearance of prosperity which may not be justified a few years hence by results. Out of the £2,790,000 of borrowed money spent last year £197,660 went into the railways, properties which appear to be steadily decreasing in their yield of revenue per mile of line worked, notwithstanding the slow rate at which extensions are being constructed, and £607,750 was devoted to what is called "closer settlement," to the purchase, that is, of landed properties at more or less high prices, in order to divide them up amongst small settlers so as to fill the land with what may be called the yeoman class of farmer. The purpose is excellent, or looks like being that; but one consequence of a forcing system of this kind is to plant upon the soil a class of people who, buying at a probably excessive valuation what they cannot pay for, live continually in debt to the central Government, and another is that squatters owning or controlling large tracts of territory, or such organisations as the Assets Realisation Board that took over the properties of the Bank of New Zealand when it was last insolvent, are enabled to trade off thousands of acres of land they could not otherwise get buyers for. Accordingly, £210,000 of the borrowed money last year was advanced to these "close" settlers, and they must be kept going in the same way year after year, the State now taking the risks which used to be borne by the land mortgage companies of doleful memory. Another £151,000 of debenture money went into roads, bridges, and apparently drains, advances to local bodies, in fact, regardless of their solvency. Thus it goes on, and we are not sure, indeed, that the whole story of borrowing is embraced in the figures mentioned, for there is a "loans to local bodies" account, which up to March 31 last showed a debit of £2,563,100. Does that stand outside the national debt as something separate, or is it included? We fear it is outside, but the full accounts accompanying the Budget statement have not yet reached us, and we cannot speak with certainty—might not be able to do so if we had them. Perhaps some patriotic New Zealander will send us the official Budget and accounts, as it is not at all probable that Sir Joseph Ward himself will do so.

Leaving this point, it may be of interest to note that of the money advanced to local bodies, and procured by the issue of debentures, no less than £426,493 has been spent on land and the Survey Department with a view to opening up blocks for settlement. Then another £90,000 or so has been credited to the public works fund to go towards meeting the charges imposed by the Roads and Bridges Construction Act of 1882. In short, wherever we touch the affairs of the colony we come upon debt—money borrowed and applied as a stimulus to force development, to create an appearance of prosperity beyond what would exist or be possible if the people were left to their own resources, allowed to develop the country by their own energies and means. And what we have always felt about New Zealand is that forcing finance of this description was injurious to the true interests of the people. They possess a beautiful country, containing large areas of fertile land. They are energetic and enterprising, and could, therefore, have afforded to wait and to grow up naturally; but instead of being allowed to do so they have been driven forward at express speed, and are now loaded with obligations to the usurer on every hand such as must cripple them in the race against other countries, and bring upon them infinite disappointment should anything occur to weaken their markets abroad. This first Budget of Sir Joseph Ward's contains a project for a further sub-division of the land. It is very adroitly drawn up on socialistic lines, and will command the sympathy of many people here. The object is to break up estates of medium or very small size, so that no one man shall possess land in New Zealand of a higher capital value than £50,000. The system of granting 999 years' leases is also to be discontinued and 66 years' leases substituted, so that every two generations there will be revision of land valuation, a chance to raise the state-rent. Perhaps some such device is necessary to keep the ball rolling. On the one hand, prices must be forced up and kept up by means of heavy annual doses of borrowed money, whereby the small occupier is loaded with debt, and, on the other, the vending owner or mortgagee of big blocks of land is conveniently put in a position to secure excessive prices. It may be a grand thing for the Assets Realisation Board and sundry favoured squatters, but we cannot feel the system to be honest even as socialism, and are not surprised that keen opposition has arisen throughout the colony to the latest proposals.

One of the most suggestive little paragraphs in the Budget is that mock balance-sheet exhibiting the astonishing "wealth" now possessed by New Zealand and capable of being stated in L.S.D. Sir Joseph Ward puts down the nett "private" wealth at £258,710,000, and the value of public property at £67,520,000, making a total of £326,230,000, a total not arrived at, we may be sure, in the way that the then plain Mr. J. G. Ward, of the Farmers' Association, made up his balance-sheet. Against this dazzling figure we have set down as a bagatelle the nett public debt—that is to say, the debt of the colony proper—the colony as a Government—after deducting a more or less illusory sinking fund, is put down at £59,670,000, and the debt of local bodies at £11,545,000, making altogether liabilities amounting to only £71,215,000, so that there is a triumphant exhibit of £255,015,000 as the excess of assets over liabilities, and obviously Sir Joseph Ward and his colleagues expect us to accept figures of that description without so much as a smile of incredulity. Have all the citizens been whitewashed and cleansed from their private debts even as Sir Joseph?

Notes on Books.

Secretarial Work and Practice. By Alfred Nixon and G. H. Richardson. (London: Messrs. Longmans, Green, and Co. Price 5s.)

This is one of a commercial series being issued by Messrs. Longman under the editorship of Mr. Alfred Nixon, the principal of the Manchester Municipal School of Commerce. In the case of this particular volume, much of the matter consists of the substance of lectures given to classes at the school, and is, therefore necessarily of a somewhat elementary character, since it was neophytes and not experts to whom they were addressed. But all the same, secretaries and company officials of long years' standing will find in the pages of the book plenty of sound practical advice on the management and routine work of their offices, while the latter portion, dealing with sundry points arising under the Companies Acts, should prove invaluable in enabling some sort of general answer to be given to those snap questions on legal points chairmen and directors are so fond of asking.

Company Reports and Balance Sheets.

*** The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

United Railways of the Havana and Regla Warehouses, Limited.

It is not easy to follow and explain all that has happened to this rapidly expanding enterprise during the past twelve months, but we will do our best. It may be remembered that at the end of last year the company took over another important railway system known as the Cardenas and Jucaro, the purchase price being provided by further issues of ordinary stock and debentures. When the scheme was completed a considerable amount

of property was specially reserved for the benefit of the United Havana proprietors, and we now hear that the realisation of these assets has been proceeded with as rapidly as possible. A first distribution was made in April last to the amount of £184,800, and shareholders may recognise this in a security known for dealing purposes as "scrip for bonus." The balance of what may be called the excepted property on June 30 last was £33,687, to which must be added £60,610 as the final profit on disposal of 3,886 shares in this Cárdenas railway, and also a first distribution amounting to £20,946 on account of the Cárdenas excepted property. These credits, with interest on deposits of £504, make up a total of £115,748, and after deduction of income-tax £6,249 and £37,942 reserved to meet any loss in realisation of the Spanish Government debt, the balance still available is £71,556. From this the board made a further distribution of £69,300, leaving £2,256 in hand subject to there being no loss on the collection of outstanding debts corresponding to the period ended December 31, 1905. It does not, however, follow that the Spanish Government debt will not be forthcoming, and should any portion of it be recovered the money will, together with any further distribution which may be recovered in respect of the Cárdenas excepted property, be added to this free balance. The acquisition of the Cárdenas and Júcaro property was also taken advantage of to bring about a reorganisation of the company's capital, with the avowed intention of preventing dividends from becoming too large, so that the Government authorities should not find excuse for throwing additional burdens on the company. Details of the plan have already been given, and they involve an increase in the capital of £1,270,000, meaning that ordinary stockholders will receive additional stock to the extent of 50 per cent. of their existing holdings. All this is quite apart from a further large capital increase involved in the acquisition of the Matanzas Railway, which has been taken over as from July 1, on a basis involving the issue of £950,000 nominal in ordinary shares to be converted into stock, and £650,000 in 5 per cent. irredeemable debenture stock. Of this capital £912,750 ordinary stock and £608,500 debenture stock was issued to the Matanzas shareholders, the balance to be applied to the general requirements of the company, including the payment of expenses connected with the amalgamation. The completion of the latest deal brings the length of track owned to between 650 and 700 miles, and the extension of the business during the last two years has rendered imperative the provision of greater terminal and other accommodation in the Havana. Arrangements to this end, and for any further extension of the company's business have been made, but, as usual, the operation involves the expenditure of a large amount of money, and authority is sought for the further increase of the capital by the sum of £730,000, consisting of 73,000 5 per cent. cumulative preference shares of £10 each, to be eventually converted into stock. At present the issued capital of the company amounts to the exceedingly large sum of £6,360,000, and when the additions have been made for the Matanzas acquisition and the issue of this new preference stock has also been completed the total will be raised to £8,690,000. To earn a return large enough to justify the existing price of the company's stock will require the continuance of the present flourishing condition for a very long time, and it is to be hoped that the future prosperity of the island will not be endangered by further revolutionary outbreaks such as that lately witnessed. Disturbances of this kind give excuse for external interference, and we know that the United States would be only too ready to pounce on the island and annex it. And the grab would necessarily be followed by the introduction of high protective tariffs for the enrichment of the financial magnates who already control the policy of the American Union, and it does not need a very high intelligence to divine how disastrous such a change might prove to the welfare of the community.

We may now turn to the record of business of the past twelve months, prefacing our remarks by explaining that no comparison with the previous year is possible. For the second half of the year the accounts include the working of the Cárdenas and Júcaro railway, and as the comparative traffics of that system are not available it would be quite useless to set the two years' figures side by side. The revenue from all sources amounted to £844,806, to which the passenger traffic contributed £270,569, goods £413,616, live stock £27,040 and sundries, wharf dues, &c., £102,616. The number of ordinary passengers carried was 1,219,967, to which the first-class contributed only 101,518, thirds being responsible for the balance. There was no troop traffic within the period, but unfortunately we shall find an entry for this class of business in the current year's accounts. By far the largest item in the goods traffic is sugar cane, of which no less than 1,752,627 tons were handled. Traffic in manufactured sugar reached 366,198 tons, molasses amounted to 94,305 tons and rum to 2,817 tons, making a total of sugar cane and products of 2,215,947 tons. Of other commodities general merchandise reached 318,123 tons, fire wood amounted to 78,308 tons, coal to 57,623, charcoal to 49,452, native woods to 47,683 and bricks and tiles to 21,616 tons. The aggregate goods tonnage handled was 2,916,738 tons. Total working expenditure amounted to £443,101, being 52.70 per cent. of the gross revenue, and it is worth noting that for 1904-5 the proportion was only 45.26 per cent. Outlay on permanent way and works was £95,790, the locomotive department cost £139,277, the carriage and wagon department £47,269 and traffic expenses £98,402. General charges took away another £33,377, miscellaneous outgo was £12,264 and the cost of the ferry boat service from Havana to Regla was £8,960. Deducting the outlay from the total revenue, and the nett balance remaining is £401,705, of which £163,654 has already been distributed in debenture interest, preference stock dividend and for additional rolling-stock, &c., on hire and purchase terms. The sum still left is therefore £238,051, to which must be added £255 for transfer fees, &c., and £8,544 as interest on dividends and investments, making £246,849. Cuban taxes, stamp duty and a payment of £14,830 to the United Railways excepted property holders reduce this to £220,763, of which the interim dividend of 4½ per cent. on the ordinary stock paid on June 8 last absorbed £111,600. The directors now propose a further distribution of 4 per cent., making 8½ per cent. for what they say is six months, but we are not quite sure what has happened to the opening half of the year. The balance carried forward is £9,963. The premium on debenture and preference stocks issued during the year, after deducting stamp duties, expenses of issue, &c., amounted to £48,133, which has been placed to capital reserve.

San Paulo (Brazilian) Railway Co., Limited.

Although this flourishing railway company again produces a very excellent display for the half-year ended June 30 last the result is not quite so good as appears on the surface. The currency receipts were converted into sterling at an exchange of just over 16d. as compared with very nearly 15d., but notwithstanding this the total income shows an improvement of £22,263 only at £513,960. A small decrease in the number of first-class passengers did not affect the income, and the result of carrying 23,815 more second-class travellers was an increase in the receipts of £2,316. Immigrants to the number of 36,035, being more than twice as many as in the corresponding period, were conveyed into the interior for nothing, together with their baggage, agricultural instruments, seeds, &c. Had these been paid for at the regular rates the company would have received an income of Rs. 47,082, but as there was nothing received from this source aggregate coaching revenue reaches £64,767 compared with £62,195. Parels, horses, carriages, &c., produced £17,797 being a gain of £1,410, and an additional £475 at a total of £3,334 came in from telegraphs. The weight of goods handled within the period under review was 620,926 metric tons or a decrease of some 25,000 tons. Of this drop 3,000 tons was in coffee and general goods, and the remainder in low-grade traffic, mainly bricks and building material. The improvement in exchange, however, neutralised the effect of this smaller carriage and the income from the merchandise traffic improves by £16,421 to £415,520. Live stock traffic was about the same, but most items of miscellaneous traffic gave more income, and the receipts in England were £1,208 better at £1,643. Coming now to the question of expenditure, we find that the company is still spending lavishly on the upkeep of the system, and so long as business continues in its present flourishing condition this policy will no doubt be continued. On maintenance of way and stations the extra outlay was £21,715, being an increase of practically 50 per cent. Tractive power cost £102,628 against £94,489 and the traffic expenses rose nearly £6,000. General charges were quite £1,200 larger, but on carriage and wagon repairs expenditure was £6,650 less. Law charges and taxes and miscellaneous outgo, including compensation, did not show striking change, but the company had to pay £430 more at £769 for mileage and demurrage. The total expenditure in Brazil was therefore £346,747, an increase of £29,796, but it is to be remembered that while the higher exchange causes a better showing when the revenue is converted it also has the effect of increasing wages and other charges. About £10,400 was spent in England for administration and interest on balance of stores and nett revenue comes out at £156,783. This is a decline against the corresponding period of £6,586, but the difference is rather more than made good by an improvement of £7,179 at £162,028 in the balance brought forward. The sum available for division is therefore remarkably similar at £318,811, last year's figure having been £318,218. Interest on debenture stock requires £46,875 and £25,000 is absorbed in the preference stock dividend at 5 per cent. per annum. The directors now propose to repeat the dividend of 5 per cent. and bonus of 1 per cent. on the ordinary stock making 6 per cent. actual for the half-year, leaving £66,936 to be carried forward. Deducting the last-named sum from the balance brought forward, it is found that the distributions for the 12 months are £95,092 in excess of the actual nett revenue, but the opening half-year is the company's poor one, and the position is always set straight in the second part when the dividend and interest payments are considerably less than the earnings. For the current half-year the company's experience will probably be among the best it has ever had, as the coffee crop is estimated to yield no less than 13,000,000 bags, being an increase of 5,500,000 bags compared with the previous year's output. Expressed in weight, this means 780,000 tons compared with 450,000 tons, and as the gross receipts to date have already improved by over £148,000 the company may end the half-year with a "record" take. Various extensions and widenings which the company have on hand appear to be making good progress. No mention is made of the Brazilian Government's coffee valorisation scheme, a measure designed for the maintenance of coffee prices, doubtless in view of the enormous crop, but the business is so complicated that extended reference to the matter is probably being reserved for the meeting to be held on October 31. It is rather curious to note that in the report, and again in the nett revenue account, the dividend is described as being at the rate of 5 per cent. per annum on the ordinary stock instead of 5 per cent. actual as proposed.

Cuban Central Railways, Limited.

The recent revolution in Cuba, which seems to have come to an end in rather a mysterious manner, no doubt has much to

answer for, and for the present it deprives the ordinary shareholders of this company of a dividend which the improvement of business entitles them to. During the twelve months ended June 30 last the company had a really excellent experience, and reports an increase in its gross revenue of £61,064 at a total of £406,349 against the preceeding twelve months. Working expenses being up by £33,185 at £226,400, the nett balance of £179,949 is larger by £27,879. The ratio of working expenses to gross receipts is 0.24 per cent. lower by 55.71 per cent. These figures are the more satisfactory because very severe floods occurred in the district served by the railways in June last, causing a certain interruption to business and damage to the estimated extent of £7,000, which has been made a special charge against the year's revenue. Satisfactory increases are shown in all branches of traffic, and the gross income was the highest ever reached. The Aguada extension is described as very promising, and the directors think it will prove a valuable feeder to the main lines. The general development of business led to a considerable increase in passenger traffic, and the numbers carried advanced by 94,498, meaning an additional revenue of £10,833. Luggage and parcels gave an extra £1,373, and £3,187 more came in from lending rolling-stock to other lines. Sundry receipts were better by £3,836, and the gain in goods traffic was £40,960. The quantity of freight moved was 1,812,695 tons or an increase of 324,024 tons, to which sugar cane contributed 220,540 tons and sugar 47,728 tons. Molasses, rum, tobacco, machinery, building materials, timber and firewood, coal and general goods also gave satisfactory increases. Traffic in live stock also continues to improve, and brought in a revenue larger by £747. The slight decline in the expenditure ratio is considered the more satisfactory because the scarcity of labour has led to demands for higher wages and shorter working hours. In fact, a strike occurred in January last, but fortunately it proved of short duration. Prices of nearly every native article used in working the railway have also been on the up-grade, and the company will probably be fortunate if it is able to maintain the present proportion of expenditure in the future. We learn from the report that the deep water pier at Cienfuegos was completed in January last, and has been largely used by the public for the exportation of sugar, while to meet the increased traffic requirements eight new locomotives and 170 cars were purchased and put into service. A further four engines and 50 cars have been ordered. To the nett revenue balance of £179,949 already mentioned must be added the sum brought forward, £4,773, registration fees £239 and interest, &c., £2,831, making a total of £187,792. From this the debenture charges and rents payable in Cuba required £68,543, a sum of £7,533 is put to the rolling-stock fund and £3,143 is set aside for special renewals. Then the damage done by floods cost £7,000, taxes in Cuba will require £5,692 and income-tax £815, making total charges of £95,065. The full dividend on the 5½ per cent. preference shares next absorbs £60,500, and £34,565 is left. That compares with about £20,000 for the preceding year, when the ordinary shares were given a dividend of 2 per cent. after a lapse of three years, but this is where the revolution comes in, and no payment can be made at any rate for the present. It seems that the recent political disturbances in Cuba were particularly felt in the district served by this company's lines, and for a time traffic was entirely suspended. Quite apart from the loss occasioned by the interruption of business, the property in the Cienfuegos district suffered damage to the extent of £34,000 or practically the amount of the nett balance. A claim for this will, of course, be presented in due course, but it is considered prudent in the meanwhile to keep the whole of the balance in hand. The disturbances have now passed away, and the board confidently anticipates that business will promptly return to normal conditions, and that the approaching sugar crop will be in no way affected. We hope so, too, especially as the construction of certain extensions of the existing lines is under consideration. These lines involve the issue of more capital, and the directors propose to raise another £100,000 in the form of £10 cumulative preference shares to rank *pari passu* with those already created. Part of the money is required for further working capital and the general purposes of the railway.

Atchison, Topeka and Santa Fe Railway.

In its fiscal year ended June 30 last this company earned gross on its own system $78,044,000 at an expense of $48,498,000 or 62.14 per cent. of the receipts. The figures of the outgoings do not include $2,119,000 paid in taxes, and if these were added the proportion of expenses to receipts would be raised to upwards of 65 per cent. Including the income from subsidiary companies, the entire gross revenue was $79,391,000 and the nett income after meeting fixed charges of every description was $17,733,000. Out of this $4,500,000 was written off toward meeting the cost of improvements and the preferred stock received 5 per cent., while the common stock got 4 per cent. A small sum of $219,000 was also put aside to what is called the fuel reserve, so that altogether $14,506,000 were disbursed in dividends and appropriations of the kind described. This left $3,227,000 to be carried to the new account. Recently, it will be remembered, quite a hubbub of remonstrance arose on Wall Street, and was echoed here, because the directors of the company only increased the dividend on the common stock payable out of this surplus by 1 per cent. per annum. The market looked for a 6 per cent. rate, and obviously 6 per cent. per annum could have been paid, seeing that it requires little more than $1,000,000 to pay 1 per cent. on the common stock for the year. Whether the directors were right or wrong in their refusal to go beyond 5 per cent. time must determine, but there can be no question whatever that the fixed charges borne by the property are rapidly expanding. In the past year $26,829,000 was spent on capital account, a great deal of it upon subsidiary lines, whose separate bond creations are probably issued in payment, and the weight of the outlay thus distributed and disguised. Even so the interest on the Atchison company's own bonds has risen by nearly $1,500,000 per annum, within the past four years and the total funded debt of the company has within the same period increased by $36,000,000.

There seems, however, to be ample justification for this large capital expenditure, and it would be churlish to deny that the company has made really astonishing progress since its reorganisation in 1896. In the first full year after its last rescue from bankruptcy its gross earnings were only $30,621,000 as against $78,044,000 mentioned above for the past year. It at the earlier date had no surplus whatever after meeting the fixed charges and rentals, and in the past year including the nett income received from auxiliary lines the entire free revenue after charging interest and taxes was $18,216,000, or an amount equal to 12.31 per cent. upon the common stock which amounts to $102,000,000. During this period, it must not be forgotten, the mileage has been extended by nearly 48 per cent., rising from 6,444 miles in 1896-7 to 9,527 miles now, and with such rapid expansion going on one is never sure how far the immense increase in the earnings may be due to a genuine development of business; but that there has been such expansion, and on a remarkable scale, appears to be unquestionable. And, naturally, when the mileage is spreading so fast and when the old lines have to be practically rebuilt and brought up to modern requirements at frequent intervals, the outlay of capital is bound to be continuous and formidable. As to the appropriation of £900,000 last year out of revenue for the purpose of covering part of the outlay upon improvements, it may be that this is really little more than a method of keeping down the ratio of expenses to receipts, or, putting it the other way, of hiding the extent to which the company's business is stimulated by a free expenditure of capital. President Ripley, in his review of the year's progress, a full and exhaustive statement as usual, points out that, in addition to the increase in the mileage above mentioned during the ten years that have elapsed since reorganisation, the gross earnings have gone up 165.65 per cent. and the earnings per mile 79.68 per cent., while the nett earnings, before deducting rentals, taxes and other charges, have risen by no less than 296.93 per cent. During the same period the outstanding capital obligations of the company have risen from $390,396,000 to $491,684,000 or 25.94 per cent. Much of the improvement thus shown has come from the extension of the company's mileage, the new lines having, Mr. Ripley says, proved not only profitable in themselves but valuable as contributors to the earnings of the old portion of the system. For the five years just past, years whose average was marred 12 months ago by the losses caused through extraordinary floods, the nett income applicable to dividends on the common stock has averaged about 9 per cent. That the directors have been wise in not distributing these nett earnings seems probable, though arguable, and the president says that out of the surplus income of $40,132,000 accruing during the ten years $20,146,000 has been charged off in various ways to meet betterment and improvement charges, the total cost of which in the same period has been $43,061,000. And, with all the improvements, these railways are still very much behind railways in this country, not only in the fact that their systems are nearly all composed of single lines, but in the light character of the rails put in the road-beds. They are probably compelled to lay down light rails because of the artificial dearness which the tariff enables the iron and steel manufacturers to impose. We have no statements in the report before us of the weight of rails put into the lines of the Atchison company, but should be surprised to hear that it had as much as 100 miles laid with rails of the customary weight used on British railways. The president says that practically no direct loss was caused by the San Francisco earthquake. The offices were burned, together with a few freight cars, but the loss was fully insured. Free service to the value of about $300,000 was rendered to the destitute, and the cost of this service together with the purchase of some supplies and donations represents the only cash loss.

Louisville and Nashville Railroad Company.

In its year ended June 30 last this company earned gross $43,009,000. Working expenses took $30,933,000 or 71.92 per cent. of the gross income. The nett earnings were therefore only $12,075,000 at 28.08 per cent. of the gross earnings. The company also received $1,567,000 from other sources, so that its nett income was $13,642,000, and after deducting interest, taxes, rents and sinking fund charges there was a free balance of $6,348,000, out of which a dividend of 6 per cent. was paid upon the common stock, absorbing $3,600,000. A balance of $2,748,000 was then left to be carried to the credit of profit and loss, raising the entire amount thereof to $17,933,000. During the year the company's earnings rose by nearly $4,500,000 compared with 1904-5, and were $7,560,000 more than in 1902-3. Fixed charges, however, have also been rising steadily during the four years. At the earliest date named interest on bonds took only $4,845,000, and last year the charge for interest was $5,602,000. After paying the dividend, however, the surplus was $2,748,000. Like all other companies, the Louisville has been spending money freely, not only on its own property, but on subsidiary roads, of which it has a good many. Its own lines owned and worked at the end of the fiscal year ran to 4,206 miles, but it had also 2,367 miles of lines owned by other companies and worked by it or under its control, besides 269 miles of lines owned by it

but worked by other companies. One of its subsidiary lines, in fact, is itself the owner of a sub-subsidiary, so that there is ample scope for variety in the financial arrangements. Last year the funded debt of the Louisville Company itself was increased by $14,822,000 to a total of $129,262,000, and it has large further capital expenditures in prospect, every one of its subsidiaries being in need of further capital as well as the parent company itself. The report of the directors says that the company has now under construction or has completed during the year additions and improvements authorised by the board of directors aggregating $19,959,000, of which $7,593,000 will be spent upon reducing the grades and doubling the line, while $6,625,000 is to be laid out in building new lines, extensions and branches and $2,473,000 on new equipment, besides $3,296,000 on new terminal facilities. To "reimburse the Treasury" for construction expenses already incurred and to provide funds for their completion the company sold last year $10,000,000 of its Atlanta, Knoxville and Cincinnati division 4 per cent. gold bonds and $4,500,000 of its unified 4 per cent. gold bonds. Its total capitalisation now amounts to $60,000,000 in share capital and $129,153,000 in bonded debt, but there are other liabilities issued by its subsidiaries which stand outside this account, and one day there will probably be forced upon these big companies a consolidation and reorganisation of their capital accounts now full of confusion through the multiplicity of interests and cross charges that the habit of extension through deputy companies has created. An interesting table is included in the report setting forth the weight of rails in the lines. Altogether returns relating to 4,205½ miles are given, and of this total 1,396 miles are laid with rails of the weight of 70 lbs. per yard, and another 1,189 miles with rails of 80 lbs. There are only 12½ miles altogether laid with 83-lb. rails, and there is not a single rail in the whole system of the standard weight in use here. No less than 884 miles are laid with rails of 58¾ lbs. weight per yard. Small wonder that the main lines of these railways are continually in need of fresh capital, of large appropriations from revenue, of helps of all kinds so that they may be kept up to their work. Within the last three years 692 miles have been added to the company's main system.

Stuttaford and Co., Limited.

The report for the year ended July 31 shows once more how completely the directors of this undertaking failed to realise the true position of affairs in South Africa when they talked of a speedy revival of business which was to come from trade with the coolies. If they ever had any real belief that they would be permitted to derive any benefit from the importation of the Chinaman that belief has been rudely dispelled, and they now wail about the enormous shrinkage of South African business. Nett profits have again fallen off by the substantial figure of £13,717 to £22,109, and with £5,586 or £4,281 less brought forward the total available was £18,999 down at £27,694. A year ago £2,758 was written off for sundry charges in connection with the new Johannesburg building, but the available surplus does not permit of anything of that kind being done this time. Administration charges, debenture interest and preference dividend, in fact, required £27,300 or some £5,200 more than was earned, so that not only do the ordinary shareholders, who have seen their return dwindle from 15 per cent. to 6 per cent. during the past few years, now get no dividend, but the surplus carried forward is down to a mere trifle of £394, and Cape Colony income-tax has yet to be found as the debenture interest and preference dividend are paid free of that tax. The directors have come to the conclusion that the only policy to be pursued until a normal state of affairs again prevails in South Africa is to keep down the stocks, expenditure and indebtedness. They, however, have arrived at this decision somewhat late in the day, as during the year they exercised the option on the property adjoining the main Adderley-street premises in Cape Town, and are rebuilding this and two other properties previously acquired. On this they have spent £30,361, bringing the total outlay on capital account up to £452,656, apart from the goodwill valued at £75,817, of which £40,000 has been raised by mortgage. Fixtures, fittings, &c., after allowing for depreciation stand at £42,116 or an increase of £1,178, and against these the reserves are only £856 up at £54,633, of which only £3,796, representing the leasehold sinking fund, is invested outside the business. One good point in the balance-sheet is the way in which stocks have been pulled down by about £21,000 to £111,591, with an accompanying reduction of £11,421 to £1,034 in trade creditors. Cash creditors, however, have risen by £4,175 to £28,702, while book debts are £6,426 up at £18,950 and cash is £5,654 higher at £11,501.

D. and W. Murray, Limited.

In dealing with the prospects of this company at the annual meeting a year ago the chairman expressed the belief that the season would prove to be one of the most favourable experienced in recent times, and the report for the twelve months ended July 19 shows that his confidence was fully justified. An exceptionally good harvest made the export of cereals unprecedented, and at the same time there was an increase in quantity and value of wool shipments, which made the year one of unusual prosperity in which the trading as well as the producing community participated. So far as this company was concerned, the tangible result of the changed conditions is a substantial improvement of £14,038 to £59,660 in the nett profits after all prior charges have been met. To this was added £3,976 or £622 more from the previous account, making a total of £63,636, out of which a dividend of 10 per cent. and a bonus of 1 per cent. are paid on the ordinary shares, and in addition to placing £18,197 or £3,197 more to general reserve to bring it up to the value placed on goodwill a fresh reserve is started with £5,000, and the balance carried forward is increased by £3,463 to £7,439. Another prosperous season is looked for in the current year, and the directors have found it necessary to increase the manufacturing appliances, especially in the boot and clothing departments, for which new buildings are in course of erection. Freehold buildings nevertheless have been reduced in the balance-sheet by £5,312 to £235,510, while plant and fixtures are valued at no more than £16,572. Cash and trade creditors have risen by £28,477 to £242,980, owing apparently to an increase of £30,979 to £340,388 in stocks, which is only partly offset by a reduction of £18,433 to £149,181 in goods in transit. Bills payable show a small decrease of £2,911 at £4,966, and, on the other hand, increases of £11,291 to £199,484 in sundry debtors and £5,109 to £118,025 in bills receivable are offset by a reduction of £16,583 to £22,952 in cash.

Richardsons, Westgarth and Co., Limited.

It is not usual just now to encounter an engineering company's report showing a reduced profit, but this one did much worse in the year to August 25 last than in the previous 12 months. In explanation the directors have a good many excuses to offer, but we do not know that conditions were any worse for this company than its rivals, most of which seem to have found the past 12 months a very profitable period. It appears that the various departments of the works at Hartlepool, Middlesbrough and Sunderland have been kept well supplied with orders, but mention is made of the severe competition encountered and the increased cost of manufacture by reason of the advance in copper, pig-iron and other materials. An unforeseen advance in wages was supposed to be another detrimental influence, but we doubt if the increase was very startling or we should have heard of it before this. An extra £1,874 at £20,258 was spent on maintaining the buildings and plant, and after providing this sum the nett profit is returned at £70,823 or a decrease of £4,550. Moreover, there was a decline of almost £10,000 in the balance brought forward, so that the available credit is only £77,581 against £92,008. Directors' fees, debenture interest and preference dividend require £39,250 between them, and the usual 6 per cent. is paid on the ordinary shares, but in order to do this and carry forward the slightly increased sum of £7,331 only £10,000 or £5,000 less is placed to depreciation account, and the reserve fund, which last year was credited with £10,000, now gets nothing. Reserve must therefore remain at £30,000, and the aggregate depreciation allowance to date of £77,500 does not seem too lavish on a total expenditure of £802,725. This includes £18,124 added during the year. Otherwise the financial position is fairly strong, because only £67,116 is owing to ordinary trade creditors, while debtors alone owe £91,017, cash and bills reach £84,100 and stock-in-trade, work in progress, loose plant, &c., has a balance-sheet value of £272,352. Investments, possibly on account of the reserve fund, amount to £9,830.

Baldwins, Limited.

This business of iron and steel manufacturers and colliery and iron ore proprietors went a little way towards justifying its excessive capitalisation during the twelve months ended June 30 last. Including £19 for transfer fees, the total income was £110,035, being an improvement of £40,889 compared with 1904-5, so that the company has evidently reaped considerable benefit from the prosperous condition of the iron and steel trades, which was one of Joseph's vanished or going industries, we forget which. The management expenses naturally grew somewhat with the profits, and amounted to £11,853 or £2,612 more, but the expenditure for alterations and improvements was rather over £1,000 less at £12,451. As before £10,000 is written off for depreciation, sinking fund premiums take £5,629 and debenture interest £11,250. Then £13,750 is absorbed in the preference dividend and £45,102 is left, being a gain of the very considerable sum of £39,368. This balance enables the directors to commence a reserve fund with £30,000 and to pay a dividend of 2½ per cent., or twice as much as last year, on the ordinary shares, still leaving enough to increase the balance carried forward from £11,147 to £12,498. A small capital reserve of £19,323 has been written off the property account during the year, but the nett additions were £40,713, so that after allowing the quite inadequate depreciation allowance to date of £50,000, the lands, buildings, plant, &c., stand in the balance-sheet at £646,003. This is quite apart from the goodwill of £165,186, an utterly unjustifiable figure so long as the company cannot provide a fair return on its ordinary copital and make proper provision for future contingencies. It is rather difficult to see what the vendors, who still hold all the ordinary shares, hoped to gain by burdening the company with so much unreal capital, as under the best conditions the return on these ordinary shares must always be a very small one, and the opportunity of turning them over to the public is never likely to occur. It is just such a company as this sort that the protectionist agitation is designed to bolster up, because it does not matter how much the consumer suffers so long as manufacturers are given an opportunity to make profits out of all proportion to the true value of their businesses. At the date of the balance-sheet there was owing to sundry trade creditors, &c., the sum of £165,754 besides £9,349 to bankers, but £215,863 was due to come in from debtors and stock represented a value of £255,044. The cash in hand, however, is much too small at £1,104, considering that £13,750 has to be provided for dividend payment. A sum of £23,819 has been paid to the Sun Life Assurance Society for ultimate redemption of debentures and depreciation of leasehold, and £10,370 has been invested in separate securities.

International Financial Society, Limited.

When this company made up its balance-sheet on September 30 last it had a loss on the securities held of £27,886. Of course, the directors do not tell us this in as many words, but there is an item called "investment fluctuation account" for the amount named, and as it stands on the credit side it means that the assets are that much short of liabilities. The company's investments, including certain securities on which the directors put a value of £19,661, are entered at £398,306, but as there is a reserve fund of £50,000 the debit mentioned is not of particular consequence. The rather large sum of £53,600 is owing on bills payable and another £6,240 to sundry creditors, making a total of almost £60,000. This is rather heavy against bills receivable of £23,583, sundry debtors £9,871 and cash and short loans £25,040. Ordinary revenue for the past 12 months from interest, commission and profit on securities realised amounted to £28,428 or £164 less than in the previous 12 months. A further amount of £3,771 or £110 more was also credited as profit on securities held on September 30, 1893, and £11,843 was brought forward, making a total income of £44,043 against £44,370. Current expenses required £4,076, debenture interest £6,753, and £3,771, being the profits last mentioned, is transferred direct to reserve, leaving £29,443. Out of this, dividends and bonus aggregating 6 per cent. are again paid on the share capital, £6,229 goes to reserve, making it £50,000, as mentioned, and the slightly increased balance of £11,964 is carried forward.

A. and F. Pears, Limited.

There are two things upon which we desire to congratulate the shareholders of this well-known business. One, the fact that the company is not included in the much talked of soap and water combine, and the other the excellent result displayed for the twelve months ended August 31. The balance on trading account, after making provision for bad and doubtful debts, was £163,477 compared with £163,490 in the preceding year, remarkably similar figures. Interest on investments and deposits, however, was £461 larger by £4,549, and there was a sharp decline of £5,310 at £103,882 in the total charges. Depreciation and leasehold redemption required £4,869 or £191 more, leaving the balance of profit at £59,274 or a gain of £5,566. Add to that the credit of £1,815 brought forward, and the total for division is £61,090, from which the debenture interest requires £10,000 and preference dividend £12,000. The ordinary shares then get their regular 10 per cent., but by reducing the credit to reserve by £1,500 to £3,500 it is possible to pay 5 per cent. on the vendor held deferred shares, carrying forward £2,090. The business is in a very comfortable financial condition, and the latest addition to reserve brings it up to £58,500 besides the special reserve of £5,703, and the depreciation and leasehold redemption funds of £86,279. This means total accumulations of £151,482 against the property and goodwill of £602,902, including £834 added during the year. Only £23,258 is owing to sundry trade creditors, and the company has a fine display of liquid assets, as debtors and bills receivable reach £54,372, cash stands at £42,937 and no less than £132,791 has been invested in tip-top securities. Unfortunately the latter show a depreciation of £14,544, and we fear the chances of recovering the loss are remote. The stock-in-trade, including advertising stock, horses, vans, &c., appears at £187,280.

Electrolytic Alkali Co., Limited.

This company did much better in the twelve months ended August 31 than in the previous year, notwithstanding the higher cost of certain materials and the fact that no increase took place in the market price of the company's manufactures. The more favourable result is therefore due to increased output and reduced cost of production, and we share the directors' hope that further developments in the same direction will lead to still better results during the current year. The process is said to be working well, and an increasing demand for the products is being experienced. Sales for the twelve months amounted to £92,644 or £14,755 more than in the previous year, and by adding £53 for registration fees, sundry receipts £264 and the stock in hand £7,036 we arrive at a total of £99,998 against £81,155. Deducting stock now held £3,252, working expenses £79,510 and office and general expenses £5,140, the nett balance is £12,095 against £4,746. Depreciation, £5,304, is on a rather fuller scale, and also included in the expenses is a sum of £1,043 written off the preliminary and debenture outlay. With the sum brought forward a total of £12,624 is available, and the directors propose to pay 1¼ year's dividend on the preference capital, leaving a similar period in arrear and carrying forward the largely increased balance of £2,127. Various additions have been made to the properties during the year, and the directors say that the demands of the local authority for the suppression of excessive black smoke emission have necessitated the erection, among other things, of a second large chimney. Only a trifle has been added to the freehold land, and the buildings account shows a nett reduction, but the plant, machinery, &c., have been increased by £6,809, and are now valued at £132,653. Trade accounts are favourable to the company, and £11,388 is held in cash, but no reserve from profits has yet been started to offset the heavy patents account of £100,500.

Montevideo Telephone Co., Limited.

In their report for the twelve months ended July 31, the directors of this progressive company again announce an increase in the number of subscribers to the system and a proportionate gain in the receipts. The improvement was substantial, as the income from all sources amounted to £32,360, an increase against the preceeding twelve months of £3,681. Charges were naturally a little higher, the local working expenses being £13,613, while £1,123 went in London office expenses, and interest, discount and income-tax absorbed £329. The deduction of these charges left the nett profit for the twelve months at £17,294, which compares with £15,473. There was also a slightly larger credit of £2,047 brought forward, making the total available £19,342, so that after providing the preference dividend the directors can again advance the distribution on the ordinary shares by 1 to 5 per cent. besides adding another £5,000 to ordinary reserve and an extra £1,000 at £4,000 to the reserve for the renewal of plant. The balance carried forward is then increased to £2,383. Capital additions in the twelve months were not at all excessive at £5,101, bringing the total cost of property to £196,300. Against this the general reserve fund will now reach £46,500 and the renewal reserve £17,000, and although the greater part of these savings is invested in the business the financial position seems pretty sound. Only a very small sum is owing to sundry creditors, and the company has a variety of liquid assets totalling £32,393, including investments £22,897, bills receivable £3,480 and sundry debtors £4,530. We should like to see a rather larger cash balance than £1,486, because there is well over £4,000 still to be provided for final dividends.

New Dimbula Co., Limited.

The season ended June 30 was an exceptionally favourable one for this company, as in spite of the rainfall having been 26 inches below the average the yield per acre increased from 500 lbs. to 540 lbs. This means that the total crop of 1,265,735 lbs. was not only 94,240 lbs. larger than in the previous year but was 75,735 lbs. above the average and the largest return yet obtained from the estate. At the same time the nett price realised was 8.59d. against 8d. in each of the two preceding years, and the proceeds consequently rose by £6,195 to £45,320. Other receipts were also higher at £1,689, making a total of £47,009 compared with £40,522, of which ordinary expenditure took £22,413 or £1,186 more, £562 was written off tea extensions, cinchona expenditure and factory account, and London office expenses and other charges absorbed £1,487, leaving a balance of £22,546 compared with £17,407. With £4,373 brought in the amount available was £4,565 larger at £26,519, and after placing £3,000 to reserve against £1,000 and paying the regular dividend of 20 per cent. the directors increase the bonus from 1 per cent. to 4 per cent. Liabilities to sundry creditors have gone up by £2,989 to £10,452, against which sundry debtors owe no more than £822, but stocks are £1,237 up at £11,436 and cash in hand and on loan comes to £19,904 or £5,306 more, and the position altogether is a decidedly comfortable one. Block account remains at its original figure of £78,162, but this is not excessive considering the quality of the tea produced, while the reserve fund is growing steadily if somewhat slowly and now amounts to £13,500, of which £11,255 is invested in outside securities.

Ceylon (Para) Rubber Co., Limited.

The business of this modest and apparently well-conducted little company is proceeding steadily, and we learn from the latest report, covering the period from October 1, 1905, to June 30, 1906, that the area planted at the end of last year amounted to 610 acres. In addition there were planted during the S.W. monsoon or are in course of planting this year a further 711 acres, so that the total under plant at the end of 1906 will be 1,321 acres. Since the last report the expenditure in Ceylon has amounted to £7,147 and in London to £156, but £68 was received from interest, so that the nett outgo was £7,235. This includes land purchases to the value of Rs. 41,115, and in addition to these the directors have sanctioned the purchase of two small blocks amounting to 163 acres at Ambedeniya, with the object of linking up the estates comprising this division. The purchase money for these lands and the balance still due on another 141 acres will be paid before the end of the year. Then there are the Dela lands, estimated to cost £2,800, which were included in the original estimate for the current twelve months, and will probably have to be paid for before the year closes, so that with this added, as also £994 locked up in advances at the gardens, the capital expenditure may reach fully £19,000. Up to the present 9s. per £1 share has been paid up, and an additional call of 2s., amounting to £3,500, will be made shortly, bringing the total called-up capital to £19,250. No profit and loss account has yet been issued, because, we assume, none of the trees planted are yet producing rubber, and the directors say that in future accounts will be submitted showing the year's expenditure from January 1 to December 31. In pursuance of this, their annual report with accounts to December 31 next will be submitted at a meeting in February or March, 1907.

Colonial Consignment and Distributing Co., Limited.

In the twelve months ended on June 30 last this company's earnings, after providing for colonial and London charges, insurance, directors' fees, &c., amounted to £25,156. This is reduced to £12,712 by the payment of £4,500 for debenture interest and the allowance of £7,944 for depreciation. The preference dividend also requires £4,500, and the directors propose to pay 4 per cent. on the ordinary shares, but this can only be done by reducing the credit carried forward from £1,076 to £1,188. There is no addition to the reserve fund on the present occasion, which therefore remains at £17,055, a very poor accumulation when we take into account that the property stands at £228,355 apart from goodwill of £67,502. The company owes the considerable sum of £107,513 on bills payable, in addition

to £5,184 to sundry creditors, but these heavy floating debts are inevitable, because there are advances against shipments of £119,919 and £49,459 is due from sundry debtors. Stocks on hand seem rather small at £11,230, but in a business of this kind that may be to the good. An investment of £16,667 is probably on account of the reserve fund, and the cash balance reaches £29,940 apart from a sum of £4,373 in the hands of the debenture holders' trustees. No additions appear to have been made to the property account within the year, and the depreciation written off apparently aggregated £8,280.

North of Scotland Bank, Limited.

This Scotch bank's year ends on September 29, and the report, covering the past twelve months then ended, states nett profits at £63,982, including £2,719 brought down. A dividend of 11¼ per cent. is paid out of this in two instalments, the second being due on November 2. This takes altogether £45,000; then £1,000 is written off bank buildings and £15,000 added to the reserve, raising it to £222,500, after which £2,982 is left to carry to the new year. The balance-sheet foots up to £5,280,863, and of this total £1,867,000 is either invested in or lent upon Stock Exchange securities. Loans to London brokers and temporary advances on stocks come to £765,543, and the bank's fixed investments in various securities from Consols down to unspecified shares, &c., exceed £1,100,000. What is the depreciation upon these investments, and how is it provided for? What proportion of cash does the bank hold against the large active note circulation of about £477,000? The item gold and silver coin at head office and branches; and cash at call with London banks, is only £522,834 or about £46,000 more than the amount of the notes in the hands of the public. Bills discounted, advances on cash credit bonds, and on other accounts and securities, are varieties of business bunched together to make a total of £2,571,407. It may be all right, but we do not like to see so much Scotch money in use on the London Stock Exchange. It could surely be better employed at home.

Amelia Nitrate Co., Limited.

Despite the high prices ruling for nitrate during the year ending June 30 last this company does not produce quite such a good profit as in the previous twelve months. This no doubt is due to the reduction in its quota in consequence of other companies coming in to the combine and sharing the maximum output agreed upon. The reduction in revenue, however, is not very important, the trading profits being £66,612 compared with £73,939. Transfer fees gave about a couple of pounds, but there was no credit for general interest compared with £621, and the aggregate revenue is £66,614 or a reduction of £7,947. On the whole the expenditure was on a somewhat heavier scale, and including £892 for general interest, discount, &c., against nothing, £3,316 or £222 more for London expenses, and income-tax of £2,452 against £857, the total outgo was £7,511 compared with £4,748. The balance of nett revenue is therefore quite £10,700 lower, but in consequence of the redemption of fixed debt during the year the interest on debentures is only £3,803 against £7,606. This leaves £55,300 against £62,207, and the whole of it has been applied to the repayment of part of the loan borrowed from the company's bankers for the redemption of the entire debenture issue. The balance of loan still outstanding is £23,000, and as the nitrate industry is still making very excellent profits there should be no difficulty in discharging this during the current year and providing the shareholders with a satisfactory dividend. The repayment of the debentures caused some important changes in the balance-sheet. The whole of the debentures, appearing last year at £138,300, have gone, together with the debenture redemption account £62,231, and there now appears the balance of the loan just mentioned, £23,000. On the credit side the debentures purchased to date, £58,887, have also been cancelled, and the property account has been reduced by £115,300, corresponding to the amount of indebtedness redeemed during the past year out of profits, so that the works and estate now stand at £147,449 against £262,749. Sundry creditors show an important increase of £14,794 at £83,067, but debtors are £13,356 larger at £62,368. Stocks in hand, including animals, carts, stores, &c., are valued at £48,090 and the cash balance is £1,255. The high prices at present prevailing for the fertilizer have induced the directors to reopen the Oficina Amelia, which has been closed for some years, and favourable results are expected from this step.

MINING NEWS AND NOTES.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

The South African market has worn a little brighter look this past week, why no one seems exactly to know. But prices have recovered from some impulse or other, whence it has come or what its nature is the market can only conjecture. Not that the improvement is much to speak of. After all, it is only what we have often witnessed, a recovery after a heavy fall. It is impossible to say what substance there is in the support given. For business has nowhere improved and broadened. The market is still in the hands of the gamblers; outsiders are doing nothing. If we ask why prices are better for the time being, the answer is: "A little bear covering; nothing more. There's no business." Very rarely, however, is the betterment more than 1s. 3d. to 2s. 6d., and even some of the leading shares have again lost this towards the end. Angelos, especially, have reacted badly. Market rumour now denies its former story of a contemplated amalgamation between the Farrar group of companies, and this may have something to do with the fall. Another report says a bad statement will shortly be issued regarding the positions of the subsidiaries.

No settled tendency has been manifested by the Rhodesian market. Sometimes firmness is exhibited, at other times the market is quite limp. Such speculative things as Tanganyikas, Bankets and Rhodesia Explorations have, as usual, been the most prominent, now falling, now rising, as profits are taken or the gamblers manipulate them. So one cannot describe them as either strong or weak, only as erratic.

Again the most active section has been the diamond. Even Premiers are slightly better, but the recovery is nothing to speak of, for the "bears" seem a very powerful clique and the "bulls" apparently helpless. But the liveliest share of all has still been Vaal Rivers, for the "rigging" of these has been tireless. Despite the lofty height to which they have been pushed, manipulators are still talking them higher. The two circulars issued by the directors are reasonably regarded as unsatisfactory. The information given is too vague; no one can form a definite opinion as to what the company is actually doing, or is likely to do. All we learn definitely is that some debentures will be issued. The directors, however, say the results obtained from test washings are such as have never been attained as regards yield and quality over so wide a tract of country in South Africa. Why withhold the details as to yield and quantity, or even the extent of the property? How many diamonds have actually been recovered? A rumour is going the rounds of the market that the property is so rich that the directors are absolutely afraid to publish details, the excitement would be too great. But if some people know it and do not keep it a secret, and whisper it in this fashion, the facts may just as well be published. For vague talk of this kind will only defeat the alleged motive of the directors in keeping silent. Looking to the excitement in the market the rumour seems fatuous, and silence is not consistent with the boast that the results are so wonderful, &c. Why are those who know these facts anxious to sell the shares, to make them look tempting to the public? Why not keep these and even the debentures? But perhaps the most plausible story of all is that of the attempt to corner a "bear," a gentleman who evidently knew where he was. For when it was discovered on Wednesday that he was in a position to deliver the shares he had sold the price went flop.

Passing by the somnolent West African and Egyptian markets we find a set-back—an inevitable development—in West Australians. The recent rise has tempted the gamblers to take their profits and the condition of this market is now normal, with movements of no importance either way. Elsewhere we analyse the position and prospects of the once prosperous Lake View Consols company, the report having been issued during the week. On the whole, it is not of the kind to put an end to shareholders' anxiety.

Broken Hill shares have been fairly firm, and Zinc Corporations have improved on the announcement of a definite decision as to the best method of treating the tailings, the way being now clear to proceed with the erection of a plant on a commercial scale.

Copper shares have been buoyant, prices improving all round in sympathy with the rise in the price of the metal, which has now gone well above £100 per ton. Though tin has also sharply advanced, it has had little or no effect on the tin share market. The Amalgamated dividend is at the rate of 1½ per cent. and ½ per cent. extra, an increase of ¼ per cent. extra on the two previous quarterly distributions.

Frank Smith Diamond Estates and Exploration.—Only now have the directors found courage to issue their accounts for the year 1905, and their reluctance to make results known can be understood and, in a way, sympathised with. For the results are poor, far different from those the officials encouraged one to expect some years ago. But this is not how the directors put it. They say the delay has been unavoidable, because the chairman and some of the board have been on a visit to the property. Was it not possible so to time this visit that the report could be issued earlier? Not only are the accounts ancient, but they cover a period of 18 months, and a sorry state of things they reveal. After allowing £4,429 for depreciation, the excess of expenditure over revenue is £7,484. The directors have transferred the premiums on shares, £56,250, to a reserve account, against which they write off the entire cost of shafts and tunnels in testing the mine to a depth of 300 ft., and other special expenditure amounting to £25,808. They are likewise getting rid of the debit balance of £25,348, so that £5,093 remains unappropriated on reserve account. A sum of £10,753 was spent on capital account. At the date of the accounts the cash, short loans, value of diamonds (since sold), and debtors (less creditors) amounted to £54,082. Out of the nominal capital of £300,000 in £1 shares there are still 25,000 unissued, the options given on them until January 1, 1906, not being exercised. When the financial position will improve it is impossible to foresee. The directors are unanimous in their desire to increase the washing capacity of the plant, so that the quantity of ground treated may be doubled, and plants have been prepared for machinery capable of treating 3,000 loads per day. But as new systems of treating ground have recently been evolved the directors prefer to await the results of experiments carried out elsewhere. So who can say how long they will have to wait—months or years?

New Vaal River Diamond and Exploration Company.—After the price of the shares had been manipulated to a high

figure, the directors of this company condescended to issue a circular for the dissemination of what they call information. But it was curiously, indeed studiously, vague, and our ignorance after reading it was as dense as before. We were simply told that the area exploited is very extensive, and that the results obtained from the test washings were such as have never yet been attained, as regards yield and quality, over so wide a tract of country in South Africa." That may be, but what is the significance or importance of it? In Wales results have been obtained unique in the United Kingdom, but no profitable gold mining industry has been established there. Nor does it follow because the area is vast that this company will be any more successful than the dozens of other diamond companies in South Africa which have never paid dividends. The only tangible fact we could gather from the first circular was that the directors intended to issue debentures, but, curiously enough, no details as to the amount or otherwise were given. It was advisable, perhaps, to put out feelers of this kind, but more openness would have been appreciated. However, they condescended to give more particulars in a second circular, not of the working of the property and real results, but of the debenture issue. They purpose convening a meeting at Kimberley, not in London, on the 10th prox., in order to increase the capital from £150,000 to £200,000 by the creation of £50,000 6 per cent. debentures. Of this amount £25,600 will be offered to the shareholders at par at the rate of £5 debentures for every 25 shares held, with the right of conversion into ordinary shares at a premium of 5s. per share. And thus we see a little into the inwardness of the market rigging.

Elands Drift Diamond Estates.—The accounts for 1905—only now published—show an excess of revenue over expenditure of £563, which has been applied in reduction of the previous debit balance of £38,952. Of the £10,000 debentures created last year £7,100 were applied for and issued. By resolutions altering the articles of association the directors are empowered to hold meetings in London. Towards the end of last year the mine was visited by one of the directors, and in the beginning of the present year the chairman went to inspect it. Active operations were commenced on his return to England, in July last. Boring operations, it is declared, have proved the existence of diamondiferous ground. The full size of the mine is not yet defined, and the manager expects to commence washing in the present month of October.

South African Real Estate Trust.—The profit earned in the year ending June 30 showed a biggish drop, as much as £3,100 at £9,830. So severe has the depression been in the Transvaal that the directors have been compelled to reduce the rents. Other tenants have been obliged to give up their offices, so that the number now vacant has increased. Competition has likewise kept the income down. Receipts from properties amounted to £17,071 and interest gave £417, a total of £17,488. As already stated, the nett profit was £9,830, and as £11,771 was brought in the available balance was £21,601. Out of this a dividend of 7½ per cent. was paid, declared at the last annual meeting, and now the directors recommend 5 per cent. As this will absorb £7,500, £2,798 will remain to carry forward.

Moodie's Gold Mining and Exploration Company.—Work upon this company's property throughout the twelve months to March 31 was practically at a standstill. No new properties were taken up, and very little work was done on those held by subsidiary companies. Over £4,400 was received from various sources, such as claim permits, rents, royalties, stand permits, &c., giving the small profit of £25, raising the credit balance to £375. Twelve months ago the directors drew attention to the large amount owing by debtors, and the hope was expressed that during the following year a considerable portion of it would be recovered. Such hopes have not been realised, but they are still satisfied that if no undue pressure be brought upon the debtors a considerable portion of the sums due, in all £17,813, will be repaid when business improves. The only other policy they can adopt at the present time is to keep expenses down as much as possible and to avoid running into debt, so for six years now the directors have not charged their fees. To sundry creditors the company owes £5,661, and cash resources amount to £7,179.

Main Reef West.—This is one of the subsidiaries of the Consolidated Main Reef Mines. The South Reef and Main Reef Leader have both been intersected in the property. First assays from the South Reef averaged only 4.5 dwts. over 36 inches, and were far from encouraging. Driving east on the first level was continued; faulted ground was passed through and the reef was picked up at a distance of 50 feet from the shaft, where it assayed 12.7 dwts. Values obtained on the intersection of the Main Reef Leader were more satisfactory. Total expenditure in the twelve months ending June 30 amounted to £39,588, of which £29,911 was on account of shaft sinking. Calls on the working capital shares had to be made of 8s. 3d. per share, bringing the total paid up to 20s. per share, thus leaving a further 20s. still to be called up. The expenditure deficit on general account since the inception of the company now stands in the balance-sheet at £33,263.

West Roodepoort Deep.—This company's mine remained shut down during the year ended June 30, and is still in charge of a caretaker. Expenditure, say the directors, has been kept as low as possible and they themselves have drawn no fees, which is very generous. On general account £2,568 was spent and £902 was received from the sale of some machinery and interest, showing a nett outlay of £1,666. This raises the gross expenditure of the company from its inception to date to £46,014, but on the other side of the balance-sheet the directors take credit for £11,856 as revenue. Only £190 is due to creditors and cash is £3,574, which cannot last much longer.

Hercules Company.—Work of shaft-sinking was continued in the year ending June 30, the manager complaining that there was a great scarcity of labour. Revenue, of course, was quite tiny, only £4,144, whilst general expenditure cost £9,878, the deficit of £5,733 increasing the total to date to £30,528. As the company has £91,513 in cash it has plenty to spend on continued shaft-sinking. At the annual meeting the chairman estimated that an additional £70,000 will be required in order to reach the plane of the reef. A first issue of 100,000 5s. shares were taken up by shareholders and others at 40s., and the directors hoped to be able to place another 100,000 at the same price, but times have not been favourable. So the money will have to be provided at some time or other.

Kent Coal Concessions.—Following upon their recent announcements of the striking of seams on the Waldershare Estate, the directors issue their report and accounts to August 31. These cover the long period of two and a-half years, from the date when the company acquired the assets of the Dover Coalfield Extension, Limited. It appears, however, that no assets have yet been assigned, the settlement with the liquidator having been delayed by the death of Mr. J. R. Whamond. As Mr. O. W. Williams has recently been appointed by the Court, the directors hope this outstanding transaction will soon be settled. In the selection of mineral areas the directors have, as is well known, taken the advice of Dr. Boyd Dawkins. On November 4, 1904, a contract was entered into between the company and the Sondage Syndicate, whereby the latter undertook the exploration of the minerals. Two borings were started at sites selected by Dr. Boyd Dawkins. The first boring at Waldershare was successful, the second at Fredville has not yet reached the coal measures. A second agreement has been entered into with the Sondage Syndicate, under the terms of which the latter has undertaken to sink an exploratory shaft in lieu of a boring at Tilmanstone. In February of the present year a contract was entered into with the Fonçage Syndicate, under the terms of which the Guildford colliery is in course of establishment, and it provides for the simultaneous sinking of a second shaft. Since July last the capital of the company has been increased to £100,000, of which £70,000 has been issued up to the present. The directors are considering the desirability of realising, for cash, one section of their minerals, in order to provide an early dividend. A subsidiary company will shortly be floated with this object, the capitalisation of which will be fixed in accordance with the estimates given in the reports of experts who are to estimate the cost of establishing a colliery to win the seams found by the Waldershare boring. Particulars are to be given at Tuesday's meeting. Other plans are under consideration for the establishment of a fourth colliery. Such is the purport of the information the directors are able to give, and it is not likely to end the anxiety of shareholders as to the possibilities of this enterprise. Nor can one be struck with admiration at the eagerness of the directors to pay a dividend, and at the manner in which they intend to pay it. No profit and loss account is issued. The only income is £93 from transfer fees, against which administration expenses are put at £5,588. Other "assets" are £3,175 "preliminary expenses" and £8,631 underwriting commission. Cash is only £1,046, debtors owe £1,087, and £3,547 is due to sundry creditors. Yet the directors wish to pay a dividend by hook or by crook!

Gwalia Consolidated.—The announcement is now officially made that the action which has been pending for the past twelve months between this company and the Lakeway Goldfield has been satisfactorily settled. So the Gwalia is now in undisputed possession of another 20 head of stamps and other assets of the Lakeway company. The manager of the Gwalia expects to start crushing with 30 stamps in the early part of the coming year, and to treat about 70,000 tons a year. Reserves of ore amount to 117,000 tons. The directors have been told that on the erection of the new machinery the cost of treatment per ton of ore should be 15s. 10d. against the present figure of 21s. per ton. As the company has been earning a profit on the basis of 21s., it is reasonably argued that the profit will be greater when the costs are reduced. Accounts are promised shortly.

Carrington's Lion P. C. Mining Company.—According to a cable from Charters Towers, received by the directors of this company, the shareholders have agreed to an amalgamation of claims which extend over an area of 120 acres. A company with a capital of £60,000 is to be registered, divided into 240,000 5s. shares, 80,000 fully paid up, the Carrington's Lion to receive 40,000 fully-paid shares and £2,000 in cash. In a circular to the shareholders the directors say since the various claims have been working and the country tested by shafts new lodes and richer copper ore have been struck, so it has become apparent that the proposition should be classed as auriferous copper, and the area held as mineral leases in place of gold claims. Hence the amalgamation. Strange to say, however, the London secretary is unable to give, so he admits, fuller information as to details, nor even the names nor area of other properties joining, and it is merely "presumed" that the fully-paid holders will receive fully-paid shares in the new company.

Dolores, Limited.—The directors of the English company have received advices from the American company, the Dolores Mines, notifying the appointment of Mr. George A. Schroter as consulting engineer. It has also been decided to increase the stock of the American company from 330,000 shares of $5 each to 400,000 shares. This necessitates a corresponding increase of 70,000 shares in the capital of the English company. Of these

66,000 shares will be offered to the shareholders in the Dolores, Limited, at $5 (or the equivalent in English currency), the remaining 4,000 shares to be unissued. This will raise the capital from £330,000 in £1 shares to £400,000, and the meeting to sanction it is convened for the 26th prox.

Mungana (Chillagoe) Mining Company.—In the financial year ended June 30 2,596 tons of copper ore and 9,053 tons of lead ore were treated at the Chillagoe company's smelters, producing 321 tons of copper, 894 tons of lead, and 116,362 ozs. of silver. In addition, 3,441 tons of flux ore were smelted at a slight profit. The manager reports that there is still a large quantity of heap roasted ore—11,416 tons—awaiting treatment, pending the installation of the Huntington-Heberlein process at the Chillagoe company's works. Some interesting information has been obtained from several diamond drill boreholes, which prove the continuation of ore at depth. The main shafts at the Girofla and Lady Jane mines have been deepened to 300 ft., and at the former a fair amount of stoping has taken place in the new level, with satisfactory results. A plat is being cut at the Lady Jane, and after the necessary connections have been opened it is expected to obtain some substantial quantities of ore. After writing off £10,000 for depreciation, the nett profit for the year amounted to £21,609, which compares with £5,742 for the previous year. Ore on hand is valued in the books at £12,017, taken at actual cost—17s. 6d. per ton—although a profit of several shillings a ton is assured, so the report says.

Chinese Engineering and Mining Company.—Results for the year ending February 28 were not equal to those for the preceding financial year, for though there was a fair demand for the company's coal the output of this, for some reason not explained, fell off. Thus the gross profit from the sales of coal was only £178,580, a drop from £204,398. In addition, £4,113 came from interest and £154 from other sources, making a total credit of £182,848, a decrease of £27,240. By placing £10,000 less at £30,000 to depreciation reserve, the nett profit is £104,448 compared with £111,959, and the dividend for the year is again 10 per cent. With the above allocation the depreciation reserve now totals £110,000, and is probably included in the cash resources of the company, £265,427, this giving the balance-sheet a look of soundness. The debenture debt has been reduced by £10,500 to a total of £421,460. In order to increase the output the directors are erecting powerful electrical pumping and lighting plants at the Tongshan and Linsi mines.

Zinc Corporation.—For some time past Mr. A. L. Queneau and his staff have been investigating the treatment of the tailings of the Zinc Corporation. It is now officially announced that the long series of experiments are completed, and that the results are highly satisfactory, showing that systematic work will be very profitable. The No. 2 plant on the British Broken Hill Proprietary mine is now in process of alteration and expansion, in order to provide sufficient capacity to treat the whole of the current output of that mine. This plant is expected to be in full operation by December 1. The large No. 1 plant now being constructed to treat the tailings from the Block 14 South and Block 10 mines is said to be making satisfactory progress. Mr. F. A. Govett has been elected chairman of the London board, and alterations in the company's constitution are in progress with a view to establish the headquarters in London.

Deccan Gold Fields Development Company.—The balance-sheet of this company is dated December 31, 1905, whilst the report of the directors is brought up to July last. It has been the policy of the board to have all the field thoroughly explored and all the old workings carefully examined and opened up by means of trenches, pits or prospecting shafts to enable them to determine at which point or points it is most desirable to begin active development work, so progress has necessarily been slow. A large amount of prospecting work has been done, and indications are declared to justify further development work on some of the locations. No profit and loss account has yet been prepared. In the balance-sheet the expenditure in India is put at £836, and in London at £619 nett, total £1,455. Cash amounts to £6,068. A call of 2s. 6d. per share was made in July, making the shares 5s. paid.

Mitterberg Copper Company.—The output of fine copper from the old smelter for the six months ending September 30 was 332 tons of 1,000 kilos. In May the output was reduced by closing down for some days for flue cleaning, and in July and August owing to the draught at the smelter being affected by the hot weather. Still the total production largely exceeded that of the corresponding months of last year, and was disposed of at satisfactory prices. Progress of the new installation, with a smelter designed for an output of 200 tons fine copper monthly, has been retarded owing to delay in the delivery of the balance of the plant, which is now expected in a few weeks, when every effort will be made to further the completion of the work. Ore developed and in sight, ready for stoping, is estimated as sufficient for seven years, with an output of 1,800 tons annually. Active operations for further development of the mines are in progress on the lines laid down by the company's consulting engineer, which are expected to result in a large increase of the ore reserves. Total ore already developed and partly developed is estimated at over 850,000 tons, containing about 24,600 tons of copper. The arrangement mentioned in the prospectus, whereby an Austrian banking institution agreed to advance £40,000 on the security of the property, has been completed.

New South Wales Gold Output.—The gold yield of New South Wales for the month of September amounted to 32,089 ozs., of a value of £114,659, compared with 32,266 ozs., worth £113,731, in the corresponding month of last year. For the past nine years the yield totals 234,998 ozs., valued at £832,066, against 229,879 ozs. and £804,043 respectively for the first three quarters of 1905.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and October 13, 1906:—

Revenue and Other Receipts.

—	Estimate for the year 1906-1907.	Total Receipts into the Exchequer from April 1, 1906, to Oct. 13, 1906.	Total Receipts into the Exchequer from April 1, 1905, to Oct. 14, 1905.
Balances, April 1:	£	£	£

Treasury, October 16, 1906.

London and County Banking.—Liabilities on September 30 amounted to £44,455,739 on simple contracts and £2,378,283 on acceptances, against which the assets were £9,352,031 in investments, £8,509,099 in bills of exchange, £20,302,842 in loans and advances to customers, £6,682,458 in cash at the Bank of England and on hand, and £2,562,965 in money at call and notice.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Brazilian Street.—5 per cent. for the year ended July 31 on the ordinary shares.

Cuban Central.—Balance of dividend for year ended June 30 on the 5½ per cent. preference shares—viz., 5s. 6d. per share, carrying £34,565 forward.

Delni, Umballa, Kalka.—Final at the rate of 6 per cent. per annum and a bonus of 10s. per cent., making 6½ per cent. for year ended June 30.

Great Western of Brazil.—Interim for year 1906 of 6s. per share on both the preferred and the ordinary shares, being at the rate of 6 per cent. per annum.

Midland Uruguay.—Payment on Nov. 1 next of an extra 1 per cent. interest on debenture stock for year to June 30, 1906, payable Nov. 1.

Ontario and Quebec.—On the common stock at the rate of 6 per cent: per annum, payable Dec. 1 at the Bank of Montreal, Montreal, or at the London Office of the Canadian Pacific Railway, at the option of holders.

South Indian.—Out of surplus profits of 30s. per cent., making, with guaranteed interest, £3 per cent. for half-year, or at the rate of 6 per cent. per annum.

INSURANCE.

London and Lancashire Fire.—Interim of 6s. per share.

Yorkshire.—Usual half-yearly at the rate of 4s 6d. per share.

BREWERIES.

Boardman's United.—5½ per cent. on the preference shares, being arrears to March 31, 1905.

Newton Heath.—Interim on the ordinary shares at the rate of 5 per cent. per annum for half-year ended Aug. 11.

MINES.

Balaghat Gold.—Interim of 1s. 3d. per share for the four months ended Aug. 31 on the ordinary shares.

Broken Hill Proprietary.—For quarter ending Nov., 1906, of 1s. 6d. per share and a bonus of 1s. per share, payable Nov. 21.

London and Hamburg Gold Recovery.—Balance of 3 per cent., making 6 per cent. for the year ended June 30, payable Nov. 2.

Mount Boppy Gold.—Interim of 3s. per share, payable Nov. 1, making with the first interim 27½ per cent. for first eight months of the current year.

Mysore Gold.—Interim of 4s. 6d. per share on the old shares, 3s. per share on the new shares allotted on which the sum of 6s. 8d. per 10s. share has been paid, and 1s. 6d. per share on the new shares allotted on which the sum of 3s. 4d. per share only has been paid, making with the first interim 85 per cent. for first eight months of the current year.

North Broken Hill (No Liability).—No. 4, of 2s. 6d. per share.

Nundydroog.—Interim of 1s. 2d. per share for the four months ended Aug. 31, payable Nov. 16, making 2s. 4d. per 10s. share paid for the first eight months of current year, payable Nov. 16.

O.K. Copper Mines Development Syndicate (No Liability).—No. 9, of 6d. per share.

MISCELLANEOUS.

A. W. Gamage.—Interim at the rate of 5 per cent. per annum on the ordinary shares for half-year ended July 31.

Bank of Montreal.—Quarterly at the rate of 10 per cent. per annum.

British Columbia Development.—5 per cent. for 1905.

Centaur Cycle.—10 per cent. on the ordinary shares, placing £3,000 to general reserve, and carrying forward £4,400.

City of Dublin Steam Packet.—At the rate of 2 per cent. per annum for half-year ended Aug. 31.

Colonial Gas.—Further of 3 per cent., making 5 per cent. for past year, placing £250 to reserve, and carrying £897 forward.

Crosses and Winkworth.—8s. per share and bonus of 8s. per share, making 24s. per £5 share.

Frederick Hotels.—On the preferred ordinary shares at the rate of 5 per cent. per annum, and on the deferred ordinary shares at the rate of 4 per cent. per annum for year ended June 30, placing £10,000 to reserve, and carrying forward £6,572.

Furness Withy.—5 per cent. per annum on the ordinary shares.

George Routledge and Sons.—10 per cent. on the ordinary shares for year ended June 30, carrying £198 forward.

Imperial Continental Gas.—4 per cent. for half year ended June 30.

Investment Trust.—Interim for half-year to Nov. 1: On the preferred stock at the rate of 4 per cent. per annum; on the deferred stock at the rate of 8 per cent. per annum.

John Haslam and Co.—Final of 10s. per share and bonus of 10s. per £10 share, making 30s. per share for past year.

Joseph Lucas.—At the rate of 5 per cent. per annum on the ordinary shares for year ended Aug. 31, placing £8,000 to reserve.

Montevideo Gas.—Interim of 6s. per share for half-year ended June 30.

Nuwara Eliya Tea Estates.—Interim of 6s. per share on account of profits of current year.

Oriental Telephone and Electric.—Interim of 3 per cent. on the ordinary shares.

Pacific Steam Navigation.—Interim on account of the present year of 12s. 6d. per share, payable Nov. 1.

Second Scottish Investment Trust.—Further on the deferred stock of 3 per cent., making 5 per cent. for past year, carrying £2,723 forward.

Self-Sealing Rubber.—7½ per cent.

Spillers and Bakers.—Interim on the ordinary shares for half-year ended Aug. 31, at the rate of 5 per cent. per annum.

West African Telegraph.—Interim at the rate of 4 per cent. per annum for half-year ended June 30.

Western Telegraph.—Final of 3s. per share, making 6 per cent. for year ended June 30. and a bonus of 2s. per share.

Wilsons and Clyde Coal.—Final of 10s. on the ordinary shares, making 25 per cent., carrying forward £13,863.

MINING RETURNS.

Ankobra (Taquah and Abosso) Development.—No. 2 dredger 134 ozs.

Brilliant Central Gold.—Crushed 1,180 tons quartz, value, including residues (tailings and concentrates), £2,700.

Brilliant Extended.—Crushed 4,606 tons for £10,231.

British Broken Hill Proprietary.—2,343 tons crude ore produced 354 tons concentrates, containing 227 tons lead and 9,912 ozs. silver.

Broken Hill Proprietary.—Block 10.—Treated 9,758 tons crude ore, producing 1,317 tons concentrates, containing 816½ tons lead and 42,144 ozs. silver.

Carrington's Lion P.C.—Crushed 250 tons, £375; concentrates £160.

Chinese Engineering.—Output 19,000 tons, sales 18,000 tons, consumption 1,350 tons.

Consolidated Goldfields of N.Z.—Progress—Crushed 4,900 tons, value £8,970. Golden Fleece.—Crushed 1,002 tons, value £1,847. Wealth of Nations.—Crushed 1,125 tons, value £1,923.

Copiapo.—Production, 600 tons copper ores, averaging 13 per cent.

Dolores.—Treated 1,111 tons; bullion, $33,681.

Durban-Roodepoort—Quartz milled 10,630 tons, 3,401 ozs.; tailings, 6,800 tons, 827 ozs.; slimes, 3,605 tons, 238 ozs.; total, 4,466 ozs.

El Oro.—Crushed 20,277 tons, producing U.S. $184,710.

Esperanza.—Crushed 12,459 tons dry ore; shipped to smelter 6,372 tons dry ore; value of bullion produced, $122,421; concentrates, $65,286; ore shipped to smelter, $502,134; total, $689,841.

Kelantan Gold Dredging (No. 1).—Recovered 104 ozs.

Komata Reefs.—Crushed 1,650 tons; bullion £3,450.

Lachlan Gold Fields.—Crushed 600 tons; £900.

Mount Lyell.—Ore treated 31,394 tons. In addition 310 tons of purchased ore and metal bearing fluxes, converters produced 614 tons blister copper, containing 607 tons copper, 52,429 ozs. silver, 1,716 ozs. gold.

North Broken Hill.—Treated 2,120 tons crude ore, producing 385 tons concentrates, containing 271 tons 16 cwt. lead and 6,508 ozs. silver.

O. K. Copper.—Treated 916 tons of crude ore, producing 88 tons fine copper.

Oroville Dredging.—Gross returns $17,500.

Palmarejo and Mexican Goldfields.—Zapote—Crushed 2,985 tons, treated 2,600 tons, producing gold $11,970, silver $38,000.

St. John Del Rey.—Gold produced £6,900; yield per ton ·54 oz troy.

Salisbury.—Crushed 5,700 tons, 1,875 ozs.

Sansu.—Crushed 1,030 tons, 460 ozs.

San Salvador Spanish Iron Ore.—Shipment 2,000 tons iron ore for St. Nazaire.

Tyee Copper.—Smelted Tyee ore 1,892 tons, customs ore 219 tons—2,111 tons; matte produced 181 tons.

NEXT WEEK'S MEETINGS.

Monday, October 22.

Associated Tea Estates of Ceylon.—Cannon Street Hotel, noon.
Baldwin's.—Birmingham, 2.45 p.m.
Kalgoorlie Electric Power and Lighting Corporation.—Winchester House, 2 30 p.m.
Routledge (George) and Sons.—68, Carter Lane, noon.
United Railways of the Havana and Regla Warehouses.—Winchester House, noon.

Tuesday, October 23.

Amelia Nitrate.—78, Cornhill, 12.30 p.m.
Bolivar Railway.—1, Broad Street Place, 2 p.m.
Kent Coal Concessions.—Cannon Street Hotel, 2.30 p.m.
Pahang Corporation.—Winchester House, 2.30 p.m.
Pahang Kabang.—Winchester House, 3 p.m.
Shell Transport and Trading.—Winchester House, 2.30 p.m.

Wednesday, October 24.

A. and F. Pears.—Holborn Restaurant, 2 p.m.
Brampton Bros.—Birmingham, 12.30 p.m.
Electrolytic Alkali.—Liverpool, 2 p.m.
Frank Smith Diamond Estates and Exploration.—Cannon Street Hotel, noon.
Winchester Gold Mining.—Winchester House, 12.30 p.m.

Thursday, October 25.

Australian Mortgage, Land, and Finance.—Cannon Street Hotel, noon.
Burton Brewery.—Burton-on-Trent, 2.30 p.m.
Car and General Insurance Corporation.—Cannon Street Hotel, 2.45 p.m.
Northern Banking.—Belfast, noon.
Otis Steel.—Winchester House, 2.15 p.m.
Trust and Loan of Canada.—Winchester House, 2 p.m.

Friday, October 26.

Linotype and Machinery.—Cannon Street Hotel, noon.
Metropolitan Industrial Dwellings.—Westminster, 1 p.m.
Sun Gas.—Winchester House, noon.

COMPANY MEETINGS.

GRAMOPHONE AND TYPEWRITER, LIMITED.

The seventh ordinary general meeting of the shareholders of the Gramophone and Typewriter, Limited, was held on Monday at the registered offices, 21, City Road, Finsbury Square, E.C., Mr. Edmund Trevor Williams (the Chairman of the company) presiding.

The Secretary (Mr. W. H. Cooper) having read the notice convening the meeting and the auditors' report,

The Chairman said: In commenting upon the report and accounts I can only say that it is very gratifying to your directors to be able to announce to you a trading profit of £212,236 for the year. (Applause.) This compares with last year's figure of £140,229, showing an increase of over £72,000 in the year. It is the more gratifying because last year showed a decrease in the profits, which decrease we endeavoured to persuade you was due to temporary causes, which at the date of our last meeting we told you were rapidly disappearing. That our endeavour so to persuade you has been amply justified is shown by the figures before you, and the fact that the trading profit this year is in excess of that of two years ago. In other words, we are back to normal conditions, which means, with this really wonderful business, gradual expansion, increasing trade, increasing profits, increasing dividends, and an exhilarating prosperity. (Applause.) That such conditions will continue there does not appear to be any reason to doubt. Your directors recommend a bonus of 10 per cent. on the ordinary shares, which, with 10 per cent. already paid by way of interim dividend, gives a total distribution for the year of 20 per cent. On the figures before you a larger distribution would unquestionably be justified—(hear, hear)—but, as has been impressed upon you at each successive annual general meeting, your directors in distributing profits by way of dividend have from the commencement aimed at leaving sufficient funds undistributed so that in the course of time your so-called liquid assets should amount to your actual issued capital. (Applause.) Well, by limiting this year's distribution to 20 per cent. that end has to-day been attained—(hear, hear)—and after to-day, given a continuance of the business at its present level, larger dividends will become a matter of course. (Applause.) We have intimated to you this state of affairs by asking you to authorise the payment of quarterly interim dividends at the rate of 15 per cent. per annum, instead of 10 per cent. as heretofore. That there may be no misunderstanding as to this increase in interim dividends, I may say at once that it foreshadows, and is intended to foreshadow, a total dividend for the current year of at least 25 per cent., and I use the words "at least" advisedly. We are at the present time earning over 40 per cent. on the ordinary capital, we have at the present time readily convertible assets equal to the whole amount of your capital, both preference and ordinary, and your directors do not think that after this year they will be justified in doing otherwise than distributing to the shareholders by way of dividend a far larger proportion of the actual earnings than has hitherto been done. (Applause.) The carry forward this year is £487,176, as against £397,796 last year, showing an increase of £89,380. In justification of so large an increased carry forward, and in further justification, if any be necessary, of limiting the dividend this year to 20 per cent., I would point out that the year in front of us will require considerable outlay out of capital. Owing to our very rapidly increasing business, it has been demonstrated that your factory at Hanover, good as it is, is not equal in capacity to the demand of your selling organisation. It has consequently been decided to erect a factory here in England—(hear, hear)—which factory it is hoped, in the course of time, will take care, certainly, of the greater part of the requirements of the business. This, however, does not mean that it is intended to do away with the Hanover factory. Hanover is a very good distributing centre, and we shall always have use for that factory, and, indeed, if the business continues to increase as it is increasing to-day, I venture to predict that when our new factory is up and in working order, both the new factory and the one at Hanover will be working to their fullest capacity. (Applause.) In addition, it has been decided to erect supplemental pressing plant in Spain and in India; in Spain because of the recently imposed practically prohibitive tariff on goods such as we manufacture, and in India because of the great distance from headquarters and because of the rapidly increasing trade in that country. The report tells you that the matrix account in the ordinary course would stand at the figure of £40,959 14s. 4d., and by computation that figure is in no way in excess of the actual value of the asset. But for reasons with which I need not trouble you, it is deemed desirable to keep the value low, and your directors are accordingly writing off the sum of £10,959 14s. 4d. in addition to what is written off by the system hitherto adopted and recommended by your auditors. This leaves the asset to-day at £30,000, as compared with £33,000 odd last year. It has been contended that this asset should be wiped off altogether, but your directors are not of that opinion. They hold that in order to enable the shareholders properly to gauge the true position of their business, it is equally inadmissible to undervalue or to conceal assets as it is to overvalue them. (Applause.) Incidentally I may say that apart from the very great value of these matrices themselves, the actual metal of which they are composed could be sold in a few hours for something like £6,000. In the report we give you a statement of assets, irrespective of goodwill, patents and trade marks, amounting to £646,681. From this has to be deducted the amount of bonus which is now recommended for payment, leaving a balance in round figures of £600,000, the actual amount of your authorised capital. This wipes out of consideration the value of goodwill, patents and trade marks, but that value must not be lost sight of, and I venture to say that it is as great to-day if not greater than it was when the company was incorporated. After some further remarks the Chairman formally moved the adoption of the report and accounts which was put and carried unanimously without discussion.

Resolutions approving of the dividends and bonus and sanctioning forthcoming quarterly dividends were also carried unanimously, the meeting closing with votes of thanks to the Chairman and directors.

BUENOS AYRES GREAT SOUTHERN RAILWAY.

The ordinary general meeting of the Buenos Ayres Great Southern Railway Co., Limited, was held, on Wednesday, at River Plate House, E.C., Mr. Jason Rigby, M.Inst.C.E., the chairman, presiding.

The London manager and secretary (Mr. H. C. Allen) read the notice and the auditors' report.

The Chairman, in moving the adoption of the report, first made a sympathetic reference to the death of Mr Frank Parish, the late chairman of the company, adding that it was gratifying to know that his merits had been fully recognised in Argentina. He went on to say that the growth of the company's receipts continued to show that elasticity which had been such a marked feature through a number of years back, but more especially in recent times. During the past 10 years the receipts had gone up from £1,400,000 to no less than £3,900,000, or 178½ per cent., while the mileage had only increased from 1,436 to 2,506, or 75 per cent. During the last four years the gross receipts showed consecutive increases of £163,000, £317,000, £497,000 and £547,000, or a total increase for the four years of £1,524,000, or 65 per cent. Although the principal expansion had been due to grain, the increase had been general. Passengers had, however, during the past year contributed rather more than the usual proportion, the increase in numbers being very nearly 2,000,000, or over 24 per cent., and the increase in receipts 26 per cent. Of the grain traffic, the principal increase had been in wheat, of which 335,500 tons more were carried than in the previous year; in two years the increase in this one item had been considerably over 900,000 tons. One of the most satisfactory features was the increase of general goods. Ten years ago the tonnage of general goods and sundries amounted to only 373,628 tons, whereas last year's figure was 1,413,000, of which general goods represented 1,027,000 tons. The growth of business in the southern district of the Republic had been phenomenal, and the receipts from the year's working were by far the largest yet attained. When, however, they looked at the other side of the account and found that for the moment the rate at which the expenditure had increased was even greater than that of the receipts, some disappointment was natural, and perhaps even some alarm as to the effect on the future might be felt. A little reflection, however, would show that the very magnitude of the sudden wave of prosperity which had flowed over the southern district, and in two years had added 2,723,000 passengers and 1,300,000 tons of goods, must of necessity have created a position of some difficulty and strained the resources of the railway to a considerable extent. Salaries and wages, and a reconstruction in the hours of labour, increases in the staff, not to speak of an increase in the cost of materials and coal, also added to the working expenditure. For instance, salaries and wages paid during the year increased £813,000, or 32 per cent. In these circumstances, what was the prospect of maintaining the dividend-earning power of the railway? The chairman read extracts from the statements from the other side, given in the official report on the general outlook, observing that there was no occasion for alarm, as the need for exceptionally heavy expenditure would not continue long, whilst the growth of the traffic would soon restore a healthy relationship between receipts and expenses. In a word, the company fully expected to be able to maintain a fair and equitable dividend, not only on the existing capital, but on any capital which it might be necessary to issue for the purpose of building extensions to the present system, or providing for the expansion of business on the present system. After a passing reference to what he called prodigal grant of concessions, and how this operated adversely to the company, the chairman went on to say that the extensions the company itself now proposed would represent an expenditure, exclusive of rolling-stock, of about 3½ millions sterling. This spread over a period of five years was a burden the B.A. Great Southern could easily bear. The directors were asking for an increase of five millions to the capital, but it was proposed at present to issue only three millions. The allotment would be made somewhere about the middle of November, and would be made at par to holders of ordinary stock and the existing 1910 shares, in the form of a second series of 1910 shares. In conclusion the Chairman formally moved the adoption of the report and accounts.

Mr. John G. Griffiths seconded the motion, which was unanimously agreed to.

CENTRAL URUGUAY RAILWAY OF MONTE VIDEO.

The ordinary general meeting of the Central Uruguay Railway Company of Monte Video, Limited, was held on Thursday

at River Plate House, E.C., Mr. Henry Bell (Chairman of the company) presiding.

The Secretary (Mr. George R. Cable) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report, congratulated the shareholders on the result of the half-year, which enabled them to recommend the highest dividend they had paid for eleven years. The larger distribution was possible in consequence of the improvement in business. There had been a large increase in passengers, general goods and building materials, and in the report tabulated returns were given for the last ten years, which showed that the fall and rise in dividends coincided with the rise and fall in business. When trade was good, or could be extended by personal calls, the passenger business increased, and the opposite was the case in bad times. The same could be said of building materials, because people would not embark on building enterprises if things were bad. General goods also showed the considerable increase of 18,716 tons, or over 13 per cent. As this was the class of traffic which paid the best rates, they were glad to see this improvement. The past year had been one of political peace, and all sincerely hoped this happy state of affairs would continue. All their advices were to the effect that it was likely to do so. They had had some labour unrest, but he was glad to say there had been no serious strike in any department of the line. They had, however, had to raise wages, and shorten hours of work to keep the peace, and he did not look for any decrease in working costs while this present era of prosperity continued, and he was quite sure all the shareholders would wish that it would continue. It would be noticed from the report that he had visited Uruguay, while on a visit to the River Plate. He was glad to find the line in good order and the City of Monte Video much improved from what it was. The new breakwater had made it a better port and the dock works were progressing. The customs receipts were the highest on record. Still he must confess that going straight from Argentina, where agriculture was making such strides, he was disappointed in the country districts not to see a greater area under crops in Uruguay, not that there was not more under cultivation than was the case when he visited the country four years ago. The items which in the report showed the greatest reductions were grain and horses. Of the former, wheat showed a decrease of 21.98 per cent. and maize a reduction of 45.6 per cent. the drought and hail being the cause of the reduction. The cause of the reduction in the number of horses was entirely owing to the war, because in the previous two years they had had to carry so many, and they were now back again to normal numbers. With regard to imports, the explanation was the same. In previous years so many fences were destroyed by troops, they had to be renewed and a large amount of wire and posts had to be carried in the previous two years. Their most recent news with regard to crops was that they were looking well, and that there was a larger area. The acting manager's report on the business of the railway was so full that he would do no more than draw attention to the paragraph giving the information. Information was also given as to the working of the allied companies, two of which showed increases, but the Northern a decrease, attributable to the greatly reduced number of horses carried. It was gratifying to note that the earnings of the Western Extension showed an increase of £7,962, which had the effect of still further diminishing the amount which the Central Company had been called upon to advance under its guarantee.

Mr. H. C. Allen seconded the resolution and it was carried.

The usual formal business was then transacted, and the meeting terminated with a vote of thanks to the Chairman.

CONSOLIDATED MINES SELECTION COMPANY.

The ordinary general meeting of the Consolidated Mines Selection Co., Limited, was held yesterday at Winchester House, Old Broad Street, E.C., Mr. Francis Muir, chairman of the company, presiding.

The Secretary (Mr. Charles W. Moore) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, said it was with much regret they had to meet the shareholders with so poor a report and statement of accounts—by far the poorest they had ever had to present. Yet, considering all the circumstances of the year, including the general slackness of the stock markets, but especially the political events at home and in the Transvaal, there was nothing remarkable or to be wondered at. Indeed, the wonder was that their accounts were not worse, especially considering the enormous depreciation in the value of Witwatersrand mining securities in the year. The directors felt that they were the victims of circumstances which they could neither foresee nor prevent, and for which they were in no way to blame. Proceeding to deal with the accounts, he said that during the year the amalgamation with the Johannesburg branch of Messrs. Dunkelsbuhler's firm was carried out, the issued capital thereby being increased to £1,000,000. At the same time an issue of £400,000 debentures was made on the terms and conditions explained at the time, so that the share and debenture capital issued now amounted to £1,400,000. The profit and loss account showed on the credit side £40,885, to which they had added the reserve account of £34,176, making a total of £75,062 to be dealt with. Against this they had for expenses of every description and income-tax £29,629, debenture interest £10,000, and they had written off sundry investments £20,757, amounting in all to £60,387, leaving a balance of £14,675 to be carried forward. Against the share premium reserve account they had charged the expenses connected with the new issues of debentures and shares, amounting to £14,774, which appeared to be a perfectly fair method of treatment and was quite approved by the auditors. The amount at the credit of share premium account now stood at £61,048. The expenses showed a big increase over last year, this being due to the rearrangement of the Johannesburg business. They felt the necessity of having a managing director resident in Johannesburg, and in having Mr. Hamilton representing the company they considered themselves extremely fortunate. Their organisation was not at all in excess of their responsibilities. Naturally, with such a profit and loss account, the expenses seemed large, but shareholders might rest assured that this matter had the close attention of the board. With regard to the depreciation in valuable securities, this amounted on June 30 to £311,990. The fact that this was the first time in the company's history when it had been necessary to make such a reservation in the accounts was of itself a strong proof of the acuteness of the crisis through which they had been passing. They had decided, after full consideration, to treat the matter as had been the custom in former years. They had always considered that until a security was finally realised, whether at a profit or a loss, it must stand on the books at cost, being neither written up nor written down. Some companies followed the practice of revaluing each year at the figures of the day, the result being to show sometimes a paper profit, which could not be dealt with, and sometimes a paper loss which had not been realised. He considered their system a better one so long as the ascertained depreciation was plainly stated on the face of the accounts. They had shown what they considered irrecoverable in the item of £20,757 which they had written off, but they would be greatly surprised and very disappointed if in the not very distant future the position did not show a great change for the better. As regarded the depreciation in the market value of Witwatersrand mining securities it would be affectation to [illegible] that in no particular case had this rate of depreciation been justified, but in most cases it might be safely said that the depreciation had been exaggerated and intensified by the prevailing pessimism and also by the necessities of holders compelled to realise.

Mr. Walter McDermott seconded the resolution, and it was carried unanimously.

The retiring directors were re-elected and the meeting terminated with a vote of thanks to the chairman.

West Australian Gold Returns.—The Agent-General for Western Australia has received notification that during the quarter ended September 30 159,314 ozs. of gold were entered for export, while 281,478 ozs. were received at the Perth branch of the Royal Mint for coinage, giving a total of 440,792 fine ozs.

Under the title of "The Gospel of Socialism," a lecture by Mr. Hector Macpherson, delivered to the Young Scots Society, has been published as a penny pamphlet. Everything that comes from Mr. Macpherson's pen is good literature. He wields an excellent style and manages to suffuse the driest subject with interest. In the present essay he sets himself to examine the theory of value or of wealth formulated by Adam Smith, popularised by Ricardo, and seized upon by Karl Marx as a foundation on which to build his socialistic despotism. That theory was based upon the assertion that labour is the one and only measure of the exchangeable value of commodities. It is no such thing. As Mr. W. B. Robertson cogently showed in his recently issued book, the "Foundations of Political Economy," the true origin of value, and therefore of "wealth" is the desire to possess, and by ruling out all elements except the wages of labour, by refusing to capital its true functions, and [illegible] doing these, is the socialist able to formulate his plausible but subversive doctrines. All is not evil in socialism. It stimulates the lowly to some measure of self-respect, and formulates demands which make for the elevation of the masses, but as a system of economy and of national life it is vicious, and can lead to no definite or permanent good to the working classes or anybody else. Specious though the theorisings of the various socialistic sects may be, they are in the main barren of good results, and Mr. Macpherson does well to point out that capital and labour are not deadly foes as the Marxian theory makes them out to be, but essentially working in harmony, the one helping the other. We hope this essay will have a wide circulation.

Another pamphlet has reached us, called, "The Sequel to the Chicago Meat Packing Agitation," and is a reprint of an address delivered to the students of the Agricultural Department of Edinburgh University at the opening of the session, on October 16 by Mr. Robert Wallace, the professor of agriculture and rural economy there. Mr Wallace is rather on the side of the Chicago packing houses, and there is a good deal of truth in what he says. Unquestionably the sensationalism embodied in that novel called "The Jungle," went far beyond the facts. There were malpractices in some of the large meat killing and packing establishments, but all were not tainted with slovenly management and filth of every description. We are not sure, however, that we can put the reliance Mr. Wallace seems disposed to do upon the measures taken by Congress to ensure a complete elimination of the abuses that confessedly existed, and think that the public in this country will do well to eat sparingly of American or any other preserved meats. The best thing, indeed, that could happen to us would be a diminution in the meat eating habit, which has become excessive with all classes of our population.

BANK RATE NOTICES.

THE CLYDESDALE BANK, LIMITED

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 460. SATURDAY, OCTOBER 27, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied or less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Meaning of the 6 Per Cent. Bank Rate.

From high quarters, from the Bank of England itself in fact, assurances are continually reaching the open money market and the Stock Exchange to the effect that the advance in the Bank rate to 6 per cent. means nothing more than an effort to put a stop to the exports of gold. Everything is all right at home, we are assured, and if these pestilent Yankees could only be prevented from coming and taking away more of the much denuded stock of gold in the Bank of England all would be well. Whether these are the real sentiments of some of those who spread assurances of this kind may be doubted, but, in any case, they are only to a very restricted extent the truth. There is much more in dear money, in a 6 per cent. Bank rate, than a superficial explanation of this kind conveys. Gold never comes into prominent demand among the world's bankers at any time except as a result of excessive financial commitments in one direction or another. If we could conceive the business of the world to be conducted always on prudent and honest lines so that no man endeavoured to over-reach his neighbour, no group of men sought to obtain a monopoly control over this or the other industry, so that commodities were never produced in excess leading to locks up of capital and no man bought or sold beyond his capacity to fulfil his contract, then the actual employment of gold in commerce and finance might be reduced to a minimum as it is in the ordinary every-day transactions of the business man in this country. But the tendency of business of all kinds is always to run into excess, and the demand for gold arises when the excess has become so pronounced, in one direction or in many, as to prevent those who have over-committed themselves from being able to fulfil their engagements in any other way than by paying in metal. There is a chasm to fill, and credit becomes unavailing to fill it. The process of distension is simple enough, and several remarkable illustrations are ready to hand. Take our own recent financial history first. It has been a story of profusion on all hands, beginning with the stupendous expenditure of the home Government. Thanks to the unseemly magnitude of its expenditure, in the last eight years especially, our money and stock markets have been oppressed by the burden imposed upon them through the debt creations of the Government as well as through the magnitude of current demands on the taxpayer. The Stock Exchange is at the present time carrying an enormous mass of obligations, promises to pay, of one kind or another, issued by the home Government, for which it has hitherto proved impossible to find a market, and it is carrying this mass of debt at such a loss through the depreciation in prices as makes it impossible for the bulk of the holders to sell even if they would. On current terms a sale would mean to many of them the Bankruptcy Court. The open money market itself is still carrying nearly £19,000,000 of Treasury accommodation bills, some £11,000,000 of which is the direct product of Government waste. The Government cannot pay off this debt, and the sinking funds the present Ministry has established are working much too slowly for the strain to be perceptibly relieved thereby.

Nor is this all the story. Readers of this REVIEW have been made painfully familiar during many years

past with the devastating operations of the company promoter. One cause of the unpopularity with which the promoter fraternity and the mass of those who dabble in stocks and shares habitually regard this journal is to be found in its persistent and unwearying efforts to rip up and expose the schemes of the fraudulent and other company promoter through whose efforts uncountable millions of fancy or sham capital have been put upon the market. Much of that capital mercifully may never have reached the hands of the genuine investor, but all the more does the unsold portion, not only of company capital but of loans issued to furnish the means to Colonial Governments and home corporations of every type to continue a career of extravagance now hang over the market, weighing it down. It is impossible to sell any appreciable portion of this dead mass of paper in the ordinary way, because there is no public with money in its hands to buy it. And here likewise depreciation has choked up the channels through which securities pass out of the hands of the wholesale or middleman holder into those of the ultimate possessor—the investor. And depreciation involves the maintenance of margins at the banks or with the brokers where the unsaleable securities lie pledged. We have an ever present painful example of what this means in the history of the Kaffir Circus. Almost from the day when peace was signed between Briton and Boer at Vereeniging down to the present hour a slow, grinding depreciation has continued with only brief moments of relief, and in the course of the wastage many thousands of people have been brought either to complete ruin or to the verge of it. But the necessity of finding "margins" on all kinds of securities, good and bad, to protect the banker or other lender from loss has the consequence of by and by bringing that other necessity to provide coin into play. Markets are all right so long as you can barter security for security, and so long as a man who has made a loss on his holding in one stock is able to fill the gap by pledging something else hitherto his own property. At a point, however, the power of many people to fill the ever-widening chasm in this way, in any way, comes to an end, and both borrower and lender may then be brought face to face with a situation of the utmost danger. And whether or not, in these ways banking capital is swallowed up, and the obligations of the banker to his customers on money deposited may threaten to become a source of trouble. A day now and then comes when the banker, like his customer, must prepare to pay in cash, and the difficulty then is to get this cash in sufficient amount without disturbing the smooth surface of the credit market. We may not be far off such a position now, and 6 per cent. should at least be accepted as an obvious product of the distress brought about by a long course of profligate finance on the part of Government, trader, gambler and people, and as the natural consequence of the persistent, inevitable and irremediable depreciation of marketable securities on the Stock Exchange thriftlessness and extravagance always bring about.

Why do Consols hang around 85, the price to which most of our joint-stock banks reduced their holdings of the stock some years ago? Is not that a symptom of the overloaded position of the market, of the distress which ensues when dealers in finance of every type have over-committed themselves and brought themselves into an inextricable position? We had a flurry in markets of the most ominous description last July. The price of Consols and of other stocks fell rapidly and mysteriously, and the air was full of rumours of impending gigantic failures. You may depend upon it there was substantial truth behind these rumours, although the names definitely mentioned may not have been those of the houses actually in most imminent danger of collapse. The spasm passed over, and the stream of the market's business flowed on apparently as smoothly as ever, but the insolvency is there to this hour, and has spread considerably since July, for nothing is so ruinous as the drain of a dead asset unless it be the suction of a bad debt. For reasons like these therefore a 6 per cent. Bank rate must be regarded as the natural result of long years of wasteful expenditure, avidious City finance and widespread extravagance in living. The capital of the nation has been devoured, mortgaged, misapplied to an extent at present unmeasurable, and before either money or stock market can return to a position of health the losses must be acknowledged and values readjusted to actual conditions. So much for the position at home—one sufficiently grave to warn everybody to be on the look-out for unpleasant surprises in the shape of failures which may serve to expose the extent to which the nation has been wasting its substance; and we write thus now in order to prevent a panic when disasters of this kind come. It is the sudden unlooked-for event which breeds panic, and if we educate our minds to the expectation of liquidations and ugly deficits, product of a long career of insane finance, we shall be able to encounter the adversity when it comes without losing our heads.

Let us now look at the United States for a moment. A similar tale has to be told about the operations of the financier on that side of the Atlantic. For the last seven years at least the potentates of Wall Street have abandoned themselves to a course of unprincipled dealing that our more prosaic and slower moving market leaders must view with envy. We have not space to go over again the familiar story of the Carnegie Steel Trust, a thing we regard as one of the most unscrupulous, unprincipled, essentially dishonest and nation-plundering organisations the ingenuity of man ever contrived. Still less can we re-tell the story of the Standard Oil Trust—a story, however, which the curious will find set forth with much detail and confirmatory evidence in the late Mr. Demarest Lloyd's book, "Wealth against Commonwealth." These are the two most prominent examples of the grasp-all, enslaving system of finance popular with American "business men," as they call themselves, but the United States has been afflicted by other "combines" and in a variety of ways—by enormous creations of fancy capital piled up through railway amalgamations and "mergers," by the maleficent and, we should judge, thoroughly unsound copper combination, by the grotesque and from its birth disastrous mercantile marine trust, by the unresting and remorseless efforts to effect "corners" in cotton, fruit, beef and mutton, in everything mankind consumes. The consequences of this kind of finance has been similar in the United States to the consequences of our emancipated and capital-devouring finance at home. Credit has been distended in the effort to attain suddenly colossal wealth to an extent unexampled in the history of the Republic, and in order to sustain the enormous and unwieldy mass its creators have been driven to expedient after expedient in the hope of averting the inevitable catastrophe. The Steel Trust has created and fomented business by promoting schemes of every description likely to provide a market for its output, and has taken payment often in paper because cash was not available. As a body, too, the giant operators have engaged in a gigantic and well-organised campaign to force prices up on the Wall Street and other Stock Exchanges of the Union so as to realise, if possible, at the expense of the community, fabulous aggregates of dollars. So far as can be judged on this side they have not been particularly successful during the last few years in unloading, and accordingly they should now find themselves pretty near the end of their tether. They have had to import gold heavily to prop up their banks in spite of the help given to these banks by the Washington Treasury, always at their beck and call, through the expansion in the often poorly-secured note circulations of the National Banks all over the country and by utilising the resources of insurance companies, particularly of the "Big Three" offices as well as of the finance trusts brought into existence for the most part as props to the financiers in their campaigns of market inflation. And to this hour the play is carried on with a boldness, an outrageous spirit of "bluff," to which we can find no parallel in modern financial history. These very un-

toward incidents, that ought in ordinary circumstances to cause prices to relapse, are utilised to drive them up, and there these American players stand, defying the world, the laws of financial gravitation and everything else as if their position were impregnable.

But the gap widens all the time, and the gold they have borrowed in London has not filled it up. The very fact that the gold had to be borrowed warns us that exhaustion is about reached. Mr. Secretary Shaw declares that no further assistance will be given to the banks to enable them to import more gold, and the inference is that in his opinion the crisis is over. It is not over, and his opinion is not worth much. The gold already borrowed has yet to be paid for, and the Stock Exchange securities and commodities lifted high in the air have first to find buyers with money in their hands. Meanwhile the cost of the "bull" campaign grows daily more oppressive, overwhelming.

It is the popular belief in this country and in the United States that the Rockefeller gang is the wealthiest in the world. John D. Rockefeller himself is credited with being immeasurably more wealthy than even the late Alfred Beit was supposed to be. We have long held a contrary opinion. That the Standard Oil people made money in disgusting amounts for many years is no doubt true enough, but they have wasted their wealth or imperilled it by the boundlessness of their cupidity. Nothing has been too mean for them or too gigantic, and in their restless activity they have sought to corner this product, this security, and the other, until at the present time we believe their wealth to consist mostly of inflated paper values on a market which they are compelled to support or perish, or in concealed stocks of commodities for which they can discover no adequate outlet. They are busy choking up the outlets. Hence we should not be in the least surprised to find the Standard Oil eyrie of vultures toppling down about the ears of its creators, burying them in its ruins. Some catastrophe of the kind is bound to happen in the United States one day, and the demand for gold which has recently perturbed our Money market so much is merely one of the symptoms that the gulf established by unscrupulous financiers between real values and current market prices is widening every day. People see only the outside of such fabrics as the Standard Oil people have built up, and do not realise the exhausting costliness of the structure.

We might go on to deal with the position in Canada and in South Africa; in our Australian colonies and in India; to glance also at the extremely delicate financial position of the French Republic; but enough has been said for the present to inculcate the lesson we seek to teach—a lesson of prudence and a warning to be surprised at nothing. One general remark only may be made in conclusion; durable prosperity of the magical-looking kind which we have been told to admire in the United States, in Canada, and in Australasia, does not blossom out with that suddenness and fulness that panegyrists of unscrupulous finance would have us believe. All lasting progress is slow, and when we see young communities spurting up suddenly into great and prosperous states, capable of carrying obligations enormously beyond their admitted strength of a few years ago, we may be perfectly sure that the dazzling fabric held up to our imagination is hollow.

The Soap Bubble.

No. 1.

Are we on the eve of another trust epidemic? It would not surprise us. Almost every day we hear rumours of amalgamation or combination in this business or that, chiefly because the capitalisation is so monstrously extravagant that only by stifling competition and getting £2 worth of labour for 20s. can half the joint-stock companies that are brought into existence keep on their feet at all. If the capitalists had their way competition in the manufacture and sale of the every day necessities of life would soon be at an end, and we should be at the mercy of the monopolist rings, just like the trust-ridden people of America. Fortunately free trade renders that impossible, because we have the whole world at our disposal in which to buy, but we get the trust nuisance in another way. Combines are usually formed, not with the precise object of cornering commodities and raising prices, although they sometimes have that effect, but with the principal idea of swindling the public by selling to them the amalgamated businesses at three to four times their true worth. Call to mind the textile insanity of half-a-dozen years ago, and try to think how much that cost the public in hard cash. At that time the investing classes could be fleeced with impunity, but we are all poorer now, war with its attendant robbery having reduced some of us almost to penury, and anything that threatens to further curtail our limited means excites an extraordinary amount of curiosity. None the less do we think the multitude of criticisms that have been levelled against this wonderful soap and water combine have really missed the mark. A lot of interest has been aroused by the latest attempt to create a virtual monopoly in one of the chief household requisites of the world, but no one seems to have detected what is probably the real reason for the anxiety to amalgamate some of the leading soap-making businesses of the kingdom. We have no doubt at all that over-capitalisation and possibly in some cases reckless finance, now brought to a head by the great monetary stringency the world over, is the true motive. The people responsible for the organisation of this soap trust wanted to do the trick with a minimum of publicity, and are surprised at the attention now devoted to them by the Press. There is very little doubt that this monopoly plot has been hatching for a considerable time, and the true reason is now laid bare of the tremendous increase of £2,000,000 in the capital of Lever Bros. last July. This business is now burdened with a capital of £6,000,000, and the important rise that has admittedly occurred in the prices of raw materials may be causing this great weight of capital to become an almost intolerable strain. Of course, no one has ever been allowed to know the true position of Lever's affairs, the whole of the ordinary capital to the amount of £2,000,000 being in the hands of one man, Mr. W. H. Lever, M.P., who was returned to Parliament for his free trade principles. But even the scanty information at one time available as to the profits earned by the Port Sunlight Company has lately been considerably curtailed, and this fact coupled with various capital juggles which no one outside the inner circle can hope to elucidate creates a good deal of very natural distrust. When contradictions that any kind of trust or monopoly was contemplated became palpably absurd we got a kind of tacit admission that a "community of interests"—you know the phrase and what it means—was in the mind of the ruling spirits just to prevent ruinous competition, overlapping in advertising and so on. No condemnation was too severe for the suggestion that the prices to the public would be raised. In fact, the consumer was certain to gain. The soap people did not want to reduce expenditure and increase profits in order to enrich themselves. Oh, dear no! They are public philanthropists, and if a million or more could be saved by turning men on the street who had worked faithfully for years and shifting their labour on to others without extra pay, by the stoppage of the prizes for wrappers tricks, by having one agency to represent a dozen firms instead of one for each, by reducing the number of travellers and trimming down the advertising bill, why the public would get all that million. But, to use a popular colloquialism, such yarns will not wash, and when an eagle eye detected 15 ozs. to the lb. on the Sunlight wrappers the game was up. But the trust has its back against the wall and fights hard.

Columns of interviews with this trust representative and that have appeared in the newspapers, and the contradictory statements made would be quite amusing if the whole business were not so serious. There will

be no displacement of labour, says one. The inevitable dismissal of employees is the worst aspect of the matter, says another, but we are making things as easy as possible for the discharged servants. Some of them are actually given two or three weeks' respite, and are not sent off as though they were pickpockets. At first the rise in prices was vehemently denied, but when this would not do the 15-oz. to the lb. was put forward as a great concession to the public. We might have charged an extra ½d. per bar, you know, but that would not have been fair, so we just reduced the quantity intimating the same in type that not one in a hundred would see. The company was careful not to include microscopes among its wrapper prizes, and it has had to abandon this mode of distilling profits. But actual advances in prices have occurred in some directions, and in Lincoln, we are told, the following increases have taken place:—

	d.		d.
Sunlight bar	3	to	3½
Sunlight box	7½	to	8
Lifebuoy	8½	to	9
Perfection	3	to	3½
Matchless Cleanser	3	to	3½
Nubolic	2½	to	3

Whether weight has gone down as well we do not know, but the grocers say that the extra cost of raw material has already been shifted on to their shoulders, and that only by advancing the quotations to the consumer can they get a living profit. Many of them have also decided to meet combination by boycott. It has been stated that Mr. Lever's method for ensuring the success of the movement was to actually buy up several of the firms known to form part of the combine, and, if that be so, the increase in capital last July is partly explained. The Grocers' Federation, which is supposed to be representative of the great army of retailers, seems rather half-hearted in its opposition to the trust tactics, but further consideration of the position should induce it to fight the threatened monopoly tooth and nail. We know these trusts only too well. The one now in course of formation is said to control 90 per cent. of the household soap production, and if this be so retailers may expect to find a pistol at their heads with the threat of stoppage of supplies if soaps other than those in the combine are sold or pushed. And what about the quality of the articles supplied. Will that deteriorate as well? Poorer soap, reduced weight, and higher prices are the prospects held out to the luckless consumer. Since the formation of the great Coats Combine it is said that the retail price of sewing cotton has about doubled. It never goes down when raw materials are cheap, but always runs up on the slightest pretext. Is there any reason to anticipate anything different with soap? None at all, and even at the sacrifice of some inconvenience the public would do well to give a real and genuine support to the large number of firms that intend to retain their independence and remain outside. They will provide a powerful opposition to the monopolists, and we do not suppose a corner in raw materials need be feared, despite the boasted agreements with foreign rivals, whose opposition might upset all the carefully laid plans. If Mr. Lever, through the soap trust, has any dealings with the rapacious American Beef Trust he could not do less than resign his seat in Parliament.

The Beef Trust is supposed to control the export of tallow from the United States, whence comes the chief supply, and tallow is the principal ingredient of pure soap. But other things are used now, and Mr. Lever's ingenuous remark that the cocoanut oil produced by the firm is sent to Hamburg for manufacture into butter because of the high prices is both amusing and significant. Raw materials are certain to be dear if you make them so. What is to become of the 3,000 people who, it is said, will be thrown out of employment when the deal is finally concluded? Concentration has already commenced, and it is certain that when the output is virtually controlled by one firm we shall witness the closing of factories and works. Mr. Lever has contributed a "case for the Trust" to the columns of one newspaper, and says that the increased cost of raw material has meant a loss of £300,000 to one firm alone, and if that be so we fancy we know which that firm is. The defence offered is the severest condemnation of the project because not a single legitimate reason has been advanced for the steps taken. We have no doubt at all that the whole thing is dictated by greed or the pressure of excessive capitalisation, and it rests with the public, both investing and consuming, to say whether it shall succeed. There are to be great savings in bill-posting, circularising, and sample presentation, we are told, and if there is any good in the combine it comes in here, because householders are tired of having their letter-boxes inundated with rubbishy pamphlets and bills extolling the merits of this substance and that. We do not know whether these wonderful cleaning compounds are injurious or not, but it has never been denied that some of the so-called soaps do a lot of harm. For the moment the public is concerned only with the probable movement in the price of the articles which custom has taught us to buy, but, depend upon it, Levers are not going to finance this huge monopoly if they can shift some of the weight on to the shoulders of the public.

It has, of course, been vehemently denied that any new capital is required, and the denial may be strictly true, but how about selling for cash the unreal capital already in existence? When all is settled, if it ever is, the prospectus of the Soap Trust will follow as surely as night follows day. It may, therefore, be useful to study the financial aspect of the business for a few moments. With this object we have been to the trouble of examining the share lists of a few of the companies embraced in the combine, which it is said will have a capital of £12,000,000. It may easily be more. There can be no question of shareholders' consent, because in every case the ordinary capital, which carries the voting power, is controlled or held by the vendors or partners, and outsiders will not have a say in the matter at all. We begin, of course, with Levers because it is the master mind and is really running the show. Including the £2,000,000 in "B" preference shares created last July the capital is now £6,000,000, of which the ordinary proportion of £2,000,000 stands in the name of Mr. Hesketh Lever, M.P. The preference shares are mainly held by the public, and some of the principal holdings will be found below:—

This must do for one week; we shall continue the story in our next issue.

Economic and Financial Notes and Correspondence.

The New French Ministry.

One of the most honest and brilliant journalists of this generation is now the ruler of France. For many years M. Clemenceau's name has been familiar to students of politics here as well as in his native country, and throughout his public life he has been distinguished by a high-minded patriotism, a clearness of vision, and an admirable wit-suffused, incisive style rarely equalled even in France. It is fitting, therefore, that he should now, towards the close of his long career, be placed in a position where he can give effect to the principles he has so long advocated with such conspicuous loyalty and ability. His accession to power, however, is only one more illustration of the difference between the position of journalists in France and in this country. Not only is M. Clemenceau himself a life-long journalist, but his new Foreign Secretary, M. Pichon, the man next to himself internationally the most important in the Cabinet, is an ex-journalist, and ever since the third Republic was established journalists have entered French Cabinets and held important positions of all kinds in the administration of their country—its new aristocracy. Here in England we have made some little progress in the elevation of the "newspaper fellow," and the accession of a small band of able journalists to the new House of Commons may foreshadow the opening of Government office doors to them in the near future, but as yet the man of this trade is with us mostly a man of no account. He may be wise, strenuous, able, patriotic, full of sound political ideas and laboriously acquired knowledge, but unless he is a party hack and consents to be the superior lackey of the professional politician he has little chance of advancement in any direction, of "office" none. The more influence and character he has, the less probability is there that he will meet with anything like cordial recognition at the hands of the classes in this country who still contrive to keep fast hold of the power of governing it. If he is content to sink his individuality and independence of mind in party politics a knighthood when he is old and worn out may be half-contemptuously thrown at him as adequate "reward" for his services. More often he lives and dies in obscurity, unknown and unregarded. We doubt whether this is well, but there can be no doubt of the contrast presented by France.

Leaving this subject and turning to the position of the new French Government one recognises that M. Clemenceau and his colleagues are not going to smother themselves in a bed of roses. There is an acute conflict with the Papacy looming in the immediate future, and many people evidently expect that the new Prime Minister and "Home Secretary" will meet this difficulty in a masterful and domineering fashion so as to excite revolts and social conflicts all over France. We do not believe he will do anything of the kind. His language has throughout been clear and definite, loyal to the law, but at the same time moderate on this passion-stirring subject. That there will be trouble, however, appears to be beyond doubt, for the spirit of ultramontanism is still potent in France and the Papacy will not surrender its claims to dominate French social, and through it political, life without a bitter and prolonged struggle. Such a struggle, however, lies outside our province, and merely pausing to wish M. Clemenceau well through it, we pass on to confess a much deeper interest in the financial position which seems to us to be delicate in the extreme. It is with regret that we have seen M. Poincaré relinquish the Ministry of Finance, for he has seemed to us to be one of the ablest and most straightforward occupants of that post the third Republic has ever had in its service. He, however, felt compelled to retire because of the divergence of view between him and the Budget Committee of the Chamber. In his opinion new taxes were necessary in order to bridge the deficit, which has been more or less chronic for many years past. How much the accumulated deficiency may be we do not at the moment of writing know, but that for the year 1907, including the extraordinary military expenses incurred in connection with the Moroccan hubbub, will amount, it is estimated, to quite £6,000,000, and were anything to occur to reduce the yield of existing taxation it might very well be £10,000,000. And the worst of it is that the French Republic has so many claims upon it—has so much to do to placate democracy—that unless the people can bear fresh taxation, or unless the scourge of militarism can be abated, deficits must continue year after year to threaten the country with bankruptcy. The load of taxation the French people have borne for many years back has been well-nigh intolerable, and if they had not been a patient, thrifty people—a people possessed likewise of one of the richest and best-cultivated territories in the world, the whole Republican system of France must long ago have broken down. What will the new Minister of Finance, M. Caillaux, do to reconcile the differences with the Budget Committee, so acute as to drive M. Poincaré from office? That Committee coolly adjusted or slurred over the accounts by swelling out the estimate of the yield of existing taxation nearly £2,000,000 and by arbitrarily leaving the Minister to meet the still existing prospective deficit by any means he could, by borrowing or otherwise. It objected to his proposals for new taxation, cut off a portion of his proposed loan expenditure, and altogether mixed things up so that the product must have increased the confusion. Will the new Finance Minister, resting his case upon the cordial friendship between the English and French peoples, bravely set to work to relieve the nation of some portion of its deadly naval and military burden, or will he leave these alone and follow his predecessor by insisting upon large additions to the already crushing burden of taxation? It is a knotty question to solve, and we shall follow the proceedings of the new Government in finance with the utmost interest.

Hotel Cecil, Limited.

Here we have another hotel enterprise which felt the influence of improving trade and the usual influx of American visitors to London, the business done during the 12 months ended August 31 being £229,030 or an increase of £27,892 against the preceding year. The company's rents also continue to creep up and last year yielded £12,140 compared with £10,699, so that from all sources the company gathered a revenue of £241,170 against £211,837. In this case the working expenses were rather increased to £74,078 and the wines, spirits, provisions, &c., consumed cost £91,000 against £79,740 an increase of £11,260. Rates, taxes, insurance and licences were also on a higher scale at £9,825 in the aggregate and £13,188 compared with £10,332 was spent on general repairs and renewals. This, we fear, must become an ever-increasing item as the hotel grows older, as the profits earned do not permit of a very generous allowance for depreciation. Notwithstanding these additional charges, however, the balance of nett profit is £53,079 or £13,335 more, so that a fair proportion of the extra income was saved. Transfer fees and in-

terest produced £435, and from the total debenture interest takes £24,000, directors' fees £800 and some smaller charges £948, leaving the nett balance £13,309 larger at £27,765. The directors therefore propose to pay one year's dividend on the preference shares, absorbing £27,500 and leaving one year in arrear, the balance carried forward being increased from £8,983 to £9,249. The ordinary shares held by the United Realisation Company on behalf of Jabez Balfour's victims are therefore still a long way off a dividend, and there is no disguising the fact that even if the profits actually showed a return nothing should be paid until the finances have been materially strengthened. A small sale of plant during the year reduced the balance-sheet value of the land, buildings, plant, &c., to £1,497,629, against which the depreciation reserve is only £30,411, and the creation of a reserve fund has been quite out of the question. Sundry creditors are about double the amount to come in from debtors, but cash is good at £56,217 and stocks are valued at £35,149. The results displayed justify the directors in saying that their policy of endeavouring to make the advantages offered by the hotel more widely known has been successful, and it is good to know that the number of visitors using the premises and the business done during the period under review were the best in any one year since the company was incorporated.

Frederick Hotels Limited and Reduced.

The directors of this much over-capitalised hotel business were undoubtedly wise to carry through a scheme of capital reduction during the early part of this year. It has enabled them to reap the benefit of the improvement in business which occurred during the 12 months ended June 30 last. Formerly the capital consisted of £500,000 in preference shares and £550,000 in ordinary shares, but quite a long time back the board endeavoured to open the way to dividend payments by dividing these ordinary shares into 150,000 preferred ordinary and 400,000 deferred ordinary shares, all of £1 each. But even this little trick did not bring any of the junior issues permanently into the dividend list, and the directors came to the conclusion that it would be more profitable to themselves to reduce the capital to a point at which a return would be possible if ever business improved. The turnover in the 12 months to June 30 amounted to £334,830 compared with £321,103 in 1904-5, in addition to which the cost of wines, spirits, and provisions consumed was about £1,000 less at £113,773, and the general working expenses were a trifle smaller at £107,244. Repairs and maintenance were cut down by £5,589 to £21,443, and a special appropriation of £1,307 for alterations and improvements last year is now absent. Leasehold redemption again takes £552, and, after providing £8,022 compared with £5,307 for directors' and trustees' fees, &c., and £36,000 for debenture interest, the balance of net profit, including £1,254 for interest and transfer fees is £49,049, compared with £29,016. That is an increase of about £20,000, and, with the addition of £6,380 brought forward the total for disposal is £55,429. From this sum a special appropriation of £2,544 is made to repairs and maintenance account, and the directors actually commence a reserve fund with a credit of £10,000, a thing we never thought they had the least intention of doing. Another £27,500 is then required for the preference dividend, and it is now proposed to pay dividends of 5 per cent. on the preferred ordinary shares, requiring £2,812, and 4 per cent. on the ordinary shares, absorbing £6,000, leaving £6,573 to be carried forward. Both directors and shareholders may be congratulated on the considerable improvement which has come about in the company's position, and although the finances as yet are anything but strong slight improvement is better than continued retrogression, and if the policy of paying moderate dividends in order to permit additions to reserve is continued the position of the preference shares which, together with the debenture stock, are in the hands of the public may in time be strengthened. The £343,750 written off the capital brings the cost of the properties, including goodwill, down to £1,563,984, compared with £1,907,734. The addition now made raises the repairs and maintenance account to £4,000, apart from the leasehold redemption fund of £4,182, and the reserve of £10,000 provided from profits, trifling sums truly, but better than nothing. To sundry creditors the company owed £51,432 at the date of the balance-sheet, against debtors of £13,472, but stock of wines, spirits, provisions, &c., had a value of £41,092. Investments were held to the amount of £15,099, and the cash balance was the good one of £69,542.

Hope Brothers, Limited.

The dissensions on the board which seemed to be responsible for the steady shrinkage that took place in this company's profits up to a year ago have apparently now given place to more harmonious working, as a really surprising recovery has taken place in the profits for the 12 months ended August 31 last. It is, however, not a good sign that the new directors have been in such a hurry to resume the ordinary dividends, and it would have been more prudent if ordinary share payments had been a little longer delayed in order to see if the improvement which has now come about is likely to be of a lasting character. We must remember that the reserve fund is only £27,798, including £11,798 standing as an indivisible special fund and £1,000 added from past year's profits. But as the latter merely replaces the sum taken a year ago in order that the preference dividend should not fall into arrear, the position is really no better than it was two years ago. With a goodwill of the tremendous sum of £275,073, a great many years must elapse before the company can become in any sense strong, and the directors would have been better advised to strengthen the finances against a possible repetition of adverse times. After payment of all working expenses and providing for depreciation and sinking fund for redemption of leases the nett profit is returned at £35,162 or an increase of £10,474 compared with the previous 12 months. Not only so, but the managing directors' salaries have been reduced from the excessive sum of £5,125 to £2,875, and it is quite worth mention that previous to last year the managing directors' salaries absorbed no less than £6,500 per annum, an utterly unjustifiable sum judged by the business done and profits earned. Directors' and auditors' fees take a further £922, a sum of £2,665 was spent on advertising and another £500 was written off for special outlay in connection with the requirements of the L.C.C. at the Ludgate Hill premises. The trifle of £16 is then provided for income-tax and £28,184 remains, an increase of £14,437 against the drop of over £16,000 shown a year ago. Therefore, besides paying the preference dividend of 5½ per cent. the directors propose to distribute 3 per cent. on the ordinary shares, adding £1,000 to reserve as mentioned and carrying forward £2,136 against only £452 brought in. A very small sum has been added to the properties account during the year and their book value is now £189,317 compared with £189,032 12 months back. Stock at or under cost now appears at £170,060 or much the same, and we hope the directors are satisfied that this item is good value. Unhappily, the concern is still rather poor, measured by its liquid resources compared with floating liabilities, as £26,649 is due to sundry creditors against only £3,999 to come in from debtors, and of the cash balance of £33,462 no less than £12,750 will be required for final dividends. This is an additional reason why the directors should not have been in a hurry to resume ordinary dividends, and even if the business recovers its former position we hope that the present modest return will not at present be exceeded.

Buffelsdoorn Estate and Gold Mining Company.

At the annual meeting of this Barnato outcrop company the chairman delivered himself of a heartrending wail, but being cant we cannot sniffle in sympathy.

Here it is: "At our last annual meeting things seemed very hopeful, but since then it is a matter of common knowledge that the industry has received a very severe blow at the hands of the Home Government, and though, so far, it has not affected the output of gold, it has seriously interfered and will, I fear, still more seriously interfere with the expansion and development of the industry as a whole. In our case the blow is a most serious and crushing one. While, at our last meeting, I was able to speak somewhat hopefully of the future, to-day everything is changed, and it will be idle to try and hide the fact that our position is very grave. The two essentials—money and unskilled labour—are beyond our reach. Money sufficient to put us in a sound position is unobtainable. As far as reconstruction and new ventures are concerned the market is quite lifeless, as you know; also the unskilled labour question will not be finally settled for a considerable time. Meanwhile our debt is mounting up. These two things make one feel very uneasy as to our future." This comes with ill grace from the chairman of such a concern as the Buffelsdoorn Estate. For in the glorious years when we had a soaring and patriotic Conservative Government, lost ever in awed admiration for mine-boss supremacy in the Transvaal, this company could not make ends meet. Although it was formed in 1889, and the war did not come until 1899, it has never paid a dividend, and the Liberals have only recently come to power. The capital has undergone several changes, and its present figure of £550,000 is too burdensome. True enough, the prospect is gloomy, and would be gloomy were all the blacks in South Africa or all the yellows in Asia at the company's disposal. For money is unobtainable. None but the foolish and improvident would give the directors money to spend on a mine which seems hopelessly poor. And it is no tragedy that shareholders prefer to keep the money they have until they can see some likelihood of investing it to advantage. No eye can discern such a prospect now. It would be better to reduce losses by getting all they can out of dividend-paying mines and leave the bosses themselves to develop the non-dividend ones and provide their own fees. In the year to February 28 this Barnato company received £29,950 from gold winning and £1,000 from other sources, and actually managed to earn a nett profit of £7,070, which reduces the debit balance to £36,379. But its liabilities are very heavy. It owes no less than £38,232 to the Johannesburg Consolidated Investment Company, and has no cash to speak of. The Buffelsdoorn "A," a subsidiary, owes it £16,000, an old debt—does it hope to recover it? Truly, the chairman has not exaggerated; he is only wide of the mark, poor fellow, in attributing the company's afflictions to the wrong causes. Not even war demi-god Brodrick could persuade us to invest in such a mine.

Why So Many Fleets?

We learn from the *Manchester Guardian* that the London *Standard* has been having "a fit." It was news to us, for we do not read that newspaper, but from outside sources we gather that it has been epileptically foaming at the mouth for some time about the dangerously weak position of the fleet, and the abominable neglect of that arm of our national defence by our present altogether accursed Radical Government. This is interesting in a way, but rather antiquated, and we fear the Blue Funk school is altogether passing into a state of frenzy that will induce some people to think it would be better locked up. There is really no truth in any such accusation, and our complaint continues to be that the fleet is maintained at an altogether unnecessary and wasteful magnitude, and that the Government is encouraged in keeping it so. Just look at the reception given the other day to that memorandum from the Board of Admiralty about the formation of a "home fleet." "Admirable, wonderful, just the thing wanted," they chorused in unison. Well, we do not object particularly to a home fleet, but what we should like to know is why a strong home fleet should be organised—with skeleton crews or otherwise—and at the same time costly Channel, Mediterranean, Atlantic, and reserve fleets kept up. In these days of rapid steaming, what on earth do we want with all these fleets continually at sea? Of whom are we afraid? We cannot dread Russia, for she has no loyal or other fleet to force the Bosphorous with, in order to come and worry us in the Mediterranean. We surely do not fear Italy or Austria, and we are in cordial friendship with France. Why, then, this expensive Mediterranean fleet, and why that Atlantic fleet? Is there any power on the other side of the Atlantic of whom we are afraid? We can discover none. There might be £10,000,000 to £15,000,000 per annum saved by the reduction of these fleets alone. We really require only one squadron to be always at sea, mostly for the purpose of training crews and keeping them up to their work. By all means let us have a home fleet, efficient, with the engines always well polished and greased, and the powder dry, but stop this antiquated system of big fleets churning about the world with nothing to do and no chance of getting anything to do. It was all very well when our fleet consisted of sailing vessels, or passably well, but it is ridiculous now, and ruinous to boot.

American Business Notes.

A gallant effort, shall we call it, is obviously being made by the New York Associated Banks to help our market in carrying the unwieldy mass of unmarketable securities dumped upon us. The return of these banks for the past week shows a further expansion of $16,700,000 in the loans. This added to the previous week's increase brings the total amount of new credit created by these banks for their customers up to about £6,000,000. At the same time the drain of currency to the interior would appear to be continuing, for the specie average fell off $2,101,000 and the holdings of legal tender notes $1,819,000 during the week. Some of the credit generated was obviously utilised for the purposes of meeting the interior demand for cash, and nett deposits were therefore up by only $11,500,000. Even so, this increase reduced the surplus reserve by $6,804,000, bringing it down to $6,213,000 as against $12,583,000 last year at the same date. The question therefore is, will the New York banks be able to continue this process of taking home their securities pawned here? Can they do that and at the same time find the means to repay our market its advances made on Yankee accommodation bills discounted here? We cannot answer the question, but to ask it is to indicate how extremely critical the position still is. The New York Associated Banks' return, in short, points to a succession of money squeezes on Wall Street between now and the end of the year. When these squeezes occur there is always the danger that some credit web may tear and bring the whole balloon to the ground. We still think that the Standard Oil group is the centre of the mischief, and have for long held the opinion that John D. Rockefeller and his associates are not nearly so rich as they are popularly supposed to be. Their hands are plunged in everything to inflate, and again inflate. Securities, frequently sham to begin with, cotton, gas, oil, metals, whatever they can lay their hands upon, they manipulate up; but it does not follow that the inflation means wealth to them if they are unable to sell what they have raised the price of to the outsider. This for a long time they certainly have not been able to do. It has been finance, paper from first to last, paper patched and eked, paper added to paper and borrowed on, and market manipulations of the stuff have grown wilder each month until the laws of supply and demand are set absolutely at defiance equally with the rules of common honesty. The more circumstances become adverse the more determinedly do these players and their associates force prices up until the play on Wall Street often looks like the insane plunging of men in despair.

After some hesitation, the Mutual Life Company dismissed Mr. Hindman, their Kentucky agent, for having refused to campaign in favour of President Peabody's and the administrations ticket in the elections to be held December 13 for trustees. Mr. Hindman is the sixth general agent dropped out from the service of the company, and it is expected that his brother, who is their general agent in northern Tennessee, will cease his connection with it shortly, and the Boston agent may follow him. The agency committee, which is doing all this decapitating, is composed of Messrs. H. H. Rogers, of the Standard Oil Company, Julian T. Davies, William H. Truesdale, Dumont Clarke and William P. Dixon, and their names will be worth bearing in mind for future purposes. The campaign between the Mutual and the International policyholders' committee continues to be waged on the *tu quoque* principle, and partakes very much of the character of a political party struggle.

On October 9 there appeared in all the New York evening papers a despatch from Findlay, Ohio, to say that the Standard Oil Company, of Ohio, was put on trial there that day, charged with conspiracy against trade in violation of the State anti-trust laws. Mr. J. D. Rockefeller was originally made a party to the suit, but was granted a separate trial, the date of which will depend on the verdict obtained by the State in the present case. It is stated that Mr. Rockefeller will neither be a witness nor attend the trial. The Buckeye Pipe Line Company and Manhattan Oil Company, both corporations with Kentucky State Charters, are also defendants, but have, like Mr. Rockefeller, secured separate trials. A jury was secured during the first two hours of the trial, and the judge cautioned the members to talk to no one regarding the case, and to report to the Court any attempt to get information from them.

By a singular coincidence some of the New York morning papers of October 10 contained a despatch from Washington dated the previous day, stating that a conference at the White House, the presidential residence, resulted in a decision that the proposed suits against the Standard Oil Company and the prosecution of its officers should not be begun for some time. The conference is said to have lasted an hour after the regular Cabinet meeting had ended, at which were present the Secretary of State, recently returned from his Pan-American tour, the Attorney-General, Mr. Moody, and the Secretary of the Navy, Mr. Bonaparte, who with the Secretary of War, Mr. Taft, at the moment in Cuba, form the President's council of legal advisers. The cases against the Standard Oil Company are being prepared but are not yet completed, and it was said after the conference that even if everything were ready, the President did not want it to appear that the Standard Oil Company was being prosecuted on the eve of State and Congressional elections solely for the purpose of making political capital. The naiveté of the reporters or whoever drew up the despatch giving this information is delightful.

The New York Produce Exchange, taking the latest Government reports of the cereal and potato crops and previous calculations of their yield as a basis, estimates the year's crops as follows:—

	Acres.	Yield per Acre.	Bushels.
Winter wheat ..	29,623,000	.. 16·7 ..	493,434,000
Spring wheat ..	17,989,000	.. 13·7 ..	246,449,000
Total wheat....	49,612,000	.. — ..	739,883,000
Corn	95,535,000	.. 29·1 ..	2,780,068,000
Oats	27,678,000	.. 31·2 ..	862,252,000
Rye	1,129,500	.. 17·0 ..	19,202,000
Barley	5,107,000	.. 28·3 ..	144,528,000
Buckwheat	732,000	.. 18·1 ..	13,249,000
Potatoes	2,959,000	.. 97·2 ..	287,615,000

What is noticeable is the small average yield of spring wheat, the quality being only a fair average. The crop falls three bushels an acre below the estimate, and the quality falls below that of the previous two years. The yield of maize indicates a larger crop than ever before harvested.

The North British Development Company, with principal office in New York City and a capital of $50,000,000, was incorporated under the laws of the State of New York on October 10 at Albany, the capital of the State. The object is to develop coal and timber lands. All the directors with the exception of Sir H. Montague Allan, of Montreal, Canada, are citizens of the United States.

The annual report of the Greene Consolidated Copper Company, of Cananea, in Mexico, near the Arizona frontier, concerning which some curious stories have appeared during the year, shows nett profits of $3,967,818, an increase of about $2,000,000 over the previous year. Dividends were declared to the amount of $2,182,400 as against $1,900,800 for the previous year, and there remained a surplus for the year of $1,785,418. The gross receipts from the sale of copper were $8,551,743 against $11,095,695 the previous year, but $1,990,549 was derived from sale of mineral land. The average yield of copper per ton of ore was 59 lbs. compared with 73 lbs., 89 lbs. and 170 lbs. in the preceding three years respectively. The average cost of production was 11½ cents per pound and the average selling price was 18 cents. Colonel Greene, the president of the company, stated that the ore in sight represented about $100,000,000 in value, and that about $2,000,000 were to be spent during the ensuing year for enlargement of the plant and new works.

Compared with most of the other railway companies' reports, the Pere Marquette and Cincinnati, Hamilton and Dayton Railroad Company's report for the past year presents a very discouraging condition for the two lines forming the great central route, which were placed in the hands of a receiver last year by J. P. Morgan and Co. after the Erie Railroad Company refused to approve of the arrangements made for the sale of the properties to that company. For the year ended June 30 the Pere Marquette line shows a deficit of $860,947, and the other line one of $1,147,630, making a total deficit of $2,008,577. This loss was sustained in spite of the fact that interest on the heavy bond issues was defaulted and the guaranteed dividends on stocks not paid. From the situation shown by the report it is made very clear that the two roads were never in a position to bear the burden of funded debt heaped up by the various syndicates that had them in hand. Among the causes for the deficits are said to be the charging of expenditures to surplus earnings ordinarily put to the capital account, and the heavy arrears of taxes that had to be paid by the Pere Marquette road. The receiver for this last-named line was obliged to issue certificates of indebtedness for $1,619,180 to meet its liabilities.

The convention of the American Banking Association met at St. Louis, Missouri on October 17, and one of the first addresses made was by the Commissioner of Banking of the State of Massachusetts. Its tenor was not of a kind to reassure shareholders and depositors, for its chief topic was the extent to which dishonesty prevails among bank employees, and the remedies to check it. He said that so great was the stealing among bank officials that it deserved the consideration of the officers of all banks, and that the only way to put a stop to it was the adoption of a proper accounting system. He estimated the number of embezzlements at one a day, and said that the president of a large surety company had told him that his company had had to pay up on an average of one embezzlement a month for the past 22 years, and that was probably the experience of the other eight or ten surety companies issuing fidelity bonds to bank employees. He added that about two out of every three cases of minor thefts never reach the surety companies, but are settled by relatives or friends, or charged to profit and loss. The making of unsound loans was also a custom which the Massachusetts Banking Commissioner regarded as among the most disastrous evils in banking practice, and he spoke of it as having been the cause of the Chicago, Philadelphia and Boston scandals of the past few months. The Hipple case in Philadelphia has, it seems,

impelled the trust companies of Pennsylvania to consider the advisability of calling a general convention to demand relief from the present unsatisfactory conditions, and it will probably come in the shape of an adequate, and what is quite as necessary, a responsible State supervision.

What is described by the New York *Herald* as "cheering news," was received on October 16, at the office of the New York Life Insurance Company. It was in the shape of a cablegram from Germany, saying that the German branch of the International Policyholders' Committee, of which Herr Wiegand, head of the North German Lloyd, is chairman, had issued a circular to all of the New York Life policyholders in Germany, endorsing the administration ticket, and advising policyholders to mail proxies for that ticket to Berlin. This decision of Herr Wiegand is said to have been arrived at after "making very extensive inquiries in New York, by letter and by cable, concerning the *personnel* of the company's administration ticket." The *Herald* naively says, "The decision of Herr Wiegand's committee will naturally be of great interest to policyholders in the United States."

A member of the Colgate committee of the Mutual Life has issued a statement declaring that most of the policyholders are dissatisfied with the work of the International Policyholders' Committee, and the charge is made that two-thirds of the members of that committee are not policyholders, while Mr. Colgate, the head of the Mutual Life Committee, in reality a kind of endorsing, white-washing body, was insured in the company for $1,500,000. To this Mr. Scrugham replied that Mr. Colgate's much-advertised $1,500,000 policy, which was taken out in the early part of 1904, will serve to illustrate what loss policyholders suffer on account of these large risks. He tells how an agent named Bosworth brought suit, July 8, 1904, for $8,110.25 as his share of the commission on this policy. It is understood that a settlement was effected by a man at present in the employ of the Mutual Life. Before the suit was instituted the company had handed over to the soliciting agent 85 per cent. of the first year's premium paid by Mr. Colgate. As will be seen by these statements and counter-statements of the opposing parties in connection with the Mutual Life, there are two sides to every question.

A despatch from Frankfort, Kentucky, throws more light on the methods of the Mutual Life, and its president, Mr. Peabody. That gentleman arrived at Frankfort on October 16, to explain to the State Commissioner of Insurance why he had dismissed the managing agent of the company in Kentucky, and to answer certain other charges against his company. Mr. Peabody was also asked why he had dismissed one of the agents of the company in New York, and whether the company would bear the expenses of the administration ticket in the coming election. Mr. Peabody's reply was worth noting. He said:—"If you are now fishing to find out that the company is paying the expenses of the election, you will find nothing. The company is not paying, and no one expects to be reimbursed. But I will answer your question as to my object in spending money in this election, regardless of whether it is proper. My object is to secure the election of that ticket because of my interest in the company and because I am a policyholder."

Phrases still seem to count for something in affairs, at least in Washington. It has been solemnly announced at the United States capital, and communicated to the American Press, that for the future the American force in Cuba is to be known as the "Army of Pacification." The change of generals to command this pacifying force has been accompanied by an official statement that it has been made, because now that the United States has taken over charge of the government of the island, the duty of the military will be merely routine. To secure this desirable result a military officer has been appointed "adviser" in each of the departments of the Government of Cuba.

The immigration returns published by the United States Government for the six months ended September 30 last show that 682,560 immigrants were admitted into the country as compared with 595,484 for the same period of 1905, and 458,682 in 1904. In the six months 9,236 persons were debarred, and the number of Russian Hebrews admitted was 157,240.

Considerable interest appears to have been felt in New York over the revelation of the existence here in London of a number of "holding companies," which are described as standing between American trusts and the American laws regarding them. Special mention was made in London despatches to New York papers of the General Industrial Development Co., Limited, said to be a holding company for the Manhattan Oil Company of Ohio, which is among those said to be constituent companies of the Standard Oil, whose trial at Findlay, Ohio, for granting secret rebates to customers was brought to a sudden close on October 17, the State prosecution falling through owing to defect in the evidence, and the manner of presenting it. The meaning of this ending is not very clear to the general public, but there is some idea that it is not unconnected with the political situation, which is developing some curious features, and indisposing the President to push things to extremities.

The New York correspondent of the *Financial Times* continues his interesting history of the financial position in New York, and Thursday's issue contains the latest of his communications. His statements support in a striking fashion the conclusions we have independently arrived at in dealing with New York finance by the help of such information as leaks out on this side. Briefly, the crisis raging in New York must break out again before the end of the year, and in a more acute form than ever. The New York banks have propped themselves up with gold borrowed on this side, they have been helped by the loan of Washington Treasury money, and by a plentiful issue of accommodation bills, only to make their position essentially worse. They owe here on one account or another upwards of £100,000,000, and can only trust to the excess value of exports over imports to liquidate this debt, or any portion of it, between now and the end of December. But the excess balance of exports for the past three months is less by nearly $10,000,000 than it was a year ago, and amounts only to about £14,000,000. Imports are increasing, were heavier than ever before in the past month, and exports are not expanding. The cotton crop is said to be poor, although accounts about it are still contradictory, and the outcry about the ravages caused by the storms in September was full of exaggeration, but even if it were large the proceeds of it would not be available in time, because those wonderfully clever financiers have schemed to hold it back, and to maintain the price so as to punish or fleece consumers everywhere, and Lancashire is strenuously endeavouring to buy as little as possible, and to satisfy as much as possible of its requirements elsewhere. We thus begin to see that the financial manipulator and schemer to rule and ruin markets may perhaps get his reward before many weeks are over.

Passing Events.

Spanish affairs grow in interest as the country begins to emerge from its long night of mediævalism, and it is pleasant to see that the financial position of the country appears to be increasingly prosperous. At any rate, the budget for 1907 promises well with a revenue of £38,330,000 and an expenditure of £36,760,000, leaving a surplus of £1,570,000. Of this estimated surplus one-fifth is to be devoted to the redemption of debt, and various other proposals are made all indicative of progress. The Government will assume the colonial debt of £12,900,000, and it is also going to make provision for a reduction in the excessive note circulation of the Bank of Spain. That amounts to about £74,000,000, and is covered only

to the extent of 50 per cent. by cash. The notes, however, are to be guaranteed in gold, Spain thus becoming a gold standard country, for silver will only be taken at its intrinsic market value. It is proposed to withdraw £5,550,000 of the notes from circulation over a period of ten years. Critics say this is not enough, and we are disposed to agree with them, although if Spain prospers, and sits down to develop her resources, which are hardly scratched and practically inexhaustible, the demand for currency may enable the Government to maintain this huge note circulation at par, or near it, against gold without much difficulty. This task, indeed, will become all the easier should Spain as it grows richer absorb that portion of its National Debt now held abroad.

The *Times* is not fighting well. Its tactics are mean and stupid. Nothing could well be more witless than Mr. Arthur Walter's letter requesting subscribers to the *Times* to boycott certain books by neither asking for them at that precious Book Club, or buying them at all. That was hitting below the belt in a way we hardly expected any English gentleman to illustrate. And naturally the result has been to strengthen the combination of publishers and booksellers, so that it will soon be impossible for the *Times* to buy any books worth having except at retail prices. It has already fallen back upon its stock of unsold old books which it recommends to its subscribers in the daily suggestions made by it on the first page of the paper. This, indeed, is about the only book advertisement it now has except that nasty one of Mr. Murray's. The thing cannot go on, it is becoming grotesque and ridiculous, more grotesque even than that burlesque suggested by *Truth* in its "Trouser Club" skit, and we must again express our sorrow that this should apparently be the end of a long and, in former days, honourable history. It cannot profit the *Times* to fill its columns with correspondence about the Book Club, fairly on the whole though that correspondence has been conducted, in place of the usual publishers' advertisements.

It is officially announced that the proposed amalgamation of the Star Life Assurance Society with the United Kingdom Temperance and General Provident Institution has fallen through. Whether to regret this failure or not we do not know. It might have conduced to economy if the two had been brought together, but an insurmountable difficulty seems to have been found in the South African business of the Star Life Society, and the two will therefore have to go on independently. Both are reasonably strong offices, and there seems no reason why they should fail to be prosperous in the future as in the past.

The Government of Victoria announces that the £3,000,000 of 3½ per cent. new stock arranged for in Melbourne in connection with the redemption of the £4,000,000 4 per cent. loan maturing on July 1 next has been taken up by the Savings Bank and others at par, without commission or any charge whatever, and accordingly the Government is now prepared to pay off the old debt at once. This is interesting in a way as showing that Savings Bank deposits have passed into the hands of the Government to a more complete extent than ever, but it is well by any expedient that our colonies should just now keep clear of the London money market.

Much misery appears to be caused in India, and especially in Madras, through the failure of Messrs. Arbuthnot and Co., the Indian branch of P. Macfadyen and Co., whose disastrous failure occurred here last Saturday. Its total liabilities on deposit and current accounts are said to exceed £1,330,000, according to the Madras correspondent of the *Tribune*, and amongst the heaviest sufferers are numerous charitable, missionary and public institutions left without funds to meet current expenses. What the liabilities are in London has not at the time of writing been disclosed, but the business has passed into the hands of a receiver, and we fear the results will be anything but pleasant. Some investigation, indeed, seems to be called for into the causes which brought about such a miserable ending. It is said that the immediate cause of the stoppage was the withdrawal of £39,600 by the Rajah of Vencatagiri. Why did he withdraw? Have the proprietors been speculating in India as well as here?

Mr. F. H. P. Creswell, formerly manager of the Village Main Reef mine, has published in a pamphlet the arguments, and especially the facts which he himself has demonstrated prove that it is possible to employ whites profitably on Rand mines. The matter contained in the pamphlet is not new, but is brought together from many scattered sources, so Mr. Creswell's position can be understood at a glance. His main contention all along has been that the work at the mines can be done with half the number of coloured men the magnates say they require, supplemented by a greatly increased use of white men and machines. The possibility of this he himself proved by actual experiments, which continued for nearly a year after he left the Village Main Reef mine. In reply to the objection that this particular mine is a high-grade one, and is more suitable for employing whites than the average mine, his answer is that the mine is a low-grade one; that it may have wider stopes than some, and may be better adapted for machines, but there are many with equally wide stopes, and others with wider ones, so they could use machines with as good as if not better advantage. Such a pamphlet deserves to be very widely distributed, and we hope it will be for mismanagement, waste and the dominating passion for "scheep" labour lie at the root of the mess in which the Kaffir market now welters.

There was a somewhat sensational incident at the meeting of the Frank Smith Diamond Estates Company on Wednesday, the chairman, Mr. Julius Pam, to the surprise of directors and shareholders alike, announcing his determination to resign. The report and accounts had been adopted unanimously without any discussion when he sprang this upon the meeting. He had come to the conclusion, he declared, that he could no longer act as chairman and director without loss of self-respect. The cause of his action lay in the differences of opinion between himself and his colleagues on the method of realising the diamonds. He instanced the case of a parcel of some 6,000 carats being offered for sale to the diamond syndicate, of which over 4,000 carats had not even been cleaned, much less sorted or valued by anybody on behalf of the company. The directors, he said, relied on the offer of the intending purchaser, without having guidance themselves, professionally or otherwise, as to the value of the goods they offered for sale. This he characterised as unbusinesslike and unjustifiable. He went into details of further actions of which he strongly disapproved, and if he has not exaggerated, he seems to deserve the entire sympathy and support of the shareholders. Probably we shall hear more of it.

The Russian Government wants a loan of £15,000,000, and is going to take it from the monasteries, the *Tribune's* Petersburg correspondent says. If this be true, we may assume that, in spite of his denials, Count Witte did fail to find anybody in Paris willing to give more money to the autocracy. Russian scrip went up in our market on that news, and it was undoubtedly good news, though not perhaps from the loanmongers' point of view. The sooner the autocracy is starved into granting liberty to the races embraced within the misgoverned Empire the better it will be for them and for mankind. But how will the loyalty, the interested loyalty, of the Orthodox Church to the Tsar stand the strain of the proposed despoilment, the first probably of many more to come?

The Ontario Bank failure turns out, as usual, to be worse than first represented. It is now alleged that the total loss is $1,600,000 or £320,000, and that no less than $750,000 has been lent or abstracted without security. We trust there is not much of this kind of banking in the Dominion.

An extraordinary profit display is made by the great Coats Combine for the year ended on June 30. Last year, it may be remembered, the revenue showed a sharp fall, owing to the influence of the Sully cotton corner and the disturbance to Russian trade, and that decline followed a smaller one in the previous 12 months. All, however, was made good in the past 12 months, the nett income reaching the remarkable figure of £2,974,088, which includes £63,933 properly belonging to 1904-5. We estimate this profit to be almost £600,000 more than the amount then shown, and besides the addition of a 5 per cent. bonus to the regular 20 per cent. ordinary dividend much larger sums are placed to reserve or carried forward. The ordinary reserve receives £50,000 less at £450,000, and only £25,000 compared with £94,123 is necessary for debenture redemption, but the addition to the underwriting fund is increased from £50,000 to £149,000, an additional £70,000 at £120,000 is placed to the pension fund and £700,000 against £479,908 is left undivided.

Another offer has been made for the settlement of the defaulting debt of the City of Cordoba, and bondholders are summoned to a meeting on Wednesday next to express their opinion of the terms. They will, in all probability, be accepted, but how long the agreement, if it is ratified, will be honoured we should not like to say. The proposal is much on the lines to which the dishonest Argentine municipalities have accustomed us, and bondholders must agree to forego all arrears of interest. In consideration of this the province of Cordoba will take over the principal of the debt and will eventually redeem it by means of ½ per cent. sinking fund. In the meantime interest will be paid at 2½ per cent. in gold for six years commencing January 1, 1907, and will be increased each six years by ¼ per cent. per annum until it reaches 4 per cent., which will happen on January 1, 1931. The first payment of interest will be made in advance on January 1 next, and thereafter interest will be paid on January 1 and July 1 in each year. The plan has yet to receive the sanction of the Legislature of the Province and Deliberating Council of the Capital, surely a formidable prospect, but the Argenine Municipal Loans Committee hopes to hear before the meeting that the approval has been given.

The Peruvian Senate has naturally authorised the Government to accept the preferred loan of £3,000,000 from the Deutsche Bank, but it is not certain that the cash will be forthcoming. It is said that the terms now offered by the authorities are not exactly of the generous kind, although the Government must be desperately hard up, and doubts are expressed whether the German people will accept them. No one seems to know what effect will be produced on the claim of the Peruvian Corporation by putting the Republic in funds, but we hope it is true that the loan is contingent on the satisfactory settlement being arrived at with the English Corporation.

Remarkably conflicting statements continue to be made concerning the position and prospects of the Guayaquil and Quito Railways and the outlook for the bondholders, but in view of the latest pronouncement by the board we cannot advise holders to throw their securities away. Of the length of 286 miles from Guayaquil to Quito the very considerable portion of 190 miles is quite finished, and really excellent progress appears to have been made with the construction of the remainder. Representatives of French, Dutch, and American banking houses have been to view things on the spot, and when their report is issued in November next the directors are confident that all their statements will be confirmed. We must give credit for the fact that through the operation of the sinking fund no less than $1,450,000 of bonds are held by the company's banking agents, and an explicit assurance is given that the coupons due on January 2 will be paid at maturity. Full information is promised any bondholder who cares to call at the office, and so far as we can see matters appear to be straightforward and above-board.

SOUTH AFRICAN MINE RETURNS.

Taking all things into consideration the output for September was not a bad one; in some respects it was better than lachrymose utterances encouraged one to expect. The aggregate was 505,111 ozs., of which 485,522 ozs. came from the mines working on the Rand, and 18,589 from the outside ones, the value of the whole being £2,145,575. These figures show welcome increases of 4,004 ozs. and £17,008 respectively, modest looking, but better than appearances indicate if allowance is made for the shorter month. The output per diem for September averaged 16,837 ozs., which compares with 16,423 ozs. for August, an improvement of 414 ozs. On the figures of the corresponding month of 1905 there was a considerable advance of no less than 88,624 ozs., in weight and £376,451 in value. The small profit from the Roodepoort United Main Reef is due to the fact that the forty stamps worked only a few days and there was no full clean up,

whilst the decrease in the profit of the Van Ryn, a member of the same group, is attributed to the temporary stoppage of work in the No. 2 mine owing to the fire in No. 2 shaft. Labour returns were better than for some months previously, for there was an increase of 1,612 natives at a total of 77,858.

* Fine Gold.

Answers to Correspondents.

W. F. F.— (1) The dividends are sent from New York. (2) The present is a bad time to touch American securities of any kind, and we think you could get as good a return elsewhere. (3) This is an excellent security, and quite suitable for your purpose. Your first two questions refer to the same security and count as one, so we hold 1s. to your credit.

C. B. (Staffordshire).—We believe the company is doing very well, and it is quite possible the shares may go higher. Waiting, however, for "that other half-crown" often leads to disappointment, and as you have a good profit you should take it.

J. N.—The Province does not appear to have complied with the conditions laid down in the Act. To our view, however, the stock is a much better investment than the one with which you compare it, and the fact that its price is low is due more to market conditions generally than anything else.

Nopir.—(1) The company is smaller than most in this section, so that its securities may be less easy to deal in, and this may account for the lower price. (2) While A is a good company, we would not put it on the same level as B, which is in an exceptionally good position, having assets worth nearly 1¾ times the nominal capital.

Rob Roy.—You have misread the terms of purchase in one important particular, as the shares you hold are to receive in exchange sufficient 3 per cent. preference stock, valued at 88, to give a cash equivalent of £9 per share. Under these circumstances it depends on the price quoted for the new stock whether or not you would make a profit, but at best we fear it would be so small as to be hardly worth the trouble.

W. G.—(1) This is too much under the influence of speculators to be good for a lock-up. (2) The company seems to be doing pretty well, and a purchase might be all right. It is impossible, however, to be sure, as for one thing the climate is not the best for steady business, and for another the directors do not appear to be over prudent in dealing with their resources. Last year a big dividend was paid by drawing on the balance brought in to the extent of over £20,000. You might find much better opportunities for putting capital into that country than either of the above. (3 and 4) Both of these are fairly prosperous concerns, and it is quite likely that prices will go up when the market becomes active again.

M. Dyer.—(1) This is a new company with its business to make, but there are large interests behind it and it should therefore do well. (2) A fair investment, but only second class, we fear. (3) The same must be said of this, but even were it otherwise it would scarcely be advisable to buy both, and of the two we prefer the first. (4) This is a sound security in a company which is doing a good and progressive business. (5) It is impossible to judge of this stock's merits as an investment, as the line is yet in its infancy, and we should be inclined to say leave it alone for the present. (6) Better not touch this at all. The line is in a very bad way without much prospect of improving its position. (7) A sound security giving a fair yield. (8 and 9) These likewise seem worth buying at the price quoted. (10) The price is down to the lowest touched for many years but we doubt if the time to add to your holding has come even yet.

Nameloc.—(1) Both these stocks can be considered perfectly good securities, and we should be inclined to take No. 2, being the cheaper. (2) The financial position of this company is exceedingly strong, and the business is one of the best of its kind in the country, but naturally enough the shares are very high priced and the prospects of an immediate advance are not great. The present price is about 2⅞, and the yield is therefore under 4 per cent. These only constitute two questions and we therefore hold 1s. to your credit.

W. H. G.—(1) This may be considered quite a good security of its kind and gives a fairly attractive yield. (2) We should hardly advise a purchase of this stock for permanent investment because the company's capital commitments are enormous and it is said that some of the latest enterprises are involving it in heavy loss. Present price, however, is the lowest touched for a great many years, and it is possible that a turn might be made by a purchase soon. (3) This is a more solid security of the same class, and does not present the same objections as those just mentioned so that on the whole it would be the wiser purchase. (4) This institution is probably one of the best operating in the country and appears to have derived benefit from the improved conditions now prevailing there. The shares cannot be considered cheap at present prices, but there is no liability on them and that makes them more attractive than most similar securities. (5) From the remarks made by the chairman of this bank at the more recent meetings, we should judge it to have kept clear of the land speculations that threaten to cause so much mischief in the country. The shares afford a fair yield, but you must not forget that they carry a liability of £10. (6) The latest report reveals slight improvement in the position of this undertaking, and there is no immediate reason to think that the company will be unable to meet its debenture interest. Regarded very speculatively a little of the stock might be bought. (7) This company is also doing rather better but it is too much burdened with intangible assets to ever become really strong. We think you might find a better security giving as good a yield. (8) We fear this concern is being pushed steadily into the background by its more progressive rivals, and it would never surprise us if the dividend payments suddenly came to an end. We should not touch the shares. (9) From all accounts we fear this great undertaking, which was established with so much promise, is going from bad to worse, and a very critical state of affairs will probably be disclosed in the report due at the end of this year. Do not touch the stock. (10) Recent changes in the administration and management of this company have, we think, led to some improvement in its position, but we are not altogether sure that the excellent business it at one time had will be readily recovered, and we do not see much attraction in the debentures.

L. E. W.—(1) You would have to face such a very heavy loss in the realisation of these shares that we almost hesitate to advise you to sell. None the less the maladministration of the company during the last few years has left it in such a weak position that even if its business showed a quick recovery its securities would not provide a very satisfactory investment. From your letter we assume that the shares were conveyed to you without cost, and in those circumstances we are disposed to advise you to clear out. (2) As you remark, there is still a moderate premium on the shares of this concern, but it is many points less than at one time. It is, however, not possible to anticipate any immediate recovery in market value, and although the company is a very fair one it might be advisable in this case also to realise. The trade just now is in a somewhat unsatisfactory position, and the market more so.

S. M. H. J.—(1) Although we believe the company will eventually do well enough, the stock is at present too speculative to be a safe investment. (2) This is much the better security of the two. (3, 4, and 5) These are all very fair investments, the only objection to No. 4 being the smallness of the amount. We should be disposed to class them in the order of your questions. (6) The time when the undertaking must be handed over is now so near at hand that this stock at the current price does not seem very attractive. (7, 8, 9, and 10.) A further recovery in this group is quite probable, and as you do not want the stocks for a permanent investment you might do well enough. Should you decide to buy any we should prefer No. 7 and 10.

Donaber.—Such a change might be too risky, for it is not easy to choose another with better chances of appreciation in such a demoralised market. So far as we can see they are as

likely to go higher as most Kaffir things. Better hold for a little time longer and write us again.

Nith.—(1) very little information is to be obtained here about this company, which is a Canadian venture, but we should doubt the wisdom of increasing your holding. (2) Experts speak very favourably of the property and the purchase of a few might turn out a good speculation.

Letters to the Editors.

Sirs,—I received to-day an article from your Review of September 29. I cannot comprehend how an Englishman could be so vulgar as to write the article in question (I think it is libellous under your laws).

The first opportunity I have in visiting your country, which I hope will be soon, I will submit it to my solicitors unless before that time you write an appropriate apology.

If you will read my interview you will see that everything that I have stated in the article has turned out true. The twelve hundred million sterling crop which you seem to be doubtful about has recently been estimated at fourteen hundred million, and the return of millions of gold to this country has proved conclusively that the balance of trade is largely in our favour.

I am,

Jefferson M. Levy.

[We would apologise with pleasure if we knew what for. Mr. Levy was chaffed for saying that the United States had been financing the world for the past three years, and had he said "fleecing" it might have been approximately true. But we did not accuse him of showing us how the business should be done. —Eds.]

NEXT WEEK'S MEETINGS.

Monday, October 29.

Chinese Engineering and Mining.—Winchester House, noon.
New Rand Syndicate.—Winchester House, 2 p.m.
Rudge-Whitworth.—Coventry, 11 a.m.
Swazieland Corporation.—Winchester House, noon.

Tuesday, October 30.

Colonial Gas Association.—Suffolk House, 1 p.m.
Cuban Central Railway.—River Plate House, 1 p.m.
East Rand Mining Estates.—Winchester House, 12.30 p.m.
Hope Bros.—Cannon Street Hotel, 11 a.m.
Hotel Cecil.—Hotel Cecil, noon.
Klerksdorp Extended.—Cannon Street Hotel, noon.
Pahang Consolidated,—Winchester House, 2.30 p.m.

Wednesday, October 31.

Argentine Municipal Loans.—Winchester House, 12.30 p.m.
English, Scottish, and Australian Bank.—Winchester House, noon.
Frederick Hotels.—Hotel Great Central, 1 p.m.
Midland Uruguay Railway.—71, Finsbury Pavement, 2.30 p.m.
San Paulo (Brazilian) Railway.—Cannon Street Hotel, 1 p.m.
Tanganyika Concessions.—Cannon Street Hotel, noon.
Western Telegraph.—Electra House, 2 p.m.

Thursday, November 1.

Bahia Blanca and North Western Railway.—Winchester House, 2 p.m.
Brazilian Street Railway.—Palmerston House, 1 p.m.
Boardman's United Breweries.—Winchester House, 3 p.m.
Dharwar Reefs.—Cannon Street House, 3 p.m.
Fortuna Co.—6, Queen Street Place, 12.30 p.m.
Williams Deacon's Bank.—Manchester, 12.30 p.m.

Friday, November 2.

Bank of Scotland.—Edinburgh, 12.30 p.m.
Henry Bucknall and Sons.—Cannon Street Hotel.
Longmore (William).—Keith, 12.30 p.m.
North of Scotland Bank.—Aberdeen, noon.
Realisation and Debenture Corporation of Scotland.—Edinburgh, 1 p.m.
Triumph Cycle.—Coventry, noon.

Treasury, October 23, 1906.

Queensland Gold Returns.—For the month of September the gold returns for Queensland were:—Charters Towers, tons crushed, 23,300, yield 18,300 ozs.; Croydon, 7,600 tons, 1,600 ozs.; Gympie, 17,700 tons, 8,400 ozs.; Mount Morgan, 18,700 tons, 9,300 ozs.; Ravenswood, 2,400 tons, 3,300 ozs.; other fields, 2,300 tons, 2,200 ozs.; alluvial, 400 ozs.; total 46,300 ozs., inclusive of 2,800 ozs. from copper ores from Mount Morgan.

RAILWAY TRAFFIC RETURNS.

FOREIGN.

Alberta Railway and Irrigation.—Earnings for week ended October 21, $3,770, decrease $1,528.

Argentine North Eastern.—Traffic receipts for week ended September 21, $23,903, increase $2,331; aggregate from January 1, $748,600, increase $73,258.

Assam Bengal.—Traffic receipts for week ended September 22, Rs. 1,04,592, increase Rs. 17,539; aggregate from July 1, Rs. 9,79,077, increase Rs. 1,78,446.

Bolivar.—Receipts for September £3,051, increase £692.

Canadian Northern Railway.—Traffic receipts for week ending October 21, $221,500, increase $102,800; total from July 1, $2,395,300, increase $922,600.

Lucknow Bareilly Railway.—Traffic receipts for week ended September 22, Rs. 21,186, decrease Rs. 80.

Quebec Central Railway.—Traffic receipts for the 2nd week of October, $16,761, increase $2,266; aggregate from January 1, $735,097, increase $100,014.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended September 22, Rs. 17,919, increase Rs. 4,343.

White Pass and Yukon Railway.—Traffic receipts for the week ended October 14 amounted to $44,194.

ENGLISH.

Cleator and Workington Junction.—Receipts for week ending October 20, £1,311, increase £41; aggregate from July 1, £19,243, increase £148.

Cockermouth and Keswick Railway.—Receipts for week ending October 20, £744, increase £4; aggregate from July 1, £16,439, increase £805.

East London Railway.—Traffic receipts for August, £4,273, increase £30.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending October 20, £388, decrease £8; aggregate from July 1, £5,439, increase £266.

TRAMWAY AND OMNIBUS RECEIPTS.

HOME.

Bath Electric.—Traffic receipts for week ending October 17, £807, increase £146; aggregate from January 1, £35,493, increase £6,412.

Blessington and Poulaphouca.—Traffic receipts for week ending October 17, £11, decrease £1; aggregate from July 1, £488, increase £34.

Bristol Tramways and Carriage.—Traffic receipts for week ending October 19, £5,110, increase £548; aggregate from July 1, £87,493, increase £4,088.

British Electric Traction.—Receipts of all the Associated Companies for the week ending October 19, £28,072, increase £1,323; total increase from January 1, £121,124; 432¾ miles, against 438½.

Burnley Corporation. — Traffic receipts for week ending October 20, £1,208, increase £176; aggregate from July 1, £20,096, increase £1,769.

Dublin and Blessington.—Traffic receipts for week ending October 17, £123; aggregate from July 1, £2,741, increase £115.

Dublin and Lucan.—Traffic receipts for week ending October 19, £98, increase £2; aggregate from July 1, £2,217, decrease £35.

Dublin United.—Traffic receipts for week ending October 19, £4,768, increase £417; aggregate from July 1, £89,771, increase £5,202.

Edinburgh and District.—Traffic receipts for week ending October 20, £4,764, increase £323; aggregate from January 1, 1906, £209,912, increase £4,751.

Hastings and District. — Traffic receipts for week ending October 18, £742.

Isle of Thanet.—Traffic receipts for week ending October 20, £393, increase £92; aggregate from October 1, £1,315, increase £264.

London County Council.—Traffic receipts for week ending October 13, £27,124, increase £12,640; aggregate from April 1, £741,754, increase £316,973. Miles 106⅛, against 51¼.

London General Omnibus.—Traffic receipts for week ending October 20, £23,103, increase £69; aggregate from July 1, £377,270, decrease £5,325.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending October 20, £4,273, increase £2,641.

London Road Car.—Traffic receipts for week ending October 20, £7,826, decrease £7; aggregate from July 1, £128,902, increase £2,461.

London United.—Traffic receipts for week ending October 19, £5,900, increase £972; aggregate from January 1, £265,713, increase £20,715.

Rossendale Valley.—Traffic receipts for week ending October 12, £213, increase £8.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending October 21, £789, increase £76; aggregate from January 1, £35,165.

FOREIGN.

Anglo-Argentine.—Traffic receipts for week ending October 21, £16,431, increase £2,553; aggregate from January 1, £629,468, increase £71,447.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 303. Total receipts from August 1, 1903, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of August, 1906, £14,186, increase £1,415.

British Columbia Electric.—Nett earnings for August $44,790, increase $6,097. Nett earnings from July 1 to August 31, $102,385, increase $17,835.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending October 14, £3,859, increase £24; aggregate from January 1, £148,149, increase £6,695.

Buenos Ayres Electric. — Traffic receipts for week ending September 1, £1,366, increase £91; aggregate from January 1, £47,400, increase £7,521.

Buenos Ayres Grand National.—Traffic receipts for month of September, $299,000.

Calcutta. — Traffic receipts for week ending October 20, Rs. 43,275, increase Rs. 3,359; aggregate from July 1, Rs. 7,13,126, increase Rs. 29,052.

Cape Electric.—Traffic receipts for month of September, Cape Town, £10,537; Port Elizabeth, £3,062.

Carthagena and Herrerias.—Traffic receipts for the month of August, £3,708, decrease £222. Total from January 1, £35,223, increase £11,310.

Kalgoorlie Electric.—Traffic receipts for August, £5,005; aggregate from January 1, £34,892.

Lombardy Road.—Traffic receipts for the month of July, 1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Madras Electric.—Traffic receipts for fortnight ended September 30, Rs. 13,063, increase Rs. 1,817; aggregate from January 1, Rs. 2,56,023, increase Rs. 27,853.

Twin City Rapid.—Traffic receipts for the month of July, $522,949, increase $87,845; aggregate from January 1, $3,077,558, increase $470,984. Nett traffic receipts, $286,832, increase $38,781; aggregate from January 1, $1,627,058, increase $247,064.

The Investors' Review.

The Week's Money Market.

Bank Rate 6 per cent. (Advanced from 5 per cent. on Friday, October 19.)

Norfolk House, Friday Evening.

The market has stood its first week of a 6 per cent. Bank rate quite as well as was to be expected. As yet the indications of improvement through the dearness of money are not conspicuous, but that was not to be expected. Observers, however, are more inclined to the belief that the 6 per cent. rate will be sufficient not only to stop the outflow of gold, but to bring the metal in, and we hope that view may prove correct. Favourable symptoms are not wanting to support it. The Bank of France has not raised its rate to 4 per cent., but only its price for gold, which is put from 1½ and 2 to 4 per mille premium. Its position is also rather stronger than it was a week ago, the stock of gold being practically unchanged, while the note circulation has fallen off nearly £2,000,000. No change either has been made in the German Reichsbank's rate, and its position is likewise improving, both by an increase in the cash in hand and a diminution in the active note circulation. The National Bank of Belgium put its rate up yesterday by 1 per cent. to 4½ per cent., but there is nothing at all disquieting to us in that. If we could say that the position was better in New York we might almost be sure that 6 per cent. would carry us through. That, however, is just what we cannot say, and New York financiers yesterday paid 10 per cent. per annum more on telegraphic transfers on London than on demand drafts. All is quiet, however, at present, and money considerably easier on Wall Street; but the struggle to maintain solvency is only postponed.

Perhaps the Egyptian demand will not be nearly so formidable as anticipated, and we certainly regard the estimate of nearly £6,000,000 more gold as exaggerated. In fact, gold to the amount of £250,000 belonging to the Egyptian banks was released to-day, but some fear that instead of an Egyptian we may have a Brazilian demand upon us should the schemes for giving artificial fixity to the exchange be sanctioned by the incoming President. We certainly are not out of the wood, and the market will do well to keep rates up.

Here throughout the week money has been frequently quite dear, as one or the other of the joint-stock banks called in loans to make up their monthly balance-sheets, and as the Bank of England and the Treasury together denuded the outside market of its balances. The export of more than £1,000,000 in gold last Saturday also told severely upon market resources, near exhaustion as they already were, and we may perhaps witness a sharp struggle to get hold of the necessary credit during the last three days of the month. But if the Bank of England gets the bulk of the £1,200,000 or so of new gold on Monday, and if the 6 per cent. rate begins to draw in odd parcels of the metal, the strain should soon begin to grow less acute.

Something will depend on the thoroughness with which the discount market keeps its rates close up to Bank rate. Several times this week it has shown some disposition to break away. Leading houses have been quoting 5⅞ firm as their minimum for three months' remitted bills, but there has often been some quarter in which the paper could be placed at a finer rate. On the whole, however, discount rates for two and three months' bills have kept fairly steady between 5 13/16 and 5 15/16 per cent., and only bills of four and six months' usance have been saleable at 5½ to 5¾ per cent. until towards the end of the week, when six months' remitted paper of the best class was said to be taken at little more than 5¼ per cent. Two of the leading bill-buying banks, however, have been sticking to 6 per cent. all week, and the principal discount houses have done their best to keep rates up. They should be helped by the inflow of American produce bills which is now assuming large proportions. We hear that £3,000,000 sterling of cotton bills left New York yesterday, and they have been dribbling in to a considerable amount in the aggregate for some time. In proportion as they come they will help to offset the heavy accumulation of American indebtedness here.

Fortunately for the market the Bank of England has, through the large Japanese balances in its hands or easily borrowed by it, the means of preventing short loan rates from slipping away. They eased this afternoon to 4½ and occasionally 4 per cent. for over-night money after the principal Stock Exchange settlement demands had been met, and although joint-stock banks continued to get 5½ per cent. for most of the week to week money they lent, there were instances this morning of 5¼ per cent. Any material weakening of the short loan market would inevitably depress bill rates, and we should then become more afraid than ever that a 6 per cent. Bank rate would not see us through the troubles of the year's end. It is only a matter of a few weeks, however, if the Bank rate is kept effective, for gold will be attracted by it in various amounts from all quarters. It picked up £70,000 worth of bars to-day in the open market, and will, to all appearance, only have India as a competitor for Monday's large supply, for the price fell to-day to 77s. 10⅛d. per oz.

The Bank return was by no means a strong one, and emphasises in particular the poverty of the open market, whose resources fell off by £1,604,000 within the week, until the total of the other deposits is now down to £40,785,000. The decline on the week, however, was due principally to the absorption of the tax gatherer, public deposits having risen by £1,305,000. Also the export of £1,048,000 in gold brought down the banking reserve by £674,000, notwithstanding some return of coin and notes from the active circulation, the return of coin alone being over £300,000, in spite of the withdrawal of some portion of the autumn bank note covering Scotch gold. On balance the market had only increased its debt to the Bank by £374,000, owing to the large amount of short bills it held falling due for payment, but yesterday the borrowings were heavy. To-day, on the contrary, the market paid off nearly all the considerable sum due, thanks to the help of Japanese money lent out for a month at 5¾ per cent., and to the dispersal of window-dressing balances by one or two of the banks.

Silver.

The rise in the Bank rate last Friday induced holders of spot silver to realise, and the price fell away to 32¼d. per oz., but at this figure a moderate demand sprang up which sufficed to bring about a rally to 32 7/16d. per oz. Speculators, on the other hand, were disposed to buy forward metal, and the market had the unusual experience of seeing the quotation for two months rise 1/16d. over the cash. It sagged back, however, and closes at the same level. Early in the week it was stated that the United States Government intends to buy 500,000 ozs. per week until December, but the news did little more than keep the market steadier than it might otherwise have been. Applications for the Rs. 60,00,000 India Council drafts on Wednesday totalled Rs. 2,44,40,000, of which Rs. 2,14,40,000 were for bills. Tenders were accepted for Rs. 52,63,000 in bills and Rs. 7,37,000 in telegraphic transfers, applicants at 1s. 4d. and 1s. 4 1-32d. per rupee respectively receiving about 24 per cent. Next week the amount to be offered is reduced to Rs. 40,00,000.

Stock Market Notes and Comments.

The Stock Market position is dealt with so fully in the succeeding article that it is unnecessary, even if we had the space, to enlarge on the subject in these notes. Besides there is very little to generalise about, for the position remains this week what it was last. One cannot help admiring the solidity, not to say stolidity, with which market men keep their end up in the intense struggle now going on to maintain an appearance of solvency. Not only have prices been maintained in an encouraging way, but business has not been altogether stifled, and we again hear that the small investor is turning his attention to Home Railway stocks. Better these than Kaffir shares or the shares of American and Canadian railways. The worst market where the public is deeply concerned continues to be the South African one, and there we can hold out no ray of comfort as long as the mining industry is conducted on the present wasteful lines. No matter how much gold may be extracted the financial position of most of the companies will go from bad to worse, and we shall presently have to appeal once more to the Home Government to intervene in the interests of the genuine investor to put an end to a system of management which can only result in the ruin of all but a few master financiers.

As for the Yankee market, the public should keep out of it still and wait events. It cannot take so very long now to bring market prices on Wall Street back to reasonable proportions in relation to intrinsic values and probabilities. Inflation cannot continue for ever in any market, it is too exhausting; but the fun, to use a colloquialism, may not begin over there until nearer the end of the year, when we call back our gold, and when the Washington Government is at the end of its expedients for inflating the currency. The latest of these has been the liberty granted to expand the note circulation of the National Banks some $18,000,000 by substituting inferior securities for those of the Federal Government to protect the note.

The Week's Stock Markets.

The attention of members in the Stock Exchange this week has been devoted almost entirely to the settlement of the fortnightly account. Ordinary business was again on a comparatively small scale, but the market did not altogether lack exciting moments. There was great commotion when the Mexican Railway dividend was announced on Thursday, and in their jubilation at the wonderful results displayed some of the jobbers almost lost their heads. It cannot, however, be said that other sections were influenced for good by the Mexican figures, but towards the close of the week markets certainly wore a rather more cheerful appearance, due no doubt to the absence of the anticipated rise to 7 per cent. in the Bank rate. Some dealers had apparently quite made up their minds that a rise must take place, and the prospect of this, together with the fact that the new account is of 19 days' duration, produced a good deal of unrest during the first few days. The American market in particular was exceedingly erratic, and it is significant that when the announcement was made that Mr. Shaw intended to come to speculators' relief with more Government money stocks fell heavily instead of going up. The Home Railway Market has succeeded in shaking off some of its excessive weakness, and this section is at the moment about the best in the House. The heavy fall in prices seems to have attracted the small investor, and failing any serious development in the monetary situation the improvement might be carried a little further. The charge for account loans was naturally extremely heavy. A large part of the credit needed for the current requirements of the money market has to be borrowed from the Bank of England at 6½ per cent., and there seems to have been a general agreement amongst bankers not to lend money below this figure. Even the money dealers did not get their usual ¼ per cent. out of the rate, and where additional funds were required lenders charged 6¾ and even 7 per cent. It was also stated that some of the banks had discriminated against American securities, where they were offered alone, and charged as much as 8 per cent. Inside the House contango rates sometimes reached excessively high figures, and on the very speculative stocks it was not unusual to find operators for the rise paying up to 10 and even 12 per cent. for the privilege of deferring payment. There was again very little life in the Consol market, but a trifling gain recorded early in the week was somehow retained to the end. Transvaal 3 per cent., Irish Land stock and India 3 per cent. were a little dull, and Bank of England stock showed a further loss of about 2, but one or two issues in the Home Corporation list were marked up. Colonial stocks, which were carried over at 6½ to 7 per cent., still kept tolerably steady.

Rather more interest than usual has been taken in the market for Foreign Government bonds, and business between bourses was on a larger scale. Steady support is still being extended to Russian bonds owing to the continued absence of unfavourable news from the country, and the scrip of the new 5 per cent. issue rallied at one time to 6⅝ discount. The best price was not quite maintained, and there was a slight weakening again to 7 discount, but the bonds are still about £2 better on the week. Paris also lent support to other European favourites, and slight improvement occurred in Portuguese, Spanish and Turkish. In the South American division the principal incident was the sharp improvement in Peruvian Corporation issues on the news that the three million loan to be obtained from the Deutsche Bank had been sanctioned by the Senate. It is said that this loan has been granted on the understanding that before the money is handed over an agreement on the points in dispute between the Government and the Corporation will be settled. Prices for Argentine and Brazilian securities opened rather dull, and in most cases remained so until the end. Chilians were also inclined to go back, and Costa Rica, Guatemala, Honduras and Venezuelan loans were all down in the Central American division. Colombians showed improvement at one time, but lost it again before the close. Small investment purchases kept Japanese bonds steady, and the shares of the Industrial Bank improved to 7¼. Very little happened to the Chinese group, but on the whole values tended downward. Rates in this department, as in all others, were heavy, and on Peruvian preference and ordinary reached as much as 8 to 10 per cent. Other leading South Americans were carried over at 6 to 8 per cent., but 7 to 9 per cent. was charged on Chilian, 1886, and Central American securities were not taken in at less than 7½ to 8½ per cent. On Japanese issues the general rate was also 6 to 8 per cent., but the 5 per cent. of 1092 were a little scarce, and were done at 5 to 7 per cent., while on the 4 per cent. sterling the charge of 4 to 6 per cent. was the lowest in the market. Even the leading European stocks, which are usually down at pretty low rates, cost 7 to 9 per cent. to continue, including the new Russian loan, but the old Fours of 1889 could be contangoed at 5 to 7 per cent. With the exception of a rise of 2¼ in the Chinese silver loan owing to the continued strength in the metal, a rally of 1⅜ in Peruvian preference, advances of 1⅛ to 1⅜ in Russians and a rise of 1 to 2 in San Paulo bonds, all the principal movements in the making-up list were adverse. The South American group showed an all-round loss of ¼ to 3, and several Central American securities were ½ to 1 down, while Venezuelan 3 per cents. showed a drop of 1⅜ per cent. and Guatemalan of 3. Chinese bonds were ½ to 1¼ worse, Greeks lost ¾ to 1⅜ and Japanese were down at ¼ to 1⅝. Spanish 4 per cent. showed a loss of 1⅜, Turkish 3½ per cent. were 3¼ lower and the Unified made up ⅜ lower.

Home Railway stocks naturally went back on the advance in the Bank rate last Friday, but on the whole the market stood the change better than might have been expected. The public seems to have been at last tempted to come in, and jobbers report that a steadily increasing volume of small investment orders has been received. "Bear" covering, too, has helped to make the market firm, and although the majority of the movements in the week are still adverse closing prices were not altogether the lowest of the week. In some instances the declines were important enough, Great Eastern, Lancashire and Yorkshire and District losing 1 to 1½ and Great Central issues dropping 1 and ½. South-Eastern stocks also fell heavily, but the deferred although 1½ down was ⅜ above the worst point touched. On the other hand, however, Great Western and North-Western showed fair improvements and Midland deferred was as much as £1 up, while there was also some recovery in Scotch stocks. Privileged stocks, however, have been dull, and a very trifling amount of selling was sufficient to depress quotations heavily. Contangos on Wednesday nominally ranged from 5 to 8 per cent., but with bankers charging 6½ and 7 per cent. very little money could be had under 7 per cent. except in one or two cases, such as Caledonian deferred, North-Western and Great Northern deferred, where the rate ranged from 6 to 7 per cent. as the supply of stock was small. On the fortnight Great Western fell 2½, Lancashire and Yorkshire 1¾ and Great Eastern and North-Western 1¼ each. South-Eastern stocks lost 1⅜ to 2, South-Western ordinary and deferred were 1½ and 1¼ down, Great Northern deferred and Hull and Barnsley dropped ⅜ and Great Central stocks ½. Amongst Undergrounds District declined 2 and City and South London ⅛, but Central London things were all ½ better. Furness rose ½, Midland deferred ¼, Caledonian stocks gained ½ to ⅝ and North British ¼ to ⅜.

American Railroad shares felt the effect of our Bank rate change most severely, and the position there was aggravated by the return of the New York Associated Banks, with the result that Wall Street was more or less demoralised. A determined effort was made on Monday to pull things together in view of the settlement, and amongst other things an enormous business in call options was done. The story from Paris that the Bank of France had offered to lend us gold was dismissed as preposterous, but an equally fanciful tale that the Bank of England had engaged the bar gold arriving in the bullion market next week was accepted, and helped to make the task of the manipulators a little easier. Most reliance, however, was placed on a story that the American Treasury had again agreed to come to the assistance of the market. Prices went up on the news, but promptly fell back when the method Mr. Shaw proposed to adopt was made public, as it was considered that the benefits conferred were more apparent than real. The fear of high charges at the settlement caused some liquidation, and the market ended idle with losses ranging from $3 to $5 or more in such things as Atchison, Baltimore, Milwaukee, Erie, Louisville, New York Central, Reading and Union Pacific. Great Northern preferred was as much as 11½ down, and Northern Pacific fell 7. It was generally stated that the account had been substantially reduced, but there was very little indication of that on Wednesday. Money seemed to be quite as much in demand as at the last settlement, and very little could be had as low as 7 per cent., the general charge being 8 to 9 per cent., while there was a somewhat improbable story current that the Bank of England had exacted 9 per cent. on these securities from its private customers. Making-up prices show declines of 5¼ in Chesapeake, 5 in Milwaukee, 4¾ in Baltimore and 4¼ in Reading and Union Pacific. Erie issues fell 2 to 4, Louisville was 3½ down, Ontario 3¼, Missouri and Kansas 2¾ and Atchison, Denver common and preferred, Norfolk, Pennsylvania Southern Pacific and Southern were all from 1½ to 2½ lower. Great Northern preferred dropped 8 and Northern Pacific 4.

Canadian Pacific shares were sold heavily from Berlin in the end of last week, and the price went steadily down until it touched 175⅞. New York then took them in hand with its own special favourites, lifting them to 180, but this figure was not maintained long, and they ended with a loss of over 7 on balance, dragging the new stock certificates down with them. Grand Trunk stocks shared in the depression at first, but the traffic increase was just about double what had been expected, and most of the early decline in the ordinary and third preference was wiped out, leaving them ½ down. Of South African lines Rhodesia Railways 5 per cent. first mortgage debentures fell 1½, and the 4 per cent. mortgage debentures, together with Mashonaland 5 per cent. guaranteed debentures dropped ½. On the account Canadian Pacific shares were 5⅞ down, Grand Trunk ordinary and third preference lost ⅜ and ½, and the guaranteed and first and second preferences were from 2 to 3¼ lower. Alberta capital stock exceptionally rose 4. The rate on Canadian Pacific was quite as heavy as those current in the Yankee market, and on Grand Trunks they ranged from 7 to 8 per cent.

Considerable interest was shown in the Mexican Railway dividend announcement which was declared on Thursday, and opinions as to the rate varied from day to day. At one time the view was held that not more than 7¼ to 7½ per cent. would be paid on the 8 per cent. first preference; then the bulls became confident that the full rate would be declared, but the hope that the second preference would get something seemed to have faded quite into the background. The declaration, therefore, of distributions at the full rate on the first preference and of 3¾ per cent. on the seconds, compared with 6¼ per cent. and nil a year ago, took the market completely by surprise, and a good deal of excited bidding followed. Prices were rushed up at breakneck pace, relapsed on profit-taking, but soon went ahead again, and ended with gains on the day of 9¼ on the seconds, 5¼ on the firsts, and 3¼ on the ordinary. Compared with a week ago the improvements were ⅛ to ¼ under these figures. Other Mexican lines were quiet and lower, Interoceanic preferred shares losing ½ and Mexican Southern ordinary and debenture stocks 1 each. Another spot where business has been active was the Guayaquil and Quito second bonds, which have fluctuated widely on the conflicting statements published. Against a cablegram stating that the President regarded the economic situation of the Government as desperate, owing to the impossibility of raising a loan in Europe, were put the semi-official reassuring statement in a French paper and later the official denial of rumours by the directors. Bulls and bears had a sharp tussle in consequence, in which the latter succeeded in driving the price down £1. Argentine lines were lifeless, and quotations dwindled until most of the leading things were from £1 to £3 down. Brazilian things were also heavy, San Paulo ordinary losing as much as 5, while Leopoldine ordinary dropped 2, and United Railways of the Havana also relapsed 5. Changes in the fortnight with few exceptions were to the bad, the heaviest declines in the Argentine group being 8 in Buenos Ayres Western ordinary, 5 in Entre Rios first preference, and 4½ in Buenos Ayres and Rosario preference. Cordoba and Rosario income debenture stock fell 4, and the Buenos Ayres Extension debenture scrip 2½, and Argentine North-Eastern preference and ordinary debenture stocks, Bahia Blanca and North-Western preference, Buenos Ayres and Pacific preferences, Buenos Ayres Great Southern ordinary and preference, and East Argentine were from 1½ to 2 lower, while Buenos Ayres and Rosario gained ¾. Leopoldina ordinary and debenture stocks declined 3¾ and 1¾, San Paulo ordinary was 4½ down, and United Railways of the Havana ordinary fell 8. Mexican ordinary and first preference were ¼ down, but the seconds gained that fraction, and Interoceanic preference shares were also ¼ better, but Mexican Southern ordinary and second mortgage debenture stocks fell 2½ and 2. Nitrate Railways ordinary shares improved 1, and the preferred and deferred ⅝ and ½, Central Uruguay stock and Guayaquil and Quito bonds 1, and Costa Rica second debentures put on 2. Carrying-over charges here as elsewhere ranged from 7 to 8, and sometimes 9 per cent. when there was any account at all.

There was rather less activity in the Miscellaneous markets, and nothing of a very exciting character happened throughout the week. The principal incident, perhaps, was the publication of the Coats figures for the past year showing nett profits of almost three million pounds. On this occasion a 5 per cent. bonus is added to the 20 per cent. dividend, making a total return of 25 per cent., and much larger sums in the aggregate are added to the reserves. The shares had a sharp rise on the announcement and finished about 5⅝. The statement had a favourable influence on other textile shares, which nearly all closed at an improvement. Nitrate shares were inclined to gather strength again after the recent shake-out, and support was again afforded to Associated Cement issues, which closed better. Salt Union preference, however, continued to be sold, and the market for Alkali shares generally was not strong. Gramophones were moving up again, but in the catering section Lyons and Aerated Breads were both easier. Liptons were also weak, but amongst Meat shares Eastmans went over 9. Bucknall's ordinary and preference shares rallied on the improved results shown for the past year, and among the Soap bubble securities Lever Brothers' preference eased off on the agitation going forward against the formation of the threatened trust. Hope Brothers' shares firmed up a little when the report came out, but subsequently fell away again. Motor and Cycle shares were strong, with a good deal of attention paid to Humbers, Daimlers, and Argylls, but prices did not in all cases close at the best. Welsbach Lights were dull. Few changes of importance took place in the Bank's share list, but the poorer kind of Brewery securities were still flat, and a sharp slump took place in Allsopps' Trust Certificates, other issues of the company going down to a lesser extent. Bieckert's were a little easier after their big rise, but the market is wonderfully well sustained. Hudson's Bay shares inclined downward, and finished round 102, but other Land shares did not show important change. Gas Light stock remained about 97 with a small investment business, and there were a few changes in the Insurance section, but none of them were important. The movements in Iron and Steel issues were nither interesting nor important, but some of the leading issues receded a few pence. Anglo-American and other Telegraph issues were somewhat flat, but National Telephone deferred advanced to 108. London Motor Omnibus ordinary shares were inclined to improve on the statements made at the meeting, but London United Tramways' preference receded to 9. Rates in this section were stiff in places, and while the charge for continuing Hudson's Bays may be considered fairly easy at 7½ to 8½ per cent., on Anglo "A" the rate touched 10 and sometimes 12 per cent. In other directions the general charge was covered by 6 to 8 per cent., and there did not seem to be any trouble experienced in arranging the account. Making-up prices did not show movements all one way, but the majority were again adverse. British Electric Traction ordinary and preference shares lost ½ and ⅝, Californian Oilfields were down ⅜, and Gaiety Theatre showed a loss of 5/10. Salt Union preference shares made up ⅜ lower, and one or two Nitrate issues also showed losses on the account. Allsopps' stocks were down ½ to 5½ and Watney, Combe 1 to 4. In the Telegraph section Anglo-American issues were 1½ to 3 worse, Eastern Telegraph was 3½ down, Great Northern fell 2½, and National Telephone deferred 2½. There was the very severe loss of 5 in the Standard Bank of South Africa shares. English Sewing Cotton shares made up nearly 2s. better and Gramophones rose during the fortnight from 2⅜ to 2¾. Lagunas Nitrate showed a very sharp rise of 11/16 followed by one of 9/16 in Lautaro. Rosario Nitrate were also 9/16 higher, while Santa Ritas were up ⅝. Humbers made up 3s. better in the Cycle section. Bieckert's Brewery ordinary stock was 13 higher, and the new shares followed with a rise of 1⅛. Hudson's Bay shares at 103 made up 5½ to the good, and Pekin Syndicate deferred rose 10.

The account has passed off very smoothly with so far only one small failure, and one satisfactory symptom has been disclosed in the large amount of stock which has passed into the hands of investors. The buying has not been in big amounts, but in hundreds and sometimes a thousand or two. This means help to the market, and has only to continue long enough to relieve the strain there most materially. Much of the buying has been directed upon Home Railway stock, but everything was better this afternoon because a little gold belonging to Egyptian banks was released and sent back to the Bank of England. This was taken to mean a more comfortable monetary outlook and everybody is so anxious to be cheerful.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Rise: Bank of Ireland 2, to 310-318. **Fall:** 2½ p.c. Annuities Acct. ½, to 84½-84¾, Irish Land Acct. ½, to 86⅞-87⅛, Exchequer Bonds 3 p.c. ⅛, to 99⅛-99⅜, Local Loans Acct. ¾, to 97-97⅛, Transvaal Acct. ⅛, to 96-97, Bank of England 2, to 268-272, India 3½ p.c. Critical Index To New Investments.

Kaneika United Goldfields, Limited.

This is a new Siberian company, formed with a capital of £350,000, in shares of £1 each. Of these 100,000 will for the present be held in reserve and are under option; 125,000 will be issued to the Sesan Syndicate, Limited, the vendors, as part purchase consideration, whilst the same company has undertaken to get 25,000 subscribed at par. The remaining 100,000 shares are now offered at par to the shareholders of the Sesan Syndicate, and have been underwritten. This new company has been formed to acquire several quartz and alluvial claims in the Province of Semipalatinsk, Siberia. These have been examined and reported upon by the vendor syndicate's mining engineer, Mr. Adams, who speaks hopefully of their prospects. His full report accompanies the prospectus. He estimates that with the erection of two dredgers with a capacity of 1,500 cubic yards a day each a nett profit during the seven open months of the year will be earned at the rate of approximately £72,000 per annum from five alluvial claims alone, the nett value of which he puts at £1,118,826. The sum the company will receive from the issue should be sufficient to provide and erect two dredgers and leave a goodly balance in hand. Of course, the venture must be regarded at the best as a very speculative one.

East Rand Proprietary Group.

For some weeks past rumours of various kinds have been flying about the market in respect to the happenings, present and prospective, in the East Rand group of companies. In consequence of reports, which, though vague, were of a disquieting nature, this particular group has been the weakest spot in the Kaffir Circus. At one time it looked as if it were the object of a determined "bear" attack, but events have proved that the fall in prices was largely justified. It was rumoured at first that amalgamation was contemplated between all the companies comprising the group, including the parent concern, the East Rand Proprietary Mines. After allowing this rumour to have sway for a week or so, greatly to the detriment of prices, a further rumour said the scheme had been abandoned. These were not, it is now apparent, irresponsible market reports, mere guess-work and gossip. They were nods and winks indicative of actual facts, but in the absence of official statements shareholders knew not whether to accept them as true or false. Anyway, the decision of the directors went far beyond the precincts of the board room, it reached the ears of others than the vast body of shareholders, and those who heard of it and knew of its authenticity have been able to take profitable advantage of it. Later still a report was disseminated that the directors would be issuing at some indefinite date a statement of an unfavourable character affecting the whole of the companies. This caused a further shrinkage in prices, for it was more calculated to alarm holders than either a contemplated amalgamation scheme or its abandonment. For such a possibility was not remote. Shareholders in the Angelo and Driefontein could not forget that each company had suspended dividends, and it was a matter of general knowledge that the ore was getting poorer in quality. Here, again, market talk was based on true knowledge, as was likewise the report that the Cason was about to increase its capital. A lengthy statement on the present position of affairs was issued by the directors on Saturday last which confirms the above market reports, but it does not describe a position of altogether unrelieved gloom.

At the annual general meeting of the East Rand Proprietary Mines on April 27 last the chairman informed shareholders that the available funds of the New Comet Gold Mining Company and the Angelo Gold Mines would not suffice to meet the total expenditure in connection with their equipments. And he also reminded them that the money originally provided for the development and equipment of the Cason Gold Mines would be insufficient to place the mine in full running order, therefore that further funds would have to be provided. So we cannot say the report the directors now issue is unexpected and disappointing. On the contrary shareholders were prepared for it. Nor is amalgamation a brand new idea, for it has been hinted at several times, especially at a meeting of the parent company two years and a-half ago. But it was never put forward as a serious conception likely to become a practical scheme until a few months ago, when the directors laid hold of it in earnest in order to see how they could shape it into a workable plan. They tell us nothing of the deliberations in the board room except that the scheme was very carefully examined, "as, from an economic point of view, it is in the opinion of the boards the best for the interests of all concerned, but owing to the difficulty in arriving at a basis of valuation satisfactory alike to the shareholders of the East Rand Proprietary Mines, the subsidiary companies, and the H. F. Company, it is not proposed to proceed with it." This is all they say, but it is evident the problem has proved too complicated for them to solve, and they could not see their way to get over all the formidable difficulties involved. It is as likely as not that one of the chief difficulties lay in the peculiar position of the H. F. Company. This swag-grabbing affair of the bosses is entitled to 25 per cent. of the profits of the East Rand Proprietary Mines after the shareholders have received £920,000 in dividends. Up to the present the aggregate paid to them is £645,300, so that a further £274,700 must be distributed before the H. F. Company can exercise its rights. Some years ago, it may be recalled, the directors of the East Rand Proprietary submitted a scheme for the settlement of the rights of the H. F. Company, but as the terms asked were considered too high it was abandoned. So the existence of this company and its vexatious lien constitute obstacles anything but easy of adjustment. After all, amalgamations are not always in the interests of shareholders. A strong point is made of the economy resulting, but other expenses and disadvantages are involved which balance the benefits, and they are often made the excuse for raising additional capital.

All the leading subsidiary companies of this group are in need of more cash, according to the brief financial statements given. In the case of the Driefontein Consolidated there will be a deficiency of £25,697 at the end of the present year after making allowance for all the profits earned and the cash in hand on December 31. This is the sum wanted to complete the expenditure on equipment, and it is to be advanced by the East Rand Proprietary Mines at 6 per cent. interest, to be repaid in instalments in order not to interfere unduly with the resumption of dividends. The New Comet's deficit will be £38,169, to be borrowed on the same terms from the same company. On the other hand, the Angelo will have a small surplus of about £2,000. The largest deficiency will be that of the Cason Gold Mines, no less than £100,888, and instead of borrowing this the directors have decided to increase the capital from £500,000 to £525,000 by the creation of 25,000 new £1 shares. These will be offered to the shareholders at £4½ per share, in the ratio of one new share for every nine held. At the present depreciated market price they will not be tempting, as the bonus will be very tiny. But the directors need not concern themselves much over that, for the East Rand Proprietary is guaranteeing the issue at £4 per share. As a large holder of Casons, it is entitled to participate in the issue, but it has decided to forego this right in favour of other Cason shareholders. Such favour, however, is not one to be grateful for. As regards the all-important question of dividends, it is apparent that these will not be possible this year if profits are to be utilised for capital purposes. This view is confirmed by the following:- "The directors much regret the necessity of passing the dividends of the subsidiary companies to the end of this year." In the instance of the Cason Gold Mines they hold out the hope that by increasing the capital dividends will be possible with the beginning of the new year. As it only commenced to crush three or four months ago, that will be its initial distribution. If nothing be paid by the subsidiaries this year no dividend can be paid to the shareholders in the East Rand Proprietary Mines, for it relies upon the dividends from the subsidiaries to pay its own.

Despite these unpleasant circumstances and events, the future is not without some promise, and we would not advise holders to part with their shares on a depreciated and demoralised market. Rumours as to the unfavourable positions of the various mines would seem to have been exaggerated somewhat. As regards the Driefontein, which has been probably the most disappointing, the directors say recent development tends strongly to prove that the poor zone on the South Reef has been gone through, and the mine is now entering into better ore. The ore exposed up to the end of August amounts to 440,721 tons of an average value of 9.4 dwts. In addition, 446,328 tons of low-grade ore have been developed, of which a considerable proportion will probably be found payable. There are also more hopeful indications revealing themselves in the Angelo Mine. At the end of August 362,668 tons were exposed of the fairly high average value of 15 dwts., with an extra 255,322 tons of low-grade stuff, which might, to a considerable extent, be put through the mill at a profit. We are assured in the same report that the developments of the New Comet and of the

Cason Gold Mines are also satisfactory. The former shows 348,699 tons in reserve, of an average value of 13.8 dwts., with 309,896 tons of poorer ore, and the latter 366,691 tons, averaging 17.9 dwts. per ton, in addition to 141,948 tons of less valuable rock. So altogether there is no justification for hopelessness, if only enlightened methods of management and strict honesty in finance were to become the fashion.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Illinois Central Railroad.

We have long regarded this fine system of railways as one of the best managed in the American Union, and last year's report does nothing to alter that opinion. Gross receipts for the year on the company's own system rose to $51,636,000, and this money was earned at an expense, including taxes, of $36,437,000 or 70.56 per cent. of the receipts. The increase on the previous year was $2,128,000, but of this $1,218,000 went away in augmented expenses and taxes went up about $108,000, so that the nett gain in earnings was only $802,000, but the total was ample, for the company was not only able to meet all its fixed charges and rents but to pay 7 per cent. upon its $95,040,000 of common stock and to set aside altogether $4,165,000 out of revenue to meet charges which our railways in this country would unhesitatingly place to capital account. Of that amount $1,358,000 has been appropriated to form a fund to pay for the acquisition of new rolling stock. We have to go back to 1892-3 to find a similar appropriation. In that year $1,815,000 was thus set aside, and the reason why another smaller sum is now called for is found in the gradual increase in the freight capacity of the cars. The average capacity of the car is now 34.78 tons as against 21.36 twelve years ago, but the new cars to be now provided will be of 40 and 50 tons capacity and the older, smaller cars will be gradually disposed of. Like all big United States systems, the Illinois Central is extending its hold over outlying districts by the acquisition of controlling interests in local lines and by building additions, but the increase in its own mileage has not been great in recent years. The average length of line operated in the year ended June 30 last was 4,459 miles, and in 1902-3 it was 4,301 miles. Neither these figures, however, nor those relating to the receipts and expenditure, include the Yazoo and Mississippi Valley Railroad, which is a dependency of the Illinois Central but is kept as a separate organisation. Its earnings for the past year were $8,671,000, and if added to the receipts of the Illinois Central would bring the gross earnings of the whole system up to $60,308,000 for the year. Part of the Illinois Central Company's nett income arises from subsidiaries of this description, and its receipts from interest, &c., last year came to $3,255,000 against $2,759,000 the year before. Thus its entire nett income was $18,456,000, of which only $15,604,000 was absorbed in interest, rents, and dividends. Many interesting tables are contained in the official report, but we have not space to deal with them. It may, however, be mentioned that the balance-sheet brings out the total cost of the railroads and equipment at $191,480,000, and that the entire funded debt, including $10,000,000 of leased line stock, is only about $155,000,000 against a share capital of $95,040,000. It is also interesting to note that the Illinois Central has evidently spent more heavily upon its road-bed than many of its neighbours. We judge this to be the case from the fact that the weight of rails in the line is on the whole higher than the average elsewhere. Altogether a return is made of the rails laid down on 5,181 miles of road, sidings, and double tracks being, of course, included, and their average weight for the entire system was on June 30 last 74.08 lbs. to the yard. There are fully 2½ miles laid with rails of 100 lbs. to the yard, and 1,989 miles are laid with rails of 85 lbs. weight, while another 1,442 miles have 75 lb. rails. There are, however, 1,352 miles containing rails of between 50 and 60 lbs. weight and 385 miles with rails of between 61½ and 70 lbs. weight. It thus appears that in spite of the liberality with which earnings are spent upon the property the high cost of steel in the United States militates against the efficient equipment of a road like this, which, like its neighbours, every year carries an increasing weight in its goods trains. No main road over which wagons of 40 and 50 tons capacity run should contain a single rail under 95 lbs. weight to the yard

The Erie Railroad.

We are asked to believe that this property is also tremendously prosperous and it no doubt is making progress. Its gross receipts in the year ended June 30 last were $47,461,000, an increase of $4,139,000 on the previous year. Working expenses, however, went up $2,364,000 to $33,077,000, these being the figures relating exclusively to the Erie Railroad itself. Adding in what are called "other operations" on both sides of the account we get a gross income of rather over $50,000,000 and a gross expenditure including taxes of $35,873,000 or 71.74 per cent. of the gross receipts. These figures left the nett income from the railroad at $14,385,000 and from all sources at $14,130,000, but there was also an income of $1,595,000 from the coal companies controlled by the line. That addition, however, represented a decrease of about $595,000 on the preceding year, and the railroad obviously prospered at the expense of its coal-mining subsidiaries as usual; but still, with these and other helps, the ultimate nett income was brought up to $16,308,000, and after meeting bond interest, rents, car trust obligations, Pennsylvania coal company's sinking fund charges and the 4 per cent. dividends on the first and second preferred stocks besides setting aside $1,927,000 for additions and improvements, there was a surplus of $534,000 left. The Erie Company, however, unlike the Illinois Central, is still pouring out capital at an ominous speed. Altogether it seems to have created and partly issued $20,625,000 of fresh capital last year. There was an increase of $8,625,000 in the total obligations under equipment trusts, which now amount to $15,064,000. Then $12,000,000 of 50-year convertible gold bonds were issued, besides $1,603,000 of general lien bonds. These last, however, were placed in the company's treasury, bringing their total up to $3,000,000 held for future sale, and obviously the company's finances cannot be considered in a healthy position while new money continues to be poured out in this fashion. It is, however, doing an increasing business. Merchandise tonnage last year rose by 3,533,000 tons or 22.30 per cent., and there was even an increase of 1,261,000 tons or 8 per cent. in the total weight of coal carried, while passengers increased in number by 2,061,000 or nearly 10 per cent. The directors appear also to be keeping up the property in a reasonably efficient style, and expenditures on maintenance of way and structures showed an increase last year of $1,047,000 or 29.47 per cent. Moreover, 73 bridges were replaced by new structures with heavier carrying capacity and no less than 32,938 tons of new 90 lb. rails were put into the property. This is all to the good, and as long as the prosperity continues the directors are wise in thus strengthening the equipment and the efficiency of the road-bed. It will, however, be some time before anything in the way of squarely earned dividend can be counted upon for the ordinary stock. It is comparatively easy to pay dividends on the first and second preferred stock, because the one amounts to only $47,892,000 and the other to $16,000,000, but the common stock outstanding amounts to $112,379,000 out of a sanctioned $153,000,000, and the debt of the company, as we have shown, grows continually.

Bahia Blanca and North-Western Railway Co., Limited.

Shareholders of this undertaking are not nowadays very much interested in its actual working, because the line has been taken over by the Buenos Ayres and Pacfic Railway and enjoys a guarantee of dividend from that concern. None the less, it is interesting to note that the system shared in the general prosperity which prevailed in the Argentine during the past year and the total revenue reached £166,400 compared with £124,874 in the previous twelve months. There was an increase of £5,369 in the passenger traffic and rentals and sundries produced £11,143 more. The livestock traffic was also moderately larger, and the result of handling an additional 164,881 tons of merchandise was an advance in receipts of £23,409. It must, however, be noted that of this £14,115 was derived from the carriage of the company's own material on capital and revenue account. Reports of the growing crops are said to be eminently satisfactory, and the area under cultivation along the new line to Huinca Renanco forecasts a considerable traffic increase during the present financial year. Although no portion of this new line, which will form a junction with the Buenos Ayres and Pacific Railway, was open to regular public service during the year, satisfactory progress has been made with its construction, and the rails have now reached Catriló, 161 miles from Nueva Roma. Under the law of concession authorising the construction of the Huinca Renaco the Bahia Blanca has power to build short branches from that line of a length not exceeding 46 miles each, and plans are being presented to the authorities for 83 miles of such branch lines. Extensive additional lines have been undertaken at Bahia Blanca to provide the facilities necessary to cope with the development which is taking place in the district to be served by this company's system. With the completion of the line to Huinca Renanco and the branches just mentioned over 600 miles of railway will be in operation, and efficient terminal station accommodation to economically handle the traffic has had to be secured. The electrically equipped mole at Bahia Blanca has been extended, and seven berths for ocean-going vessels are practically ready. Moreover, it is said to be essential that further extension of the port works should be rapidly constructed. The branch line from the port to Bahia Blanca Town is being relaid and doubled with 100 lb. rails, and the produce market at the latter place has been again enlarged. The main line from Nueva Roma to Bahia Blanca has also been relaid with 100 lb. rails, and traffic facilities have been provided along the whole length of the Bahia Blanca-Toay section. Naturally enough all this has not been accomplished without considerable expenditure, and it is rather startling to find that the company's capital outlay during the past year amounted to £1,011,780. Still a very large amount of work appears to have been accomplished, and on the Nueva Roma branch alone the company spent £643,817. Another £121,025 went on the new mole at Galvan Port and £76,894 on new sidings, buildings, stores, &c., at Bahia Blanca station. The expenses connected with the issue of £1,000,000 of debenture stock amounting to £35,431 were also charged to capital account which is now overdrawn to the extent of £612,401, to provide which the Buenos Ayres and Pacific Company has advanced £633,411. The directors therefore propose a very important increase in the capital of the company, and seek authority to credit an additional 60,000 shares of £10 each, and to issue

these together with the existing 65,000 £10 shares at present unplaced in the form of 4½ per cent. guaranteed shares ranking in all respects *pari passu* with the existing preferred stock, which in future is to be called guaranteed stock. The new shares will apparently enjoy the same guarantee from the working company as those at present in existence. The amount of this guarantee for last year was £68,485, a further £5,420 was allowed for management expenses, and £1,183 for interest, making with interest received on deposit a total of £75,547. From this debenture interest takes £28,000 and the guaranteed dividend of 3 per cent. on the preferred stock £40,485, the balance going for the charges mentioned.

Midland Uruguay Railway Co., Limited.

The ordinary traffic receipts for the year ended June 30 showed an increase of £7,037, but this unfortunately was accompanied by a drop of £10,122 to £2,162 in the receipts from the Government for conveyance of troops, &c., and the total revenue was consequently £2,865 lower at £60,533. Of this decrease, £2,867 was due to passengers and £2,460 to the carriage of animals, the latter being also affected by the drought which caused the principal killing establishments on the line to restrict their operations, but goods traffic increased by 8,354 tons and £2,120, and small improvements in parcels, luggage, telegrams, &c., left the decrease in gross income as above. Savings of £1,151 in maintenance of way and £528 in locomotive power were offset by increases of £288 in repairs and renewals of rolling stock, £913 in traffic expenses and £426 in general charges, with the result that working expenses were a trifle of £120 down at £50,304 and the nett revenue came out at £10,229 against £12,974. The balance brought forward, however, was considerably larger at £10,509, while £481 more at £55,481 was received from the Government guarantee and with an extra £465 at £1,615 taken from special reserve the total available amounted to £77,834 or an increase of £2,813. Debenture interest took £47,178, but £3,402 was spent on new works and £1,998 on new cattle wagons compared with £1,578 on new locomotives a year ago, and revolution expenses, travelling, &c., took £1,591. Then £1,440 was written off for loss on the sale of £17,021 securities received from the Government on account of claims, and after transferring £5,000 or £1,200 more to reserve, the balance to be dealt with was £5,268 smaller at £17,036, but the directors again pay an extra 1 per cent. interest on the debenture stock, and reduce the sum carried forward to £5,241.

Demerara Railway Company.

Improvements were shown by both passenger and goods traffics on all the lines worked by this company during the six months ended June 30, and the old line especially did considerably better. The gross revenue on it was £2,674 up at £15,638, and as substantial economies have been effected in working, the outgoings were only £13 heavier at £6,803, leaving a nett revenue of £8,835 compared with £6,174. On the Berbice Railway receipts rose by £746 to £3,927, but expenses still exceed income, and the loss for the half-year, although £448 smaller than for the corresponding period of 1905, was still heavy enough at £1,792, while on the West Coast line it cost £3,260 or an increase of £221 to earn an additional £422 at £3,124, leaving a loss of £136. After providing for these losses and for debenture interest a balance of £8,508 was left, to which were added the Government subsidy of £6,250 and the balance of £517 brought forward, giving a total of £12,275. The Government subsidy is sufficient to meet the half-year's dividend at the rate of 4 per cent. per annum on the extension preference shares, and out of the balance the directors pay an interim dividend at the rate of 5 per cent. per annum on the 7 per cent. preference stock. This is 1 per cent. more than a year ago, but the directors consider that they are justified in making the advance, as recent advices from the colony point to a continuance of the good traffics during the current half-year. After making this additional distribution there is £3,150 in hand, and of this £1,500 is put to renewal fund leaving £1,650 to be carried forward.

Cox and Co.

On October 9 this private bank had liabilities on current and deposit accounts of £3,395,886, a very slight increase compared with the previous year. Circular notes were out to the amount of £580, so that with the capital and reserve of £400,000 the balance-sheet total came to £3,796,466 against £3,739,873. This very slight increase in resources has been accompanied by a rise of £138,808 to £1,632,263 in the advances to customers, and the premises have evidently been enlarged as their value is now £170,807 compared with £145,690. Cash at bankers and on hand has risen slightly to £519,678, and the bank has taken advantage of the high rates for money lately ruling in the London market, as the money at call and short notice is £80,000 higher at £470,000. This has led to a reduction of £214,742 at £1,003,718 in the investments, and we are sorry to find that the balance-sheet does not contain so many details as hitherto. We used to be told the prices at which the British Government securities were held, but now it is merely stated that the Consols, War Loan and Exchequer bonds amount to £750,250 and the India, Colonial and Corporation stocks to £253,468. This is the more significant because a year ago the Consols were held at the comparatively high price of 88¼, and it would be useful to know if they have been written down to, say, 85, the very top price at which they should be kept in the books.

The Yokohama Specie Bank.

In the half-year ended June 30 last this well-known Japanese bank's gross profits amounted to yen 13,149,833, including yen 678,000 brought forward, which was yen 148,000 more than the similar amount accruing of a year ago. Out of these profits yen 9,786,000 has been paid away in current expenses, leaving the nett profit at yen 3,264,000. Expenses, interest, &c., came to yen 3,555,000 more than in the corresponding half-year, but notwithstanding the nett profits were up by yen 1,254,000 to yen 3,364,000 because the increase in the gross profits was almost yen 4,810,000. In this comfortable position the directors are able to add yen 400,000 to the ordinary reserve and yen 1,000,000 to the special reserve and still can pay the usual dividend at the rate of 12 per cent. per annum, which absorbs on the old and new shares together yen 1,170,000. This done, yen 794,000 will be left to be carried to the new half-year. Liabilities on current and fixed deposits have gone up yen 23,714,000 to yen 123,409,000 and cash is yen 6,693,000 larger at yen 28,285,000. Bills discounted, &c., are yen 12,111,000 up at yen 89,346,000, but bills payable and other liabilities have declined yen 44,813,000 to yen 75,464,000, some of these movements being probably connected with the bank's participation in the loan transactions of the Imperiol Bank of Japan. Bills receivable are down yen 34,931,000 at yen 96,307,000, investments up yen 834,000 at yen 19,213,000, and the value of premises has been increased by yen 41,386 to yen 1,720,000. The allowance for doubtful debts is down yen 18,000 to yen 90,000. Taking the yen conventionally at 2s., the aggregate of the balance-sheet now represents the very handsome total of £23,584,000.

Northern Banking Co., Limited.

The nett profit of this Irish bank for the year to August 31, after providing for bad and doubtful debts, interest on deposits and rebate on bills, amounted to £58,716. To that is added £27,000 brought forward making a total of £85,716, from which dividends at the rate of 11 per cent. with a bonus of 2s. per share on the "A" shares and of 5½ per cent. with a bonus of 1s. per share on the "B" shares have been provided, requiring £51,000. Then £7,900 has been appropriated in writing down Consols to 85, and premises have been reduced by £4,934, leaving £21,882 to be carried forward. No addition is made to reserve, which will remain at £300,000 compared with a paid-up capital of £500,000. At the date of the balance-sheet the bank had notes in circulation to the amount of £548,108, and its deposits and credit accounts stood at £4,195,765. The principal item on the assets side is the bills of exchange, loans on securities, advances to customers, &c., £3,168,869. Total investments, including the reserve fund Consols, stand at £1,423,493, and cash holdings, including balances in London and with other banks, reached £916,546. After making the deduction from profits the premises account appears at £108,000, which does not seem excessive, and the aggregate of the balance-sheet is £5,616,908.

English, Scottish and Australian Bank, Limited.

The favourable season in Australia did not do very much for this bank, as the gross profits for the year ended June 30 only rose by £920 to £249,043, and even this small improvement was swallowed up by the increase of £1,140 to £97,380 in expenses. Nett profits, therefore, were £220 less, but the balance brought forward was £4,597 larger at £16,612, and the directors consequently had £168,275 at their disposal compared with £163,918. Of this interest on the debenture stock and the preferred and deferred inscribed deposit stocks required £90,000 against £90,404, and another £15,000 is put to reserve, leaving £63,275 or £4,762 more to be dealt with. A further 1½ per cent. is again paid on the deferred inscribed deposit stock, but the dividend on the shares is increased by ½ per cent. to 4½ per cent., and an extra £900 at £8,092 is applied to the purchase and cancellation of deferred deposit stock, after which the usual £1,000 is transferred to officers' guarantee fund, and the balance carried forward is raised by £1,300 to £17,912. Deposits and current accounts are up £446,838 at £3,002,692, bills payable and other liabilities have risen by £121,996 to £471,861 and the note circulation is £8,572 larger at £41,008, but the purchases of deferred deposit stock have brought down the perpetual stocks by £8,990 to £2,672,734. Against these increases are shown of £7,643 to £846,100 in cash and bullion and £37,110 in cash at bankers and at short notice. Bills receivable and remittances in transit amount to £699,472 or £87,241 more, and advances and other assets after providing for bad debts and contingencies are £474,195 larger at £4,682,819. Investments in British Government securities and the Colonial Government stocks held against the note issues are unaltered at £100,000 and £52,726 respectively, but bank premises have been reduced by £17,911 to £359,028 through the cancellation of deferred deposit stock.

Western Telegraph Co., Limited.

The business of this company again showed a very satisfactory expansion during the six months ended June 30, and the receipts from messages rose by £31,199 to £284,435, a gain which was all the more satisfactory in that it followed an increase of £37,022 in the corresponding half of 1905. Interest on deposits, rents, and transfer fees gave £1,931 more at £3,433 and interest on investments, after deducting £1,258 for sinking fund, was £4,504 up at £12,430, but against these there was a decrease of £6,439 to £14,257 in dividends on investments in other telegraphic companies, so that the improvement in the total income was £31,195 at £314,555. Expenses were only a trifle of £746 heavier at £75,991 and debenture interest and sinking fund required an extra £1,302 at £15,448, but the outlay on maintenance of cables was considerably lighter at £28,587 compared with £41,420, and after providing £3,650 for income-tax the nett profits came to £190,858 or an improvement of £43,466. To this was added £5,269 from the previous

account, giving £196,148 or £44,844 more to be dealt with, out of which the regular dividends and bonus aggregating 7 per cent. for the whole year are paid, £75,000 is put to general reserve against £60,000, and the usual £5,000 to maintenance ships' reserve. Then a marine insurance fund and a land and buildings depreciation fund are established with £15,000 each, and after writing off £312 for expenses of issue of debenture stock £2,663 or £469 less is carried forward. The general reserve has been debited with £40,394 on account of cost of St. Vincent-Fayal (Azores) cable and £20,000 for partial renewal of Pernambuco-Bahia No. 1 cable, but its total is still £104,199 larger than at the corresponding date a year ago at £1,121,110, while the total reserves come to £144,299 more at £1,216,610. All the 5 per cent. debentures were redeemed on June 30, and the sinking fund, which had been brought up to £62,000, is written off capital expenditure. Under that heading are included £340,817 for shares in other telegraph companies, £37,500 invested in Electra House, Limited, and £86,010 for cable ships, the whole being valued at £2,884,873 or a decrease of £30,858. Investments at cost have risen by £271,761 to £1,025,182, but spare cable, which presumably forms part of the securities representing the reserve funds, is £12,463 down at £42,252. Liabilities for traffic and other balances are £12,253 smaller at £55,615, while amounts due to the company have increased by £8,811 to £117,417, cash is £33,269 up at £101,131, and against a small drop of £1,962 to £9,765 in remittances in transit bills receivable are £8,147 up at £58,401. Altogether an excellent display.

Australian Mortgage, Land, and Finance Co., Limited.

The prudent manner in which this company's business and finances have always been handled enabled it to survive the many distressful years suffered by Australia with a good deal of credit, and now that business there shows signs of improvement the effect of past policy is still more apparent. Naturally enough the company did not escape very severe losses during the prolonged period of drought, which brought so many similar ventures to the verge of bankruptcy, but it had reserves and resources with which to make them good, and so rapid was the recovery that twelve months ago the directors were able to tell the shareholders that all losses had been fully provided. The company now presents what appears to be a very satisfactory balance-sheet, and given a continuance of better conditions we see no reason why the undertaking should not continue to flourish. Shareholders had to submit to a temporary absence of dividend, but two years ago payments were resumed with a return of 2½ per cent., followed by a rise to 6 per cent., and now the directors propose a total distribution of 7½ per cent., or the same as paid for the five years previous to 1902. In their report the board again refers to the favourable season experienced in Australia. The lambing is described as rather above the average, and recent rains give promise of food and water for the ensuing summer. The wool market has also remained strong throughout the past year, and the level of prices is still satisfactory. All this naturally finds reflection in the revenue account, and we find that the profits for the year ended June 30, including the nett result of the wool and produce departments for that period and of the working of the stations for the period ended December 31, 1905, were £208,643, after providing for bad and doubtful debts. This is a gain compared with the previous year of £47,554, and as an advance over 1903-4 of £44,000 was then shown it is clear that the recovery has been rapid. There was a further small increase in the current expenses at £26,263, but the interest on debenture stock required just a trifle less at £79,139. Income-tax took £2,888 and £106,730 is left, including £6,374 brought forward. This nett profit shows an advance of £48,210,and besides raising the dividend to 7½ per cent., as mentioned, the directors transfer £25,000 to reserve fund and write off £12,394 from the investments of that account, leaving no less than £30,336 to be carried forward, against only £6,376 brought in. The reserve fund Consols have now been reduced to 85, quite high enough in present circumstances, and other investments to market value. Their total is £287,580 and the reserve fund now reaches £275,000 apart from another £38,000 which we know the company to have secreted away somewhere. It is satisfactory to note a further reduction of £254,625 in the land, stations, and stock, and properties which now amount to £1,993,560. We do not of course mean to imply that this item should continually diminish, because such would mean that the status of the company's business was at an end, but we hope the reduction points to the fact that the directors are eliminating all doubtful accounts and that those perfectly sound and safe are being retained. The money set free by the reduction in fixed assets is partly represented by a new item of "sundry other investments" standing at £187,395. The cash balance has also been increased from £266,568 to £337,767, and floating liabilities have been reduced by £36,356. Sundry debtors are higher by £28,569 at £121,763, advances on wool and other produce afloat and in store are rather higher at £36,377, and the freehold and leasehold premises, furniture and plant are now valued at £82,986 compared with £53,187. The paid up capital of £520,000 remains the same together with the 4 per cent. debenture stock, £1,900,000, and the 3 per cent. debenture stock £100,000, but the redeemable debentures have been reduced by £4,200 to £3,200, which accounts for the decline in the debenture interest charges.

Otis Steel Co., Limited.

A very great improvement took place in this company's position during the year ended on June 30. How great may be judged from the fact that the profit of trading is returned at £136,236 against £65,500 in the previous year, while in 1903-4 the balance of revenue was no more than £23,000. With interest, transfer fees and profit on exchange the income is raised to £139,799, and after providing administration charges, interest on prior lien debenture stock and a special grant of £1,000 the balance remaining is £132,948. In terms of the agreement with the trustees for the "A" and "B" debenture stockholders the sum of £12,500 must be appropriated for depreciation, and after providing this, together with interest on the "A" debenture stock, the sum still left is £111,130. Of such balance one moiety or £55,565 will be set aside for redemption of debenture stocks, again in terms of the agreement with the trustees, and out of the remaining half £8,211 will be used for payment of the interest of 6 per cent. on the "B" debenture stock. There is still a sum undisposed of amounting to £47,354, and the directors propose a dividend of 5 per cent. on the consolidated stock, adding £25,000 to reserve and carrying forward £5,854. With the sum of £15,869 set aside from the profits of the previous year, together with £70 in the hands of the debenture-holders' trustees, the directors redeemed during the year prior lien "A" and "B" debenture stock to the amount of £19,173 at a cost of £15,893, the unappropriated balance of £46 being now brought forward to the credit of the debenture stocks redemption account. Additions to property during the year amounted to £26,652, and after deducting the mentioned £12,500 for depreciation and the equivalent of the debenture stock redeemed, the land, buildings, plant, machinery and goodwill stand in the balance-sheet at £593,448. Against this the reserve is very slender at £32,350, which includes the £25,000 now added. The company, however, possesses a good supply of liquid resources, as only £55,751 is owing to sundry creditors or on contingencies account, whereas sundry debtors and bills receivable in America alone stand at £134,429. The concern is also strong in cash, having £85,227 at bankers, on deposit or in hand, and possesses merchandise stocks to the value of £91,476.

Rudge-Whitworth, Limited.

Although no mention is made of it in the report, this company has evidently extended its works considerably during the twelve months ended July 31, as £48,072 was spent on freehold property, bringing the total up to £91,355. Plant and machinery after allowing about 10 per cent for depreciation on the old portion is valued at £53,802 or £7,952 more, but loose tools and patterns stand at £14,266 and goodwill remains at the old figure of £56,306. This extension has brought a greatly increased business in its train, and we find liabilities to sundry creditors have risen by £89,191 to £135,556, against which sundry debtors are £49,462 higher at £148,695 and stocks are £35,916 up at £104,983. Cash and bills, however, have dropped from £20,843 to £8,077. Nett profits, after providing for all charges, including debenture interest, depreciation and bad and doubtful debts, amounted to £53,072 compared with £46,513 and a much larger balance of £14,643 from the previous account gave £9,044 more at £67,715 to be dealt with. The preference dividend takes only £4,731, and the directors with their usual prudence restrict the dividend on the ordinary shares to 10 per cent. which requires £9,500 leaving £53,484. Of this £10,000 is again put to property reserve and £24,973 or £5,170 more to general reserve, making these funds £20,000 and £100,000 respectively, and the balance forward is increased by £3,868 to £18,511.

Triumph Cycle Co., Limited.

The increase in this company's trading profits for the year ended August 31 was little more than £1,000 at a total of £20,387. This is a comparatively small advance compared with the achievements of other cycle companies, but we must take into account that in the previous year the company had an increase in revenue of over £8,000, so that in two years the income has gone up by nearly 50 per cent. Including £64 for transfer fees and £2,510 for dividends on investments, the profit from all sources is £22,961, from which the directors provided £5,951 for depreciation on buildings, plant, patterns, patents, &c. Directors' fees are very modest at £250, a sum of £800 is reserved for doubtful debts and £532 for income-tax, leaving the actual nett profit at £15,428. Compared with 1904-5 this is a gain of £1,689, and with £1,197 brought forward the sum for disposal is £16,625. Debenture interest and preference dividend take £4,375 between them, and besides raising the dividend on the ordinary shares from 2½ per cent. to 5 the directors carry £750 to reserve fund against the debentures, add £1,250 to the general reserve fund, write off £5,000 from goodwill and carry forward £1,250. The reserve fund against debentures will now amount to about £5,000, and the latest addition to reserve brings it up to £11,250. The goodwill account, too, is now reduced to £70,000, so that the directors are making some progress in improving the financial position. We hope the £9,500 reserved against investments in various cycle and other companies is sufficient, and note that their balance-sheet value has been reduced from £27,245 to £23,787. Depreciation allowance on the whole seems fair, and the £229 now appropriated completely extinguishes the item of patterns and patents. Trading accounts are a long way favourable to the company, and £7,235 is held in cash and bills besides stock-in-trade of £26,269.

Joseph Lucas, Limited.

The improvement in the cycle trade was reflected in the earnings of this company, which deals in cycle accessories, by an increase of £4,657 to £19,487 in the nett earnings for the 12 months to August 31. With £2,630 or £80 more brought in the total

available for distribution was £4,737 up at £22,117, but after paying the preference dividend the ordinary shares receive only 5 per cent. or the same as a year ago, as the directors prefer to increase the allocation to reserve by £3,000 to £8,000, and to carry forward £1,737 more at £4,367. This brings the reserve up to £30,000, a figure which is none too large considering that goodwill and patents remain at £55,573, while the depreciation of £1,370 allowed on fixed plant and machinery was less than the outlay during the year. Freehold land and works, including £2,325 spent on additions, are valued at £59,614, and loose plant and tools stand at £13,323, the total of these three items showing an increase of £2,398. Sundry creditors are down £1,205 at £6,604, and as stocks have risen by £16,058 to £57,803 this has necessitated a decrease of £5,745 to £13,615 in cash and the disappearance of investments for £4,998 which appeared in the previous balance-sheet. Sundry debtors, however, are £817 up at £20,779 and the liquid assets are therefore still ample enough.

Metropolitan Industrial Dwellings Co., Limited.

The accounts presented a year ago by this philanthropy at 5 per cent. undertaking included two Michaelmas days against one only in the balance-sheet now presented. For this reason probably the gross revenue shows a small reduction of £391 at a total of £32,075. The total charges, however, were reduced by £755 to £21,099, so that the nett balance shows a trifling improvement to £10,958. Add to that the credit of £9,915 brought forward, and the total available for distribution is £20,873, from which the directors pay the regular 4 per cent. preference dividend and 5 per cent. on the ordinary shares, adding £3,372 compared with £1,500 to special repairs fund, and reducing the sum carried forward by almost £1,000 to £8,951. The special repairs fund will now stand at £8,000, this together with the leasehold redemption fund of £4,216 being the only reserve possessed against the properties account of £275,261. There is a suspense account of £2,268, consisting of premiums on new shares, but that is really capital. In other ways the balance-sheet has a poverty-stricken appearance, as £2,160 is owing to sundry creditors or to directors, while only £397 has to come in from sundry debtors, and the cash balance of £4,298 is only just about sufficient to provide the final dividends.

Liverpool and North Wales Steamship Co., Limited.

From the annual report of this company made up to October 5, we learn that a favourable season was experienced, and the steamers carried a larger number of passengers than in any previous year. The result was an improvement in the gross profits of over £2,200 at a total of £18,923. After providing all charges, including £6,935 or £1,215 more for depreciation and £1,240 for debenture interest, the nett sum remaining is £6,787 against £5,078. Out of this the directors again propose a dividend of 6 per cent., adding £2,000 against nothing to reserve, and moderately increasing the balance carried forward from £1,672 to £2,000, subject, as usual, to directors' remuneration and income-tax. The depreciation written off leaves the fleet of four steamers at a book value of £82,500, against which there is now a reserve fund of £7,000. Sundry debtors are considerably less than the amount due to creditors, but £5,379 has been invested in good class securities, and £16,720 is held in cash.

Hornsey Tea Estates, Limited.

With an increase of 3 lbs. at 461 lbs. in the yield per acre the total crop for the year ended June 30 was 1,494 lbs. larger at 208,494 lbs., on which an average price of 43.36 cents or 7.91d. per lb. was realised compared with 43.41 cents or 7.92d. a year ago. The cost of production again worked out at 4⅛d. per lb., with the result that nett profits showed an improvement of £80 at £2,218, but receipts from rent, &c., were £27 down at £37, so that, although £147 more at £165 was brought forward, the total available was only £200 up at £2,420. This extra revenue is applied towards depreciation of machinery, &c., making £400 written off against £200, and as administration charges were rather heavier the disposable balance after providing for debenture interest and preference dividend came to £724 or £41 less, but the distribution of 5 per cent. on the ordinary shares is repeated, leaving £124 to be carried forward. Against the amount written off machinery £209 was spent on fans for the factory during the year, making the nett reduction in this item £191 at £2,582, while the estates, of course, remain at the old figure of £30,000. The way in which the balance-sheet is drawn up would make it appear that the company owes nothing on current account, but this is probably due to the methods of working, as there is a sum of £163 to come in from the agents, which may represent the surplus balance in trading accounts. That item, indeed, with an uncertain one of £280 for coast advances outstanding, makes up the total free assets, as the account show neither a penny piece of cash nor an ounce of tea in hand.

Associated Tea Estates of Ceylon, Limited.

The crop of tea for the season ended June 30 amounted to 834,970 lbs. and cost sold in London 5.43d. per lb., while the price realised was 6.46d., giving a gross profit of £3,584, a better result than has been obtained for several years past. Adding £661 brought in and deducting sundry charges, including interest on loan, the nett balance was £3,773, out of which a dividend of 3 per cent. is paid on the preference shares and £1,000 is put to reserve for rubber cultivation, leaving £973 to be carried forward. During the year 121 acres of forest and jungle were planted with rubber, and a considerable area of the tea has been interplanted, the expenditure to date being £2,022, against which the reserve now amounts to £1,257. Liabilities on bills payable seem rather heavy at £9,650, and in addition £937 is due to sundry creditors, and there is also a loan of £2,000 outstanding, while stocks are valued at £5,923, sundry debtors owe £475 and cash comes to £1,214. Coast advances at £1,763 also appear to be unduly large, even if we allow for the tiny reserve of £200 specially earmarked against this item.

Henry Bull and Co., Limited.

Business was decidedly better with this Australian company during the year ended July 31 and nett profits improved by £2,113 to £20,704, and with £1,041 more at £9,612 brought forward the total available was £3,154 up at £30,316. Seeing that the reserve was brought up last year to the value at which goodwill stands in the balance-sheet the directors evidently consider that it is unnecessary to do more than add another £5,000 to that fund and increase the dividend by 1¼ per cent, to 8¼ per cent., carrying forward a larger balance of £10,929. Liabilities to sundry creditors have risen by £4,102 to £54,911, against an increase of £3,628 to £170,258 in stocks on hand and in transit, but the company has paid off £23,117 of the loan from bankers, reducing it to £6,333. As the result of this sundry debtors are down £3,811 to £54,431 and cash is £13,043 smaller at £2,215. Property account has been increased by £8,240 to £79,220, fixtures, fittings, &c., are valued at £7,898, and goodwill at £40,000, against which the reserve will now stand at £45,000.

Brazilian Street Railways, Limited.

Gross receipts for the year ended July 31, taken at the exchange of 1s. per milreis, amounted to £23,708, an improvement of £905 on last year, and the total expenditure at the same rate was £17,363 or £82 less, leaving a balance of £6,345. As a matter of fact the average rate of exchange was 16.36d. against 14.56d., and this gave £2,594 to be added to the above balance in addition to the £501 brought forward, making together a total of £9,440. Debenture interest, £141 for income-tax and £400 placed to the credit of renewals account reduced this to £6,601, and preference dividend having been paid, the ordinary shares receive 5 per cent. or double what they did in 1905, while the carry forward was increased to £780. To earn the additional gross revenue mentioned above involved running a mileage of 186,804 miles or 286 more, while the number of passengers carried rose 57,628 to 1,523,876. The capital expended prior to December 31, 1898, still figures in the balance-sheet on the basis of 2s. per milreis, and the only provision made for depreciation so far seems to consist of the tiny capital reserve of £757 and the renewals fund of £2,000, of which £1,600 is represented by investments in Transvaal guaranteed stock and War stock standing at about 95½ and 98 per cent. respectively.

MINING NEWS AND NOTES.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

The South African market is still sickly, for prices, instead of recovering, have further receded, and speculators see little or no hope that the new account will be better than the old. Losses in the shape of differences during the fortnight were neither so heavy nor so numerous as they have been in former accounts, though they were sad enough for "bulls." The most conspicuous movement was the appreciable rise in Vaal Rivers of no less than 3⅜, due to reasons we have already explained in these columns. De Beers and Jagers were also consistently strong, the first-mentioned gaining ⅛ and the latter ¼. Premier deferred, on the other hand, were still the object of attack from the "bears," who depressed them to the extent of ⅞. Amongst Kaffir gold shares the principal falls were ½ in Central Minings and Crown Deeps, ⅛ in Angelo Gold Mines, ¾ in Geldenhuis Deep and Heriots, ¼ in Apex, City and Suburban, East Rand Extension, Meyer and Charlton, New Districts, Roodepoort United, and Rose Deep. Other losses ranged from ⅛ to ⅜. Amongst Rhodesians the most conspicuous change was a fall of ⅜ in Tanganyikas. Rio Tintos in the Copper group moved up 1½ against a loss of ⅞ in Anacondas.

As a result of the 6 per cent. Bank rate contangos were a little stiffer than at the mid-monthly settlement, East Rand Proprietary being continued at 7-8 per cent. against 3½-4½ per cent.; Randfonteins at 7-8 per cent. compared with 5-6 per cent., with much higher charges on Modderfonteins and Gold Fields at 7⅛-8½ and 6-7 per cent. respectively. There was a like tendency in the Diamond group, the rate on De Beers being 7⅛-8½ per cent., on Jagers 6-8 per cent., and the same on Premier deferred. On the bulk of shares the rate was 7-9 per cent., both in Kaffirs and Rhodesians; it was also the general figure in the West African and Egyptian sections. Most West Australian shares were carried over at 8½-9½ per cent.

For the new account the Kaffir Circus opened very sorrowfully. No fresh business is reported and prices have continued to waste away. Now and then a leading share loses as much as 5s., but most of them 1s. 3d. to 2s. 6d., Crown Reefs, Crown Deeps, and Central Minings being conspicuously flat. Since the publication of the report from the officials of the East Rand Proprietary mines the prices of the shares in this particular group have shown a tendency to recover, but it is nothing much

to speak of. The fact that no dividends can be paid for the whole of this year is a most depressing revelation, the only comfort to shareholders being the statement that indications in the mines are looking more hopeful.

Rhodesians have picked up since the publication of the circular from the directors of the Tanganyika Concessions giving details of the company's financial schemes, the flotation of a separate mineral company, and the issue of debentures. It is understandable that Tanganyikas and Zambesias should improve, but why it should help other shares is not comprehensible.

Diamond shares have again been interesting in many ways. De Beers and Jagers are strong and higher on the week, while Premiers are weak and lower. New Vaal Rivers are still gambled in without intermission, although the latest circular from the directors is almost as disappointing as the first two were. More particulars are given, it is true, but they do not enable anyone to form an idea of the value of the property.

West Australians have been invariably dull and uninteresting, with hardly a change in the entire group worth noting. The recent inside activity in these has quite subsided, for speculators soon discovered the public are not to be tempted by rising prices alone, despite general statements of improving developments here and there. A blow to this market has been the latest cable from the manager of the South Kalgurli.

Copper shares have been irregular after a strong opening, the later weakness being the effect of an appreciable drop in the price of the metal. Tin has also fallen back, but tin shares remain steady. Broken Hill descriptions have been erratic, local selling and buying proceeding simultaneously. Amongst Indians Champion Reefs have been advancing daily on good buying support.

East Rand Mining Estates.—This, like many another South African company, is making little or no progress. In view of what they describe as the vital questions that remain to be settled when the new Legislative Assembly meets, the directors have not considered it advisable to commence shaft-sinking. Also, in view of the continued depression in the share market, it would be unwise, in their opinion, to embark upon heavy expenditure "when the securing of the additional capital could only have been carried through at a considerable sacrifice to shareholders." So the company is really marking time and waiting upon events. Despite this it almost succeeds in making ends meet, the balance of expenses over income in the twelve months to June 30 being £57, which increases the deficiency in the balance-sheet to £8,844. But it owes very little on current account, though contingent liabilities, representing uncalled capital, amount to £62,447. Cash, too, is by no means a large sum at £1,571, but the firm of Messrs. Lewis and Marks owes the company £48,300, sufficient to keep it going for a long time to come.

New Vaal River Diamond and Exploration Company.—The directors have at last, after "yielding," to quote their phrase, "to considerable pressure on the part of the Press and public," issued some details as to the results of the much-vaunted discoveries at Doornlaagte. In the first circular, they admit, they gave no specific details, "as we were anxious to avoid excessive speculation on the part of the public until prospecting results were confirmed by washing on a large scale." Why, then, did they feed imagination by hyperbolical language? Could they not have been more modest and left results to speak for themselves? However, instructions were given to the manager to supply certain information, and the following was his cabled reply to specific questions:—"Approximate amount of alluvial ground to the present date 200,000 claims, equal to 12 square miles; sunk about 1,200 prospecting holes, proving existence of this quantity alluvial; 27 test washings have been made, yielding from ¼ to considerably over 1 carat per load, average all round about 75 carats per 100 loads; value per carat roughly £6; should consider that the yield of 5 carats per 100 loads on ordinary diggings high estimate; in my opinion our new discovery is so superior to any previous discovery that no comparison can be drawn." All this may look very good, but, after all, the results are of hardly more value than high assays printed in reports or prospectuses of a mine that afterwards proves a failure when worked on an extensive scale. They certainly do not justify the inflation of the price of the shares. But so long as the gambling is confined to House speculators and the public take no part in it the price will soon find its proper level.

Swazieland Corporation.—As usual, the directors have little to say in this report for the year ending June 30, for the position of the company in respect of the negotiations with the Government concessions and land rights remains practically unchanged, the settlement anticipated a year ago not having been arranged. The directors, however, are informed that the High Commissioner now desires to discuss at an early date the terms of settlement with a view to ariving at a satisfactory arrangement. Agricultural operations have been largely devoted to the experimental planting of cotton under the superintendence of Mr. Cleveland, the Corporation's cotton expert. The results obtained so far are considered satisfactory and justify, in the opinion of Mr. Cleveland, the cultivation of cotton on a large scale. Since June 30 prospecting and opening up operations on the Forbes main reef have been suspended, the output of gold obtained from the Daisy mine in the 12 months being 2,611 ozs. of a nett value of £10,014, the Corporation receiving £1,106 as royalty. Some discoveries of alluvial gold having been made on the flats in the Mhlosheni Valley, and an offer having been received by the Corporation for the prospecting of them, the directors have entered into an agreement with a tributor for the systematic working of a certain defined area by means of sluice boxes, the tributor paying in lieu of rental a percentage of the gold recovered and bearing all the expenses of working. The option over Wolverand has not been exercised. Funds are exhausted, but the directors—wise men—do not consider the present moment opportune for raising further working capital. They are not likely to forget it, however, and at the first "favourable moment" the shareholders will learn how the wind will be raised. Two directors have retired in the persons of Mr. John S. Sheldrick and Mr. John Stroyan.

Tanganyika Concessions.—Following up their circulars of July 31 and September 10 the directors of the Tanganyika Concessions give additional information prior to the holding of the adjourned meeting on the 31st inst. The negotiations which have for some time past been conducted in Brussels by Mr. Robert Williams have resulted in arrangements for the formation of a mineral company, to be registered under the law of the Congo Free State, for the acquisition of the whole interest in all the deposits already discovered. This new company will allot to the Tanganyika Concessions 40 per cent., and to the Katanga Special Committee 60 per cent. of the vendor's shares, each party subscribing one-half of the working capital. The half to be taken up by the Katanga Special Committee has been guaranteed by the Société Générale in Brussels and others. For the purpose of subscribing the working capital shares of the mineral company, and providing for the further construction of the Benguella Railway, it is proposed that the Tanganyika Concessions shall create 250,000 5 per cent. debentures of £8 each, to be issued to the public, though prior allotment will be given to shareholders in the Tanganyika and Zambesi Exploring Companies. These will be convertible for the first five years into shares at £8 per share, and be repayable at the expiration of ten years or earlier at the option of the company. Provision will also be made to enable the company to pay the interest accruing during the first five years by the allotment of further debentures of the same series. The entire issue of £2,000,000 debentures is guaranteed for the payment of a cash commission of 5 per cent. on the whole issue, and a call of 100,000 reserve shares for five years at £10 per share. Accordingly the capital of the company is to be increased from £525,000 to £1,000,000 by the creation of 475,000 new shares of £1 each, of which 412,500 will be set aside for conversion purposes, and to satisfy the above call. Three-twentieths of the money that will be received from the debenture issue will be available for taking up the working capital shares in the mineral company, and for general purposes. Should any of the 100,000 shares be called, one-fourth of the proceeds will also be available for the company, whilst balance moneys will be applied to the further construction of the Benguella railway.

Companhia de Mozambique.—This company has not yet succeeded in making ends meet. The receipts in Europe in the year 1905 amounted to £13,339, inclusive of £9,065 premium received on the eighth issue of shares. But the expenditure came to £18,262, so there was a deficit of £4,923. In Africa the income totalled £129,560, and the outgoings £133,902, showing a loss of £4,342, a total of £9,265, which the directors propose to meet from the special reserve. In the analyses of the African receipts increases are shown in the hut and poll taxes, concessions and ground rents, mines, commercial taxes, registration tax, interest, discount and rubber tax, with decreases in customs, Post Office, port dues, tolls from new bridge, land tax, stamp duties, licences, fines, Beira hospital, exchange and sundries, attributed to the general depression in business, particularly at Beira and Macequece. The report says native labour was abundant, and easy to recruit in the mining region. It costs 30 per cent. less than in Rhodesia, and nearly 50 per cent. less than in the Transvaal. By decree of November 16 last year His Majesty's Government approved of the alterations in the mining regulations, which were suggested by the directors with a view to reducing considerably the rents of the alluvial claims, and making the provisions of the regulations more simple and liberal. There has also been a reduction in the railway tariffs from Beira to the interior, even as far as the Victoria Falls, to remain in force until December 31, 1907.

Benoni Gold Mines.—The directors of this company have decided to suspend operations "until such time as the labour supply is assured." It is no news to learn that it is hard up. Some time ago it borrowed £20,000 from Messrs. Farrar Brothers and the Anglo-French Exploration Company, but this has all been exhausted, and apparently these creditors will lend no more. So it looks as if this is the more direct cause of the suspension than the labour position, which is actually improving. However, when, in the opinion of the directors, the supply is assured the directors hope to make arrangements for the provision of further working capital. It is very good of them to promise to submit a scheme at some indefinite date for the consideration of shareholders. The mine is still only in the early development stage, and under the most favourable circumstances profits were a long distance off.

Jumbo Gold Mining Company.—Twelve months ago this company did not exercise its option to purchase the Jumbo Extension claims either for 100,000 shares or for 75,000 shares and £15,000 in cash. It appears, however, that the directors consider the claims more valuable than they thought they were, for they have now decided to buy them from the New Rhodesia Mines for 80,000 fully-paid £1 shares and £15,000 6 per cent. first mortgage debentures. It remains to be seen if they are worth it.

Balaghat Gold Mining Company.—The directors have made the somewhat astonishing announcement that they have completed an agreement for the purchase of the Nine Reefs property, with all the buildings, machinery, plant, and stores, for

a sum of £10,000. This is not a ruinous payment, but it is probably more than the property is worth. The Nine Reefs Company is a quarter of a century old, having been originally formed in 1881, and during this long period it has gone through four reconstructions and never paid a dividend. In the last balance-sheet, September 30, 1904, the debit amounted to £52,555, and the machinery and plant alone were given a book value of £20,012. The property adjoins the Balaghat mine to the north, and it is argued that it will be possible to exploit it to much greater depths than hitherto by continuing the drivages of levels from Ogle's and Haines's shafts. Such explorations can be carried on at a comparatively small outlay, as the expense of shaft-sinking will be avoided. It does not follow that the Balaghat has got a "bargain."

Ouro Preto Gold Mines of Brazil.—This company was able greatly to improve its position in the past twelve months, the amount of gold produced and the profit earned being the largest in its history. In all 73,998 tons of ore were crushed, producing 25,425 ozs. of bar gold, compared with 75,660 tons and 19,573 ozs. respectively in the preceding twelve months. This shows a material improvement in the value of the ore, the yield advancing from £1 os. 6½d. per ton to £1 7s. 7½d. A greater percentage of ore was mined from the main ore shoots, and the ores were delivered at the mill more free from waste than in the previous year. The value of the gold produced was £102,213, the gross revenue being made up to £103,431, with £1,218 received from interest, rents, and transfer fees. Expenditure took £87,525, so the nett profit was £15,905. This enables the directors to write off the debit balance of £3,081, to redeem £2,000 of debentures, to allow £1,297 for depreciation, and to pay up arrears of preference interest from September, 1903, to December last, leaving only six months' dividend behind. The sum taken forward is £1,144. With the above £2,000 the whole debenture debt is repaid. Hopes are held out that the improvement will continue.

San Francisco del Oro Mines.—A circular from the directors of this company states that recent development work has been of a most important character. Three shafts have been sunk to the fourth level, and have all cut the reef there, showing it to be of greater width and higher value than in the third level. In a part of the mine where the reef had faulted it has now been struck, and is 9 ft. wide, of which 5 ft. is shipping ore. The manager estimates there are 280,000 tons of good ore averaging about 26 ozs. of silver, 11 per cent. of lead, 20 per cent. of zinc, and a little gold, and computes that the completion of the fourth level should add another 200,000 tons of ore to the above quantity. On May 16 the directors said they hoped to hold the annual meeting in a few weeks from that date, and they excuse themselves for deferring it by a desire to await results from the drivage on the reef at the fourth level. They now say the meeting will be held before the end of the year.

Royal Oak of Hauraki.—Three times this New Zealand company has undergone reconstruction and now the directors propose a fourth one. This is to furnish funds wherewith to develop the property acquired near to the Mount Boppy mine, the developments so far being described as satisfactory. The new company is to have the title of the North Mount Boppy, Limited, with a capital of £106,250, in 850,000 shares of 2s. 6d. each, credited 2s. 3d. paid up. This new property may bring the company success eventually, but it is doubtful. For though the consulting engineer says that east of the shaft a new lode has been opened 24 ft. wide and the drives extended along this prove it to be gold-bearing throughout, with some good ore in it, he adds that up to the present no payable chute has been opened. This hardly looks promising or encouraging.

Dharwar Reefs Company.—A meeting of this company is convened for Thursday next to receive the sanction of the shareholders to an increase of the capital to £235,000 by the creation and issue of 60,000 new £1 shares. Of these 25,000 will be issued to the Dharwar Gold Mines, Limited, as purchase consideration of Block No. 19, of which the Dharwar Reefs had a lease, the balance of 35,000 shares to be issued for additional working capital. Crushing is promised in the early part of the new year, after which monthly returns may be expected. Other blocks are owned, known as Nos. 1, 3, and 4. In respect of No. 3, an "influential" company has been given an option of purchase for three years in respect of it.

Tomboy Gold Mines Company.—During the financial year ended June 30 104,063 tons of ore were milled, from which bullion to the value of $947,981 was realised at a cost of $514,586, resulting in a profit of $433,395. In sterling the nett profit was £80,315, to which has to be added a balance of £20,047 from the previous accounts. Out of this a couple of dividends have been paid, of 1s. 6d. per share and 2s. per share respectively, leaving a sum of £47,863 to take forward. In a supplementary estimate of the 12th inst., the general manager puts the ore reserves at:—Unbroken reserves awaiting extraction, 284,000 tons; ore broken in the stopes, 46,000 tons; probable ore above the 1,650 ft. level, 70,000 tons; total 400,000 tons. These figures compare with a total of 378,060 tons in the Argentine property on November 1, 1905. As regards the Tomboy group, development work has been continued in the Mountain Chief claim, on the 600 ft. level, but without disclosing ore of milling value. This section of the property has been worked through tributors, from whom royalties to the amount of $2,054 have been received. It is stated that the results of exploring the Argentine claims in depth have been highly encouraging.

Pahang Consolidated.—In their report for presentation to the statutory meeting the directors say the total number of ordinary shares of 5s. allotted is 464,000, of which 50,000 go to the Malay Exploration Syndicate, or its nominees. The balance of 414,000 shares have been allotted on the footing that they are to be paid up in cash. 54,500 preference shares remain to be allotted as fully paid to the Pahang Corporation and the Pahang Kabang for the purchase price of the properties, whilst 36,000 ordinary shares are to be allotted fully paid to the Malay Exploration Syndicate for the property to be transferred by them. The total amount of cash received by the company in respect of the 414,000 shares issued for cash is £27,642.

Winchester Gold Mining Company.—Once again the directors of this sorry concern, which has vainly sought success in more than one quarter of the globe, propose reconstruction. It may surprise many who are not patriarchs that this company originally came into existence in 1880. In other words, it was the famous Callao Bis; later, in 1895, after three reconstructions, it was christened the North Coolgardie, and in 1903 received its present title. We can understand that the directors have "reluctantly" decided to advise another reconstruction, funds being exhausted, but it would be better advice to end the company's existence. The assessment is put at the modest-looking figure of 1s. per share, but after such an experience of failure and loss it would seem folly to put another penny into it. And what hope is there that it would be the last reconstruction? The money is wanted to develop the property in Venezuela. For the discovery of a reef has been reported here, and the directors want to sink to get to it. The company also possesses claims in the Heidelberg district, Transvaal, taken over from the Heidelberg Dasport Company in default of a loan, but we believe these are to be sold. And this might even eventually be the fate of the Venezuela property.

Shantung Mining Company.—Operations during 1905-6 resulted in the production of 136,990 tons of coal in the Weihsien district, being 100,000 tons in excess of the preceding year. A reduction in the revenue from the sale of coal occurred owing to the unremunerative prices at which contracts were concluded for deliveries at ports in the Far East, also on account of the lower prices at which coal was sold in the interior of the Province of Shantung and at Tsingtau. Now that the coal washing plant has been brought into operation, the directors hope that the resulting classification will be the means of generally obtaining higher prices both in the country and at the ports. Further exploration was made to determine the deposits of iron ore, and the presence of workable magnetic iron ore has now been ascertained near the main line of the Shantung. At present £450,000 out of the capital of £600,000 has been paid up, and a further call is contemplated.

Mining in Chili.—On July 6 a paper was read before the Society of Civil Engineers of France upon the mining industry of Chili. The author of the paper was Mr. Vattier, who has lived many years in the Republic. In the extreme north of Chili, he says, a railway has been commenced, which will connect the port of Arica with the town of La Paz, in Bolivia. It is being built by a Chilian company, will cost more than £2,500,000, and will open up a new territory for large mining and metallurgical enterprises. In Tarapaca some rich copper mines have been discovered at Collaherasi, whilst at Antofagasta, the copper mines at Chuquicamata, which at the commencement of working used to produce only ore in the form of atacamine powder, containing 2½ to 3 per cent. of copper, are now exploited at a depth of 200 metres, where there are thick veins of copper in dioritic rocks. In 1904 the output of these mines amounted to 30,000 tons of copper ore, yielding 18 per cent. of pure metal.

Brilliant Block Gold Mining Company.—During the half-year to July 20 the mill crushed 7,694 tons for the public and 4,793 tons from the company's own mine, an increase of 1,296 tons. At the cyanide works 9,900 tons of sands and slimes were treated for a yield of 5,283 ozs. of bullion, realising £6,687. Of the tonnage dealt with 4,563 tons were purchased from the public, 4,416 tons came from the company's mine, whilst 921 tons was old tailings on hand. The credit balance at the commencement of the term was £459, but at the end of the half-year there was a debit of £283, a result attributed to a falling off in the quality of the stone from the mine. Prospects look rather doubtful.

TRADE AND PRODUCE.

Wheat.—Not much has been done in the cargo market this week, and though the tendency throughout was distinctly in buyers' favour, there was little inclination shown to deal. Quotations for English wheat, both in London and the provinces, are decidedly weak at present, and farmers' deliveries are consequently small, the total for last week being 71,352 qrs., averaging 26s. 6d., as compared with 90,548 qrs., averaging 27s. 1d., a year ago. Imports of foreign wheat were, however, heavier, aggregating 360,967 qrs., as against 265,883 qrs. twelve months ago, while those of flour totalled 112,000 qrs., against 115,467 qrs. In the States the more favourable crop news from the Argentine and the unsettled outlook in the financial world created an easier tendency at the end of last week and the beginning of this. Later on the smaller movement gave the bulls heart, and with sellers showing more reserve prices hardened, the movement being assisted by Bradstreet's estimate of 65,855,000 bushels being in sight east of the Rockies as compared with 64,536,000 last week, and 44,087,000 last year, and which the market was pleased to consider less bearish than it anticipated.

Wool.—Although more inquiries have been made in certain quarters, the actual amount of business resulting from them is unimportant, as topmakers demand prices above spinners' views. Yet even so the inquiries are regarded as a hopeful sign and evidence that consumers are at length anxious to know the prices at which contracts can be placed, particularly for crossbreds and

fine merinos. Quotations for next year are absolutely prohibitive. Round Leeds trade is active, and the prospects for the next spring season are decidedly encouraging. Ready-made clothing factories are working full time, but so far stocks are slow in moving off, and will be until a cold spell comes to give them some impetus. About 5,000 colonial woolled sheepskins are to be offered on Thursday, November 1, at the Wool Exchange.

Linen.—The demand for flax at farmers' markets has been brisk, and rates have advanced. Moreover, the quality showed signs of improvement, and some well-grown and nicely handled fibre was offered and fetched extreme prices. Yarns continue to maintain a strong position in every department, and the volume of buying has been considerably greater of late. The most prominent feature has been the further and abnormal advance in foreign yarns, based on extensive local buying in the various countries. Even before this last rise most foreign yarns appeared in comparison with Irish to be over-priced, and now this increase puts them completely out of court for the time being. Nothing out of the ordinary has occurred in the manufacturing end. Business has been good all over, and is likely to be so for some time, since textiles are simply sharing in the general improvement everywhere observable, and until this improvement reaches its zenith we are not likely to see much change in the linen market. Prices everywhere are advancing, but as yet no figures quoted have had the effect of checking demand, and all departments report a satisfactory trade. For bleached and finished linens the demand both on home and foreign account displays a tendency to increase, and already actual orders, as well as the number of inquiries, are greater in some directions. The home trade has commenced to operate more freely of late while outside markets are certainly doing a full average business.

Cotton (from our Manchester correspondent).—A firm tone has prevailed in most quarters of our market during the past week, but a rather quiet feeling has shown itself in most sections, the turnover in both cloth and yarn being on rather a small scale. The raw cotton situation has been a good deal discussed, and the forward movement of the crop, which compares very favourably with last year, has been well received. It is rather remarkable, however, that the larger receipts at the United States ports and the heavier shipments to this country have had practically no influence on values in the cotton markets. The extent of the American growth is undoubtedly uncertain, and buyers for the most part seem to have deferred placing orders of bulk pending more settled conditions. The Egyptian crop is reported to be doing very well, and from most quarters the extent of the crop is expected to be quite equal to that of last year, and some people are expecting even a larger yield. In cloth for export numerous offers have been received, but most of them have been too low for manufacturers. In most cases the bids have been so far out that shippers have not thought it worth while to wire out the prices demanded on this side. A waiting attitude seems to have been the position adopted by quite a number of exporters. The inquiry for Calcutta is healthy, but not much reaches the order books, but the other outlets of India are not doing much at the moment. An increasing trade has come round for Japan, which has been mostly confined to certain makes of shirtings, and towards the close some difficulty has been experienced in arranging delivery. Hardly any change can be reported of China, the demand all round being unimportant, and sales on quite a small scale. The minor markets of the Continent have bought goods of a miscellaneous character to a moderate extent. The business, however, has been mostly in small lots, few orders of weight being reported. The South American markets have not been active operators, both price and delivery being not easily overcome. In home trade goods a healthy demand has again shown itself, and producers are now deeply engaged. Buyers have had some difficulty in obtaining the delivery which they require. T-cloths and Mexicans are deeply engaged, and buyers have not been able to purchase freely owing to the stiff attitude of manufacturers. A little better demand has shown itself for Burnley printing cloths, but the sales cannot be described as important. Glossop goods are very firm and well sold. In coloured woven goods and sateens a fair business has been done at full prices. In American yarns for home use the demand has not been very large, users for the most part apparently deferring placing orders as much as possible. The medium numbers in weft are decidedly scarce, and some fancy prices have been paid for the quick delivery of these numbers. The coarser numbers in weft continue to move off better, and the margin is very satisfactory. In bundle yarns for export the prices quoted by spinners have been too high for shippers to purchase freely. A very fair Continental business, however, has been done in cops. Egyptian yarns are stiff owing to most producers having extensive engagements. A steady demand has again shown itself with a moderate trade from day to day.

In New York the cotton market opened firm from 30 to 33 points up, and the rise was maintained for some time on adverse weather reports, crop estimates, &c. Towards the end of the week there was a drop of several points, chiefly on fears of a bearish ginners' reports and general selling. Subsequently the report issued by the Census Bureau showed that the amount of cotton ginned up to October 18 was 4,910,490 bales.

Coal.—Trade in all coals remains without change, except that prices are advancing. Everywhere demand seems to justify the rise, and Lancashire and Staffordshire owners have declared an advance of 1s. per ton on all descriptions. In the North furnace coke is quoted at 19s. per ton, best steams are 11s. f.o.b., and seconds 10s. Shipments from the Welsh ports showed a large increase last week, over 136,000 tons above the corresponding period of last year, and large contracts are being received at prices considerably above those ruling last year. Everywhere quotations have bounded up; on Cardiff Exchange best steams are now quoted at 16s. 3d. to 16s. 9d., best seconds 15s. to 15s. 9d. Swansea anthracite best malting is 20s. to 21s., seconds 16s. to 17s.

Copper.—Quotations have fluctuated more this week than of late, the market being apparently somewhat unsettled by last week's sudden rise and fall, and though at times prices have gone beyond the £100 mark, they have as a rule kept just below that figure. How long these abnormal rates are going to last it is impossible to say with consumption so far in excess of supply as it is at present. Already something very like a famine in copper exists, and with the American producers sold out well into next year there seems but little prospect of lower prices for some time to come. On Thursday after a little irregularity the closing prices were £97 10s. for cash and £97 15s. three months, and yesterday left off at £97 5s. and £97 17s. 6d. respectively.

Iron and Steel.—The iron and steel trades are still exceedingly buoyant, and despite apprehensions felt over the labour troubles, the prevailing conditions are considered very encouraging. There is no falling off in the enormous and growing demand for pig-iron for shipment to the Continent and the United States. Three boats for America, with an aggregate tonnage of some 16,000 tons, have recently been fixed, while the total orders given to this side by American interests are said to amount to about 100,000 tons. In addition to inquiries for Cleveland iron important orders have been secured for Scotch iron, the makers of which have placed their output for months ahead. Very favourable reports come from Germany, ironmasters there being sold out up to the end of the first quarter of 1907, while the scarcity of half-finished material is causing grave apprehensions, as the German Steel Trust has had to postpone deliveries on all current contracts. In Germany there is not enough pig-iron and steel to satisfy the demands of consumers. Makers of Cleveland pig-iron have scarcely any in stock, and it would be difficult to get rapid delivery anywhere of as much as 500 tons. On the 24th inst. the stock held by Messrs. Connal's was 581,602 tons, a decrease of 17,353 tons.

Tin.—This metal has been active all the week, and quotations were cash £200 and three months £199 15s. Later a weaker tendency developed under increased offerings, and in the absence of support a sharp break occurred, which was, however, of only a temporary nature. At one time on Thursday there was a loss of £2 on realisations, but prices recovered towards the end and closed 20s. to 25s. lower at £197 cash, and £197 5s. three months. Yesterday (Friday) there was a sharp reaction to £195 10s. cash, and £196 three months.

Tea.—The prolonged strain of the past three weeks, says Messrs. Gow, Wilson, and Stanton's, Limited, circular, has begun to tell upon the market, and signs have not been wanting that any additional pressure might prove adverse to the interests of importers. The Indian market on Monday showed less animation, last week's prices were not always attainable, especially for lower medium and commonest kinds, and on Wednesday the tone was even weaker. But the average obtained for the 44,164 packages sold out of 47,722 packages offered came to 8.30d., against 8.12d. last week, as special varieties fetched high prices. In the Ceylon market the tone was generally firm, and prices were maintained throughout, except occasionally. In some of the poorer liquoring qualities, 22,507 packages were offered, and obtained the same average of 8.20d. as last week, against 7.82d. in 1905. Javas had a small sale of 1,777 packages without quotable change in prices. From January 1 105,617 packages on garden account averaged 5.85d., against 95,476 packages, averaging 5.63d. during the same period of last year.

Sugar.—The recovery due to the hurricane in Cuba did not last long, when it was learnt that the damage was done principally in the west of the island, the eastern and central districts suffering little. The strength of the situation, as Mr. Czarnikow points out, remains in America, where the nominal quotation is about 6d. above Europe, one cargo having been sold again at 9s. 4½d. c. & f., but where new Cuban sugars can be bought cheaper. The new season may start there with 130,000 tons less supplies, unless more beet is bought, or Cuba begins grinding earlier, in order to offset the want of labour. We likewise may get more Javas next summer if we attract them, but we do not believe in Licht's 400,000 tons more visible supplies on September 1st next, based on nearly 300,000 tons more cane and apparently 300,000 tons more Russian supplies, with a world's consumption of only 250,000 tons less. There is a deficiency of 140,000 tons in Russian stocks, and the tendency is to keep old sugar over there for fresh home allotments. To calculate final stocks for statistical countries by borrowing incomplete figures from non-statistical parts is always confusing. It seems preferable to estimate only the amount of statistical sugar displaced by the Russian and Indian crops, and possibly by increased invisible stocks outside Europe. We may finish with stocks as moderate now, and we shall then enter a fresh season of probably large requirements, owing to the natural increase in the world's consumption, which for many years past has always been shown in every second year only, and to obtain the necessary supplies we must pay fair prices for next spring sowings. The situation at present level is therefore not disquieting, unless the factory estimates should be unexpectedly high, but temporary fluctuations during the height of the producing season are natural. The New York market has been firm, though dull. Landings in the three ports for the week amounted to 14,000 tons and meltings to 46,000 tons, reducing stocks to 147,000 tons.

COMPANY MEETINGS.

A. AND F. PEARS.

The fourteenth ordinary general meeting of the shareholders of A. and F. Pears, Limited, was held on Wednesday at the Holborn Restaurant, New Oxford Street, W.C., Mr. Thomas J. Barratt (the chairman of the company) presiding.

The Secretary (Mr. Edward Praill, F.C.I.S.) having read the notice convening the meeting and the certificate of the auditors,

The Chairman said: Gentleman,—I do not propose, nor do I think it at all necessary, that I should detain you very long to-day. Without doubt, you have with satisfaction studied the annual balance-sheet and report, which has been sent to you for the fourteenth time. The directors have on each occasion met you both with pleasure and satisfaction to themselves, and you have kindly expressed a similar satisfaction. It is unnecessary, perhaps, for me to remind you that out of these fourteen years, inclusive of the present, you will have once received 8 per cent. and for thirteen years 10 per cent., which rate has been maintained for the past twelve years in succession. The year under consideration has been a successful one, and but for the exceptional prices ruling for raw materials it would have been very much more so. Nevertheless, we have made a gross profit of £168,026, £4,549 of which is interest on investments and cash deposits. After deducting all expenses, together with a further £4,869 carried to depreciation and leasehold redemption fund, making a total of £108,751, a net balance remains of £59,274; and adding thereto £1,815 not divided last year, we have £61,089 to deal with this year. After paying therefrom the interest on the debenture stock, £10,000, and the interim dividend of 3 per cent. on the preference shares for the half-year, £6,000, and the half-year's interim dividend on the ordinary shares at 4 per cent., £10,400, and carrying to reserve a further £3,500, we have £31,189 still to divide amongst us. This enables us to pay the balance of the preference dividend at the rate of 6 per cent. per annum, taking £6,000, and the ordinary dividend at the rate of 12 per cent. for the half-year (making 10 per cent. for the whole year), or £15,600, and 5 per cent. for the year to the deferred shareholders, £7,500. These payments will leave £2,089 undivided, which we propose to carry to the next year. These figures, I think, must again be in every way satisfactory to you. (Hear, hear.) Now, as to our financial position. That, too, is a very strong one, and one with which we are also eminently satisfied. Before dividing profits we have, in the fourteen years, put £150,481 to reserve and leasehold redemption, and, as your directors have repeatedly informed you, the premises, the plant and stock being just as good to-day, indeed, worth very much more than they were at the birth of the company, these reserves, with almost the sole exception of £9,500 required for leasehold redemption, and £14,500 reserved for depreciation of our investments—making together £24,000—have, consequently, only been wanted to provide for a possible "rainy day," which, during the past fourteen years, we have not experienced. (Applause.) We say, therefore, that we regard the £150,481, less the aforesaid £24,000, as being practically a writing off of the cost of the goodwill to that extent, and, of this amount, some £99,000 has been provided at the expense of the deferred shareholders, who were legitimately entitled to it under the prospectus and articles of association, and only £18,000 has been contributed by the ordinary shareholders. You will have observed that beyond the £5,000 of debenture interest at the end of June you were only owing £23,258, plus £351 unclaimed dividends, whilst on the contra side we had £54,371 due to us, besides liquid assets—namely, cash balances at our banks in London and New York, £42,037, and gilt-edged investments (Consols, Metropolitan stock and our own debentures) to the value of £132,790 at cost. You will fully recognise the safe and strong position we are in to-day, and your directors can thus "sleep o' nights" comfortably and without anxiety. Indeed, the position is so strong that had we taken £50,000 less of capital, as we could have afforded to do, we should have had more profit to divide, as we have to pay 10 per cent. on that excess of capital, whilst we only receive 3 per cent. on our investments, so that we should have had a further £3,500 to the advantage of the deferred shareholders. These few remarks, under the circumstances, I regard as all that are necessary for me to make. I shall be happy to answer any questions from any shareholder as far as they may be in the interest of the company.

The motion for the adoption of the report and accounts was duly seconded and carried unanimously after a little discussion. able, and it was based upon two years' profits.

On the motion of the Chairman, seconded by Mr. Alexander T. Hollingsworth, the retiring director, Mr. Byas, was unanimously re-elected.

The Chairman moved and Mr. Byas seconded the declaration of dividends as set forth in the report—namely, at the rate of 6 per cent. per annum on the preference shares, 12 per cent. per annum on the ordinary shares (making 10 per cent. for the year) and 5 per cent. per annum on the deferred ordinary shares.

The motion was carried unanimously.

Mr. Stuart Gordon proposed the reappointment of the retiring auditors, Messrs. Turquand, Youngs, and Co., which was seconded by Mr. Mansfield and agreed to.

The Chairman remarked that the board had received a letter from Mr. Birks to the effect that he wished to make some comment on the original capitalisation of the company and bring forward a suggestion. He was happy to afford him the opportunity he desired.

Mr. H. W. Birks then explained his proposal, which was to the effect that there should be some rearrangement of the capital account with the view to getting rid of the deferred shares.

The meeting approved of the scheme unanimously, and the Chairman said the directors would shortly call a special general meeting to which the matter would be referred.

BALDWINS, LIMITED.

The annual meeting of Baldwins, Limited, was held on Monday at Birmingham, Mr. Alfred Baldwin, M.P., presiding.

The Chairman, in moving the adoption of the report and balance-sheet, said: I will draw your attention for one moment to the figures. The only point in the profit and loss account is that the gross profits for the year ended June 30 amount to £110,000 in round figures, as against £69,000 the year before. On share capital and debentures the figures are all exactly the same as the year before. Trade creditors are £165,000, as against £131,000 the year before, and this year we owe our bankers £9,000 instead of having nearly £19,000 in hand. That is very easily accounted for by the expansion of business and also the rise in prices. On the credit side the land, buildings, plant and machinery stand at £646,000 after depreciation has been deducted, against £634,000 a year ago. The stock is £255,000, as against £208,000, the increase of stock being not only a question of value, but very largely a question of increased business. The investments stand at £10,370, as against £7,810, and the sundry trade debtors, after fully providing for all doubtful debts, stand at £215,802 against £190,000. The premiums have been paid for the redemption of debentures and depreciation of leaseholds, so that that fund is increased to £23,818 against £18,189. Goodwill, trade marks and licences stand at the same amount. The profit and loss account shows a balance down of £45,101, as against £5,734 the year before. From the figures I have now laid before you it will be seen that I can congratulate the shareholders on better results this year than last. The volume of trade carried on by the company is expanding, and we have dealt with the accounts, as we have in each year preceding, in a sound and conservative manner. The Elba colliery, where, you will recollect, we had the disastrous explosion, proved unsuccessful in working, and after careful consideration it was decided to abandon it. It no longer remains among the properties of the company, and your directors have been able to write off the value at which it stood in our books direct from trading account. You may remember that at our last annual meeting I pointed out that the prosperity of the British steel trade depended on the home consumption of the German and American markets. During the last winter there arose such a large demand in those countries that their powers of production have been taxed to the uttermost. For the time being the need for disposing of their surplus at dumping prices has disappeared, and the British market has responded naturally to the conditions. In consequence there has been a better profit, and the workpeople have been employed full time. For the present, at any rate, there are no signs of decreasing prosperity in Germany and the States. There are, however, other causes for the improvement of the company's position. We have given attention to the extension and development of other branches of our business where foreign competition at present has not been so severely felt, and increased revenue has come in from those sources. During the last three years a considerable amount of time and money have been spent by us in developing our coal properties, and the prospects are now, we think, favourable. Recognising as we do, that coal mining is, and always must be, of a somewhat speculative nature, it is a subject on which we congratulate ourselves that all our coal properties have been valued at and stand in our books at most reasonable figures. Your board have entered into an agreement with the Gloucester Railway Carriage and Wagon Company for the joint purchase of the Port Talbot Steel Company's works and for the conduct of a business there that we believe will be of benefit to both companies.

Colonel Wright seconded.

Mr. F. B. Goodman said he never liked to see goodwill figure at a very large amount in the balance-sheet. He had not got a prospectus and did not quite know what the goodwill was made up of, and he would be glad of a little information on the point.

The Chairman replied that the goodwill stood exactly where it did when the company was formed, except that there was now against it a reserve of £30,000. The amount included the whole of the licences and trade marks, which were very valuable, and it was based upon two year's profits.

Mr. Goodman: The licences and trade marks will be very valuable, but I never like to see a large goodwill.

The Chairman: We know the trade marks are valuable.

Mr. A. V. Jerome thought it was rather misleading to have the balance on the profit and loss account described in the balance-sheet as profit for the year. The profit for the year was about £45,000, but that was after deducting the preference dividend for the year.

The Chairman: It says "profit for the year as above."

Mr. Jerome: That is certainly true, but anybody would take that as being the profit for the year.

Colonel Wright: Would you take it so?

Mr. Jerome: I think so.

The Chairman: I think it is the common form, as far as I have any experience, at any rate. It is Turquand, Youngs and Company's form.

Colonel Wright: They will have it.

The report was then adopted, and a 2½ per cent. dividend on the ordinary shares was declared.

The formal business of the meeting having been transacted, it closed with a vote of thanks to the Chairman.

LONDON MOTOR OMNIBUS COMPANY, LIMITED.

The first ordinary general meeting of the London Motor Omnibus Co., Limited, was held on Monday at the Hotel Great Central, Marylebone Road, N.W., Mr. A. T. Salisbury-Jones, the Chairman of the company, presiding.

The Secretary (Mr. Stanley D. Gilbert) having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, reminded those present that the company was registered on January 7, 1905, and the first issue of share capital was fully subscribed. Work was begun on March 27, 1905, with five omnibuses, and had made continuous and steady progress from that date. In July of last year the board called the shareholders together for the purpose of obtaining their consent to increasing the capital to £303,000, their issued capital at that date being £63,000. At that meeting they authorised the issue of £200,000 6 per cent. preference shares, and in November last the whole of this capital was offered to the public and fully subscribed. In the following month the holders of the ordinary shares received an interim dividend for the period ended October 31 at the rate of 10 per cent. per annum. In April last Mr. William Roberts suddenly resigned his position as a director for the purpose of joining another concern. In his place they had secured the services of Colonel Charles Allen, who was connected with some of the largest industrial companies in this country. At the time the company made their continental purchases there could be no possible question as to the wisdom of this course, as no manufacturers in this country at that time had had the necessary experience for turning out a thoroughly efficient machine for the company's purpose. It was, however, gratifying to find that chassis of home manufacture were now being turned out almost, if not quite, as reliable as the best machines of continental manufacture. The directors deeply regretted the sad accident which happened in July last at Handcross Hill. They had no reason to think that any blame whatever attached to their company or its officials, and they were advised that they were under no legal liability for the consequences. Claims had, however, been put forward by some parties, and he was not at liberty, while these claims were the subject of legal inquiry, to discuss them; but he might say quite openly—and, he was sure, with the shareholders' approval—that the directors would endeavour from humane considerations to assist the sufferers in a practical way. (Hear, hear.) The whole authorised share capital of £303,000 had been issued. The 39,993 shares of £1 each upon which 1s. had been called up and paid were, as stated in the original prospectus, held under call at a premium to the promoters for twelve months from the date of the first allotment of shares. This call was duly exercised, and in the ordinary course the remaining 19s. per share would have been called up, but owing to the non-delivery of chassis by the manufacturers and to the large sum of money in hand the directors would have been unable to utilise the amount, and no further moneys would be called up until they were required. The 60,000 deferred shares were all issued to the promoters of the company in accordance with the terms of the prospectus. On June 30 last the company only had 98 omnibuses running, and the shareholders might have assumed that these had cost the £115,030 appearing under the head of "motor omnibus stock, less depreciation." Manufacturers, however, supplied a very large number of chassis towards the close of the financial year, and the £115,030 represented not only the cost of the omnibuses on actual service, but in addition the whole number delivered to the company up to and including June 30 last. Of the item of sundry debtors, £18,357, over £17,000 had since been received. The formation expenses, underwriting commission, brokerage, &c., amounted to £5,440, being the total sum paid in respect of the first issue of share capital. In respect to the important question of depreciation the directors had adopted a safe and conservative basis. The company's chief engineer reported that the omnibuses to-day were more efficient than they were when they were new, and considered, from practical experience of the daily running, that even the oldest of them was good for a "life" of at least ten years. The directors had taken as a basis of depreciation, after allowing for all maintenance and renewals out of revenue, what they considered would write off the whole of the stock in less than one-half of the engineer's estimate of the "life" of the omnibuses in running. This writing off was inclusive of omnibus body and all its equipment. As regarded maintenance, a very large proportion of the amount, he thought, could have been charged legitimately to capital account. This would have made the year's profits very much larger, but prudence had prevailed, and the shareholders would receive the benefits of this drastic operation in future years. The gross revenue and profit from all sources from January 7, 1005, to June 30 last was £124,938, and the nett profit, after making agreed with the estimated amount of profits given in the original agreed with the estimated amount of profits given in the original prospectus. They recommended a further dividend on the ordinary shares at the rate of 10 per cent. per annum in respect of the period from November 1, 1905, to June 30 last, and they proposed to place £4,000 to reserve fund and to carry forward £952. After dealing with several other matters, such as the question of noise, the popularity of the company's 'buses, the scheme for reducing expenses, he went on to speak of the amalgamation rumours. It was true an amalgamation between some of the companies was under consideration, and should a scheme be arrived at the shareholders would be taken into the full confibutors operating in the mine.

Sir Henry Seton-Karr seconded the motion for the adoption of the report and accounts, which was carried unanimously.

After the formal business of the meeting had been transacted, it closed with a hearty vote of thanks to the chairman and directors.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Bengal and North-Western.—Usual for half-year of £3.

Mexican.—At the rate of 8 per cent. per annum on the first preference and at the rate of 3⅞ per cent. per annum on the second preference stock.

Rohilkund and Kumaon.—Usual for last half-year of £3 and a bonus of 10s. per cent.

San Lorenzo Nitrate.—Interim of 7s. 6d. per share, payable Nov. 8, being at the rate of 15 per cent. per annum.

BREWERIES.

Frome United.—Further of 7 per cent., making 12 per cent. for year ended Aug. 31, carrying forward £2,700.

John Lovibond and Sons.—Interim on the ordinary shares at the rate of 7½ per cent. per annum for six months ended Sept. 30.

Rochdale and Manor.—3½ per cent. on the ordinary shares for year ended Sept. 30.

MINES.

Broken Hill South Silver.—3s. 6d. per share.

Pusing Lama Tin.—Eighth interim of 1s. per share.

Waihi Gold.—Interim of 3s. per share.

MISCELLANEOUS.

Acadia Sugar Refining.—3 per cent. on the ordinary shares for year ended Sept. 30.

Blackpool Passenger Steamboat.—7 per cent., placing £2,000 to reserve, carrying forward £1,400.

Borax Consolidated.—Interim of 5s. per share for quarter-year ended June 30, being at the rate of 10 per cent. per annum upon the ordinary shares, payable Nov. 1.

Canadian Bank of Commerce.—At the rate of 7 per cent. per annum for six months ending Nov. 30, and bonus of 1 per cent., making 4½ per cent.

City of Buenos Ayres Tramways (1904).—1s. 3d. per share for three months ended Sept. 30.

Clan Line Steamers.—Interim for half-year ended June 30 at the rate of 5 per cent. per annum.

Cleveland Trust.—6 per cent. on the ordinary shares for year ended Sept. 30, carrying £254 forward.

Danish Gas.—Further of 5 per cent., making 9 per cent. for year ended June 30, placing £1,000 to reserve, and carrying £32,905 forward.

Dunville and Co.—Further of 13s. per share, making 23s. per share for year ended Sept. 30, being at the rate of 11½ per cent. per annum.

Eastern Produce and Estates.—Interim of 2½ per cent. on the ordinary shares, payable Nov. 5.

H. H. Warner and Co.—Further of 2 per cent. on the preference shares on account of arrears, making 4 per cent. for the year, placing £1,000 to reserve, and carrying £819 forward.

Henry Bucknall and Sons.—2 per cent. on the ordinary shares for half-year, making 4 per cent. for year ended Aug. 31, carrying forward £4,604.

International Plasmon.—5 per cent. on the ordinary shares.

J. and P. Coats.—Final of 1s. per share, making 20 per cent. for the year, and a bonus of 1s. per share, placing £450,000 to reserve, £120,000 to employees' pension fund, £149,000 to marine and fire insurance fund, £25,000 to debenture redemption premium, and carrying forward £700,000. The sum of £41,797 is set aside for depreciation.

J. B. Brooks and Co.—On the ordinary shares at the rate of 7 per cent. per annum for half-year, making 6 per cent.

Montreal Light, Heat, and Power.—For three months ending the 31st inst at the rate of 5 per cent. per annum.

Moss Isaacs.—7½ per cent. for year ended Sept. 8.

San Lorenzo Nitrate.—Interim of 7s. 6d. per share.

Texas Land and Mortgage.—Interim for past half-year at the rate of 10 per cent. per annum.

Transvaal and Delagoa Bay Investment.—3s. per share.

Wall Paper Manufacturers.—Usual of 8 per cent. on the ordinary shares, carrying forward £125,503.

Wilsons and Clyde Coal.—Final of 10s. per share on the ordinary shares, making 20 per cent. for year ended Aug. 31.

Victoria and Queen Gold Mining Company.—In the six months to the end of July the development work done totalled 682 ft., and the output was 219 tons for 234 ozs. of gold, of a value of £776. Residues were worth £108, making a total of £884, equal to £4 0s. Ed. per ton. Tributers crushed 118 tons for 133 ozs. of gold, value £418, with residues worth £24, total £443. Thus the output for the period was 337 tons for a return of £1,327, an average of £3 18s. 8d. per ton. The balance-sheet shows a credit of £5,866 against £7,186 at the end of the previous half-year, so the operations for the six months resulted in a loss of £1,320. There is now only one party of tributers operating in the mine.

KANEIKA UNITED GOLDFIELDS,

LIMITED.

This notice is not an invitation to subscribe for shares in the company, the offer of shares being limited to shareholders in the Sesan Syndicate, Limited, and it is intended for public information only.

This Company has issued a prospectus which has been filed with the Registrar of Joint Stock Companies, offering to the Shareholders in the Sesan Syndicate, Limited, 100,000 shares at par, the Sesan Syndicate, Limited, having previously arranged to place an additional 25,000 shares firm at par.

The Company has a nominal capital of £350,000 in 350,000 shares of £1 each, of which 100,000 are held in reserve, and are under option to the Sesan Syndicate, Limited, and the guarantors of the working capital at 30s per share.

The Company has been formed for the purpose of acquiring and working 28 quartz and alluvial gold mining claims, situate in the province of Semipalatinsk, Siberia.

The properties have been examined and reported upon by Mr George R. Adams, and the following particulars are taken from his report:—

ZOLOTAI LOSHKA.

The reef in this property has been proved for a length of 1,500 feet by cuttings and shafts.
21.72 tons, a general sample taken from each face, milled 20 oz. 16 dwt. 20 gr., or an average value of 19½ dwt. of gold per ton.

JANTASS REEF No. 1.

The reef in this property was exposed by surface cuttings for a distance of 930 feet, with an average width of 16 inches.
Two general samples of five tons each milled 7 oz. 10 dwt. and 5 oz. 3 dwt. 2 gr. respectively.

JANTASS REEF No. 2.

Prospected by surface cuttings for a length of 327 feet, showing a strong regular reef of an average width of 21 inches.
Two general samples of five tons and 6.85 tons milled 8 oz. 13 dwt. 7 gr. and 8 oz. 5 dwt. 2 gr. respectively.

JANTASS REEF No. 3.

Prospected by surface cuttings for a distance of 75 feet, the reef averaging 28 inches in width.
5½ tons and 5 tons milled 5 oz. 5 dwt. 3 gr., and 5 oz. 13 dwt. 4 gr. respectively.
A mixed sample of 9½ tons from the three properties milled 11 oz. 1 dwt. 8 gr.
The average yield of the 41 tons of ore milled was over 1¼ oz. of gold per ton.

ZAGADOCHNI REEF.

Reef prospected for a length of 1,029 ft., exposing a well-defined reef averaging 3 ft. in width.
4 1/10 tons of ore were milled and produced 3 oz. 4 dwt. of gold.

ALLUVIAL CLAIMS.

Five of these have been prospected for a total length of 50,000 ft., the width varying from 600 to 1,500 ft.

On the basis of a return of 2s 10d per cubic yard, the average result obtained from the lowest samples, and taking the width as only 500 ft. and average depth 10 ft., this alluvial ground shows a net value of £1,118,826, after deducting a very liberal estimate of 5d per cubic yard for cost of working.

It is intended to instal as soon as possible two dredging plants with a capacity for treating daily 1,500 cubic yards of ground. It is hoped to have these at work by the summer of 1907.

It is estimated that these two dredgers will earn £72,000 profit during the seven open months of the year. This estimate does not take into account in any way the profits which may be expected from working the numerous quartz reefs, apart from the alluvial properties.

From the particulars above given it is apparent that these reef properties hold out the prospect of being of very great value.

The present issue, together with the proceeds of the 25,000 shares placed at par, will provide the sum of £125,000 cash, which will be ample for the purchase price of the various properties and the general purposes of the Company. The options, when exercised over the 100,000 shares held in reserve, will provide further cash working capital of £150,000, which amount will be available for the development and equipment of some of the most promising gold reef properties.

The Directors of the Company are T. Ellis Honey, 25 Old Broad street, E.C.; Carl C. Bang, 43 Great Tower street, E.C.; Frederick C. Marten, 9 Token-house yard, E.C.; Henry David Boyle, 8 Old Jewry, E.C.; Ernest M. Clarke, 4 London wall buildings, E.C.

The Registered Office of the Company is Dashwood House, 9 New Broad street, London, E.C.

MINING RETURNS.

Associated Queensland.—Crushed 121 tons for £409.

Battlefields (Rhodesia).—Crushed 1,045 tons, 962 ozs.; cyanide 760 tons, 487 ozs.

Briseis Tin.—Shipped 23 tons, including five tons from New Brothers Home No. 1.

British Broken Hill Proprietary.—2,358 tons crude ore produced 361 tons concentrates, containing 220 tons lead and 9,747 ozs. silver.

Broken Hill South Silver.—15,891 tons crude ore produced 2,544 tons concentrates, containing 1,730 tons lead and 48,336 ozs. silver.

Central Chili.—Production of Regulus, 135 tons of fine copper, £735 value gold and silver.

Chinese Engineering.—Output of coal, 21,000 tons; sales, 20,500 tons; consumption, 1,350 tons.

Croydon Consols.—Golden Gate, 38 tons for 234 ozs.

Day Dawn Block.—Treated 1,620 tons, value (including concentrates, &c.) £3,480.

Great Cobar.—Ore, 15,082 tons; matte, 1,093 tons; carrying 409 tons copper, 8,200 ozs. silver, 1,020 ozs. gold.

Hyderabad (Deccan).—Output of coal, 31,836 tons.

Kelantan Gold Dredging.—Recovered 124 ozs.

Mills' Day Dawn.—Crushed 1,922 tons; value (including residues) £5,400.

Mount Lyell Blocks.—Treated 6,068 tons crude ore for 63 tons 17 cwt. fine copper.

Mount Roudny Gold.—Crushed 2,640 tons ore, 270 ozs. Concentrates, 133 tons, 218 ozs.; tailings (cyanide), 1,535 tons, 22 ozs.; total, 510 ozs.

North Broken Hill.—Treated 2,160 tons crude ore, producing 390 tons concentrates, containing 273 tons 16 cwt. lead and 6,552 ozs. silver.

Oroville Dredging.—Returns, $16,500.

Orsk Goldfields.—Tributers' ore and the alluvial deposits on the Siberia claim produced 739 ozs.

Ouro Preto.—Ore 5,780 tons, 2,225 ozs.

Rhodesia-Matabeleland Development.—Crushed 175 tons, 79 ozs.

Stratton's Independence.—£2,062 from 1,667 tons of shipping ore, averaging 1 oz. 16⅝ dwts. to the ton.

Victoria Proprietary.—Crushed 215 tons, 187 ozs.

Waihi.—27,465 tons of 2,000 lbs., yielding £62,600.

Weardale Lead.—Ore raised 340 tons, pig lead smelted 26⅔ tons, average price obtained for lead sold £18 13s. 6d. per ton net.

The directors of the Channel Tunnel are credited with the intention of taking immediate steps to formulate plans with a view to the deposit of a Bill in Parliament.

Realisation and Debenture Corporation of Scotland, Limited.

A year ago this company stated separately the profit derived from realisation of investments, but apparently it was not so proud of its achievements in this direction during the twelve months ended August 31, and the income from interest, profit on financial business and on sales are lumped together. Including trustees' fees received and miscellaneous items, the revenue was £4,492 smaller at £60,418, and as outgoings rose by £618 to 28,917 the nett profits came to £31,501 compared with £36,611. Preference dividend having been paid, the usual £1,140 representing a further 2 per cent. on the preference stock is put to the special reserve, and last year's dividends of 10 per cent. on the ordinary shares and 6s. per share on the founders' shares are repeated, leaving £15,161 or £5,110 less to be carried to general reserve. During the year £6,569 of the terminable debentures were redeemed, leaving £344,352 outstanding in addition to the £200,000 debenture stock. With the present additions the reserves will amount to £135,608, while investments have been increased by £16,594 to £845,964, and there are also securities for £18,591 representing claims paid under guarantee policies.

Colonial Gas Association, Limited.

This Australian company realised £16,640 or an increase of £442 from sales of gas during the year ended June 30, but residuals produced £123 less at £1,423, and miscellaneous receipts were also smaller, so that the total revenue showed an improvement of £270 only at £18,130. Against this, coal, freight, wages, repairs and maintenance, all lumped together into one item, cost £127 more at £9,447, directors' and auditors' fees took an extra £97 at £323, and the allowance for depreciation was increased from £792 to £1,028, while general expenses were £64 lower. Nett profits were consequently £105 down at £5,949, and with £845 brought in gave a total of £6,794 to be dealt with. Debenture interest having been met, together with the interim dividend on the shares, the directors now propose to make a further distribution at the rate of 6 per cent. for the second six months, giving 5 per cent. for the year. Then £250 is added to reserve, making it £3,500, and £768 is carried to the new account. During the year £697 was spent on the various works and £1,028 written off, leaving the property account at £108,859 against which there is the above-mentioned reserve, represented as to £1,000 by 114 £5 shares in the Brisbane Gas Company taken at cost. Creditors on current account are comparatively trifling at £781 while sundry debtors are £2,367, and in addition to £1,618 cash in hand there is a remittance in transit of £2,050, so that liquid resources are ample enough.

FIFTY-THIRD REPORT

OF

THE YOKOHAMA SPECIE BANK,

LIMITED

(*YOKOHAMA SHOKIN GINKO*),

PRESENTED TO THE SHAREHOLDERS

AT THE

Half-yearly Ordinary General Meeting,

HELD AT THE

HEAD OFFICE, YOKOHAMA,

On MONDAY, 10th September, 1906.

CAPITAL SUBSCRIBED - - - Yen 24,000,000

Head Office: *YOKOHAMA.*

TO THE SHAREHOLDERS.

Gentlemen,—

The Directors submit to you the annexed Statement of the Liabilities and Assets of the Bank, and Profit and Loss Account for the Half-year ending June 30th, 1906.

The Gross Profits of the Bank for the past Half-year, including *yen* 678,115.^{338} brought forward from last Accounts, amount to *yen* 13,149,833.^{670}, of which *yen* 9,785,925.^{630} have been deducted for Current Expenses, Interests, &c., leaving a balance of *yen* 3,363,908.^{040}.

The Directors now propose that *yen* 400,000.^{000} be added to the Reserve Fund, and *yen* 1,000,000.^{000} be appropriated to the Special Reserve Fund. From the remainder the Directors recommend a Dividend at the rate of Twelve per Cent. per Annum, which will absorb *yen* 720,000.^{000} on old shares and *yen* 450,000.^{000} on new shares, making a total of *yen* 1,170,000.^{000}.

The Balance, *yen* 793,908.^{040}, will be carried forward to the credit of next Account.

Head Office, Yokohama, September 10th, 1906.

YUKI YAMAKAWA, Chairman.

BALANCE-SHEET, 30th June, 1906.

Liabilities.	Y.
Capital paid up	21,000,000.^{000}

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 461. SATURDAY, NOVEMBER 3, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied or less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The Soap Bubble.

No. II.

The Soap Trust is down, but it is not beaten yet. It is not going to give in without a desperate struggle. The prospect of increased profit derived from short weight and higher prices is much too fascinating to be lightly abandoned. But the storm of protest to which the formation of the combine has given rise grows in intensity day by day, and if consumers practise what they preach Mr. Lever and his trusty friends have got a bigger job on hand than we should care to tackle. The mighty power at Port Sunlight professes to be hugely delighted with the advertisement the Press has given his grime-killing compounds; "it has increased the sale of my soaps enormously, don't cher know;" but some of the soapmakers have been almost foaming at the mouth at the wicked stories which these newspapers spread about. "The idea of a trust never entered our heads," they say, and as for crushing out the small manufacturers and attempting to wreck the business of those outside the trust by underselling, why, there never were such dreadful falsehoods! Great alarm clearly prevails in the trust camp because, despite Mr. Lever's pleasure over his increased sales, there is probably no doubt that the public is doing its "levering" with non-combine soaps. Is it to be supposed that the 15 oz. pound would have been so speedily withdrawn if the public had blessed the short-weight as Mr. Lever would have us believe? And how about the attempt to hoodwink the retailer and consumer by Messrs. Watson's ingenious piece of bluff? "We are in no way connected with a soap trust," "Our soap can be pushed forward as a non-trust soap," ran a circular issued by the firm. "Watson's Matchless Bluff, full weight 16 ozs. to the lb. and the price up only 5 per cent.," is what we shall expect to see in the grocers' shop windows presently. But the consumer is not half so soft as some of the combine soaps. When bounce and bluff take the place of straightforward fighting there is something weak in the armour, and by hammering away at the soft spot the enemy can soon be reduced to subjection. The weak place in this case lies in the fact that the public is beginning to realise what a trust really means. We have all read "The Jungle" now, and despite the protestations of innocent motives, know quite well what the result will be if this projected trust becomes a living thing. Attempts are being made to control the fat supply throughout the country, and there seems to be a half threat to the alkali manufacturers that if they do not agree to the combine terms supplies will be sought elsewhere. "We are going to spread our net," says one trust representative, "and shall undoubtedly embark on the manufacture of chemicals." But two can play at that game, and the alkali companies might enlarge their soap works. Fleecing the public of a Free Trade country is not half so easy as it seems. These tricks are all very well in America, where the financiers control the Government and dictate the laws, but they won't wash here. Mr. Arthur Chamberlain, brother of the unhappy Joseph, has been giving the retailers some sound advice in his capacity of chairman of the well-known Kynoch's. His exposure of the ways of trusts and rings provides delightful reading, and retailers should note carefully his wise counsel not to bind themselves by any agreements.

Perfect freedom of action should be retained by all, especially if there is truth in that amazing story related by one of the employees of Joseph Watson and Sons. "Crush the wholesaler," and "get at the retailer, no matter how small." "Every ounce of soap must be got in for the firms represented in the combine." "If a soap manufacturer outside the combine comes along with samples to your customers, you must do your best to keep him out." "Write to us and we will give you a sample of 'kill him.'" This is a sample of the kind of instructions said to be given for future operations, and although the accuracy of the statements has been vehemently denied, it is hard to see what is gained by inventing them. There seems a possibility that retailers will begin to make their own soaps, and since the outsiders are said to be doing a roaring trade, the death-knell of the great Soap Bubble should soon be heard. Mr. Lever has made a false move. Why not own up and play straight?

We now resume the analyses of companies in the combine, beginning with

Joseph Crosfield and Sons.

This company's capital consists of £600,000 divided into 25,000 cumulative pre-preference enjoying capital priority, 15,000 cumulative pre-preference and 20,000 ordinary shares, all of £10 each. Since 1898 dividend results have not been announced, and the ordinary capital is no doubt in the hands of the vendors:—

Erasmic Soap Company.

The Erasmic Soap Company is really an offshoot of Joseph Crosfield and Sons, and it appears to be rather a usual thing for coap companies to specialise by help of a subsidiary business. Perhaps it is not good for one company to be identified with too many brands because the public dearly loves something which appears novel or new. The company has a capital of £100,000 and on January 26 the portion issued was held as follows:—

	£10 Ord. or Pref. Shares.		£10 Ord. or Pref. Shares.

Edward Cook and Co.

The preference shares of this concern have a Stock Exchange quotation, and the price promptly advanced when details of the formation of the trust first became known. It may be said that the ordinary shares to the amount of £100,000 are entirely in the hands of the Cook family, the only other holdings being in the name of Hall, directors of the company. Up to the present the company's career has not been exactly brilliant, no dividend having been paid on the ordinary shares during the four years ended with 1903, but in 1904 4 per cent. was paid. The director-proprietors doubtless jumped at the chance of turning the business to more profitable account. The remaining half of the capital to make up £200,000, the authorised amount, is in preference shares, and there is also an issue of £100,000 debenture stock. On May 8 last the holdings were as follows:—

	Ord. £10 Shares.		Ord. £10 Shares.

Joseph Watson.

Considerable success seems to have attended the operations of this company, recent dividends on the ordinary shares having been at the rate of 12½ per cent. per annum. These ordinary shares are still held by the original vendors, who took them, together with a quantity of preference, when the company was formed. It has a capital of £500,000, three-fifths being preference and the balance ordinary, and a reserve fund of £70,000 has been accumulated. These are the only particulars we can give, and it is rather difficult to see what a company like this expects to gain from handing itself over lock, stock, and barrel to Levers. The subjoined list of shareholdings was made up to May 18:—

Christopher Thomas and Sons.

Here we have a Bristol firm possessing a capital of £300,000, divided into £180,000 in preference and £120,000 in ordinary shares, most of which has been called up. The present company was formed in 1897, and the preference dividend is regularly paid; but the results to the ordinary shareholders are not allowed to

transpire. On June 30 last the holdings stood as follows :—

	Pref. £5 Shs.		Pref. £5 Shs.
Johnson, Samuel Waite..	400	Thomas, Anne (for Exors. Thomas, Herbert)	960

The Vinolia Company.

The dividends paid on the ordinary shares of this company have varied somewhat, a fall from 8 per cent. to 5 being followed by a recovery to 7. The capital is £250,000 in equal amounts of ordinary and preference £5 shares, and, as shown below, practically all the ordinary portion are held by one man, who is the company's chairman. The preference shares are quoted in the official list, and like those of Edward Cook, have recently improved in value. Appended is a list of holdings on January 3 :—

	Ordinary £5 Shrs.		Ordinary £5 Shrs.
Burrows, Eggleston	24,996	Powell, Wm.	1
Pinney, William.....	1	Foley, Thos.	1

William Gossage and Sons.

William Gossage and Sons appears to be quite a private company, and so far as can be traced none of its capital of £425,000 has been issued to the public. The preference shares, amounting to £350,000, are held by Mr. F. H. Gossage and Mr. T. S. Timmis, who no doubt control the business, while the ordinary shares are divided into eight holdings. On June 7 the capital was distributed as follows :—

	Pref. £10 Shares.		Ord. £10 Shares.
Gossage, F. H.	17,500	....	2,196

Thorpe, A.	—	....	268
Smith, J.	—	....	268

The eight companies whose position we have briefly summarised possess between them a capital in shares of £8,375,000. What the capital of Ogston and Tennant and J. Barrington and Co., who are also in combine, amounts to we do not know, but if we put down one million, the total will be £9,375,000. According to report this will be swollen to £12,000,000 by the time the thing takes definite shape, so that there is a clear intention to inflate to the tune of almost three millions, quite apart from the water in the existing capitals. It will be a most interesting prospectus when it comes out, but beware lest you are fleeced as a shareholder as well as a consumer.

British Railways in 1905.

There is always much of interest to be found in the pages of the Board of Trade annual returns on our railways, and though the inferences to be drawn from the facts therein may appear to change but little year by year, they may be said to gain additional force by repetition. Probably the cold impersonal tone of the official document, so widely different from the usual cheery optimism of chairmen's speeches and individual half-yearly reports, makes the figures more impressive, and the treatment of the companies and their capital, working expenses, receipts, and traffic as mere units serves to emphasise the magnitude of movements which in isolated instances appear insignificant. To the public little or nothing is conveyed by the appeal of one company for a few hundreds of thousands of new capital, the sum looks so trifling compared with what it has already borrowed or raised ; but these appeals lumped together at the end of twelve months look formidable, and last year they totalled £14,800,000, raising the aggregate capital of our railways, ordinary, preferred, and debenture, to £1,282,800,000. Did this enormous sum represent assets now in existence there might be little to complain about, but it does not, for £194,300,000 consists of nominal additions through consolidations and duplications, in other words "water," more than £800,000 having been added last year in this fashion. To earn dividends on the ever-increasing mass of real capital is becoming year by year more difficult, and it is therefore not surprising to find that although the trade conditions of 1905 were generally regarded as considerably better than in 1904, the average rate of interest paid by railway companies was only 0.01 per cent. more at 3.43 per cent. Had the water been poured off before the dividends and interest were paid, the average rate would have been 4.05 per cent. But, in addition to the water, much of the nominal capital of the railways cannot be said to have its equivalent in either revenue producing or necessary assets, for many of the works and much of the rolling stock and locomotives constructed and built out of capital must have long since vanished or become obsolete. However, this is a matter on which the shareholders and general public are never likely to get much information, and, indeed, we very much doubt whether the officials and directors have more than an approximate idea of the ratio the value of their lines bears to the nominal capital.

During the twelve months of 1905 the gross receipts of the railways amounted to £105,100,000, £48,700,000 of it from passengers, and from goods £56,400,000, the first showing an increase of £300,000, and the other of a million. As usual by far the larger portion of the revenue from passengers was derived from third-class, though its ratio of increase on 1904 was considerably less than that of first-class traffic, 0.8 per cent. as against 1.1 per cent. Second-class is evidently becoming more and more a relic of the past, for the traffic in it last year showed a considerable decrease in numbers and in percentage of receipts when compared with the returns for the previous twelve months. No doubt much of this decline was due to the District and Metropolitan companies ceasing to run second-class carriages on a large number of trains, a circumstance that materially benefited the receipts from first and third. But, making due allowance for this, second-class travelling is undoubtedly losing ground, and unless reinvigorated by a courageous revision of fares, it is merely a question of time when it must vanish altogether. The only thing likely to prolong its life is second-class season ticket traffic, the revenue from which is still considerable. Yet even this has shrunk since the introduction of third-class seasons on many of the lines, and the receipts from these last year amounted to £1,644,000, or an increase of £131,000, while second-class dropped £16,000 to £1,022,000. But passenger earnings are to the railway managers of the big trunk lines of less importance than those from freight, since it is to goods and minerals that they look for the larger portion of

their revenue. Last year the receipts from these totalled roughly a million more than in 1904, the increase being entirely furnished by minerals and general merchandise, a slight falling off taking place in live stock. To earn this revenue involved the handling of 461,200,000 tons of minerals and merchandise, which was 11,300,000 tons more than the total of the previous year. So far as minerals were concerned the increases in receipts and tonnage were practically the same, but in merchandise, though the tonnage was 2.8 per cent. more, the revenue produced by it was only 1.7 per cent. higher. On the expenditure side the working expenses of the year came to £70,060,000, which was £890,000 more than those of the preceding twelve months. Compared with the state of affairs between 1897-1900, when expenses rose out of all fair proportion to revenue, last year's increase is not so very alarming, except for the tendency shown. Moreover, it was accompanied by a corresponding rise in gross revenue. The ratio therefore remains the same at 62 per cent., at which figure it has been constant since 1900, except in 1901, when it rose to 63 per cent. The attempts made by the officials to reduce expenses would appear to have resulted in some small success, though we still think more might be done in this direction. To spend £62 in order to earn £100 appears excessive, and it ought not to be impossible to reduce the proportion to a more reasonable figure if harmony instead of muffled war prevailed between the systems. A good deal certainly has been done in the way of reducing unnecessary train mileage both by the abolition of useless competition, chiefly in mineral traffic, and the adoption of heavier freight trains, and the result is shown in the increased receipts per train mile, which are now 62.93d. from passengers and goods together. Unfortunately the whole of this improvement is due to goods traffic, for while the receipts per train mile on this have been gradually rising until they are now 87.29d. per mile compared with 71.06d. six years ago, those on passenger traffic have dropped from 49.61d. per mile in 1901 to 47.58d. This, we are inclined to think, is in no small measure due to the practice rival railways have of despatching trains to the same destination at identical hours. Competition of this description always strikes us as absurd, and the public and shareholders alike would be better served were the companies to agree to run their expresses to such places as Birmingham, Manchester, Liverpool, Leeds, at different hours, so giving travellers a more ample and varied service, and at the same time filling the reduced number of their trains better. On the whole, however, 1905, while in no way a brilliant year in the history of railway progress, may be described as one of fair average, at any rate better than one of depression. But there is nothing in the returns to induce us to "go a bull" of stock.

Economic and Financial Notes and Correspondence.

Ceylon Company of Pearl Fishers.

We have already related at some length the circumstances surrounding the formation and inception of this enterprise—how Sir J. West Ridgway obtained a lease of the Ceylon Pearl Fisheries from the Colonial Government, how Mr. Lyttelton when Colonial Secretary endorsed the action of the authorities, and how great was the agitation in political circles when full particulars of the deal became available. Many did not hesitate to characterise the business as anything but straightforward and above-board, but the present Government allowed the contract entered into by its predecessors to stand, while at the same time inclined to agree with the criticisms levelled against it, and the future alone can show whether or not the Ceylon Government made the bad bargain which some declare it did. The present company was incorporated on March 3, 1906, with an authorised capital of £165,000 divided into 150,000 ordinary shares of £1 each and 300,000 deferred shares of 1s. each, all of which have been allotted. Up to the present 10s. per share or £75,000 has been called and paid up on the ordinary shares, while the deferred share capital has been paid up in full. Issued capital therefore stands at £90,000, a large part of which remained unspent at the date of the balance-sheet. In fact, so long as the fisheries continue profitable the capital must always remain intact, because the capital outlay necessary to embark on the enterprise was remarkably slender. Thus the cost of obtaining the lease was only £11,000, and the plant, machinery and vessels involved an outlay of £12,167. If the fisheries should one year turn out badly some capital might disappear, but there is no immediate prospect of that, and at the moment the company is undoubtedly on top and the Government underneath. It has £11,000 invested in Ceylon 3 per cent., which cost it £10,367, the stock being deposited with trustees in accordance with the terms of the lease, £40,000 lent at short call, and cash £28,553. The Ceylon Government owes a further sum of £41,213 on account of the 1906 fishery and only £805 is owing to sundry creditors. The lease of the fisheries runs for a period of 20 years from January 1, 1906, and as the fishery is held during the months of February and March the results should always be ascertainable early in each year. The directors therefore think that the financial year should terminate on June 30. The first accounts, which have just been presented, were made up to that date, which will be adhered to in future. A final adjustment with the Government on account of the 1906 operations has not yet been made, but since the close of the financial year a substantial sum has been paid on account by the authorities. Receipts from this year's fishery reached the goodly sum of £92,333, and after providing £20,667 for rent, £17,333 for expenses, £933 retained by the Ceylon Government pending final adjustment, and £21 for loss on exchange the nett proceeds were £53,379. In addition to this £593 came in from interest, making £53,972, and the directors straightaway wrote off £3,667 from the cost of obtaining the lease and £4,056 off plant, machinery and vessels, reducing the items to £7,333 and £8,111 respectively. General expenses and directors' fees take a further amount of £1,170 and £2,476 is carried to capital redemption and reserve, leaving a nett divisible sum of £42,604. First of all the ordinary shares are entitled to a preferential dividend at 6 per cent. per annum, requiring £1,467, and £2,523, being 10 per cent. of the sum divided beyond this dividend, is also added to capital redemption and reserve making the total of the fund £5,000. Further remuneration to the directors, being the equivalent of 5 per cent. on £4,235 (the amount by which the surplus divided exceeds £21,000) next takes £212, the ordinary shares get another £11,250, giving them 1s. 6d. per share, and the deferred 1s. shares a similar sum, providing a dividend of 9d. per share or 75 per cent. A balance of £15,902 is then carried forward. These are eminently satisfactory figures from the lessees' point of view, and the result of the deal may be said to mean a loss to the Ceylon Government on the first fishery of something near £50,000, a sum which would pay interest on a rare lot of debt. Naturally enough, the directors are determined to make this loss as heavy as possible in future years—that is to say, they will do their best to render the industry a continuously profitable one. They recognise that the future value of the acquired property is essentially dependent upon its development upon scientific lines already indicated by the prominent authorities previously consulted by the Ceylon Government, and are taking energetic steps to give practical effect to their recommendations.

Welgedacht Exploration.

Not so very long ago Welgedacht Explorations provided a kind of excitement similar to that we are now witnessing in connection with New Vaal Rivers. That is to say, the insiders gambled in them and rigged them to preposterously inflated figures and the

great drop in the last year or so must represent enormous losses by some people. The shares were originally introduced on the market in 1899, and even in that year they went as high as £6 and never fell below 4¾. In the following year they rose to 8, despite the war, in 1902 reached 8¾ and actually mounted to £12 in 1903. As recently as 1904 the extreme quotations were 8¼ and 5¼, and in 1905 8¼-5. Now we see them a little over £3. Based upon actual achievements and prospects, they would be inflated at par, for the company has not only never paid a dividend, but it is doubtful if it will ever earn one. All the income it still gets is from interest on contango loans and deposits, which in the year ended June 30 brought in £3,946, and £193 from rents, making a total of £4,139. Administration expenses and depreciation absorbed only £3,217, so the accounts show a small nett profit of £922. Adding this to the previous credit balance of £2,536 and the directors have the colossal sum of £3,458 to carry forward. This is the aggregate financial achievement of six or seven years, though allowance must be made for the suspension of operations during the war. Still, even if it represented the profits of only three years it is a miserable result when contrasted with the high price at which the shares have been pushed. And the greater part of it has come from the mere side business of lending to market speculators, and even this money must gradually diminish as time goes on. Nor do the directors themselves look for replenishment from gold-winning. This is impossible. The company is first of all to become a coal-getting concern. There has been considerable delay even here, and instead of being in a position to supply coal in May or June last, this will not be possible before the beginning of 1907. But, as the chairman pointed out, the delay is not so serious after all, as the main railway line to Witbank will not be ready for traffic for some time, so that even had the company reached the producing stage at the date anticipated, no coal could have been sent to market. The main cause of the delay is the striking of troubled ground with the two shafts, which necessitated a lot of driving and other work. As for gold, before this can be got additional capital must be raised. A cheerful prospect this for those who were foolish enough to buy the shares when they were double and treble the price they are now. Such capital would doubtless have been raised long ere this had it been possible to get it. Evidently the directors have felt, and still feel, that any such appeal to the shareholders and the public would be futile. The first outlay to be incurred by way of getting to the gold is that of shaft-sinking, a long and costly operation. So it cannot be undertaken with the company's present limited resources. "I hope, however," said the chairman at the annual meeting, "that with better times in the Transvaal financial market we will be able to obtain funds for all our purposes on favourable terms, more especially seeing that the reefs are not problematical ones, but have been proved by boring to exist over the full extent of your mining area, and that at a comparatively shallow depth." The contango loans amount to £77,957, in addition to which there is cash to the extent of £2,687, to be set against current liabilities of nearly £13,000. Out of an authorised capital of £250,000 in £1 shares, £105,500 has been issued, but £165,003 has been received in premiums. How nice it would be if only the directors could persuade shareholders to take up the unissued shares at a fat premium! It would make them feel quite comfortable, but probably subsequently bring exceeding discomfort to those who bought them.

HUMBER, LIMITED.

Twelve months ago the ordinary shares of this company could have been picked up for three or four shillings each, but after the report covering the year to August 31 last was published they were quickly run up to the neighbourhood of 35s. We should not like to say that this great rise can be altogether justified, but the display made is far in advance of anything that even the most sanguine could have dreamt of. As is quite well known, the directors have been devoting a large part of their energies to the establishment of a motor business, and so much success has attended their efforts that a trading profit is produced of no less than £109,468. This is a truly remarkable figure, and although the original cycle business probably contributed materially to it, there is no doubt that the revival in the company's fortunes is almost entirely due to motor-cars. The company turns out a first-rate article, and we read in the report that the demand for its productions during the past 12 months was unprecedented. The comparatively small, reasonably-priced car is said to have caught the public fancy, and as the motor industry must still be considered in its infancy, it is quite possible that the company, in its present clean and capable hands, has a long and prosperous career before it. In addition to the trading profit, £2,572 came in from royalties and £892 from interest and transfer fees, making a total of £112,931. It is perhaps not of much use to compare the profit with that shown a year ago, because at that time the directors were only laying down the foundations of the industry which apparently has now been permanently established. Just, however, for the sake of reference, it may be pointed out that in 1904-5 the trading revenue was £10,708, and even that figure showed an increase of £5,385 compared with the year before. Remuneration for five directors is modest enough at £1,499, law costs and audit fees required £604, and £4,269 is allowed for depreciation of plant, machinery, furniture, &c. The nett profit is therefore £106,359, raised to £108,931 by the balance of £2,372 brought forward. First of all the directors have to make up two years' arrears of preference dividend, making a total of three years including the period under review. This alone requires a sum of £45,000, and the necessity of providing that big sum on the present occasion induces the directors to restrict the ordinary dividend to 5 per cent., absorbing another £12,500. They are clearly anxious that the company shall not again get into low water through neglect to give a thought to the future, and therefore carry the very large sum of £40,000 to reserve, at the same time increasing the balance forward to £11,431. We have nothing but praise for the prudent manner in which the profits earned have been handled, and a repetition in the current 12 months of last year's good fortune should mean the payment of a very substantial dividend on the ordinary shares. Next year there will be only the usual amount to provide for preference dividend—that is £15,000—and this alone will release £30,000. Now, £30,000 represents 12 per cent. on the ordinary shares, so that apart from the big sum added to reserve the company actually distributed profits last year which in ordinary circumstances would have given 17 per cent. on the ordinary capital. The sum added to reserve equalled another 16 per cent., and the addition to the carry forward was nearly 3 per cent., meaning that in the period now being reviewed the company earned at the rate of 36 per cent. on its ordinary shares. We do not set out the fact in this fashion in order to induce people to gamble too freely in the company's shares, but those who bought at the comparatively low prices ruling previous to the past week may be interested in the facts. It will, however, be well to remember that the item of goodwill, trade marks, patents, &c., a legacy of Hooley's days, stand at the exceedingly heavy figure of £2-1,300, and those who have closely followed the company's history will no doubt remember that some little time back it became necessary to add to this item a bad debt of over £26,000 incurred in litigation. It is quite in the order of things to find that the board has been under the necessity of incurring considerable capital outlay during the year, the additions to land and buildings being £4,076, raising their total to £76,825, and to the plant, machinery, factories, &c., £19,225, the latter asset now appearing at £53,050 after allowing £4,269 for depreciation. A large factory at Coventry has been taken on a short lease, but notwithstanding the further facilities so obtained a difficulty was experienced in giving prompt deliveries, and overtime

had to be worked for a considerable portion of the year. There being every appearance, the directors say, of the business still further increasing, a suitable site at Coventry has been acquired with a view to the erection of new works specially designed for motor and cycle manufacture, and plans are now being prepared. No hint is given of any additional capital being required, and we do not think that an increase should become necessary. The balance-sheet shows the company to possess ample liquid resources, and the continued allocation of considerable sums to reserve for extending the business should enable the company to meet all extensions out of current income. On August 31 last it possessed high-class securities to the value of £50,414 and cash and bills of £53,247. Sundry creditors of £53,389 were more than covered by debtors £57,996, besides which there was the stock of machines, motors, stores, materials, &c., valued at £99,489.

Daimler Motor Co. (1904), Limited.

From the time of its inception in 1896 up to about a couple of years ago this company's business was so unsatisfactory or was so badly managed that in 1904 it became necessary to reorganise its finances and cut down the capital. At the time the proposals gave rise to a good deal of hostility chiefly because of the reticence displayed by the directors when bringing forward their scheme. Eventually, however, the suggested plans were agreed to, and the company entered upon a new era. No one, however, could have anticipated the extraordinarily successful career which then lay before it, and when at the end of 1904 the company was asking subscriptions to a new issue of preference shares the hope was expressed that with the new money so provided the company might succeed in earning profits of, say, £20,000 a year. But the Daimler car has always been a thoroughly reliable article, even though its manufacture was not at first turned to profitable account, and the first year's profits since the reorganisation quite put into the shade the expectations formed by the board. These in turn have been completely overshadowed by the results for the year ended on September 30 last, and instead of £20,000 we find the business now producing a gross profit of the remarkable sum of £212,416. This, as nearly as possible, doubles the revenue shown for the previous year, and after adding the sum of £8,360 for interest, rents, and transfer fees the total income is £220,776 against £109,671. Directors' fees, their extra remuneration and travelling expenses took away £4,129, auditors' fees were £126, debenture interest and trustees' fees were £2,540 and £406 is provided for sinking fund on the Coventry leasehold. One hundred guineas are then contributed to the Motor Union and £213,470 is left. Out of this the employees are entitled to bonuses aggregating £27,684—a heavy-looking sum but doubtless well-earned. In this way the nett credit is reduced to £185,786, but it is raised again to £227,050 by the balance of £41,265 brought forward. Preference dividend amounts to £3,000 and 6 per cent. is then paid on the ordinary shares requiring £5,554. The next contribution is £20,000 to a special fund for renewal of plant and machinery and for experimental and development work, and no less than £120,000 is transferred to reserve fund. After this £30,547 is divided in equal proportions between preference and ordinary shares as provided in the articles of association, meaning that on the amounts paid up the ordinary shares receive 22½ per cent. and the preference shares about 36½ per cent. The balance carried forward is £6,684 larger at £47,949. Reserve fund is now £150,000, and if we also take into account the undivided balance just mentioned we find that these sums are actually in excess of the entire paid-up capital, both share and debenture—a most commendable position after only two years' working. There is another £21,034 standing for premiums on shares and £1,676 for lease redemption, so that altogether the accumulations to date amount to £220,659. They are genuine funds, too, because the company's cash balance alone amounts to £138,840, and its goodwill and patent rights stand at the insignificant sum of £12,000. Floating liabilities are fairly important at £73,214, but are by no means high considering the immense business which the company turns over. Sundry debtors, after providing for bad and doubtful debts, stand at £58,940, and £171,824 is represented by stock-in-trade. Investments and bills receivable amount to £21,344 between them, and there is an item of £12,000 representing shares in a company formed to represent the Daimler in Italy. The freehold and leasehold land and buildings have a value of £89,079, plant and machinery stand at £49,876, loose tools at £14,745, and furniture, fittings and fixtures at £9,633. The company has thus raised itself to a position of eminence in an extremely short space of time, and there is no reason to believe that the Daimler cars will not continue to enjoy their present well-deserved popularity.

Dalgety and Co.

We can be sure of nothing so far as this great Australian business is concerned, because the directors have never provided us with an opportunity of finding out its true position. It may be that the advances on land, stations, stock, wool and other produce, including property held by the company, are quite prudently valued at £4,432,190, but while this great mass of assets is presented in existing form we can reach no clear judgment of the real condition of affairs. The item shows a very slight decline compared with last year, but we must note a very important increase of £249,584 at £1,667,431 in the sundry creditors and customers' balances. Bills payable have also increased by £178,713 to £379,849 and the balances in transit between branches are likewise higher at £132,905. Liabilities by endorsements—that is to say, bills receivable under discount—amount to only £1,944 against £43,879 last year and £132,818 in 1903-4, and we may perhaps regard this decline as a good sign, as it seems to indicate that the company was not under urgent necessity of converting the debts due to it into cash. Together with the large increase in floating liabilities we naturally find corresponding advances in the assets, the cash at bankers and on deposit of £447,818 alone showing an increase of £276,283. Bills receivable in hand and under discount are somewhat less at £112,943, but sundry debtors and customers' balances have grown from £477,572 to £563,970. Freehold and leasehold premises, plant and furniture show an unexplained and rather remarkable increase of £51,259 at £449,045, and there seems to be a new item of Government stocks and other securities, £164,051. The reserve fund appears in the balance-sheet at last year's total of £165,000, which has been invested in the company's London premises in Bishopsgate Street Within, but the fund is now raised to £200,000 by a credit of £35,000 from last year's revenue. Besides the great mass of floating debt mentioned, the company has debentures fixed and terminable to the amount of £2,819,920 an increase on the year of £113,860, and while these may be well enough covered, shareholders should never forget that part of the security consists of their uncalled liability of £15 per share, representing a sum of no less than £3,000,000. With the improvement that has lately come about in Australian affairs the various properties on which the company has advanced such huge sums may be steadily recovering, but during the long period of suffering which the colony underwent we were never allowed to know what losses were wrapped up in the big balance-sheet item mentioned, and cannot now be sure whether the depreciation which must inevitably have occurred has been made good. After providing for bad and doubtful debts the profit for the year ended June 30 amounted to £371,591 being an increase of £37,430 against the previous 12 months, from which the total charges including income-tax were £148,171 against £139,290, and another important increase of £5,460 at £114,439 takes place in the debenture interest. The nett profit,

however, is still £23,089 larger at £108,981, and with £56,400 brought forward the sum available for division is £165,381 compared with £141,399 in 1904-5 and £115,507 in the year before that. The directors therefore propose to pay a bonus of 1 per cent. in addition to the 6 per cent. dividend as paid last year, to add £35,000 or £10,000 more to reserve and to apply £5,000 to the foundation of a staff benevolent fund. The sum carried forward is then slightly reduced to £55,381.

J. and P. Coats.

The achievements of the great Paisley cotton-spinning combination, carried on under the name of J. and P. Coats, will always form a wonderful page in the history of joint-stock enterprise. Nothing quite like it has ever been seen in this generation, or any other. There are many sound, progressive industrial concerns in the country, but the wealth accumulated by the Paisley firm is simply bewildering. It must arouse the envy of many less fortunate undertakings, and evidently excites the cupidity of other big manufacturers, with the result that periodically we are threatened with the formation of other huge trusts in this business or that. So sensationally profitable, indeed, have the company's operations become, that the attention of the President of the Board of Trade has just been drawn to its alleged monopoly in the production of sewing cotton. The member for North Paddington wanted to know if the Government could see its way to legislate with a view to secure the public control of a trade which, it is said, affects every working woman in the country. Reference was also made to other combinations, including the Wall Paper Manufacturers, but Mr. Lloyd-George's studiously official reply was, naturally enough, quite unsympathetic. He pointed out that besides the Coats combine there were quite 20 independent makers of sewing cotton, many of which have been in existence for more than half a century, but perhaps he could hardly be expected to know that the Paisley trust virtually controls the industry. The influence it at one time possessed, and probably does still, over the English Sewing Cotton Company is quite well known, and we believe that prices are still fixed and all methods controlled by the Coats combine. It is, perhaps, needless to say that the company's all-powerful position results in the creation of very extraordinary revenues year by year, and in the twelve months which ended on June 30 the profit and dividends, including dividends and interest from subsidiary companies, and after making provision for depreciation and bad and doubtful debts, reached no less than £2,908,334. Compared with the previous year, when the profits were affected by such events as the disturbances in Russia, where the company does a very large business, and the Russo-Japanese war, to say nothing of the influence of the Sully cotton corner, this revenue shows an increase of £564,894.

It may, perhaps, be noted that twelve months ago the profits were down by £216,205, and this drop followed a decline of about £106,000 in the year before that, but the whole of this set-back has now been recovered, and the income exceeds the company's previous best year by something like £240,000. There are further credits of £105,273 for interest, £6,630 for rent, and £822 for transfer fees, making the revenue from all sources £3,021,059. From this the general charges for management, salaries, legal expenses, directors' fees, &c., were £46,970, a decrease of £2,225, and the actual nett profit for the year appears at £2,974,088, an increase of approximately £600,000. Here we may mention that £63,933 of the profit properly belongs to the previous year, but this does not materially affect the comparisons we have made. Adding to the nett credit the balance of £479,908 brought in and we arrive at a total of £3,453,997 at the disposal of the directors. Interest on debenture stock for the year amounts to £36,462, and £150,000 is absorbed in the payment of the 6 per cent. dividend on the preference shares. The fixed 20 per cent. on the preferred ordinary stock next requires £600,000, and three quarterly dividends of 5 per cent. on the ordinary shares absorb £675,000. The board now propose to pay the final 5 per cent. on the ordinary shares, making the usual 20 per cent., and in addition a bonus of 1s. per share, bringing the total return of the twelve months up to 25 per cent. The dividend reserve fund is then credited with £450,000, being £50,000 less, but the pension fund receives £120,101 against £50,000, and the marine and fire underwriting account gets £149,528 also against £50,000 last year. Then £25,000 is placed to the debenture premium account, and the balance carried forward is increased by £220,175 to £700,083.

We have no intention of attempting to criticise the balance-sheet because that is really impossible with a company whose wealth is so abounding. There was an addition of £71,038 to the property account within the year, representing further shares in subsidiary companies and other capital expenditure which brings the outlay to date to £9,812,800. From this we have to deduct a nett sum of £35,431 as the depreciation on the Ferguslie Thread Works, so that the balance-sheet value of the property and goodwill appears at £9,777,369. Ordinary reserve fund stands at the old figure of £3,500,000, but the latest addition increases the dividend reserve to £900,000. The odd amount credited to the Marine and Fire underwriting account now brings it to the round figure of £500,000, and the same can be said of the employees' pension fund, which will now amount to £250,000. There is also a suspense account of £185,096 as provision for depreciation of investments, and taking also into account the £25,000 for debenture premiums we arrive at the total accumulations reaching the stupendous figure of £5,365,096. This is over 54 per cent. of the total capital outlay, and the reserves are genuine realisable funds, as amongst the assets we note such items as cash at bankers and in hand £1,721,534, bills receivable £646,943, book debts and agents' balances £1,229,239, and investments, loans, and advances against mortgages £2,569,785. Then we have the advances to subsidiary companies for stock and working expenses £917,302, including dividends declared but not received at the date of the accounts, and stock of goods and stores £1,478,061. The floating liabilities on trading account are almost absurdly small at £266,523, the company's enormous free assets enabling it to work on a cash basis and thus get every possible advantage from its purchases of raw material. The total of the balance-sheet is £18,340,235, being an increase of practically £1,000,000 compared with last year, and it is really quite fascinating to watch the steady piling up of such dazzling riches.

American Business Notes.

It is difficult to believe that the New York Associated Banks have not taken to cooking their weekly exhibits. How otherwise are we to explain a decrease of $20,100,000 in the loans and advances last week? Operators on Wall Street have been compelled to take back heavy parcels of securities from London, and for the previous two weeks the New York Banks had been making large advances against these shipments. The process was still going on so far as we know, and suddenly last week shows a decrease. Where are the securities carried and by whom? Are they shifted to other centres of banking credit in the Union? The Continent cannot have taken them. How is the change to be explained? We cannot tell, but it is hardly a reassuring incident. The nett deposits have been reduced by $27,000,000 partly owing to the cancellation of these loans or their transfer and for the rest by the decrease of $6,050,000 in the specie average and of $1,389,000 in the holdings of legal tenders. It results from all these changes that the surplus reserve has only fallen off by $539,000 to $5,674,000 compared with $12,431,000 in the corresponding week last year. We shall be interested to

see how the statistics shape for the current week and what the United States financiers are going to do to meet the action of the Bank of France in refusing to discount their accommodation bills.

A dividend of ½ per cent. upon United States Steel Corporation common shares for the past quarter does not seem much, but if continued it will amount to 2 per cent. for the year, which is surely a very liberal reward upon fancy capital that represents no assets whatever. The profits for the past quarter are declared to be $38,115,000 as compared with $31,241,000 in the corresponding quarter of last year, these figures being arrived at after deducting the cost of ordinary repairs, renewals and maintenance of plants, interest on bonds and fixed charges of subsidiary companies. Out of these profits sinking funds, depreciation and reserve funds, special improvement charges and interest on the bonded debt have all been met, leaving $23,544,000 as compared with $16,978,000 last year. There cannot, therefore, have been very much money set aside for depreciation or for sinking fund purposes, but $11,000,000 is taken out of the surplus of $14,697,000 left after paying the preferred and ordinary dividends for authorised expenditure on additional property. This compares with $6,500,000 appropriated to the same purpose in the previous year, and the balance finally left to carry forward is $3,697,000 against $4,173,000. It may be added that the amount of unfilled orders on hand on September 30 last was 7,936,884 tons against 5,865,377 tons in the third quarter of 1905. There is consequently uninterrupted progress, all on a cash basis you may be sure.

It is becoming the fashion in some quarters to speak of the population of the United States as becoming crowded, and of the country approaching the limits of production. Nothing, of course, is further from the truth, for the whole of the present population of the United States could be put into the one State of Texas, and every man, woman, and child given two acres of land to live on. For an average family of five this would be ten acres—about the average area of a Belgian or French peasant's farm. What is happening in the United States is that the greater portion of the land will soon have passed into the hands of a few large private owners and syndicates of one kind or another, together with the ownership or control of the whole of the money of the country; and that production of all kinds will depend not on actual demand so much as on the profit it will bring to the owners of the land, of the means of production and of the money. To increase this profit foreign trade will be a vital necessity, from which will follow adventures like the taking of the Philippines, Cuba and Porto Rico, and the aggressive attitude towards the Central and some of the Southern American Republics; also foreign wars, and with this prospect the demand by the Republican party for a larger army and a great navy. The pretext for both is national defence, but up to now they have served no other purpose but aggression. The cause of this condition of things has been the facilities afforded by Great Britain and Europe in the way of money for the exaggerated and extravagant development of the country far beyond the legitimate needs of its inhabitants. The effect of it all will be that Europe, including Great Britain, will in due time become the victim of the get-rich-quick principle, now a cardinal rule in the United States.

Mr. E. H. Harriman, the great American railway magnate, met with a serious defeat on October 17 in his effort to secure control of the Illinois Central line. The battle took place at the annual meeting of the stockholders of that company over the election of a director. The Harriman candidate was overwhelmingly beaten, but Mr. Wm. Nelson Cromwell, the well-known corporation lawyer who represents the Union Pacific, declared that the fight was not over yet, and would be renewed when the board meets next month for the election of officers. He claims that seven of the thirteen members of the board are with Mr. Harriman, and that in the end the Union Pacific will secure control of the Illinois Central, in spite of the opposition of its president, Mr. Fish, and his following.

A Toronto despatch of October 17 to the New York papers stated that the losses to the shareholders of the Ontario Bank would amount to over $2,000,000. The manager, Mr. Chas. McGill, was arrested, and the president, Mr. G. R. R. Cockburn, was arraigned on a charge of malfeasance and allowing the issue of false balance-sheets. The amount of gold retired from the New York market as a consequence of the Ontario Bank trouble up to October 18 was $3,250,000.

A new express company, with the title of North American Express Company, was organised at Augusta, in the State of Maine, on October 16, with a capital authorised of $25,000,000. The matter was not very well understood in New York, where express company officials denied all knowledge of the new company and knew of no reasons for its organisation. The only suggestion that occurred was that it was in all probability a holding company for the numerous local express companies in New England, where the express business originated.

On October 16 the Norfolk and Southern Railroad and the Virginia and Carolina Coast Railway were merged by a vote of the stockholders of the two lines, who met at Norfolk, Virginia, and confirmed the consolidation effected by the directors of the two companies. The capital of the new company was increased from $2,000,000 to $3,000,000, and Suffolk, Virginia, and Columbia, North Carolina, were made the northern and southern termini of the line.

A despatch from Lansing, Michigan, states that the Michigan Sugar Company, which recently acquired nine sugar factories in Michigan, has registered new articles of association, and raised the original capital of $62,500 to $14,500,000. It is understood that the Michigan Sugar Company is controlled by the same interests that dominate the American Sugar Refining Company, the Havemeyer Sugar Trust. Several sugar works acquired by the Havemeyer interest have been recently placed under one management.

The American Metal Company has registered at Albany, N.Y., an increase of its capital from $2,000,000 to $3,000,000. This company is said to be one of the largest dealers in copper and other metals in the world, and the increase was required by the increase of the company's business.

The International Silver Company of New York has brought several suits against banks in that and other cities to restrain them from voting at meetings of stockholders of the company on stock deposited with them as collateral for loans. Certain interests in the company say that the loans were unnecessary, but the bank officials state that stock pledged as collateral can be transferred in the name of the lending individuals and institutions, and voted as they judge necessary to protect the loan. The banks concerned are the City National and American Exchange Banks, of New York, the First National of Meriden, Connecticut, and the Hackensack, New Jersey, Trust Company. The questions raised are of considerable interest.

A shortage of $61,200 has been discovered in the United States Sub-Treasury at St. Louis, Missouri. All the money in the Sub-Treasury is being counted, and it is stated that the shortage has existed ever since the World's Fair, when immense sums of money were handled. The law requires that the inspection be made every two years, but the last inspection was made two years and ten months ago. The receiving teller, who has not been at his post for two weeks, has been suspended pending the result of the investigation.

The New York Central Railroad Company was declared on October 17 by the jury in the United States Circuit Court guilty of violating the Elkins Anti-Rebate Law in having granted concessions to various sugar refining companies and individuals allied with the Sugar Trust. It was proved that the railway company had been giving the Sugar Trust a secret rebate of 5 cents on the cwt. off the price fixed by the Inter-State Commerce Commission for the haulage of sugar

from New York to Detroit. The company was found guilty on five of the six counts in the indictment. The judge did not pass judgment, but on the application of the defending counsel agreed to hear arguments on October 19 on a motion in arrest of judgment. A large number of indictments have been found against other corporations and officials of the Sugar Trust which, it is understood, will be immediately pressed for trial. It is expected that the New York Central will take the case to the United States Supreme Court in Washington.

Should President Roosevelt ever decide to retire from politics and go into business, he should certainly have a great career open to him as a stage manager. Nothing more perfect in its way has ever been brought out on the stage than the American intervention in Cuba. Now that it is all over, and the Pearl of the Antilles has been occupied by an Expeditionary Brigade to all intents and purposes, the American people are laughing in their sleeves at the gullibility of the rest of the world, which took seriously the despatches telling how reluctant President Roosevelt was to send troops to the island, and how determined he was that the Cubans must have "another chance" to show their capacity for self-government. The thing was a little overstretched in the first week of last month, when a semi-official memorandum was given out to the American Press from Washington telling how "pained" the President was that so many of the papers exultingly spoke of the "annexation of Cuba," thereby throwing doubts on his good faith toward a sister republic and on his sincerity of purpose. The climax of the comedy was reached at the same time by Senator Beveridge, known to be in President Roosevelt's confidence, coming out bluntly as an advocate of Cuban annexation, saying that the American troops in the island were there to stay, and that anyone who said otherwise was talking nonsense. The new elections in Cuba, it is announced, cannot take place before June next, eight months hence, so that there is plenty of time in which to bring about a condition of things that will make the American occupation permanent.

The most curious thing about the whole performance has been the attitude of the American Press, even of some of the anti-Imperialist papers, in the matter. A desperate attempt was made to keep up an appearance of compulsion on the American Government to intervene, but when immediately after President Palma had resigned and Mr. Taft took charge of the Government of Cuba, Mr. Palma's complicity in the plot for the annexation was made public in all the American papers, and the opera bouffe insurgents surrendered their arms with "unexpected" alacrity, the papers seemed to feel that they were making themselves and the American Government ridiculous. Taking it all in all, the acquisition of Cuba by the United States has been as pretty a piece of national buccaneering as one need wish to see, and was carried out with neatness and despatch. The cost of the American occupation to Cuba is reckoned at $25,000 a day, so that a basis for a mortgage of the island to the United States Government has begun to be laid, and the facility with which Cubans can be hired to get up disturbances to justify the permanent occupation of their country shows that pretexts can be easily created when needed. Some surprise was expressed when it was found that really all the insurgents, so called, were negroes.

Sensational developments are looked for before long in the way of oil discoveries in the State of Wyoming. That State contains more proven but undeveloped oil territory than any other State in the Union. In fact, it constitutes a great reserve which will be drawn upon when the oil deposits of Pennsylvania, Indian Territory, Kansas, Texas and California have been exhausted. The limits of the productive regions that have been located have never been defined; they are distributed from the extreme north-east to the extreme south-west of the State. Most of the proven territory is included in the vacant public domain, although from 10,000 to 15,000 acres have been taken up and patented by Standard Oil interests and by the Belgo-American Oil Company (an English syndicate). With the completion of the Chicago and North-Western Railroad Company's extension from Casper to Lander on the edge of the Shoshone Indian Reservation, it was the intention of the Standard Oil and Belgo-American interests to increase their holdings to such an extent that they would control the oil production of the State. This programme, however, has been seriously interfered with by the recent action of the Secretary of the Interior in withdrawing 6,000,000 acres of Government mineral land from entry by syndicates and speculators and treating it as the property of the nation. There is naturally much indigation among the great corporate interests that had laid themselves out for wholesale grabbing of the public domain, and it is yet a question whether President Roosevelt will be able to withstand the pressure they can bring to bear against him and the policy indicated by the action of the Department of the Interior.

It has been reported in New York that a European Oil Trust has been formed and registered at Bremen with a capital of $5,000,000. The principal members of it are said to be the Nobels, Rothschilds, and the Deutsche Bank. Its title is the European Petroleum Union, Limited, and its object is described to be to break the Standard Oil monopoly, and the first move will be the amalgamation into a single central syndicate of the numerous individual oil properties controlled by those in the combine in Russia, Roumania, Austrian Galicia, and Germany. The competition between these interests that has hitherto existed will cease, and their combined energy and capital will be concentrated against the Standard Oil. It is also said that French capital will be placed at the disposal of the great European Oil Trust where required for the exploitation of hitherto unproductive and undeveloped properties.

The trial of the Standard Oil Company at Findlay, Ohio, terminated on October 19 with a verdict of guilty of conspiracy to restrain trade in violation of the anti-trust laws of the State. The penalty for violation of the law under which the trial took place is a fine of not less than $50, nor more than $5,000, or imprisonment for from six months to one year, or both such fine and imprisonment. Further, any person suffering injury through a violation of the State law may, under it, recover damages double the amount of such injury. It was stated that now that a verdict of guilty had been found, the case would be allowed to go through higher courts before Mr. Rockefeller's own case was called.

The action of the Bank of England in raising the discount rate against American borrowing was spoken of in Wall Street as an international money war, in which not only England and the United States is involved, but into which all Europe may be drawn. The New York *Herald*, dealing with the subject, said that the narrowing of the contest in the minds of some people to one between the Bank of England and the Standard Oil Bank was a mistake; that the Bank of England being a quasi-governmental institution, and the Standard Oil Bank having received assistance from the United States Treasury in the shape of short time loans against gold imports, by which the Bank of England's reserves were drained, it became practically a case of the fiscal department of Government against Government. The hardest hit, however, was when blame was thrown on English financiers for too freely discounting American finance bills, and so absorbing their floating credit, rendering it difficult for English banks to take care of English financial and mercantile interests.

Passing Events.

Mr. F. H. P. Creswell, one of our few honest and courageous mine managers, delivered a vigorous speech at a crowded meeting of the Johannesburg Reform Club. In his spirited oration he easily demonstrated the falseness of the argument that the mines

must close down should the Chinese be repatriated. Some time before the coolies arrived there were no less than 13 mines working with seven to nine natives per stamp, supplemented with whites and machines. He further proved that with the existing number of blacks employed the present number of stamps can be operated, assisted by the extended use of drills. Mr. Creswell proceeded to argue that the threat of the bosses to starve the community by closing the mines must, if carried out, be met by State action, even to the extent of confiscation. This is what we ourselves have advocated, and seems the only way in which the bosses can be prevented, against their wills, from injuring and ruining others. The suggestion seems to have fitted in with the temper of the meeting, for it aroused quite remarkable enthusiasm. But we must give an intelligent community credit for seeing a little beyond the tips of their noses. Latest statistics show that 1,000 whites have been discharged by the mines in the last six months, notwithstanding the continued inflow of Chinese, and the report of the trade union officials shows that the process of supplanting whites by Chinese continues. No less than 1,000 skilled whites are registered as unemployed. Mr. Winston Churchill himself testifies to these facts.

An interesting and suggestive report is that issued by the Perth Chamber of Commerce, a document that covers a very wide range of subjects. One of the most important of these appears to be, in the opinion of the Chamber, the question of the development of the large and important mineral, pastoral, and agricultural resources of the North-West, and the Government has been impressed with the urgent necessity of pushing on with this work. It is acknowledged, with expressions of satisfaction, that the State has made steady progress during the year, and that the producing industries are in a healthy and prosperous condition. The following words of warning seem to be thoroughly justified, and will be received with sympathy outside as well as inside the colony :—"The financial condition of the State calls for cautious and economical administration on the part of the Government, and in particular, demands for public works or extension of railway communication should have the most careful consideration before being adopted by Parliament." The Chamber is anything but pleased with the results of Federation. Indeed, the President believes that Western Australia made a most unfortunate mistake in not standing out, as New Zealand did.

Well-merited punishment has been meted out to the protagonists in the American Mining and Smelting fraud, the long trial coming to a close on Monday last. It turned out that they were really well-known criminals, Young himself having previously been sent to penal servitude. But, as Judge Rentoul himself remarked, these criminals were assisted in their fraudulent and ruin-spreading operations by certain organs of the financial Press. With regard to those that had assisted in the swindles his lordship said he would be glad to hear that they had recouped some of the losses suffered by the victims. As regards the *Financial News,* if this paper was imposed upon it was its duty, he said, to find out and remove the writer of the leading article which appeared in that paper in praise of the company. Mr. Arnold Ward, for the *News,* said that before inserting the article the writer consulted all the leading authorities with respect to the status of the company, whilst Mr. Turrel announced that some people contemplate bringing an action in reference to the matter. Judge Rentoul said the *Financial News* proprietors would welcome an action, as giving them an opportunity of making a full explanation, and Mr. Ward practically endorsed this. So we are likely to hear a great deal more as the sequel of this trial.

How many people have heard of the New Rand Syndicate? Yet only a few months ago there was almost as much excitement in the shares as in New Vaal Rivers. For the sixpenny deferred shares were rigged up by some people to about £7, which was a more wonderful performance than the inflation of Vaals. Rumours of all kinds floated about the market respecting the extraordinary richness of the property. Yet it is an incident practically forgotten by all but a very few. This week the shareholders met to pass a resolution for the voluntary winding up the the concern. After a lengthy talk this was dropped, and the meeting was adjourned till January, on pressure from a group who are negotiating for an additional property to the company's claims and for getting fresh capital. The chairman is Mr. Hermann Schmidt, known to fame as "Magpie" of the *Sunday Times.* In his speech he declared the directors were not responsible for the market premium, the favourable rumours emanating from outside sources. In fact, the secretary was instructed to inform any callers at the office that such was the case. But why not have sent out official denials? That would have been easy and cheap enough? And did not the chairman himself, in his *rôle* of financial journalist, have an exceptional opportunity of refuting market gossip? As the City Editor of the *Pall Mall Gazette* pertinently puts it, "information from such an authoritative quarter and at such a time, if it appeared, would have been something more than 'chatter.'" So it would.

A big effort is to be made to increase the supply of labour for the West African mining industry. According to recent news from the Gold Coast an attempt is being made to get labour from the thickly-populated regions lying to the north of the Protectorate, and Captain Taylor is at the present moment conducting a selected number of chiefs' sons and men of influence to Tarkwa, where they are to be shown the work on the mines and the conditions of employment there. Afterwards they will be escorted back to their country with the hope that they will induce gangs to go to the mines. The people of the country from which the selections have been made know nothing of the world beyond their own villages, so the success of the development will depend greatly on the treatment of the pioneers and their subsequent reports. In a way this is, of course, good news, but unhappily there is not much of a mining industry on the Gold Coast to work at. Abundant labour of itself will not make a success of the industry. Gold is the first requisite, and so far it has not been proved that there is a vast quantity of this.

It will be welcome news to the shareholders of the Camp Bird that twenty stamps commenced running on Monday, and that the complete battery started on Thursday. This is rather quick work at renovation, for the snowslide, which did such destruction to the mill, and the property, occurred in the latter part of March. As this disaster was unfortunately followed by a fire the entire battery was destroyed, and it was some weeks before the work of rebuilding could commence. This being so, the management has evidently not lost many precious moments, but has carried through the arduous and expensive work with exemplary despatch. Misfortunes of this nature cannot be helped, and the pity is the disaster came at a time when prospects looked most promising. The mine outlook, of course, wears that complexion still, but there is some comfort in the fact that the suspension of milling has caused a delay of about six months only. This will tell upon the profits of the year now running, but the losses might have been much greater.

The first of the Rand mining companies to publish the statistics of their "secret" gold reserves are those of the Wernher-Beit group, these being given in the recent monthly reports. The official phraseology in each report is identical, viz. :—"In the past it has not been deemed necessary to publish a statement of the gold held in reserve, but, as your board has been advised that the omission is open to criticism, it has resolved to add this information in future to the results published monthly and to show the reserve in the quarterly and annual reports. The object of having a certain amount of gold in reserve is to equalise monthly profits as nearly as possible; in this manner abnormal expenditure and fluctuations in yield, which from month to month are unavoidable, are prevented

from interfering unduly with average monthly returns." As we have already had our say about this policy, which is in vogue on other gold fields than the Rand, we need offer no further criticisms, except to remark that it shows how unreliable and misleading the monthly statistics have hitherto been. Seven companies of this group have so far declared reserves to the value of £121,000, of which the Robinson alone accounts for £50,000.

Quite staggering were the figures of estimated profits given by Mr. Robert Williams, the managing director, at the meeting on Wednesday of the Tanganyika Concessions, and to smile incredulously at them would be excusable. For they look incredible, and being mainly outlined by a vivid and glowing imagination one may well doubt their possible realisation. According to his calculations a profit of £2,000,000 per annum would come from Katanga and Kansanshi copper alone. Indeed, Mr. Williams feels quite safe in forecasting such a profit, "provided" the reefs maintained their value in Kansanshi, and he still kept a safe margin for profits from railways, tin, gold and coal. The word "provided," however, will give Mr. Williams a safe refuge from criticism if facts fall far short of his theories. With an issued capital of £525,000 the company owned, said he, a 56 per cent. interest in copper already proved to exist amounting to two million tons, which at only £50 per ton represented £1000,000,000. "Let us say that half of this is profit under economic working conditions, there would be a profit of £50,000,000, of which this company would be entitled to about £22,000,000." No wonder the assembly opened wide its eyes as it gazed upon these visions of prodigious wealth.

A Russian official, well qualified to know the facts and incapable of saying what is not true, assures us that Count Witte when on his holiday had no mission to negotiate any loan for Russia, and has made no attempt to find money for it since he retired from the Presidency of the Cabinet. So that story goes the way of many similar inventions. It does not, however, follow that feelers have not been put out by the Ministry actually in office, and we are glad to see that the Jewish houses at least are standing firm in their resolution to have nothing to do with any new Russian loan. Here all honourable and self-respecting Jews have adopted that attitude for some time back, and they will stick to it. "No money to sustain tyranny," that should be the motto of all friends of liberty, of whatever creed.

Rumour has prepared us for a wonderful harvest this year in Canada, and it does not seem, for once in a way, to have exaggerated. For, according to the latest threshing returns and the reports sent to the Department of the Interior the wheat crop in the prairie provinces will reach 90,800,000 bushels, and thus show the substantial increase of 6,500,000 bushels. Of this vast quantity Manitoba will contribute 58,700,000 bushels, Saskatchewan 29,300,000, and Alberta 2,800,000 bushels. These are magnificent figures, and enable one to imagine the more vividly how the Canadian Pacific Railway in particular is enjoying such extraordinary prosperity.

In its usual monthly table of the market values of South African mining shares, the *Investors' Chronicle* remarks that, taking 44 representative shares of a face value of £33,047,000, and comparing this with the aggregate market value of the two previous accounts, the loss during October was £6,433,962. This decreases the total market value of the 44 shares to £68,911,458 compared with £75,345,420 at the end of September and with £154,509,040 at the mid-December carry-over, 1904, when prices were at their high-water mark for the post-bellum period. When the South African boom was at its height in 1895 these 44 index shares were valued at upwards of 150 millions, but nominal capitals have, of course, increased materially in the meantime.

Coming back to the City after a brief absence, it was with a painful shock that we heard of the death of Mr. William Tidy, a member of the old and eminent firm of stockbrokers, Whiteheads and Coles. We have known Mr. Tidy for something like 30 years, and he has been a member of the Stock Exchange since 1872—a much respected and trusted member. Quiet, unassuming, with nothing at all of the aggressive about him, Mr. Tidy yet knew how to hold his own and to keep others in their place. He was an excellent judge of markets, too, had a shrewd eye to the interests of the firm's clients, and was an unwearied and arduous worker. Best of all, he was a man to be relied upon absolutely. Whatever information he gave you might be sure accorded with the facts, and for that reason alone we shall miss him keenly from the ranks of the few old friends we have on the Stock Exchange. It is hard as the years multiply that the numbers of those who pass away and become a memory should also increase. Their departure gives one a sense of loneliness in the crowded street.

An official intimation has been sent to us that Mr. William Joseph Hutchings Whittall has resigned the position of actuary and principal official to the Clerical, Medical and General Life Assurance Society, and that his hitherto deputy, Mr. Arthur Digby Besant, B.A., F.I.A., has been appointed to be the actuary in Mr. Whittall's place, retaining at the same time his present position of secretary. While congratulating Mr. Besant on his promotion we cannot refrain from bemoaning the enforced retirement of Mr. Whittall, for he is one of the most keen-sighted, painstaking, and cultivated members of his profession, a man always courteous and ready to take an unbiassed view of any point that might be in dispute; an invaluable friend on occasion to the crude, uninstructed journalist groping his way in the intricacies of life insurance technique. What makes Mr. Whittall's resignation all the more sadder is the fact that he is a young man, only in his 50th year, and might have looked forward, had health been given him, to a long period of active work, one fruit of which, at least, should have been to place him at the top of his profession, a Nestor among actuaries. We can only hope that leisure may give him back some measure at least of the health he has so long been deprived of, and that his judgment and abilities will not be lost in insurance business.

A correspondent writes to us to say that after reading the literature issued on both sides, he inclines to vote for what is called the "administration ticket" in the contest for control of the New York Mutual Life Office. His impression is that this administration has been badly treated by the opponents, who have made charges amounting almost to dishonesty, while at the same time giving no credit to them for their hard work and extensive economies. Another reason given is that the rivals whom the policyholders' committee are seeking to put in are men without experience, and there may be a good deal in all this. To us, indeed, it is not a matter of very profound interest, because we have a strong suspicion that no matter what names may be put forward, the almighty financiers of the Standard Oil Trust and other blighting speculative and trading organisations in the American Union will take precious good care to prevent such valuable support as the wealth of this and other big American life offices command from being withdrawn from them by policyholders or anybody else.

The State Fire Insurance Company, a Liverpool concern, has been so badly hit by the San Francisco disaster that a serious reduction in the capital has become necessary. The directors propose to write off £2 from every £10 share, so that in future the capital instead of being £1,000,000 in £10 shares will be £800,000 in £8 shares. One of the objects of the scaling down is to expedite the time when dividends can be resumed, but we are not sure that this is a good reason for charging losses to capital.

The Sweetmeat Automatic Delivery Company is never likely to return to the halcyon days when dividends of over 20 per cent. were paid, because those dividends were never really earned, but business seems to be slowly recovering. Two years ago dividends were entirely suspended, but for 1905 a distribution of 2½ per cent. was made, and for the past 12 months shareholders are to have 5 per cent. Not only so, but the directors continue their prudent policy of strengthening the

finances by adding another £10,000 to reserve, and the balance carried forward is more than £6,000 better at £10,400. We shall deal with the report next week, and analyse the position more closely.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for week ended October 21, $3,770, decrease $1,528.

Argentine North Eastern.—Traffic receipts for week ended September 28, $20,848, increase $644; aggregate from January 1, $769,448, increase $73,903.

Assam Bengal.—Traffic receipts for week ended September 29, Rs. 89,072, increase Rs. 4,785; aggregate from July 1, Rs. 10,66,676, increase Rs. 1,81,759.

Canadian Northern Railway.—Traffic receipts for week ending October 21, $221,500, increase $102,800; total from July 1, $2,395,300, increase $922,600.

Lucknow Bareilly Railway.—Traffic receipts for week ended September 29, Rs. 25,209, decrease Rs. 6,020.

Quebec Central Railway.—Traffic receipts for the 2nd week of October, $16,761, increase $2,266; aggregate from January 1, $735,097, increase $100,014.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended September 29, Rs. 21,978, increase Rs. 2,062.

White Pass and Yukon Railway.—Traffic receipts for the week ended October 14 amounted to $44,194.

English.

Cleator and Workington Junction.—Receipts for week ending October 27, £1,283, increase £18; aggregate from July 1, £20,526, increase £166.

Cockermouth and Keswick Railway.—Receipts for week ending October 27, £726, decrease £74; aggregate from July 1, £17,166, increase £731.

East London Railway.—Traffic receipts for August, £4,273, increase £30.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending October 27, £357, decrease £64; aggregate from July 1, £5,796, increase £202.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Bath Electric.—Traffic receipts for week ending October 24, £779, increase £140; aggregate from January 1, £36,272, increase £6,552.

Blessington and Poulaphouca.—Traffic receipts for week ending October 24, £10, decrease £3; aggregate from July 1, £498, increase £32.

Bristol Tramways and Carriage.—Traffic receipts for week ending October 26, £5,011, increase £514; aggregate from July 1, £92,504, increase £4,602.

British Electric Traction.—Receipts of all the Associated Companies for the week ending October 26, £27,918, increase £879; total increase from January 1, £122,003; 430¾ miles, against 438½.

Burnley Corporation. — Traffic receipts for week ending October 27, £1,189, increase £80; aggregate from July 1, £21,285, increase £1,849.

Dublin and Blessington.—Traffic receipts for week ending October 24, £118; increase £8; aggregate from July 1, £2,859, increase £123.

Dublin and Lucan.—Traffic receipts for week ending October 26, £98, increase £2; aggregate from July 1, £2,315, decrease £33.

Dublin United.—Traffic receipts for week ending October 26, £4,745, increase £279; aggregate from July 1, £94,516, increase £5,535.

Edinburgh and District.—Traffic receipts for week ending October 27, £4,912, increase £393; aggregate from January 1, 1906, £214,824, increase £5,145.

Hastings and District. — Traffic receipts for week ending October 25, £815.

Isle of Thanet.—Traffic receipts for week ending October 27, £352, increase £59; aggregate from October 1, £1,667, increase £323.

London County Council.—Traffic receipts for week ending October 20, £26,303, increase £12,095; aggregate from April 1, £768,057, increase £329,068. Miles 106½, against 51¼.

London General Omnibus.—Traffic receipts for week ending October 27, £23,911, increase £1,719; aggregate from July 1, £401,181, decrease £3,606.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending October 27, £4,488, increase £2,842.

London Road Car.—Traffic receipts for week ending October 27, £8,205, increase £731; aggregate from July 1, £137,107, increase £2,992.

London United.—Traffic receipts for week ending October 26, £6,063, increase £1,383; aggregate from January 1, £271,776, increase £22,098.

Rossendale Valley.—Traffic receipts for week ending October 12, £213, increase £8.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending October 28, £756, increase £19; aggregate from January 1, £35,921.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending October 28, £15,894, increase £2,536; aggregate from January 1, £645,362, increase £73,983.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 303. Total receipts from August 1, 1903, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of August, 1906, £14,186, increase £1,415.

British Columbia Electric.—Nett earnings for Sept. $48,381, increase $6,557. Nett earnings, including income from investments, from July 1 to September 30, $160,302, increase $28,461.

Buenos Ayres and Belgrano.—Traffic receipts for the week ending October 28, £3,640, increase £820; aggregate from January 1, £148,374, increase £7,291.

Buenos Ayres Electric. — Traffic receipts for week ending September 1, £1,366, increase £91; aggregate from January 1, £47,400, increase £7,521.

Buenos Ayres Grand National.—Traffic receipts for month of September, $299,000.

Calcutta. — Traffic receipts for week ending October 27, Rs. 43,924, increase Rs. 6,114; aggregate from July 1, Rs. 7,57,050, increase Rs. 35,166.

Cape Electric.—Traffic receipts for month of September, Cape Town, £10,537; Port Elizabeth, £3,062.

Carthagena and Herrerias.—Traffic receipts for the month of October, £3,675, increase £1,233. Total from January 1, £41,773, increase £13,325.

Kalgoorlie Electric.—Traffic receipts for August, £5,005; aggregate from January 1, £34,892.

Lombardy Road.—Traffic receipts for the month of July, 1,356, increase £16; aggregate from January 1, £8,795, increase £144.

Madras Electric.—Traffic receipts for fortnight ended October 31, Rs. 14,961, increase Rs. 2,096; aggregate from January 1, Rs. 2,86,564, increase Rs. 33,852.

Twin City Rapid.—Traffic receipts for the month of July, $522,949, increase $87,845; aggregate from January 1, $3,077,558, increase $470,984. Nett traffic receipts, $286,832, increase $38,781; aggregate from January 1, $1,627,058, increase $247,064.

The Investors' Review.

The Week's Money Market.

BANK RATE 6 PER CENT. (Advanced from 5 per cent. on Friday, October 19.)

Norfolk House, Friday Evening.

Only in a negative way does our Money market improve. The 6 per cent. Bank rate appears to have warded off further demands from abroad for gold at the Bank of England, and the open market supply was secured this week by it at 77s. 9½d. per oz. If this continues, we may gradually see the position improve, but it will be very slow work indeed unless our rates are powerful enough to draw gold from surrounding markets. Two boats are bringing in about £400,000 worth next week, but that does not carry us far, and although Continental exchanges are above the point that would enable gold to be taken from us except at a sensible loss to the exporter, they are nowhere definitely in our favour, and appear disinclined to go up. In this respect the position continues bad.

That being so our leading discount houses struggle to maintain rates with fair unanimity, in spite of the downward tendency expressed by little more than 5 per cent. as the rate on six months' remitted bills and 5¾ per cent. as frequently the working rate in three months' paper of the same class. The market for three months' bank bills never slips back very far, and it was steady this afternoon at 5 15/16 per cent., with occasional quotations at 5⅞ per cent. We hope it will continue to be firm, because nothing would appear to be more certain at the present time than that gold exports would recommence if the open market let down discount rates so that the foreigner might resume his purchases.

Money rates fluctuate from hour to hour, and we regret that once or twice this week the call loan quotation went down to 4½ per cent. It did not stay down, but the temptation always is, when money seems to be weakening, to enter into engagements often ending in a loss. For the last two days, however, the market has been severely pinched, and we did hear yesterday that one poor borrower of the bill-broking class had to pay 7 per cent. for over-night money. This morning some people had to pay 6 per cent. for call loans, and even notice money went to that figure. As a rule, however, the banks lent for seven days at 5½ per cent., and when the Consol settlement payments had been carried through the day to day rate eased, helped by the release of the Russian loan instalment money by the Barings. The joint-stock banks are materially helping to maintain rates. They took a few November bills to-day at 5¾ per cent., but on December paper they asked and got 5⅞. As long as they act thus discount rates cannot slip away very far, and the Bank of England has a fair chance of keeping control over the whole market. It renewed large amounts due yesterday for a week at 6½ per cent., and about a quarter of the moderate sum repayable there to-day had to be renewed on the same terms. The India Council got 5¾ per cent. on some renewals to the end of the month.

There really should be no particular difficulty in keeping the open market bare and hard up for the rest of this year. Assuredly yesterday's Bank return supports that view, for it showed a further decrease of £690,000 in the other deposits, now little more than £40,000,000 all told, and the reserve was slightly lower, in spite of the fact that £455,000 in gold came in for the week. But then the note circulation expanded at the end of the month and the Scotch gold requirements doubtless swept away much of the benefit arising from gold imports. But why should Government balances be going up just at the turn of the month? They were £706,000 greater on October 31 than a week before. Calls on new issues are happily of no importance next week, but the demands for the whole month in this direction are fairly extensive.

SILVER.

On the whole the silver market has been quiet, for only a moderate business has been done. The Indian Bazaars at first really sold more than they bought, though towards the end some buying orders came from Bombay, which lifted the price ⅛d. to 32 9/16d., the price for spot and forward shipment alike. There is a scarcity of supplies on the market, practically no silver coming from America, and it needed little buying to have a bracing effect upon prices. Thus some purchasing of cash silver to-day by the Indian Bazaars sent the quotation ⅛ up to 32 1/16d. per oz., two months' remaining steady at 32 9/16d. Applications for the Rs. 40,00,000 India Council drafts on Wednesday totalled Rs. 2,74,00,000, of which Rs. 1,64,00,000 were for bills. Tenders were accepted for Rs. 32,29,000 in bills and Rs. 7,71,000 in telegraphic transfers, applicants at 1s. 4d. and 1s. 4 1-32d. respectively receiving about 8 per cent. Next week the amount to be offered is Rs. 40,00,000.

BANK OF ENGLAND.

Stock Market Notes and Comments.

Many people say that the present should be a good buying time, and they are right from some points of view. When money is very dear and borrowing difficult or costly, there are always people about who are compelled to sell their securities in order to work clear of embarrassing engagements. Prices therefore decline, and give opportunity to fresh investors to buy at more reasonable figures. A certain amount of this kind of business has been developing lately, and is one of the healthiest things the market has disclosed. At the same time, we must not forget that the absence of failures at the difficult settlement concluded last week once more proves that there must be many accounts hanging over markets which those interested in dare not liquidate. We have, in fact, had no clearing out or clean up, and until such comes we must preach caution. Prices, in other words, seem bound to go lower for many of the better classes of securities, just because there has been no general clearance, either here or on Wall Street. The Wall Street position, indeed, seems more critical than ever, so far as we are able to judge, and the amount of credit absorbed, not only in keeping up prices on American stock exchanges, but in holding back leading lines of produce of various descriptions from the consumer, is straining to the utmost the ingenuity and resources of American financiers and bankers. We hold it to be impossible that an artificial position of this description can continue indefinitely, and directly the readjustment of values begins all sorts of trouble will develop. Business has been restricted this week in all departments of our Stock Exchange, because Thursday was November 1 and a holiday. It will be spasmodic business in any event for most of the remaining days of this year, and as long as money remains dear we must be on the watch for unpleasant surprises. With an exhausted Consol market and threatened labour troubles, not only on the Clyde, but in South Wales and elsewhere, we cannot hope to see any steady improvement in the position of the Home Railway market, even with the money squeeze out of the way, and as for that other section of the Stock Exchange, so long popular to our undoing, the Kaffir Circus, every passing improvement there is bound to be followed by reaction as long as mines are worked upon a wasteful and ungracious system, and while irresponsible financiers play with the share market for their own exclusive profit.

The Week's Stock Markets.

A few speculative securities still stand out prominently in the Stock Exchange, and the gambling in them gives an appearance of activity all round the House, but as a matter of fact the amount of solid business passing is still extremely small. Dealers have this week been discussing the probability of a 7 per cent. Bank rate, and this would be quite sufficient to restrict investment dealings. More attention has been paid to the Miscellaneous groups of stocks and shares, and the good results displayed by some of the important motor companies has led to a revival of interest in these securities. Mexican Railway stocks have likewise continued to attract a large amount of attention, but some prudent speculators were disposed to take profits in anticipation of the half-yearly report, being a little anxious, perhaps, regarding the manner in which the sensational dividend lately announced had been produced. They seemed to be afraid that the money might have come from some special source instead of from ordinary business. The principal incident of the week, however, has undoubtedly been the very sharp improvement in the new Russian loan. It is said in some quarters that the support has mainly sprung from Jewish financiers, and the story has been spread about that an understanding has been arrived at between the Russian Government and the Jews on the question of extending civil rights and affording proper protection to life and property. It is impossible to say what measure of truth lies in these statements, but the fact remains that the scrip of the 5 per cent. loan was rapidly raised to 3½ discount, or an improvement on the week of 2½. It is not so very long ago that this loan stood between 12 and 13 discount, and the advance has been both rapid and remarkable. The monthly settlement in Consols was carried through during the week, and the high charges for loans led to considerable weak-

ness in the prices. Some early borrowers on stock paid as much as 6½ per cent. for their accommodation, but they were rather unfortunate, as later in the day a good deal of Japanese money was lent in the market and many operators for the rise were able to contango their purchases at 5¾ and even 5½ per cent. The price made up at 86 or decline of ⅝ compared with the previous settlement. The running off of rates did not have a strengthening influence on quotations, because the Stock Exchange immediately began to discuss the prospects of a rise in the Bank rate, and final figures show a sharp loss on the week. Other British funds commenced fairly well, and after displaying a reactionary tendency again pulled up, closing slightly higher in most instances. Home County and Corporation stocks were steady without very much doing, and the Colonial Inscribed list may be considered fairly firm since a few stocks finished ½ to 1 better.

The opening price for the Russian 5 per cent. loan was about 6 discount, and, as intimated above, the price steadily improved to 3½ discount. The other leading securities of the country went up as well, the 4 per cent. of 1889, which are best known in this market, showing a rise of about 2. Business in other European stocks was rather restricted by the monthly bourse settlement in Paris, and prices did not respond to the lead given by Russians. Spanish, Turkish, and Portuguese all showed slight dulness, but the first-named was firmer again towards the close. South American bonds were very neglected, but fractional improvements appeared in a few Argentine issues and Brazilians recovered from a dull start, with particular strength in the Western of Minas Railway bonds. Cuban 5 per cent. continued to pick up from the weakness caused by the recent revolution, and support was extended to Chinese Shanghai Railway loan. Japanese issues likewise met with small investment inquiry, but the excitement in Peruvians died down and prices ended a trifle lower.

Business in the Home Railway market slackened off, and indications were not wanting that some dealers were anxious to secure their profits before the holiday on November 1. So much stock, however, has recently been absorbed by the small investor that the realisations produced very little effect, and on balance prices retained a good proportion of the gains registered in the end of last week. Great Western scrip was in fair demand, and Great Central preferred also recovered sharply, while South Eastern and Chatham stocks enjoyed a spell of popularity on the announcement that plans were to be deposited in Parliament for the Channel Tunnel scheme. But the project is generally regarded as impracticable, and the enthusiasm flickered out. The Great Western, Great Northern, and several other traffic returns were all considered satisfactory, but the market was in a listless mood and the figures had very little effect. Metropolitan dwindled, but District met with good support owing to expectations that the competition from motor buses will be less felt now that the bad weather has come with its attendant greasy roads.

Considerable doubt exists as to what will happen when the mass of securities recently shipped from this side reaches New York, and until it has found a lodgment operators both here and in Wall Street are inclined to restrict their dealings as much as possible. To what low ebb arbitrage business between the two markets has fallen may be judged from the cables, which show that the transactions on account of London houses rarely covered more than 10,000 shares on any day this week, and even of these the greater portion were not the usual favourites. Pennsylvania were pushed up by the usual method, viz., talk of an increase in the dividend, but advantage was taken of the rise to sell other things, and the market was never really strong. Disappointment over the Steel Trust quarterly figures and the failure to pay an extra dividend on the ordinary stock caused dealers to modify their expectations regarding the Pennsylvania, and prices eased off all round. Mexican Central issues and National of Mexico preferred stocks were bought vigorously early in the week, but fell back a little on the announcement that the negotiations with the Mexican Government with regard to the first-named company had fallen through. The prophets of an increased distribution on the Pennsylvania proved to be right, as on Thursday a dividend of 3½ per cent. for the half-year, or an increase of ½ per cent., was declared. An all round rally in prices which followed was partly lost when call money rose to 9 per cent., but the market pulled itself together and a fresh advance was engineered.

The Grand Trunk traffic statement for September was far worse than the market had looked for, the nett increase being only £6,200 or about half what had been expected, but notwithstanding this the junior securities were well supported. Most of the buying was said to be against options by Continental and local operators, and was vigorous enough to lift the ordinary stock by a considerable amount, while the third preference also showed a fair improvement. Canadian Pacific shares on the other hand, did not quite hold the best figures of the week, although in its case the monthly statement was satisfactory enough, with an increase in nett earnings of $662,000.

Amongst Argentine Railways, Great Western has been in strong request, and the buying was said to have been stimulated by talk of the line being taken over by the Buenos Ayres and Pacific Company. According to the market, the absorption must take place sooner or later in order to protect the Pacific from the severe competition which it will have to meet when the Transandine system is finished, and it is suggested that the Pacific will take over the line on the basis of a 6 per cent. guarantee. Argentine North-Eastern preferred and ordinary debenture stocks, East Argentine and Rosario preferred stock have likewise met with support. Profit-taking in the stocks of the old Mexican company sent quotations back in the end of last week, but it was not long before buying was resumed and further substantial improvements were recorded in the ordinary and second preference. Other Mexican Railway things shared in the advance, Mexican Southern in particular being decidedly better. Brazilian stocks were firm, and the same may be said of Uruguay issues, while United Railways of the Havana ordinary was steady without a great deal going on in it. Russian Railway stocks hardened just before the holiday in sympathy with the strength shown by Government loans.

A considerable amount of activity developed in the miscellaneous market with particular interest in Cycle and Motor shares and Textile securities generally. The wonderful results displayed by Humbers for the past year caused a sharp run on the shares, and the "bulls" were not satisfied until the price had been raised to 35s. There was some reaction from this figure owing to profit taking, but the shares still show a substantial gain on the week. Daimler Motors were also favourably influenced by the report (the accounts of both this company and Humber are analysed elsewhere), and the price of the £1 shares was run up to 4 11/16. In this case also there was some reaction before the close, and Dunlops, which had also been good, finished below the best. Argyll Motors were pushed up to 1½, and Darracq ordinary to 3. In the Textile group English Sewing Cottons and Coats were prominently strong, and Fine Spinners, Calico Printers and Bleachers were also good. Amongst Catering shares Aerated Breads derived benefit from the report, and Lyons, Slaters and Harrods were sympathetically firm. James Nelsons were a trifle harder amongst Meat shares, Nitrates continued to improve in several instances, and continued buying of Gramophones carried them up to 55s. Eastman Kodaks common stock was advanced 15 on the announcement of an extra dividend of 5 per cent., but lost one-third of the advance before the last. The Associated Cement issues were dull again, but Alkali shares were inclined to improve. Both Salt Union preference and Brunner Mond ordinary were fractionally better. Sweetmeat Automatics improved to 18s. 6d. on the greatly im-

proved result shown for the past year, the dividend being raised from 2½ per cent. to 5, while an extra £6,000 is carried forward. Hudson's Bays were taken in hand again by the manipulative clique and rose from 104 to 108 in one day, closing steady round the top price. Pekin Syndicates, however, were rather dull, and other land shares were without particular character. Gas Lights met with small investment inquiry and rose to 98, but the Iron and Steel group was inactive and inclined to be dull. Anglo-American deferred dipped to 23⅛, but rallied again and closed round 23½. London Docks deferred advanced to 64, but Shipping issues were quiet and generally unaltered.

Business was only languidly resumed on the Stock Exchange to-day, and dear money is slowly stifling the tendency to speculate so far as the public is concerned, but there was a little hardening in Consolidated Gold Fields shares this afternoon, the story being current that the company may this year squeeze out a dividend. Another little excitement was the slump in New Vaal Diamond shares, but the play in these would seem to be still in great measure professional. The Consol settlement passed off with no hitch whatever, and yet the market is not comfortable, fears it does not know what. Home securities were for the most part hardly looked at, and players, when they are not fascinated by Hudson's Bay shares or things of that kind, dabble in small things like Humber shares and the shares of several of the motor companies, for most of which to-day has seen a demand. Abroad markets appear to be as stagnant as at home, and we cannot expect business to be good here in present circumstances, and with a 19 day acount to live through. The new Extension shares of the Buenos Ayres Great Southern are quoted at 5/16-7/16 premium. The North-Western Uruguay Railway Company announces the first cash dividend paid upon its 6 per cent. first preference stock since 1895. The dividend is only 1 per cent., but it is something, and marks progress.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Rise: War Loan Acct. ½, to 97½-98, Local Loans Acct. ½, to 97½-98, Transvaal Acct. ½, to 96¾-97½, India 3½ p.c. Acct. ⅝, to 103½-103¾, do. 3 p.c. Acct. 1½, to 92½-92⅝, do. 2½ p.c. Acct. 1½, to 77⅜-78½. **Fall:** Exchequer Bonds 2¾ p.c. ⅛, to 97-97⅛.

CORPORATION STOCKS.—Rise: Metropolitan 3½ p.c. ⅜, to 101⅛-102⅛, do. 3 p.c. ½, to 91-92, do. 2½ p.c. 2, to 77-79, London County 2½ p.c. 1, to 75-77, do. 3 p.c. Acct. 1, to 88-89, Blackburn 1, to 89-91, Brighton 3 p.c. 1, to 87-89, Burton 1, to 89-91, Coventry 3 p.c. 1, to 87-89, Devonport 1, to 87-89, Southampton 1, to 103-105, Wigan 1, to 81-84. **Fall:** Hanley, 1, to 87-89.

COLONIAL GOVT. STOCKS.—Rise: Cape (1882) ½, to 102-104, do. 3 p.c. ½, to 83-84, Natal 3½ p.c. ½, to 97½-98½, do. 3½ p.c. 1934 ½, to 97-98, N. S. Wales 3 p.c. 1935 ½, to 86-87, do. 3½ p.c. 1930 ½, to 99-100, New Zealand 3½ p.c. ⅛, to 100-101, Queensland 1924 ½, to 105½-106½, do. 3½ p.c. 1, to 98-100, do. 3 p.c. 1, to 86½-87½, S. Australian 1882 ½, to 101-103, Victoria 3½ p.c. ½, to 99-100.

FOREIGN GOVT. SECURITIES.—Rise: Argentine External 1889 ½, to 76-78, do. Bonds 1897, 1898, 1899, and 1900 ½, to 85½-86, Brazilian West of Minas Rly. ½, to 95-96, do. 1895 ½, to 95-96, do. Companhia Lloyd ½, to 80¼-80¾, Bulgarian 1888 ½, to 100½-101½, do. 1892 ½, to 100½-101½, Chilian 1887 1, to 91-93, do. 1892 1, to 96-98, do. 1896 1, to 96-98, do. 4½ p.c. Bonds 1, to 90-92, do. 1905 1, to 96-98, Chinese 1894 1½, to 105-106, do. 1896 ¼, to 100¾-101½, Cuba 1, to 104-106, Greek 1881 ⅛, to 52½-53½, do. 1884 ½, to 52-53, do. Monopoly ½, to 40-41, Honduras Issues ¼, to 11⅜-12¼, Japan 4 p.c. ½, to 88-88½, do. 4½ p.c. ¼, to 93-93½, Russian 1867-9 1, to 75-78, do. 1882 1, to 62-66, do. Ser. II. 1⅛, to 75-76, do. Ser. III. 3, to 72-76, do. Rentes 3, to 69-73, do. 3½ p.c. Bds. 1, to 63-66, do. 4 p.c. Loan 1, to 70-74, do. 5 p.c. 1906 3, to 4½-3⅝ dis., Siamese ½, to 100½-101½, German ½, to 84-85. **Fall:** Brazilian 1883 1, to 87-89, do. 1889 ½, to 83½-84, Dutch 1, to 90-92, Greek 4 p.c. Rlys. Loan ½, to 91½-2, Russian 1822 1, to 92-96.

HOME RAILWAYS — Ordinary. — Rise: Glasgow and S.-Western Def. 1, to 38-39, Gt. Northern "A" ½, to 38-39, Gt. Western Scrip. 2, to 63-65, S.-Western Pref. 1, to 102-104, Brighton Pref. 1, to 148-150, N. Staffordshire 1, to 97-99, S.-Eastern Pref. 1, to 123-125, Taff Vale ½, to 77-78. **Fall:** Nth. London 2, to 88-93. Port Talbot, ½, to 9-10.

Leased.—Rise: Weymouth 1, to 115-118.

Debentures.—Rise: Furness 1, to 84-86, N.-Western 1, to 93-95, Brighton, 4 p.c. 1, to 116-118, Neath and Brecon "B" Deb. 2, to 49-54.

Guaranteed.—Rise: Gt. Northern 1, to 115-117, Midland 1, to 72-74.

Preference.—Rise: Gt. Central 1891 1, to 82-85, do. 1894 2, to 71-74, Gt. West. ½, to 142-144, Chatham 4½ p.c. 1, to 87-89, do. 2nd 1, to 50-52, Midland 1, 71-73, North British, 1884, 1888, 1890, 1892, 1897, 1901, and 1904 issues all, 1, to 113-115, North-Eastern, 1, to 114-116, Plymouth 1, to 116-119.

INDIAN RAILWAYS.—Rise: East Indian "B" ½, to 25¼-26⅛, Gt. Indian Peninsula "B" ½, to 20⅜-21⅜. **Fall:** Bengal Dooars Pref. 1, to 99-102.

Critical Index To New Investments.

BRITISH WEST AFRICA PRODUCE CO., LIMITED.

This company takes over 19 concessions for agricultural and trading rights over territories covering an area of upwards of 4,000 square miles, in the Protectorate of Sierra Leone, for which it pays £33,333 in ordinary shares to the vendors and sundry small sums to the chiefs granting the concessions. The concessions give powers to cultivate and deal in vegetable matters and produce of commercial value except palm kernels, palm oil, rice and kola nuts, and the company proposes to devote its energies to the cultivation of ramie, jute and other fibre plants, cotton and maize. New processes for treating ramie at a small cost have been secured on condition that half of all royalties from licences granted, and of all proceeds of sales of letters patent are to be paid to the inventor, Mr. D. E. Radclyffe, and that the company pays a maximum royalty of ¼d. per lb. up to 500 tons and ⅛d. per lb. on any further quantity treated by the processes. The total capital is £100,000 divided into the above-mentioned 33,333 ordinary shares and 66,667 preferred ordinary shares entitled to a non-cumulative dividend of 6 per cent. and to two-thirds of the profits available for distribution after the ordinary shares have received a sum equal to half the amount required to pay the preferential dividend, and 50,000 of the preferred ordinary shares were offered for subscription. No reliable estimate of profit seems possible, and the directors endeavour to tickle the imagination by vague general talk of the possibilities and quote figures from the Sierra Leone *Royal Gazette* of the exports of native produce during the three years 1903-5 in support of their theories. Mr. Edward Brunner, one of the vendors, who takes 8,334 of the ordinary shares, has entered into an agreement to act as managing director for ten years, receiving as his remuneration 10 per cent. of the profits after provision has been made for reserve and depreciation funds, so that he has a decided incentive to make the company a success.

SUTHERLAND REEFS PROPRIETARY GOLD MINES, LIMITED.

Once again the Sutherland Reef, Limited, is in liquidation, and is now going through its fourth reconstruction. The pity is that it is not its last, for the

venture has long appeared to us as absolutely hopeless. A brand new name is being given to the new company, the capital of which is £120,000 in 960,000 shares of 2s. 6d. each. Of these 366,837 shares will be allotted as fully paid up in part payment of the purchase consideration, inclusive of 216,437 shares to be offered by the General Share and Investment Company as a commission to shareholders in the Sutherland Reef and in the Murchison Proprietary (also in liquidation), who take up the shares to which they are entitled, being one fully-paid commission share for every two shares applied for. But even with these thrown in we cannot advise anyone to take them up. "A considerable amount of work has been done on the mine," says the prospectus, "which has up to date produced more than £30,000 of gold." Is this anything to boast about? Seeing that the original company was formed in 1889 and had a considerable amount of capital spent on its exploitation, we should say this is anything but a recommendation. Nor can we think more highly of the Murchison Proprietary property. The whole thing is not worth consideration, judged by the lamentable results of the past.

TANGANYIKA CONCESSIONS DEBENTURES.

No person in his senses can doubt that this company has got hold of a magnificent mineral property in Central Africa, but we wish those responsible for the compilation of estimates were a little less sanguine. When they tell us that copper deposits have been exposed containing 2,000,000 tons of copper of a value of nearly £200,000,000 at current prices, they excite the cupidity of the average mind to a dangerous extent. Were less than half this amount of copper to be found in an easily minable condition the expenditure now proposed would be amply justified. An issue of 250,000 5 per cent. debentures of £8 each is now offered at par by the Concessions company. This means that £2,000,000 of borrowed money is to be raised on a share capital of £1,000,000 in £1 shares, of which only 515,000 have been issued. Would it not have been easier to issue the remainder of the share capital, and more profitable as well, seeing that the current price of the shares is about £7? As it is, however, the present issue seems to be as well safeguarded as these things can be, and the money will not be called up very rapidly, not all before ten months. Meanwhile, the coupon for the full six months will be paid on July 1, 1907. Option is given to each subscriber to exchange these debentures within five years for shares in the company, one share being given for each £8 debenture, and the directors describe this concession as being most valuable. That is quite possible, as development appears to be going on vigorously. Of the money now raised, over £1,500,000 will be available for the construction of the Benguella Railway Company, which is being built under the superintendence of Sir Douglas Fox and Partners, and Sir Charles Metcalfe, Bart., as consulting engineers, and will, when finished, connect the mineral region lying to the north-west of Rhodesia with Lobito Bay on the West Coast of Africa, one of the finest harbours on that side of the continent. For further particulars see the prospectus on another page.

ISSUE BY TENDER.

NORTH SUSSEX GAS AND WATER COMPANY.—This company was incorporated as a gas company in 1905, but Parliamentary powers for the supply of the district with water were granted this year, and owing to the recent serious drought the present is considered an exceptional opportunity for commencing this supply. The water to be obtained by borings from the Ashdown sand, and for this purpose £7,500 6 per cent. preference stock is offered for subscription at par. No mention is made of the total capital, nor of the amount already issued, but it is quite a tiny affair, having, according to the reference books, unauthorised capital of no more than £12,000 in £5 shares, of which 2,000 were offered in 1905.

We are requested to state for the information of policyholders in the Mutual Life Insurance Company of New York, that ballot papers (in sealed envelopes) may be sent to the London office, 16, 17, and 18, Cornhill, E.C., whence they will be forwarded in bulk to the head office in New York, and further to say that if ballot papers have been lost or mislaid, forms may be had upon application to the company's representatives.

MINING NEWS AND NOTES.

***Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* ONE SHILLING *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* INVESTORS' REVIEW.

The Kaffir Circus continues dull and listless, and prices have further dwindled. Hardly a genuine bargain has been transacted from one end of the week to the other, for the reason that the public still takes no interest in this market. At any rate, it is not buying, and the professionals have the game all to themselves. On Wednesday a couple of shares suddenly came to the front, which may be ranked as "outsiders." These were Transvaal Gold Mining Estates and T. C. L.'s, though there have previously been occasional spurts of lively gambling in the latter, chiefly on rumours of tin finds. The former were pushed up on the cablegram from the manager announcing that as a result of the prospecting operations on the farm Vaalhoek he has traced the reef in four small prospecting shafts, covering a distance of 200 yards across the hill, that the reef is 8 feet wide, with an average assay value of 1 oz. 7 dwts. This is a high value for a South African property, too high to be accepted as a sign of a permanent reef, it looks more like a rich pocket. But such considerations and doubts matter little to speculators if only they can rush the price up. Crown Deeps have been steadily advancing, in contrast with the recent heavy fall, and it looks as if these are the media of a persistent "bull" and "bear" contest.

Rhodesians were also very dull until after the meeting of the Tanganyika Concessions, when they began to improve all round by way of sympathy. At the meeting Mr. Robert Williams delivered a highly optimistic speech, drawing a picture of wonderful profits to be earned in the future, and this was a sufficient excuse to the insiders to hoist the price again, for prior to the meeting it had shown much limpness. Tanganyikas, therefore, have again been the most prominent and active share in this particular market, and the gamblers are once more talking them to still higher levels. Zambesi Explorings have been helped by this movement, the two companies being closely connected.

In the diamond section the gambling excitement in New Vaal Rivers has been unabated, and they have moved about, up and down, in a violent and bewildering way. Sometimes they would gain substantially on balance, and lose considerably at others, but the public very wisely look on, without losing their heads or their money in this unhealthy sport of rigging and "bear" cornering. At one time the price reached £12, and it has been down to £6. Legal developments are said to be possible in connection with the reported "bear" position. This is reputed to have arisen in connection with the clearing up of the estate of the late chairman and life governor of the company, Mr. E. Schwabacher, who committed suicide a few months ago. He is said to have held 60,000 shares out of the issued capital of £128,000, or nearly half, and report says the trustees of the estate parted with these, on the basis of the nominal quotation of about 10s. then ruling, to a syndicate controlled by a well-known operator. The liquidator of the estate is said to be disputing the sale on behalf of the creditors, and it is argued that if his contention be upheld it will place the syndicate in an awkward position as regards the shares they may have resold. Premier deferred, after gaining a little, have latterly developed weakness, but De Beers and Jagers are firm.

We need say nothing of West Africans nor of Egyptians, which are as stolid and lifeless as usual. Neither has much been done in West Australians, where Great Fingalls are very weak and Kalgurlis strong. On Monday Loddon Valleys were suddenly hoisted ⅛ on rumours that the company would enter the gold-bearing rush in a few days, but they have not retained this, the price steadily falling on profit-taking.

Copper shares have been firm, on the whole, without much doing in them; Indians keep steady, and amongst Mexicans Esperanzas have been irregular. Many people regard the position of this company as "mysterious," and there is much justification for the feeling, for the market is weak, despite the high monthly profits and the sanguine official reports. It looks as if some big holder is constantly realising.

SCOTTISH MASHONALAND GOLD MINING COMPANY.—It is most surprising to see that this company managed to make a profit of no less than £25,500 in the year ended June 30 by realising some of its shares. This is the more remarkable inasmuch as the Rhodesian market was depressed during the whole of that time, and this company itself suffered from the depreciation. No schedule of holdings is given, but these in the aggregate are valued in the balance-sheet at cost at £125,000. It is acknowledged that the market value of these at the end of June was £101,440. That is to say there was a loss of £23,560 by way of depreciation, yet concurrently a profit of £25,500 was made! It is well known that the company is a large holder of Banket shares and this probably explains the achievement. There were times during the year, especially a few months ago, when the price of Bankets was rigged up by the inside gamblers and it is as likely as not that the directors seized one of these opportunities to realise a line of them. Such an inference is reasonably deducible from the statement that the company still "retains" a large interest in the Banket company, in whose future prosperity the directors say they have the greatest confidence. Assuming they sold some of these shares this feeling of confidence is expressed in a peculiar way. But, after all, a market profit must be very tempting when the company's paper wealth is

evaporating by depreciation. Adding in £878 from interest and dividends, £190 from transfer fees, and £42 from tribute royalty, the total revenue was £26,611. The directors made no allowance whatever for the depreciation in the share assets, so they are able to boast of having made a nett profit of £24,808. Deducting the previous year's debit of £16,478, they carry forward a credit of £8,331. Had they written off the loss of £23,560 on the shares they would have had to take forward a debit of £15,229. This would have been less pleasant than showing a profit, which, under the circumstances, is partly fictitious were sound financial principles adopted. "Oh, the depreciation will be recovered in time," would probably be the directors' reply. But they know no more of future probabilities than anyone else, and further depreciation is just as likely as a recovery. And are the directors certain to repeat the performance in the current year of selling other shares at a large profit?

NORTH SHEBA GOLD AND EXPLORATION COMPANY.—This oft-reconstructed company is again in financial difficulties, though this is not surprising. But, looking to the lamentable past, there is no justification for the directors feeling, as they seem to feel, judged by their language, annoyed that they cannot get more money out of the shareholders or the public. "Owing," say they, in a circular issued to their shareholders, "to the apathy shown by shareholders and mining investors generally at the present time towards all South African mining ventures and the consequent inability of your directors to provide further funds so long as their operations are confined to South Africa, they have given their consideration to mining properties in other quarters, with the result that a mining property in Victoria, Australia, has been acquired on very advantageous terms." Shareholders have no need to be profoundly thankful to the directors for going to Victoria, especially as it is quite an untenable hypothesis that they and the public are willing to give money to any mining company outside South Africa. On the contrary, they prefer a good South African mine to anything in Victoria, but who could feel that the North Sheba is a good mine or ever will be? From the Victorian property "an enormous amount of gold has been extracted up to date." Indeed! Then this is hardly a good recommendation to prudent investors, who see no profit in buying sucked oranges, and the directors had better twiddle their thumbs if they cannot find a mine that is not partly worked out. Some experts, however, seem to think there is a chance of intersecting the lode at depth and finding richer stone there than at the surface. So to test their theories money is to be provided by utilising the unissued shares. Who will take them up? As the mine has already produced £1,200,000 of gold have not the owners courage to spend another £2,000 on it? Anyway, they seem very anxious to get rid of it, even though the directors "are advised that with a moderate expenditure the mine will within a comparatively short time be earning large profits and thus open up a successful era for the company." Have the directors abandoned the South African property for good? It ought to have been abandoned years ago, but how tenaciously the directors have clung to it! Our advice to the shareholders would be to insist on absolute liquidation.

NIGEL MAIN REEF.—The announcement is made that the board of this unsuccessful South African company has been reconstructed and that the following are now the directors:—James Vining, Reginald Corfield and Thomas Grimes. Baron von Reiffenstein has resigned his seat on the board. The present directors have arranged to provide the money required to enable the company at once to start working the property on the lines set out in the report written by Mr. A. H. Manning. This is a decidedly good example for directors of other companies to follow; it is the best way of showing their faith in a mine. There is little encouragement from experience to place robust faith in the prospects of the Nigel Main Reef. The original company was formed in 1895 and underwent reconstruction in 1899. After suspension during the war development work was resumed in 1904 and a five-stamp mill is being erected. The capital is modest enough at £50,000 in 200,000 shares of 5s. each and the accounts to December 31 last showed cash £12, debtors £52, calls unpaid £2,541, uncalled capital 1s. per share on 23,000 shares. Current liabilities were £764.

CENTRAL CHILI COPPER COMPANY.—This company benefited a little in the year 1905—the report for which is only now issued—from the rise in the price of copper, but not to the extent that may be expected during 1906. There is, however, no question of a dividend yet, but now that nearly the whole debit has been wiped out a distribution may be possible twelve months hence, the last payment being 6d. per share in 1900. During the year 44,450 tons of ore were smelted for a return of regulus containing 2,052 tons of fine copper, whilst some gold and silver were recovered of a value of £3,605. A large portion of the company's production came, as usual, from ores purchased from the neighbouring mines which are too small to operate independent smelting works. The profits from these smelting works, say the directors, cannot be as favourably affected by the rise in the price of copper as would be the case if the whole output came from the company's mines; on the other hand, they would not suffer to the same extent if the price fell to a lower level. Gross profit on mines and smelting amounted to £22,805 in comparison with £16,687, and the total income was £23,012, with £116 from interest, commission, and transfer fees. Outgoings of all kinds, including depreciation, the expenses of the new issue of capital, loss on exchange, income-tax, &c., absorbed £12,089, leaving a nett profit of £10,932, practically the same as in the year before. At the end of 1904 there was a deficiency in the balance-sheet of £22,576, and this the directors reduced to £11,643 by utilising the balance of the reserve fund. This is further cut down to £711 with the help of the profit earned last year. The general manager advises that the scarcity of labour, which is general in Chili, was aggravated by the outbreak of an epidemic of small pox at Panulcillo and the surrounding district. He considers that with an adequate supply of labour, and the employment of suitable machinery, the output and profits could be considerably increased. Machinery required is now on the way, as well as an equipment for an extension of the smelting plant. Against liabilities to creditors of over £5,000 cash totals £22,731, and debtors are down for £28,211, but allowance must be made for the proceeds of the 30,000 shares issued.

ZINC CORPORATION.—Following up their recent circular with regard to the treatment of tailings on a working and successful scale the directors have issued another dealing with the financial position of the company, in the way of appeal to the shareholders to provide more capital. At present the capital is £350,000 in £1 shares, of which £340,000 is issued and has been applied in the purchase of tailings, in the construction of returnable deposits on contracts and in experimental work, erection of plant, &c. The directors have decided to increase the capital to £500,000 by creating 150,000 new shares. Of these it is proposed to issue 113,333 at 25s. per share and to give all shareholders the right to subscribe for the new shares in the ratio of one to three held. The 113,000 have been guaranteed at the issue price, without any consideration beyond the option to subscribe for the remaining shares at £2 per share, the guarantors being Messrs. E. L. and C. Baillieu, of Melbourne, Messrs. Bewick, Moreing and Co., Messrs. Govett, Sons and Co., Messrs. Lionel Robinson, Clark and Co. and the London and Western Australian Exploration Company. This issue will, therefore, give the company £141,666 additional cash and, if the option be exercised, a further £93,334. With such resources the company will exercise further options over tailings already accumulated and those to come from current operations of the mining companies under contract; the No. 2 plant on the British Broken Hill Proprietary property will be enlarged to a capacity of 12,000 to 15,000 tons a month, to be in operation probably by the end of the year; and No. 1 plant on the Broken Hill South Blocks mine will be completed. It is anticipated that this will be working by March of next year. Other money will be used in the construction of a smelting works. A meeting of shareholders is to be held in Melbourne at an early date to consider these proposals. As soon as these financial arrangements are completed it is intended to advise the shareholders to convert the company into an English one, with a head office in London, a feasible proposal, which will doubtless fall in with their wishes. We cannot feel absolutely certain that even now this company will become a successful undertaking, but it can be said it has better chances than it ever had. But the future large capital may be something of a handicap to it. The company's purchases and options cover tailings now on the surface to the amount of approximately 2,000,000 tons, the assay values of which vary from 17 per cent. to 22 per cent. of zinc, 7 per cent. to 10 per cent. of lead and 5 ozs. to 8 ozs. of silver per ton. Contracts for the current outputs of the mining companies should yield, it is estimated, an additional 2,200,000 tons.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* INVESTORS' REVIEW, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

MEXICAN RAILWAY CO., LIMITED.

It is rather more than a week ago since the directors of this undertaking treated the Stock Exchange to another extraordinary dividend surprise, and threw the dealers in the market into a state of frenzied excitement by announcing a distribution of 3¼ per cent. per annum on the company's second preference stock. For several weeks the speculators in the market had been indulging in varied dividend anticipations, and at one time whispered in an awe-inspiring tone that they believed the company would this time pay the full dividend on the first preference stock and possibly ½ per cent. per annum on the seconds. But as dividend day drew near the "bulls" seemed to become alarmed at their own extravagance, and revised previous opinions by saying that after all the distribution on the "firsts" might not be more than 7½ per cent. So when the declaration was made it was only a work of seconds to put the second preference stock up £10 in the market, and it, together with the firsts and the ordinary, have been going forward ever since. The rise has not, of course been entirely uninterrupted, because the idea prevailed in some quarters that the fine result might have been due to some special circumstances, and not entirely to the half-year's business. Those who thought this way were rather eagerly taking profits just before the report came out, but a few people always seem to know more about the company's affairs than they should, and sales were invariably met by eager buyers. It may be said at once that the legitimate operations of the half-year are alone responsible for the sudden accession to fortune. The steadiness of Mexican exchange, thanks to the Government's currency reform measure, continues to be of immense benefit to the company, and during the past six months the sterling value of the dollar worked out at 24.846d., compared with 24.3583d. in the corresponding half of 1905. During the present half-year the rate of exchange has remained about the same as during the opening period, having

varied between 24.92d. and 24.80d., but we have yet to see what effect the remarkable rise which has lately occurred in the price of silver will have. This has produced an important effect in more than one direction, and if the Governments both of Mexico and the Strait Settlements, which also has a fixed exchange, are to maintain the new laws, they will probably be compelled to prohibit the export of silver. At present prices it is a profitable commercial operation to send dollars away from Mexico and the Straits for melting into bars, and already the Government of the Straits Settlements has had to reduce the quantity of silver in the coins it issues. This, however, by the way. The gross earnings in the period under review amounted to $3,496,658, or an increase of $365,476 compared with the corresponding half of 1905. Number of passengers carried was 570,292 or 53,589 more, resulting in an additional revenue of $23,528. Carriage of luggage also produced a little more, and express services increased by $46,813, making a total gain from the coaching business of $71,125. Carriage of foreign goods gave an extra revenue of $260,145, and from national goods and earnings there was a rise of $34,206. The principal item of increase in foreign goods was $187,771 from additional coal traffic, other important gains appearing under fruits and vegetables, building stone, bricks, &c., ores, petroleum and its products and mineral oil, salt, sand, lime and cement, dry goods, clothing, shoes, &c., and wines and liquors. The increase in pulque, which forms such a large part of the traffic, was comparatively small, and in some directions were rather important decreases. Much less firewood was carried and a sharp drop of about 7,000 tons occurred in Indian corn. Seeds, sugar, wheat, and various other agricultural products were also smaller, and declines likewise appeared under drugs and chemical products, glass, earthenware, groceries, hardware, nails, &c., machinery and castings, and various other items of general merchandise. Material and equipment for other railways and Government material were each considerably lower, but the company's own traffic, which is carried free, showed a sharp increase. Under all heads the total tons hauled were 442,359 against 387,287. Only a small part of the larger earnings was absorbed in working expenses, which show a rise of $51,523 at a total of $1,873,034, the general charges both in London and Mexico being included. The actual outlay on maintenance of way and works was rather sharply reduced as, including $115,912 or $46,937 more allowed for special renewals, the total under this head was down by about $7,000. Locomotive expenses cost nearly $35,000 more, notwithstanding that the provision for special renewals was reduced by over $36,000. Coal, coke, and firewood alone came to $44,656 extra, and there were increases under all important maintenance charges. Traffic expenses were higher all round, as was only natural, taking into account the much larger business handled. Telegraph outlay rose by $4,280, and the general expenses were less by $25,174 because in the corresponding period the company had to pay heavily for losses and compensations. Nett balance on working is $1,623,624 compared with $1,309,671, and such sum converted into sterling at the average rate mentioned produces £168,086 compared with £132,922. Difference in Exchange gave £28 and an extra £2,000 at £13,337 came in from the Vera Cruz pier and launch, making with £259 for transfer fees and £1,984 for interest on deposits and investments a total of £183,695, being an improvement of £37,274. Interest on debenture stock takes the usual £60,000, and after providing £1,500 written off suspense account and £1,000 reserved on account of depreciation of investments the sum left is £121,195. This will provide the dividend at the rate of 8 per cent. per annum on the first preference stock with £19,031 over, or sufficient to give a return at 3¾ per cent. per annum on the second preference stock, and leave the trifling sum of £57 to be carried forward. In addition to this there is also a sum of £720 standing to the credit of the first preference stock holders, being the balance remaining after paying the dividend for the second half of 1905. The debit standing to the permanent way renewal account has been slightly reduced during the half-year, but it still stands at £9,996, and although the company has balances to the good on locomotive renewal and carriage and wagon renewal accounts aggregating £10,962 the nett credit is only £965. Fortunately this is a considerable improvement against the previous balance-sheet, when there was a total deficiency of £6,974. Credit to capital account of £130,243 is represented by investments and stocks and stores, and a good part of the money required for dividend purposes is in hand. On the whole we may congratulate the shareholders on the really substantial improvement which has lately come about in the company's affairs, and if the stability of exchange can be maintained there is no reason to look for any immediate setback as traffics in the current half-year show further substantial increases.

Argentine Great Western Railway Co., Limited.

Apparently this company was somewhat hampered in its operations during the twelve months ended June 30 by the delay of manufacturers in delivering locomotives which had been ordered, as the directors state that the volume of traffic at one period was only handled with difficulty. In spite of that, however, very satisfactory progress was made and receipts from all branches of traffic increased substantially, with the result that gross earnings showed an improvement of £123,154 at £741,723. Passenger receipts rose by £27,293 owing to an increase of 282,460 in the number carried, as the receipts per passenger fell off by nearly 4d. In goods traffic 119,261 tons more were carried, and in spite of a reduction of about 7½d. per ton receipts from this source were £98,044 up. The chief increases in native goods were in wine, fresh fruit and vegetables, grain, &c., firewood and hardwood posts for vineyards, while of imported articles improvements were shown in machinery, building, fencing, and railway materials, casks, boxes, &c., provisions, wines and spirits and miscellaneous merchandise. Against these miscellaneous native goods and railway construction materials imported for other lines were down, but the nett result was as stated above. Parcels and excess luggage gave £5,108 more, but receipts from mileage dues and telegrams were £7,083 lower. Working expenses were £95,209 heavier at £390,841, partly because of the higher wages paid, but mainly because the company has had to use coal instead of wood for fuel owing to the difficulty of obtaining the latter. This item alone rose from £13,355 to £82,196, while the cost of wood was only reduced by £13,423 to £39,660. Drivers' wages required about £10,600 more and locomotive running expenses altogether were £72,460 up. Higher wages also accounted in great measure for increases of £15,172 in traffic expenses and £6,388 in general charges, but savings were effected of £33,655 in maintenance of way charges and £12,143 in locomotive rapairs. Wagon repairs, however, cost £19,566 more and miscellaneous expenditure was £26,655 higher, thanks partly to an increase of £18,011 in compensation claims and partly to a bonus of £2,500 given to the staff. Nett profits amounted to £255,673 compared with £227,728 for the previous year, and with £11,490 from interest, &c., the amount available for distribution was £267,163. Of this debenture interest took £135,022, interim dividend at 5 per cent. on the preferred and ordinary stocks £43,750 and interest on new shares £18,190, while £8,432 had to be provided for loss on working the Argentine Transandine Railway. To the balance of £61,768 was added £20,507 brought forward making a total of £82,275, out of which further dividends making 6 per cent. for the year are paid on the preferred and ordinary stocks and £21,025 is carried to the new account. In March last the capital was increased by £1,000,000 and the new shares together with £625,000 which was then unissued were offered for subscription at a premium of 15s. per £10 share. Capital expenditure during the year amounted to £467,603, of which £146,794 was on permanent way and works, chiefly station and other buildings, £238,252 on rolling stocks and £82,557 on new branches. General progress, however, with the construction of new lines was delayed by the scarcity of labour, and the company still has a credit on capital account of £721,788. Of this £204,732 is held in cash and £498,295 in stores and £110,000 is out on loan at short notice, while £46,450 was due for the final call on shares issued in 1905. Balances due to sundry creditors stand at £150,054 against which there are £158,955 to come in from sundry debtors and £17,794 from the National Government for services rendered, and the position is therefore exceedingly comfortable.

Alberta Railway and Irrigation Company.

The progress made by this company during the year ended June 30 lay mostly in the development of its lower-priced lands, and the improvement in revenue is consequently comparatively small. Sales of land aggregated 171,305 acres for $939,538 against 13,190 acres for $164,139 in the preceding nine months, the average realised being only $5.48 compared with $12.50 per acre. These sales comprised 84,640 acres covered by the trust deed for debenture stock holders and 86,665 acres formerly the property of the Canadian North-West Irrigation Company, which were free from the trust. Only 11,484 acres of the total were irrigable, and for these the average price came out at $11.04, while for the 159,821 acres of non-irrigable or "winter wheat" lands it was no more than $5.08. Early in the year the company's terms for payment were changed from one-tenth to one-sixth in cash and the balance in five equal annual instalments with interest at the rate of 6 per cent. per annum. Including the company's share of profits from sales of land held jointly with the Canadian Pacific Railway the estimated nett profit was $343,960, and the proportion of actual cash received for lands free from the trust is included in the revenue account. Owing to the collieries having been practically shut down for the last four months on account of a strike, sales of coal were no more than 29,142 tons up at 199,824 tons. Nothing is said as to the profits derived from this source, nor is there any information as to the nett results obtained from the railway, where the gross earnings rose by $55,082 to $182,796. From all sources a nett revenue of $245,277 was gathered, and with $21,000 brought forward the total available was $266,286, of which London expenses, exclusive of directors' fees, took $7,026 and interest on the prior lien debenture stock $49,534. Out of the balance the interest is paid on the 5 per cent. debenture stock and $47,225 is carried forward subject to directors' fees. The company has $319,828 in reserve in connection with its own land sales and $113,720 in connection with Canadian Pacific lands, or $433,548 in all, representing the outstanding instalments. In addition it holds 762,186 acres, about 155,000 being irrigable and 607,186 acres above canal level, as well as many town lots in Lethbridge and Raymond. The selling price for irrigable lands has now been increased to $20 per acre and upwards according to location and for winter wheat lands to $5 or more, and the directors state that although the prospects for making further land sales in the immediate future are very promising, they are not at present desirous of making large sales of irrigable land. Capital expenditure on canal extension, change of gauge on the railway, &c., amounted to $523,205, but $806,213 was credited for cost of land and amount realised from the sale of the narrow gauge equipment, leaving the property account $282,918 down at $7,212,138. The liabilities to sundry creditors have gone up by $170,142 to $284,372, and land suspense accounts come to $338,481 more at $433,548, but on the other hand

debtors for land, &c., are no less than $806,609 higher at $1,639,690 and cash has risen by $70,156 to $274,766.

CARLTON HOTEL, LIMITED.

By this time the shareholders of the Carlton Hotel no doubt clearly recognise that their fortunes are also bound up with the huge building lately erected in Piccadilly, and known as the Ritz Hotel. For some reason not very easy to define the Carlton directors made themselves responsible for the financial arrangements of the new venture, and a large part of the capital has been specially raised for that purpose. The company owns 15,400 shares of £10 each in the Ritz Hotel, and has also advanced it a nett sum of £290,564, being the proceeds of a special issue of debenture stock, so that its total interest is £444,564. In addition to this debenture issue the company has been obliged to borrow £75,000 from its bankers, and in order to repay this money an increase of £100,000 is proposed in the Carlton capital which will raise it to £450,000. The Ritz Hotel was opened for business on May 26 of the current year, rather too late, perhaps, to take advantage of the best part of the London season, but notwithstanding this the directors say that the business done was extremely satisfactory. It needs to be so, and the profits too, because the total cost of the land, building, furniture, and equipment is approximately £850,000. Of this the Carlton company has supplied £444,564, as mentioned, but the balance does not seem to have been all provided, as arrangements are now under consideration for raising the money still required. It is, however, hoped that such arrangements will be concluded before the date of the general meeting. At that gathering the directors will no doubt put the shareholders in possession of full profit details, as it cannot be too clearly understood that if the Ritz Hotel cannot pay the interest on the money advanced it must come off the Carlton profits, the debenture stock being raised on the security of the Carlton Hotel itself. Fortunately none of the business of that venture has been drawn away to the new building, and for the year ended August 31 its nett profit increased about £1,000 at £57,887 compared with the preceding twelve months. The trifle of £40 came in from interest, being £402 less, and the sum brought forward was down £2,811 at £8,202, so that altogether the revenue was fully £2,000 smaller at £66,129. Out of this interest on the 4 per cent. debenture stock requires £10,904, and on the loan from bankers £3,735, while income-tax and directors' and trustees' fees absorb a further sum of £3,819. The interest on the 4½ per cent. debenture stock was charged to the Ritz Hotel, and we hope it was duly earned. Interim dividends on the preference and ordinary shares further reduce the revenue to £35,321, which is £3,673 less than a year ago. The directors, however, complete the preference dividend and again bring the ordinary distribution up to 10 per cent., adding rather more at £2,562 to the lease redemption fund, and again placing £15,000 to reserve. These appropriations, however, can only be accomplished by further reducing the credit carried forward to £5,409. The total of the general reserve fund will now be £100,000, and the reserve for amortisation of the lease amounts to £16,018, fair accumulations it is true, but the property item is pretty heavy at £647,311, and while the directors tell us that the hotel and its contents have been maintained in good order and condition it must be remembered that there is no specific allowance for depreciation, the valuation being the same as it was six years ago. The reserve fund is, of course, involved in the Ritz Hotel, but sundry debtors, including stocks, are a good deal in advance of the ordinary trade creditors, the cash balance is £12,225, and investments, apparently on lease redemption account, stand at £16,058.

AERATED BREAD CO., LIMITED.

The directors of this well-known enterprise no longer dabble in fancy finance in the shape of allotments of ordinary shares at par in order to give pleasant little bonuses to the shareholders, and it is now possible to judge the position from a purely revenue standpoint instead of having it confused by unknown possibilities. There was a time when the £1 shares of the company were valued at £15 to £16 each, but we never neglected the opportunity of pointing out the fictitious position that had been created, and those who bought at such inflated figures have only themselves to blame. The present price of the shares is much less than half the highest figure touched, and great though the suffering has been it is satisfactory to find the company now able to hold its own against the formidable competition continually springing up around it. We are not altogether convinced that the board is pursuing a good policy by launching into the tobacco trade, and should feel more assured of the future if they had stuck to catering and left other business alone. Three new light refreshment depôts were opened during the year to September 30, and also two tobacco depôts, but against this the tenancies of two shops expired, the premises being closed, and the lease of another was disposed of. The total capital outlay for the year on buildings, leaseholds, &c., was £18,372, and after allowing the regular depreciation of £5,000 the property account stands at £149,110. The rather considerable amount of £40,869 is owing to sundry creditors, but that is usual in a concern of this kind, and it is also quite natural to find that sundry debtors are no more than £3,656, because the trade is almost entirely a cash one. Investments, practically all of a high-class character and mostly consisting of Consols, are valued at £98,455, cash amounts to £33,650, and stock on hand stands at £17,930. The nett profit for the twelve months to September 30 amounted to £85,474, being an increase of no less than £19,063 over 1904-5, from which we assume that buying markets must have been exceedingly favourable. Adding £16,004 brought forward, the sum for disposal is £101,478, and besides increasing the dividend by 5 per cent. to 37½ the directors allow £5,000 as stated for depreciation, commence a new reserve fund for extending the business with £10,000, and again increase the sum carried forward to £17,735.

TRADE AND PRODUCE.

WHEAT.—Though the tone of the London cargo market was on the whole steady this week, there was little or no improvement in the demand, which was still restricted to the narrowest limits. Holders kept firmly to last rates, and these apparently were not considered tempting enough by buyers, since bids were few and the general tendency was to hold off. Home-grown wheat has ruled fairly steady in spite of a quiet demand, and farmers' deliveries last week totalled 69,920 quarters, averaging 26s. 7d., compared with 86,166 quarters, averaging 27s. 4d., a year ago. Imports of wheat for the week amounted to 327,903 quarters, and of flours to 71,967 quarters, as against 300,673 quarters and 127,333 quarters in the same week last year. In the States quotations first steadied and then rose under the influence of unfavourable reports from Argentina and Europe, but later on became unsettled under the weight of a large liquidation. Confidence, however, was quickly restored, and a firm tone was given by Bradstreet's estimate, which put the wheat in sight east of the Rockies at 44,829,000 bushels or 21,026,000 bushels less than last week and 3,012,000 bushels less than last year.

WOOL.—Cable advices from Australia indicate that the wool season there, which is now close at hand, will see quotations if anything higher than last, as the number of home and foreign buyers in Melbourne promises keen competition. In this country manufacturers are still busy, though prices as a rule continue in sellers' favour. Round Leeds a spell of bright, cold weather is necessary to stimulate the retail business in ready-made clothing, and the factories turning out this class of goods, while still fully engaged, are in many cases working to stock. At Leicester the most hopeful feature of the wool market is the very heavy consumption in the manufacturing branches, and this promises to last for some time to come.

LINEN.—Supplies of flax continue to increase at the markets, and the quality in most cases has also shown signs of improvement. Buying, however, is here and there reported as slow, on account of the extreme price demanded by farmers. The market for yarns still maintains a strong upward tendency, and much of the business done has passed at rates perceptibly higher than any yet touched. Tow yarns in particular have been eagerly bought, but most of the transactions have been between spinners and merchants, manufacturers being hardly prepared to pay the high prices asked. All descriptions of linen are in good demand, and fresh business is quite equal to expectations. There is, however, but little change to note, nor, indeed, is anything abnormal at all likely to happen in the near future. At the same time, buying is almost certain to continue good for some time to come, and at prices that must show a further advance, as current rates are too low, considering the marking up in yarns that has been done for a week past.

COTTON (from our Manchester correspondent).—The general tone of our market during the past week has been rather disturbed by the violent fluctuations of raw American cotton in Liverpool. Buyers of cloth and yarn have not been in the mood to purchase freely, in view of the varying conditions of the raw material markets. The outlook all round is healthy, the demand for piece goods being of very fair extent; but in the face of the uncertainty, and the irregularity of the situation, buyers hesitate before purchasing goods for distant delivery. The estimate of the American crop by Messrs. Neill Bros. of 13,000,000 to 13,500,000 bales has been very welcome to Manchester people. The prospects for a large supply are always gladly received here. However, large the crop may be the supply will all be required, as the needs of the world are increasing considerably at the present time. In piece goods for India a fair amount of business has been put through for Calcutta. Not much, however, has been entered for Bombay and Madras. Advices generally from our dependency are encouraging, and clearances in the bazaars are said to be of an encouraging character. China buyers have shown very little life, although occasional orders have been mentioned chiefly in fancy goods. For Japan, and one or two of the smaller markets of the Far East, a healthy inquiry has shown itself, but business towards the close seems to be tapering off. For the Levant a rather better demand has shown itself in certain makes of cloth, but for most of our markets abroad the sales of piece goods have not been very important. Manufacturers' quotations are rather irregular, owing to the varying positions of makers' order-lists. While some firms are deeply engaged, others have not very much work to go on with. Glossop cloths continue very strong and firm, and the same may be said of T-cloths and Mexicans. Coloured woven goods and sateens are well sold, and remain firm at late rates. Rather more business has come round for Burnley manufacturers, but the margin of profit is not very remunerative. In the home trade houses a healthy tone has continued to prevail, and makers have received a fair number of orders to make, especially where anything like early delivery can be undertaken. In American yarns for home use the volume of trade passing at the moment is on a reduced scale as compared with a few weeks ago. Users are not now much inclined to purchase for distant months. Supplies at some of the weaving sheds are larger than was thought likely. Scarcity,

however, still exists in certain numbers and qualities. Spinners are still in a strong position, and owing to engagements are enabled to hold for full prices.

In New York cotton opened with rather a weak tendency, some 5 to 7 points lower, and went lower still, the bulls showing a disposition to unload. Later the market firmed up appreciably on better cables and bullish crop estimates, but "bear" selling again forced quotations downwards, though at the close a steadier tone is exhibited.

Coal.—North of England trade may be regarded as the most satisfactory at present, for there shipments are brisk, consumers abroad taking all they can get and more, and this in face of rising prices. With the abolition of the tax sellers have raised their quotations for f.o.b. rates, and best steams now stand at 11s. 6d. to 12s.; smalls, 7s. to 8s.; best gas, 10s. 9d. to 11s.; coking coal, 10s. 6d. to 11s. The steam trade of the Sheffield district is not quite so active, though foreign markets continue to receive large consignments. Nor is home trade in house coals as brisk as is usual this month, but owners are not troubled on account of the quietness, which any change in the weather would soon do away with. Welsh trade has had a certain lull this week, chiefly on account of the removal of the tax and the fact that all buyers who have no immediate necessity to buy are holding off to see how prices shape themsleves.

Copper.—Fluctuations have been more frequent this week, and quotations have on the whole shown a tendency to sag. This change from the upward movement of the past weeks is attributable partly to the unsatisfactory state of the money market and partly to the presence of a large bear account which, if rumour be true, has come into existence. In addition the feeling is gaining ground that the abnormal consumption of the present time cannot last for ever, while the market is also afraid of a fall being engineered by American speculators. All these causes combined had a weakening effect on quotations and kept business quiet, and at the close last night prices were £97 10s. for cash and £98 5s. three months.

Iron and Steel.—There is practically little or no change noticeable in the condition of all branches of the iron and steel trades. All are as buoyant as ever, and the difficulty is to keep pace with the unceasing and growing demands. Reports from everywhere tell the same tale of expansion and activity, with increasing orders from America and the Continent, especially from Germany, where the production of pig-iron is much below the immediate and pressing needs of the consumers. As we stated last week, German ironmasters are sold out up to the end of the first quarter of next year, and stocks of all kinds are very low. Further large exports of Cleveland pig-iron to America have been made.

Tin.—The unpleasant outlook in the money market also affected this metal, and with unsatisfactory Eastern advices and sales to realise an easier tendency has been present all the week. To-night the closing quotations are £195 spot and £196 5s. three months.

Tea.—In spite of moderate offerings an all-round easier tone has characterised the auctions this week, says Messrs. W. J. and H. Thompson's circular, resulting in a somewhat lower range of price for practically all grades except useful liquoring leaf teas between 6d. and 8d. This restriction in demand is not unusual at this time of year, and it is but the natural reaction from the active buying for Christmas trade which generally takes place in October. 43,058 packages of Indian were offered, and demand was chiefly for good liquoring teas. Lower mediums were less active, and common sorts difficult to dispose of at fully ¼d. per lb. lower than a fortnight ago. 39,199 packages in all sold on garden account at an average of 7.97d., against 8.30d. last week and 8.12d. a year ago. The Ceylon auction was unusually small, amounting to only 14,079 packages.

Sugar.—Business with the trade continued very slow, both refiners and dealers buying strictly from hand to mouth, and a further decline took place this week on ready foreign and English graunlated, and about 3¾d. on forward beet and refined, notwithstanding the factory estimates, which were lower than expected, but which are not quite believed in. Licht's forecasts probably had a depressing effect, says Mr. Czarnikow, and refiners here bought down to 8s. 7½d., which in the light of the above statistics seems a moderate price, and generally at the decline, and with the disappearance of premiums for ready sugars more trade is due, and the feeling seems rather less despondent. We are much below America, which may show some interest again any day. The American market has been very dull, with moderate transactions. The landings in the three ports for the week were 39,000 tons, and meltings 42,000 tons, leaving stocks at 144,000 tons.

The *Book Monthly* for November contains an excellent resumé from the pen of its editor of the history of The "Times" Book Club, and an outline of the injury that the public would sustain were the club—a near relation of the Beef Trust's big pistol—allowed to gain a mastery over booksellers and publishers by its American methods. Another article deals with the coming boom of the works of William Blake, the strange mystic and artist-poet of some 70 years ago; while a third treats of the characteristic of the Heroine of the Hero, which, the writer states, was chiefly soul. There are, of course, the usual notes on books just out, or about to appear, notes that regularly once a month make us long for the purse of Fortunatus.

A branch of the London and County Banking Company will be opened on November 1, at 102, High Street, St. John's Wood, under the management of Mr. H. Selby.

Answers to Correspondents.

Anglo.—We understand that the bonds were never really taken up by the public, and that the depression is due to forced selling on the part of big holders. It is impossible to say if this liquidation is yet at an end, and you might wait a little before adding to your holding.

Rob Roy.—You are quite right as to the terms, and we apologise for our mistake. We fear, however, that you would not be able to get the shares at the price you name, as the jobbers are only "buyers" at that figure, and you might have to pay from 10s. to 20s. more. The transaction, therefore, would merely mean that under the most favourable conditions you would reduce your loss by say, £2. Do you think it worth while?

Hardware.—The institution is an old-established one doing a sound business, and a deposit with it should be quite safe. We regret that our rules do not permit us to answer your second question, and we therefore hold 1s. to your credit.

W. F. F.—Yes; a very fair security giving a good return.

C. B. (Staffordshire).—We do not think you need accept a loss on these shares just now. The position shows signs of improvement, and later on prices may recover.

D. C. H.—The purchase of a few of these at the price you mention might turn out a fair speculative investment, as prospects seem to be improving.

H. D. R.—You will see that we are dealing with the company this week, and that we say we cannot feel very hopeful as yet of its financial prospects. As you say, it is a new kind of business, and it has yet to be commercially tested. Seeing you can sell at a profit, we think you should take it, and we cannot advise buying more of either share; the market is much too erratic and speculative.

G. W.—(1) This is a very poor security, as its price implies, but the country is progressing, and a little bought as a speculation might turn out all right. (2) The absence of a free market is the chief drawback to a security of this kind. We think something more suitable might be found nearer home.

NEXT WEEK'S MEETINGS.

Monday, November 5.

Aerated Bread.—Cannon Street Hotel, noon.
Africa Trust.—Winchester House, noon.
Caledonian and Australian Mortgage and Agency.—Cannon Street Hotel, 2 p.m.
Lucas (Joseph).—Birmingham, noon.
New Heriot Gold Mining.—Gresham House, noon.

Tuesday, November 6.

British Columbia Electric Railway.—G.E.R. Hotel, noon.
Carlton Hotel.—Carlton Hotel, 12.30 p.m.
Ceylon Company of Pearl Fishers.—Salisbury House, noon.
Chartered Institute of Secretaries.—Salisbury House, 5.30 p.m.
Imperial Continental Gas.—Cannon Street Hotel, 2.30 p.m.

Wednesday, November 7.

Alberta Railway and Irrigation.—Winchester House, noon.
Central Chili Copper.—Winchester House, 2 p.m.
Gwalia Consolidated.—Winchester House, noon.
Humber.—Victoria Station Hotel, noon.
Queensland Investment.—Cannon Street Hotel, noon.
Second Edinburgh Investment Trust.—Edinburgh, 4 p.m.

Thursday, November 8.

Bull (Henry) and Co.—Winchester House, noon.
Boardmans United Breweries.—Winchester House, 3 p.m.
Daimler Motor.—Cannon Street Hotel, 11.30 a.m.
Dalgety.—96, Bishopsgate Street, 12.30 p.m.
Egyptian Gold and Gem Syndicate.—Winchester House, 3 p.m.
Mexican Railway.—River Plate House, 2.30 p.m.
Rochdale and Manor Brewery.—Winchester House, noon.

Friday, November 9.

Ferranti.—Winchester House, noon.
Scottish Australian Mining.—Winchester House, noon.

PRUDENTIAL

ASSURANCE COMPANY, LIMITED.

HOLBORN BARS, LONDON.

Invested Funds £60,000,000.

NOTICE.

THE STOCK EXCHANGE.—NOTICE.

NO MEMBER OF THE STOCK EXCHANGE IS ALLOWED to ADVERTISE for business purposes, or to issue circulars to persons other than his own principals.

Persons who advertise as Brokers or Share Dealers are not Members of The Stock Exchange or under the Control of the Committee.

A list of Members of The Stock Exchange who are Stock and Share Brokers may be seen at the Bartholomew Lane entrance of the Bank of England or obtained on application to EDWARD SATTERTHWAITE,
Secretary to the Committee of the Stock Exchange.
Committee Room, The Stock Exchange London, E.C.

MINING RETURNS.

Associated Queensland Mines.—South Glanmire, 1,324 tons for £2,205; 1 North Oriental, 610 tons for £1,400.

Briseis Tin.—Shipped 19 tons, including 9 tons for New Brothers Home No. 1.

Broken Hill Proprietary.—Refinery products—Fine gold 911 ozs., fine silver 343,507 ozs., soft lead 4,754 tons, antimonial lead 46 tons

Carrington's Lion P.C.—Crushed 230 tons for £1,333; plates, £670; concentrates, £1,450; total, £3,453.

Cecil Syndicate.—North Queensland—Crushed 890 tons, 433 ozs.; 770 tons of tailings, value £525.

Chinese Engineering.—Output of coal and sales—Output, 22,000 tons; sales, 20,500 tons; consumption, 1,325 tons.

Croydon Consols.—Marshalls Queen, 430 tons for £1,280.

Eaglehawk Consolidated.—Crushed 960 tons, 345 ozs.; 104 ozs. from cyanide.

Fremantle Smelter.—Shipped 49 tons lead bullion, containing 1,310 ozs. gold and 2,250 ozs. silver; also 6¾ tons metallic tin.

Golden Gate.—1 South Great Eastern, 193 tons for £409; North Smithfield, 126 tons for £130.

Indarama-Butterfly Mine.—Milled 1,200 tons, 338 ozs.; cyanided 1,200 tons, 190 ozs.; total, 528 ozs.

Kamfersdam.—Diamonds 1,750 carats; 14,894 loads blue-ground deposited on floors.

Kelantan Gold Dredging.—Dredges 121 ozs.

Mysore West Mysore-Wynaad.—Crushed 2,100 tons, 343 ozs.; cyanide 2,496 tons tailings, 144 ozs.

North Broken Hill.—Treated 2,170 tons crude ore, producing 390 tons concentrates, containing 274 tons 3 cwts. lead and 6,318 ozs. silver.

"O.K." Copper.—Treated 835 tons crude ore, producing 84 tons fine copper.

Sulphide.—Milled 3,352 tons ore, producing 590 tons leady concentrates; also 11,020 tons tailings, producing 4,000 tons zinc concentrates; 1,376 tons leady concentrates, 448 tons residues, and 3,483 tons purchased ores smelted, yielding 1,445 tons lead, containing 111,265 ozs. silver and 8,525 ozs. gold; also treated 210 tons zinc concentrates, producing 58 tons spelter.

DIVIDENDS ANNOUNCED.

MINES.

Alaska Mexican Gold.—30c. per share, payable 28th inst.

Alaska Treadwell Gold.—$1.50 per share, payable 28th inst.

Briseis Tin.—Further interim (No. 4) of 9d. per share.

Carrington's Lion P. C.—1s. on the fully-paid and 6d. on the contributing shares.

Jubilee Gold.—No. 74 of 5s. per share.

Mount Morgan Gold.—3d. a share for Oct.

New Ravenswood.—Interim of 4d. per share (being £8 6s. 8d. per cent.) for year ended June 30.

Ooregum Gold of India.—Interim of 4½d. per share.

Waihi Gold.—Interim of 3s. per share.

MISCELLANEOUS.

Blackpool Passenger Steamboat.—7 per cent. for past year, placing £2,000 to reserve, and carrying £1,400 forward.

Blackpool South Shore Pier and Pavilion.—4 per cent.

Brunner, Mond, and Co.—Interim for half-year ended Sept. 30, at the rate of 30 per cent. per annum on the ordinary shares.

Continental Union Gas.—3½ per cent. for past half-year on the ordinary stock, making 6½ per cent. for the year.

D. Hill Carter and Co.—Interim for half-year ended Aug. 18, at the rate of 4 per cent. per annum.

Debenture Securities Investment.—Interim at the rate of 4 per cent. per annum on the preferred stock and 6 per cent. per annum on the ordinary stock.

Eastman Kodak.—Extra of 5 per cent. on the common shares.

Grand Hotel, Eastbourne.—Balance of 3 per cent. and a bonus of 4 per cent., making 10 per cent. for year ended Sept. 30.

India General Navigation and Railway.—Ad interim of 2 per cent. on the ordinary shares.

James Hinks and Son.—Interim at the rate of 7½ per cent. per annum.

Lascelles, Tickner, and Co.—Interim at the rate of 6 per cent. on the ordinary shares.

Liverpool and London and Globe Insurance.—14s. on each £2 of stock on account of the current year's profits.

Meters.—Interim on the ordinary shares at the rate of 5 per cent. per annum.

Newport Dry Dock.—At the rate of 4½ per cent. per annum, carrying forward £311.

North-Western of Uruguay Railway.—1 per cent. per annum on the 6 per cent. first preference stock for year ended June 30.

Parkgate Iron and Steel.—Interim of 10d. per share.

Pranges Estancia.—Further of 4 per cent., making 15 per cent. for the year, placing £5,000 to reserve, and carrying £6,268 forward.

Ryburn Mill.—Interim of 10s. per share.

San Donato Nitrate.—Interim of 5s. per share, being at the rate of 10 per cent. per annum.

San Sebastian Nitrate.—Interim of 3s. per share.

Sir Elkanah Armitage and Sons.—Interim of 6s. per share.

Smallman's.—Interim of 5 per cent.

Swears and Wells.—10 per cent. and a bonus of 1 per cent. on the ordinary shares, placing £1,500 to reserve, and carrying £1,866 forward.

Sweetmeat Automatic Delivery.—1s. per share, placing £10,000 to reserve, and carrying £10,351 forward.

William Hancock and Co.—Interim for half-year ending Nov. 30 on the 6 per cent. preference and 6 per cent. preferred ordinary shares and on the deferred ordinary shares at the rate of 6 per cent. per annum.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and October 27, 1906:—

COMPANY MEETINGS.

TANGANYIKA CONCESSIONS.

The adjourned ordinary general meeting of the shareholders of the Tanganyika Concessions, Limited, was held on Wednesday at the Cannon Street Hotel, E.C. Mr. Tyndale White, the chairman of the company, presided.

The Secretary (Mr. L. Scotland) having read the notice convening the meeting and the report of the auditors,

In his lengthy address, the Chairman observed that a good deal had been said in the Press in respect of the silence of the directors while negotiations of the most vital importance were in progress, and many rumours of a conflicting character, some entirely without foundation, has appeared from time to time, which the directors thought it best to ignore, and only to publish a statement of facts when they were in a position to do so. Now that they were able to say what had actually been accomplished, he was quite sure shareholders would be more than satisfied with the position taken up and the results achieved. The last few months had been very anxious times, inasmuch as the business which has been under consideration had required very careful thought and much time to bring it to a successful issue. That the board could report a successful issue was largely due to the unfailing energy and resource of the company's managing director, Mr. Robert Williams. (Applause.) He had during the year under review, as, indeed, for many previous years, given up his whole life to the cause of the company's marvellous properties—(applause)—and he (the chairman) desired also to take this opportunity of publicly thanking Messrs. Sheffield Neave and Rowsell, two of his colleagues on the board, for the assiduity with which they had worked in the interest of the company upon the special committee charged with these negotiations, and the large amount of their valuable time which they had devoted to that object, and he felt that, in making these remarks, he was only saying what the shareholders would unanimously endorse. (Hear, hear.) The arrangements entered into were fully set out in the circular the shareholders had received, and in order to carry out these the directors have entered into two contracts conditional upon the shareholders' approval of the provisions. The first is an agreement with the underwriters which provided: Firstly, for the calling of this meeting to create the series of £2,000,000 debentures, to increase the capital of the company to £1,000,000, and to ratify the underwriting arrangements. It further provided that the debentures shall carry interest at 5 per cent. per annum, shall be repaid in 10 years, and shall be secured by a first charge on the company's assets (except its Rhodesian assets) such charge to be a specific charge on the shares in the Mineral Company and the shares in the Benguella Railway, and that the debentures shall be convertible in five years into shares at £8 per share, and that the company shall only be at liberty to create further debentures ranking *pari passu* for payment of interest due in such five years. Secondly, that the £2,000,000 debentures shall be offered to the public in bonds of £8 each, payable £1 on application, £1 on allotment, £1 on February 1, 1907, and the balance in calls at intervals of not less than two months as and when required, and that preference of allotment be given to the shareholders of this company and the Zambesia Exploring Company, Limited. Thirdly, the underwriters to guarantee the issue for a commission of £5 per cent. cash, and the option for five years to take up 100,000 shares of the company at £10 per share; and fourthly, the agreement to be conditional upon the shareholders passing the resolutions set out in the notice convening the meeting. The second is an agreement between the company, the contractors, and the Zambesi Exploring Company, Limited, and it provides:—Firstly, that the contractors will enter into an agreement to construct a further section of the Benguella railway, and the company guarantees payment of the contract price up to the amount to the credit of construction account. Secondly, a construction account is to be opened, into which is to be paid 17-20ths of the subscriptions received for the £2,000,000 debentures, any money received in respect of shares now issued and not fully paid up, and three-quarters of all moneys received on the exercise of the call given for underwriting commission. At the conclusion of his address, the chairman formally moved the adoption of the report and accounts.

Mr. Sheffield Neave seconded this.

Mr. Robert Williams, the managing director, then delivered a lengthy speech, and on getting on his feet was received with much enthusiasm. After giving a short history of the company, and explaining the terms of the various agreements entered into, he said the company was at present producing gold at the rate of £3,000 per month from Ruwe. Their intention was to erect a smelter to deal with 300 tons per day at Kansanshi and produce 60 tons of metal per day, and they estimated to make a profit of £600,000 to £1,000,000 per annum from this one mine, 65 per cent. of which came to this company. If the Rhodesian Railway pushed on its line with energy, and their 300 ft. shaft proved their reefs held good, they ought to have these results coming in two years. He had been often told that their copper production would lower the price of copper. He questioned it; but the 60 tons per day from Kansanshi would hardly affect the price of the metal. The copper was there in practically unlimited quantities, and the method of arriving at a £2,000,000 profit per annum from Katanga and Kansanshi copper would not matter so long as they got that £2,000,000 per annum. Now he felt quite safe in predicting a profit of £2,000,000 per annum, provided they found their reefs kept up their value in Kansanshi, and £1,600,000 per annum from their 45 per cent. of the profits of working of their great Katanga copper quarries exclusive of Kansanshi, which would not belong to the New Mineral Company. And he still kept a safe margin in profits from railways, tin, gold, and coal, and their profits on railways and tin might be very large.

The motion of the chairman was then put and carried unanimously without discussion.

A resolution was then passed granting an honorarium of 2,000 guineas to the seven directors "as a mark of the shareholders' appreciation of their services in bringing the company to a position of such marked success."

An extraordinary general meeting followed, which unanimously agreed to the various resolutions embodied in the circular issued by the directors.

RICHARDSONS, WESTGARTH, AND CO., LIMITED.

The sixth annual ordinary general meeting of the shareholders of Messrs. Richardsons, Westgarth and Co., Limited, was held at the registered office of the company, Hartlepool Engine Works, Hartlepool, on Monday, October 29, 1906. Sir Christopher Furness, M.P. (chairman), presided, and the other directors present were Mr. W. J. Richardson (vice-chairman), Mr. S. W. Furness, Mr. T. Richardson, Mr. Marmaduke Furness, Mr. D. B. Morison, Mr. Tom Westgarth, and Mr. Alfred Harrison (Sunderland), local director, with Mr. H. H. Murray (secretary). There was a good attendance of shareholders.

Sir Christopher Furness, in moving the adoption of the report and balance-sheet, said: Since our last annual meeting death has taken from us a valued colleague on the board of directors, in the person of Sir Thomas Richardson. Our deceased friend's connection with the Hartlepool Engine Works extended over a long period, representing his whole commercial life, and since the formation of the amalgamated company he had been its vice-chairman. Sir Thomas was most assiduous in his labours for the company, and did all in his power to advance its interests. The directors have recorded their appreciation of his services, and this, I am sure, will be readily endorsed by every shareholder. To fill the vacancy thus caused, the directors have elected his son, Mr. Thomas Richardson, to a seat on the board. This appointment, together with that of Mr. Marmaduke Furness to fill the vacancy of the late Sir William Allan, will, under the articles of association, be submitted for your endorsement. The profits for the past year amount to £70,823 6s. 10d. This result is obtained after allowing for a sum of £20,257 15s. 0d., spent on the maintenance of the company's works to keep them thoroughly up-to-date—an expenditure which is in excess of the amount allocated in previous years. When it is considered that there has been an advance in the cost of the various materials which we use in manufacture, and an advance also in wages, the result must be regarded as satisfactory. Our works at Hartlepool, Middlesbrough, and Sunderland have been kept well supplied with orders, but these were taken under very keen competition. At our Hartlepool works, which is under the direct supervision of Mr. D. B. Morison, we have been well supplied with orders for marine engines, all of which have given excellent results at sea, and I may specially mention the very fine passenger steamer *Riverina*, built by Sir James Laing and Sons, of Sunderland, for Messrs. Huddart, Parker, of Melbourne, which for speed and economy has given great satisfaction. We have also practically finished fitting the machinery on H.M.S. *Cyclops*, which, as a repair ship in attendance on a fleet, will be the most completely equipped ship of her type in the British Navy, or, in fact, in any navy in the world. This vessel is to take the place of H.M.S. *Assistance*, which was also engined by your company. The large pumping engines supplied to South Hants have gone through the preliminary trials very satisfactorily, and another large pumping plant is being supplied to the Staffordshire Potteries. Our steam turbines continue to give excellent results, and, fortunately, the large installation we are erecting at Santiago escaped any serious damage during the recent earthquake. Our condenser department has been very busy with the "Contraflo" type, some of which have been of very large size, notably three complete sets supplied for the Newcastle Electric Supply Company, to the order of Mr. C. H. Merz. These condensers are each of 10,500 square feet of surface, and the very high vacuum carried has completely fulfilled the stringent guarantees and justifies the claims made for this system. Our Middlesbrough Works, which are under the direct supervision of Mr. T. Westgarth, have been well employed, and, in addition to turning out a large amount of marine work, they have completed the new engines and rolling mills for the Cargo Fleet Iron Company, which have been found to work satisfactorily. They have also completed a number of very large steam driven blowing engines, and their gas engine department has made very satisfactory progress, including an order for an installation of 4,500 horse-power for Hong-Kong. Our Sunderland works, which are under the direct supervision of Mr. Alfred Harrison, have turned out a record output of marine engines, all of which have given the shipbuilders and shipowners the greatest satisfaction. They are also fully occupied with orders. Altogether the output of the combined works must be regarded as satisfactory. The prospects for the coming year are at present somewhat less satisfactory than usual, by reason of the high prices of materials and the unrest in the labour market, but on a return of general confidence we shall, by our policy of keeping our works thoroughly up-to-date in the matter of economy of production, be able to take our share in any prosperity which may develop.

Mr. T. Richardson seconded the adoption of the report and balance-sheet.

The motion was then put, and carried unanimously.

Mr. W. J. Richardson moved that a dividend on the ordinary shares for the year ending August 25, 1906, at 6 per cent., be declared, and that warrants for same be posted on Wednesday, October 31, 1906.

Mr. Marmaduke Furness seconded the motion, which was then put and carried.

Mr. D. B. Morison moved that the retiring director—Mr. W. J. Richardson—be reappointed a director of the company.

Mr. T. Westgarth seconded.

The motion was then put and carried.

Mr. T. Westgarth moved that the election of Mr. Thomas Richardson and Mr. Marmaduke Furness as directors of the company be confirmed.

Mr. Alfred Harrison seconded.

The motion was then put and carried.

Messrs. W. B. Peat and Co. were re-elected auditors.

On the motion of Mr. M. Atkinson (Hartlepool), seconded by Alderman J. F. Wilson (Middlesbro'), a vote of thanks was accorded to the chairman and directors for their services during the past year.

ENGLISH, SCOTTISH AND AUSTRALIAN BANK.

The fourteenth annual general meeting of the shareholders of the English, Scottish and Australian Bank, Limited, was held on Wednesday at Winchester House, Old Broad Street, E.C., Mr. C. J. Hegan, chairman of the company, presiding.

The Secretary (Mr. J. Paterson) having read the notice calling the meeting and the auditors' report,

The Chairman, in moving the adoption of the report and accounts, gave an interesting survey of the present position of trade and commerce in the Commonwealth, and spoke hopefully and even enthusiastically of the future. He said: Trade and commerce generally have undergone remarkable expansion, and a period of financial stringency has given way to a period of financial ease. The people are better off than they have been any time these 13 years. This revival need not be viewed with any degree of apprehension from a fear lest there be a repetition of the mistakes and the disasters experienced in the early nineties. The events of that time are too fresh in the memories of all concerned for the lesson to be forgotten, and it is safe to say that the inflation of the values of real property which characterised that period, and which was the chief cause of all the trouble that ensued, is not likely to recur in the lifetime of the present generation. The annual statement of the trade of the Commonwealth for 1905 shows a large increase in the exports of merchandise. Taking the total figures, the excess of exports over imports, which in 1903 stood at just under 11 millions sterling, had risen in 1904 and 1905 to nearly 20½ millions and 18¼ millions respectively. But to appreciate the full importance of these figures those relating to the export of specie and bullion should be eliminated, for during the years 1903 and 1904 gold was sent out of the country to a quite unusual extent, partly, no doubt, in order to pay for the large importation of foodstuffs occasioned by the drought. Dealing, then, with general merchandise alone, the comparison will be found much more striking, for whereas in 1903 imports exceeded exports by upwards of 6¾ millions sterling, in 1904 exports exceeded imports by nearly 4 millions, and in 1905 the excess had risen to 8¼ millions. These are remarkable changes to have taken place in such a short period of time, and what makes them the more valuable is that the improvement to which they testify has been well distributed over the pastoral, the agricultural, and the mining industries—all sharing in the greater prosperity of the Commonwealth. In purely banking matters also a very satisfactory development has taken place, the full benefit of which will not be felt until next year. Ever since the autumn of 1904, when the agreement between the banks came to an end, a war of rates has prevailed, to the advantage, no doubt, of the mercantile community, but to the great disadvantage of the banks, all profit in exchange business being practically done away with. Frequent efforts have been made during the course of the last two years to bring the banks into line again in this respect, and at last I am happy to say they have succeeded, so that we may now look forward to once more making a legitimate profit, and no one wants to make more than that, out of our exchange operations. I think I have said enough to justify the somewhat optimistic tone of my opening sentences. Turning now to a consideration of our own position, I think I can claim that the figures we lay before you to-day faithfully reflect the improved state of things to which I have been alluding. With one exception, every single item in the balance-sheet and profit and loss account that is changed at all, as compared with the figures of last year, is changed for the better. And in making that exception I do it more for the sake of accuracy than aught else, for it by no means follows that one would wish to see it otherwise. I allude to the small increase in the expenses of management, which, of course, is the natural and almost inevitable consequence of doing more business. Deposits, current accounts, bills payable, bills receivable, and advances all show a substantial improvement in the figures, and I need scarcely point out to you that these are just the items in the balance-sheet which show what progress a bank is making, and how it stands in the estimation of its customers and the public. The reserve fund is quietly mounting up at the rate of £15,000 per annum, and next year we hope to see it over £150,000. Premises account has been further reduced by transferring thereto the sum of £17,910, resulting from the purchase and cancellation of deferred inscribed deposit stock in the years 1904 and 1905. It was thought desirable on this occasion to show the transfer on the face of the balance-sheet, but as we intend to continue this policy year by year, and so to effect an automatic reduction in the figures of premises account, we trust it will not be considered necessary next year to again set forth the details of the operation. I have left till the last what many will consider the most satisfactory feature of the balance-sheet—viz., the increase in the dividend. On the other hand, there may be some who, looking to the substantial amount which we carry forward, will think that we might well have given the shareholders another ½ per cent. No doubt we could, and it would have been easy for us to win a cheap applause by so doing. But it must not be forgotten that our field of operations lies in a far distant country, where the ups and downs—as we know to our cost—are frequent in their recurrence, and severe while they last; where, moreover, keen competition has to be encountered, and we believe we are consulting your best interests in deciding to take but one step forward at a time; in making strength and efficiency rather than dividends our claim to public favour, and in placing the bank in a position which will enable it alike to take advantage of what business may be offering in times of prosperity, and to stand scathless and unmoved in times of adversity. I don't know that there is anything more which I need touch upon, but before sitting down I wish, on behalf of myself and my colleagues, to express our thanks to our inspector and general manager, Mr. Urquhart; to his assistant, Mr. Wren; to our secretary, Mr. Paterson; to the managers of our different branches, and to the staff generally, both abroad and at home, for their loyal and efficient co-operation.

Mr. James Tullock seconded the resolution for the adoption of the report and accounts, which was carried unanimously.

The retiring directors and auditors were then re-elected, and the meeting closed with a vote of thanks to the chairman and directors.

WESTERN TELEGRAPH COMPANY, LIMITED.

The 66th ordinary general meeting of the shareholders of this company was held at Electra House, Finsbury Pavement, on Wednesday, under the precidency of Sir John Wolfe Barry, K.C.B.

The Secretary (Mr. E. Steer Hodson) read the notice calling the meeting, and some formal business having been disposed of,

The Chairman said: Gentlemen,—During the period under review the conditions of trade in Brazil and in the Argentine Republic have been active and, I hope and think, prosperous. This activity of trade is reflected in our receipts, and I feel sure the shareholders will agree that the result of the half-year's working is satisfactory, the gross revenue for the period being, in round figures, £31,000 more than in the corresponding half-year of 1905. Our total working expenses were less by £12,087, due to a reduced expenditure on repairs to cables. The general expenses in London have increased by £560, principally in salaries and wages and repairs of offices and furniture. The general expenses at stations show a nett increase of only £117. Travelling expenses of staff, repairs to buildings, medical expenses, advertising and a few other items were more by £1,962; but against these, rent, taxes, house allowance, fuel and light, electrical expenses, repairs and renewal of furniture, stationery and printing, &c., were less by £1,845, the difference being £117 before mentioned. Referring to expenses attending maintenance of cables decreases are shown as follows:—Store ship "Norna" £322, chartered steamers £3,350, cable used £8,890, depreciation of cable in stock £490, insurance of cable in stock £36, making a total of £13,088. The working expenses of our cable steamers were increased by £1,441, and sundry expenses at stations in connection with repairs to cables were more by £533. These two items amount to £1,974, which, deducted from the sum of the decreases, results in a decrease of £11,114. The total of the expenses under this heading was further reduced by the expenses of the "Norseman" whilst engaged on a partial renewal to one of our cables, amounting to £1,213, being charged to the general reserve fund, and the receipts from charter of our vessels having been increased by £505, or together £1,718, making a nett decrease under this heading of £12,832. Other expenses show a nett increase of £68. Thus the revenue for this period amounted to £314,555 and the working expenses to £104,578. After providing £15,488 for debenture stock and debenture interest and sinking fund, and £3,650 for income-tax, there remains a balance of £190,878; to this is added the sum of £5,269 brought forward from December 31 last, making a total of £196,147. A quarterly interim dividend, amounting to £31,189 10s., has been paid. £75,000 transferred to the general reserve fund, £5,000 to the maintenance ships reserve fund, £15,000 to a marine insurance fund, and £15,000 to a land and buildings depreciation fund. The directors now recommend the declaration of a final dividend of 3s. per share, making, with the interim dividends, a total dividend of 6 per cent. for the year, and also the payment of a bonus of 2s. per share, both free of income-tax, which together will amount to £51,982 10s., leaving a balance of £2,603 4s. to be carried forward. The dividend and bonus will be payable on November 1. As I stated at the last general meeting, the unissued balance of the 4 per cent. debenture stock was taken up by the share and debenture holders, and the total amount created—viz., £500,000—now appears in the balance-sheet. You will notice that we have made an addition to the number of our cable-repairing steamers in the shape of the "Cormorant No. 2." The vessel of the same name which

she is to replace has proved most useful, and the repairs to the cables effected with her have fully warranted the outlay. The acquisition and employment of her was, however, somewhat experimental, and the result has proved so satisfactory that the directors decided to build a completely-equipped cable-repairing steamer more or less upon her lines, but rather larger, as the cable-carrying capacity of the old vessel is insufficient for our present needs. The new boat is now on the station, and we hope shortly to dispose of the "Cormorant No. 1" at a remunerative price. I wish small boats of this type could be made capable of dealing with cables in deep water, and thus avoid the very heavy cost of maintaining larger and more powerful vessels. But for several reasons this is impossible, and it is only in case of cables in shallow water and near ports that the type of small vessels can be economically employed. After some further observations the Chairman concluded by moving the adoption of the report and accounts.

The Deputy-Chairman (Sir John Denison-Pender, K.C.M.G.) seconded the motion, which was carried unanimously.

DHARWAR REEFS COMPANY, LIMITED.

An extra-ordinary general meeting of the members of the Dharwar Reefs Company, Limited, was held on Thursday at the Cannon Street Hotel, E.C., Captain W. B. McTaggart, the Chairman of the company, presiding.

The Secretary (Mr. John Ponsford) having read the notice convening the meeting,

The Chairman said: The secretary having read the notice convening the meeting, and also the resolutions which we shall presently submit to you, I have much pleasure in rising to propose the adoption of these resolutions, but before doing so a few words from me may not be out of place. In the circular which you have received, and which has been in your hands for some time, the reasons the board have in asking you to pass these resolutions are fully set forth, and but little comment from me is necessary. The circular falls naturally into four headings. The first of these is a statement concerning the progress of the mining part of your business since we last met. I do not propose to weary you with any details on this head. It is simply a record of satisfactory progress with which, I am happy to say, you have already become quite accustomed. The second portion of the circular deals with the creation of 25,000 fully-paid shares, which are to be paid to the Dharwar Gold Mines Company in payment for the block which is under option to you. Probably you all know the reason why we obtained an option over this block. In the first place, it was chiefly because we believed that the reefs would dip in depth into this block, and it was necessary for the life of your mine that if this was so it should be obtained, and the option was arranged on what we have always considered very satisfactory terms to both companies. At the general meeting held in March I indicated to you that we thought that the time would soon come when this option should be exercised, and I may say that not only are we now satisfied that the reefs do dip into this block, but we have already occupied it to a very large extent. We have numerous buildings on it now—bungalows—and part of our plant has been erected. Therefore it seems that there is no reason why the payment of the purchase price should be any longer delayed, and consequently you are asked to create the 25,000 shares necessary to obtain the property. The third point with which the circular deals is the creation of 35,000 shares for the purpose of providing a further amount of working capital. It is a satisfactory thing that we are able to come before you and ask you with confidence to find this money, because it shows that we have confidence in the future of your property. A great deal of work has been done, and a great deal of plant has been supplied, but in order to work the property on a great and lasting scale still more machinery and plant must be provided. Fifteen heads of stamps have already been bought and sent out. They are now on the field and are in course of erection. I may tell you that we have also provided foundations for another five heads, which I have little doubt will soon be sent out. I hope that in the future some portion of this £35,000 which you are now asked to raise may go in providing still more heads of stamps to augment the output. The last portion of the circular deals with something which is quite new to you. You are aware that when you purchased your property from the Dharwar Gold Mines you acquired four large blocks in what has now turned out to be a valuable goldfield. One of these blocks you have been actually working with great success, and three others remain. It is quite clear that your present capital could not possibly provide the funds to deal in a competent manner with one of these blocks, let alone with all three. Therefore, your directors have constantly had in mind some plan by which these could be dealt with in a profitable manner to yourselves, and for one of these blocks a chance has now arisen. The Chairman then read the terms and conditions of the option, and afterwards moved the resolutions set forth in the notice convening the meeting.

Mr. Henry Taylor seconded them.

These were agreed to unanimously after a little discussion.

The Chairman stated that the board held proxies for 65,000 shares, which showed that the large body of shareholders approved of their proceedings.

FREDERICK HOTELS, LIMITED.

The eighth ordinary general meeting of the Frederick Hotels, Limited, was held on Wednesday at the Hotel Great Central, Marylebone, N.W., Mr. Horatio G. Regnart, chairman of the company, presiding.

The Secretary (Mr. L. W. Slade) having read the notice convening the meeting and the auditors' report,

The Chairman said: I am sure, gentlemen, you will readily appreciate the pleasure with which we meet you to-day, in view of the gradual improvement in your company's fortunes which has taken place during the past three or four years, culminating as it has in the most satisfactory balance-sheet we have been able to place before you. (Hear, hear.) From the figures that are before you, you will notice that the volume of business done has increased by a sum of £13,726, although the amount shown on the other side as being expended on wines, spirits and provisions is not materially different from that of last year; but this reduction of expenditure, I may tell you, has arisen solely from the fact that the consumption of wine has decreased so much, whereas the amount we have expended on provisions is considerably more than that of last year. The number of visitors to the hotels has considerably increased. The business done in Wharncliffe Rooms also shows an improvement, thus proving that our policy with regard to these rooms has been successful. We have many important functions already booked for these capacious rooms, amongst which are included some banquets for City Companies, who have favoured us with their patronage and whom we are most anxious to secure. The comfort of our visitors and attention to their requirements are, of course, our first study, and to add further to their convenience we have recently built and opened very fine motor garages at the Hotel Burlington, Dover, and the Royal Pavilion Hotel, Folkestone. I may also mention here that we provided last year a suite of masonic rooms and their accessories at the Hotel Great Central to help us in our business. The amount spent on the repairs and maintenance account is somewhat lower than that of the year ending June 30, 1905, but I must point out that the expenditure of that year included the addition of the masonic suite referred to and other alterations to the Hotel Great Central, also the garage at the Hotel Burlington, Dover. As, however, we found ourselves this year in a position to place some money to this account, we have credited the repairs and maintenance account with a further sum of £2,544 2s. 8d. I would like to tell you that, finding ourselves in a more prosperous condition, the directors have decided to increase the amount set aside to the amortisation of the lease of the Hotel Russell, which, in the opinion of the directors, was not sufficient for the value of the hotel, but this does not affect the accounts which are now before you. You will observe that your directors recommend the transfer to a reserve account of the sum of £10,000, this being the first time any money has been allotted for this purpose. (Hear, hear.) You will perhaps note that we could have paid greatly increased dividends on the ordinary shares and still have placed a good sum to reserve, but we decided, and I am sure you will be with us, that the wiser course to pursue is to put your company on a firmer financial basis, and by these means endeavour to secure the confidence of the investing public in our stocks and shares. I am pleased to tell you that we have been favoured with the catering at the Royal Botanical Gardens for a period of three years, and also on the boats on the Dover-Calais route, owing to the successful manner in which we catered on those of the Folkestone-Boulogne boats. From all these sources, with care and attention, we hope to increase our revenue. From the balance-sheet you will notice that we have rather a large sum of money at the bankers and in hand which at present, owing to the Bank rate, is earning us good interest, and which we shall not be requiring until paying our debenture interest. I do not know that there is much more left for me to say. The figures are before you, and I think we may ask for your approval with every confidence. We shall continue to do our best in the interests of the company, and I am glad to be able to tell you that up to the present our business returns show an improvement on those of last year. (Applause.) I now beg to propose the following resolution: "That the directors' report and the annual statement of accounts for the year ended June 30, 1906, be, and they are hereby, approved and adopted, and that a dividend be paid on the preferred ordinary shares at the rate of 5 per cent. per annum, and on the deferred ordinary shares at the rate of 4 per cent. per annum for the year ended June 30, 1906."

Mr. Arthur Bird seconded the resolution, which was carried unanimously without discussion, after which the retiring directors and auditors were re-elected.

TOMBOY GOLD MINES.

The annual ordinary general meeting of the Tomboy Gold Mines Company, Limited, was held on Thursday at Salisbury House, E.C., Lord Arthur Butler (the chairman of the company) presiding.

The Secretary (Mr. T. Dundas Pillans) having read the notice convening the meeting and the auditors' report to the shareholders,

The Chairman said: Gentlemen,—We meet here to-day under very agreeable circumstances, the past year having been one of the most prosperous since the company was incorporated. The profit on the year's operations, as shown in the accounts now submitted, amounts to £80,315 12s. 5d., the largest in the history of the company. The nearest approach to this profit in the past was that earned in the year 1901-2, which, however, only amounted to £71,489 5s. 1d., so that you will see that we have surpassed that previous high-water mark by nearly £9,000. Out of the past year's profit two dividends have been paid—one on December 30, 1905, of 1s. 6d. per share, and the other on June 29 last of 2s. per share, making together a distribution at the rate of 17½ per cent. on the issued capital. In respect,

therefore, of dividends the past year has been the best since the company was formed, the next best distribution having been that made in the year 1901-2, when dividends of 3s. per share (including a bonus of 1s.) were paid. You will observe from the accounts that these increased dividends have been paid without any deviation from the conservative policy which the board has hitherto pursued. After paying off the loan of £10,500 from the Exploration Company which appeared in last year's accounts, and setting aside the usual provision for depreciation, the substantial sum of £47,863 1s. 7d. remains to be carried forward. With a position of such financial strength it may perhaps be considered that the board would have been justified in making a larger distribution of profits than they have done. It will doubtless be in your recollection, however, that when the unfortunate labour disturbances took place at the mine some three years since it was only the financial strength of the company that enabled it to go through that difficult and harassing period without calling upon the shareholders for further support. While, therefore, it is not the intention of the board to accumulate an excessive reserve, we think it is in the best interests of the shareholders that the strong financial position disclosed at June 30 last by the present accounts should be maintained. I now pass to the consideration of the year's mining and milling operations, and in this respect also I have to congratulate you upon highly satisfactory results. The ore milled amounted to 104,063 tons, which is only 1,110 tons more than in the previous twelve months, but whereas for the year ended June 30, 1905, the value of the bullion recovered was $737,938 or $7.17 per ton, during the period under review the bullion amounted to $947,982 or $9.10 per ton. In the matter of expenses the results are equally satisfactory. In 1905 they amounted to $530,278 or $5.15 per ton, while this year they were $514,586 or $4.94 per ton; and the profits this year rose to $433,396 against $207,660 last year, the percentages of profit being for 1905 $2.02 per ton and for this year $4.16 per ton. The results, when compared with those of the previous five years, present some highly satisfactory features. For instance, during the past year the tonnage treated and the bullion recovered are both in excess of any previous year, while the working costs have been reduced from $7.41 per ton in 1901 to $4.94 per ton. As I have already said, the profits are the largest ever made since the company was formed, and the percentage of profit per ton is the highest, with the exception of that shown in the year 1900-1. These facts reflect the greatest credit on the present general manager, Mr. D. A. Herron, who is carrying out with ability and energy the improved methods inaugurated by his brother, Mr. John Herron, who preceded him in the management. It will be seen that the development work for the past year is reported by Mr. Herron to have resulted in a material increase in the area of ore reserves as well as in the general value of the ore milled. It is highly satisfactory to note that Mr. Herron's present estimate is 22,000 tons above that made by Mr. Bradley on November 1, 1905, notwithstanding that in the interval 90,000 tons of ore have been extracted from the mine. The Chairman then detailed the plan of development work now carried on, and spoke of the benefits to be derived from the new contract with the American Smelting and Refining Company, and in conclusion formally moved the adoption of the report and accounts.

The Hon. A. G. Brand, M.P., seconded it, and it was carried unanimously.

Other formal business having been transacted, the meeting closed with a vote of thanks to the chairman and directors.

EAST RAND MINING ESTATES, LIMITED.

The fifth ordinary general meeting of the shareholders of the East Rand Mining Estates, Limited, took place on Tuesday at Winchester House, Old Broad Street, the Right Hon. the Earl of Chesterfield, P.C. (the Chairman of the company), presiding.

The Secretary (Mr. Alfred D. Owen) read the notice calling the meeting and the auditors' report.

The Chairman, in moving the adoption of the report and accounts, first of all explained the various entries in the accounts, and proceeded to say:—Looking at the income and expenditure account, it is satisfactory to note that during a period of stagnation such as we have been passing through during the year under review we have been able to meet all the expenses of the company, with the exception of £57 12s. 5d., out of revenue. Coming now to a review of the past year, I regret that I am not in a position to report any real progress. The change in the political affairs in this country has led to an unexpected delay in the establishment of the new Constitution in the Transvaal and the looked-for meeting of the Legislative Assembly can therefore not be expected until early next year. In fact, I notice that last night, in reply to a question in the House of Commons, the Under-Secretary of State for the Colonies stated that the elections would take place in February of next year. Combined with this delay we have had the constantly increasing depression in the Stock markets produced mainly by political changes and uncertainty, and, in the case of the Transvaal particularly, by the question of Chinese and native labour, to which so much attention has been directed of late. You can well understand that in times of uncertainty such as we have been passing through your board have felt compelled, in the best interests of the company, to be extremely cautious and to conserve the resources of the company, which they feel, as we have already stated in our report, could not be replenished in times like the present without an undue sacrifice on the part of the shareholders. As you are, of course, aware, to thoroughly develop the reefs which have been proved to exist on your company's farms will require a larger working capital than the company at present possesses. I would remind you of the very extensive character of the properties owned by this company. You will, no doubt, recollect that Dr. Hatch, our consulting engineer, has estimated that, taking the basis of one-quarter of the farm as the probable proportion to which the company will be entitled under the new gold law, the number of claims on Grootvlei works out at 1,231, and on Palmietkuil at 1,608, making a total of 2,839 claims; whilst on the still more conservative basis of one-fifth we should become entitled to 2,272 claims. Taking Dr Hatch's estimate of 10,000 tons per claim, this would give on the latter basis 22,724,000 tons of milling ore. And I should like to emphasise what has been stated in our report, that the future development of this enormous area has now been fully considered by the consulting engineers, and your company is prepared for the commencement of work immediately the conditions are favourable. The review, however, of the past year is not one to which your directors can look back with any feeling of satisfaction, in so far as circumstances have not been favourable for the carrying out of the work they hope to see accomplished, but the future in their opinion holds out a great prospect of improvement. The Transvaal has been passing through a period of exceptional strain, due to many causes, and, of course, largely to the severe drain of a long-continued war. There can be no doubt that we were all too optimistic in our view that the country would recover from that strain in a comparatively short period. At the same time, I feel confident that under the new conditions of administration the foundations have been laid of a more prosperous future for the country, and with the establishment of responsible Government, which will result in entrusting the affairs of the Transvaal to the management of the people of the country, I have little doubt that many difficult questions still outstanding will be speedily and satisfactorily settled.

Mr. C. Guy Pym seconded the motion for the adoption of the report and accounts, and it was carried unanimously without discussion.

The retiring directors and auditors were then re-elected.

BAHIA BLANCA AND NORTH-WESTERN RAILWAY.

The 17th ordinary general meeting of the members of the Bahia Blanca and North-Western Railway Co., Limited, was held on Thursday at Winchester House, Old Broad Street, E.C., Mr J. W. Phillipps, M.P. (the chairman of the company), presiding.

The Assistant-Secretary (Mr. W. R. Cronan) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—There has been a great deal of work done upon this property since I last met you. As you know, we had a concession from the Argentine Government to build 290 miles of new line to join up our port at Bahia Blanca with the Pacific Railway. Of that 290 miles 161 miles have been completed up to Catrilo, where we join the Western Company, and we expect that that will be open for traffic for the grain harvest about the beginning of December. Along the rest of it the earthworks are all finished, and it is only a question of rail-laying being done. Then, besides that, under our concessions we had the right, with the approval of the Government, to throw out short spur branches for traffic purposes. The Pacific Company propose at once to start on about 83 miles of those short branches. Turning to other sections of our property, since we last met £40,000 has been spent upon additions to our market, and further additions are about to be made, while we have spent £140,000 upon the port at Bahia Blanca. We expect by the beginning of December there will be about seven berths for ocean-going steamers, and that expenditure is likely to be continued for the next few years, because our complete scheme is that we should have 30 permanent berths for big steamers. Then, besides that, we have had to put up increased terminal station accommodation, and we have had to provide increased traffic facilities all along the old line for the grain business that is now developing there. Gentlemen, it will be within your recollection that under our agreement with the Pacific Company they have to develop the property and make such additions to the property as they and we think wise. Those additions are to be made with the capital of this company, but with the provision that that capital is to be guaranteed by the Pacific Company in the same way as is the existing capital. We are proposing to you to-day that we should create 125,000 new shares of £10 each, to be subsequently to their issue converted into £1,250,000 stock, and it is proposed that that stock should carry 4½ per cent. interest and should rank from the time of its issue with the existing stock on which 3 per cent is now being paid. I say that it should rank equally as to capital, and eventually that they should rank in one stock as regards dividend also, because you will remember that although your preference stock only gets 3 per cent. to-day, over a period of years from now to 1917 it rises by steps up to 4½ per cent, so that there should be one stock eventually. The Chairman concluded by formally moving the adoption of the report and accounts.

Mr. Marcus Van Raalte seconded the motion, which was carried unanimously, without discussion.

The Chairman then moved the special resolutions set out in the notice convening the meeting.

Mr Paget P. Morley seconded them, and they were carried unanimously.

The retiring directors and auditors were then re-elected, and the meeting closed with a hearty vote of thanks to the chairman

ABRIDGED PROSPECTUS.

The Subscription List will OPEN on Monday, the 5th day of November, and CLOSE on or before Thursday, the 8th day of November, 1906.

TANGANYIKA CONCESSIONS
LIMITED.

(Incorporated under the Companies Acts 1862 to 1898.)

Capital - - £1,000,000

Divided into 1,000,000 Shares of £1 each.

ISSUED CAPITAL - - - 515,000 Shares.

ISSUE OF

250,000 Five per Cent. Debentures of £8 each at par,

Created by Resolution of an Extraordinary General Meeting held on 31st October, 1906.

THE WHOLE OF THIS ISSUE HAS BEEN UNDERWRITTEN.

The Debentures will be issued in Registered Bonds of £8 sterling or 200 Fcs. each, convertible into Bearer Bonds at the option of the Registered Holder, and will be payable as to—

£1 or 25 Fcs. on Application,
£1 or 25 Fcs. on Allotment,
£1 or 25 Fcs. on 1st. February, 1907,

and the balance in calls not exceeding 25 per cent. at intervals of not less than two months as and when required.

In lieu of payment of interest on the instalments, a full six months' interest on the nominal amount of the Debentures will be paid or satisfied on the 1st July, 1907, and thereafter interest will be paid or satisfied half-yearly on the 1st January and 1st July in each year.

The Debentures carry interest at the rate of £5 per cent. per annum, and are repayable on the 1st day of January, 1917, or earlier at the option of the Company on six months' notice. Provision is made enabling the Company to satisfy the interest accruing on any Debentures up to the 31st day of December, 1911, by allotment of fully-paid further Debentures of the same series, but except for the purpose of paying the interest, no further Debentures may be created to rank pari passu with or in priority to this issue.

The Debentures are convertible at the option of the holders at any time up to the 31st day of December, 1911, into fully-paid Shares of the Company at the rate of one fully-paid Share for every £8 of the nominal amount of the Debentures, i.e., one Share for each Debenture; and if repayment is made before the 31st day of December, 1911, the holders of Debentures so repaid will be given a right to subscribe up to that date for one Share at £8 for each Debenture repaid. Any Debentures issued for interest will carry similar conversion rights. The Debentures will be secured by a Trust Deed creating a specific first charge of 90 per cent. of the issued Share Capital of the Benguella Railway Company, and on the Shares to be received in the Mineral Company about to be formed under the laws of the Congo State, less the Shares reserved to commute Prospectors' interests, and a first floating charge on all the other assets except the Rhodesian assets.

TRUSTEES FOR DEBENTURE HOLDERS.

Colonel Sir HOWARD MELLISS, K.C.S.I., 9, Queen's Mansions, London, S.W.
The Hon. ARTHUR STANLEY, M.P., 33, St. James's Square, London, S.W.

DIRECTORS.

TYNDALE WHITE (Chairman).
J. W. BROOMHEAD,
LORD ARTHUR BUTLER,
THEODORE P. E. HEYVAERT.
THOMAS HONEY,
SHEFFIELD NEAVE,
CHAS. FREDERICK ROWSELL.

MANAGING DIRECTOR.—ROBERT WILLIAMS.

MANAGERS AND ENGINEERS.—ROBERT WILLIAMS AND CO., JOHN R. FARRELL (Head Engineer), THOMAS BAYNE (Engineer.)

MANAGER IN AFRICA.—GEORGE GREY.

METAL BROKERS AND COMMERCIAL AGENTS.—VIVIAN, YOUNGER AND BOND, 117, Leadenhall Street, London, E.C.

BANKERS.—THE LONDON CITY AND MIDLAND BANK, LIMITED, Threadneedle Street, London, E.C., and Branches.

LONDON BROKERS.—BASIL MONTGOMERY, FITZ-GERALD AND CO., 19, Throgmorton Avenue, London, E.C., ANDREAE AND CO., 28, Throgmorton Street, London, E.C.

COUNTRY BROKERS.—CUTLER and LACY, 41, Waterloo Street, Birmingham.

SOLICITORS.—INGLE, HOLMES, SONS, and POTT, Broad Street House, London, E.C.

AUDITORS.—COOPER BROTHERS and Co., 14, George Street, Mansion House, London, E.C.

SECRETARY.—L. SCOTLAND.

OFFICES.—30 and 31, Clements Lane, London, E.C.

The Company's Engineers give the following short résumé of the mineral discoveries made, the exploration work done on them and the results proved by that work.

"COPPER.—In the western half of the copper belt, that is in the section lying to the west of the Lufira River, twenty-six cross cut tunnels have been run on ten of the deposits, giving average backs of about 100 feet, which will give a sufficient mining tonnage for a great number of years.

"On June 8th, 1905, the Official Engineer of the Congo Free State, who spent over eighteen months in the district during the time these developments were being made, reported there was shown ore containing two million tons of copper. The Engineers of the Company have also examined the work and reported similar results.

"The copper interests of the Company can be safely considered to be of a character to establish and maintain a great and enduring enterprise.

"TIN.—The tin belt extends from the Busanga Mine on the Lualaba north-easterly to the Lufira River, a distance of about 110 miles, and along this distance many locations have been made of both alluvial and reef tin. It is considered that this will constitute a new tin field of great commercial importance. The tin is found as cassiterite, tin oxide, and it contains practically no other metals. Eight and one-half tons of tin bars were made last year by the crudest methods and sent to Europe, where they were pronounced equal to any tin on the market and sold as such. Nine tons more have been made at Busanga this year. The tin mines are well located for cheap and continuous working when adequate transport can be had.

"RUWE GOLD MINE.—Washing for surface gold commenced at Ruwe in April, 1904, and, with a stoppage for two months last spring has been continuous. A pumping plant has been shipped to take the water to the dirt instead of the dirt to the water, and when it arrives more ground can be worked and at less cost. Nearly three-fourths of the value now recovered is profit.

A Mineral Company has been registered under the Law of the Congo State, with its principal office at Brussels, under the name of "Union Minière du Haut-Katanga," to acquire the whole interests in all the deposits already discovered in Katanga. The Company's interest in such deposits will then be 45 per cent., less 2,000 Shares set aside to commute Prospectors' interests.

BENGUELLA RAILWAY.—The Company is the owner of 900,000 Shares of the exchange value of £1 each (225,000 fully paid and 675,000 paid up to the extent of 75 per cent.) in the Benguella Railway Company, a company formed under Portuguese law, whose principal office is at Praca Camoes No. 6, Lisbon, with a Capital of £2,000,000. The Company's holding in this Company represents the whole of the issued Capital of the Railway Company less 10 per cent. reserved by the Portuguese Government. This Company owns a concession, granted in 1902, giving it the right to construct and work a railway from Lobito Bay to the Eastern frontier of Angola (Portuguese West Africa), i.e., to the Western or Southern frontier of the Congo Free State, with a preferential right to construct branches, and which in addition to other rights confers the right for ten years to prospect for and work minerals within an area of State land of 120 kilometres on each side of the line. All minerals regularly worked during the period will belong to the Railway Company in perpetuity, subject to the Portuguese regulations as to mining in their Colonial possessions and the Concession. The construction of the Railway (for which over £1,500,000 of this issue will be available) is actively proceeding under the superintendence of the Consulting Engineers, Sir Douglas Fox and Partners and Sir Charles Metcalfe, Bart. The section included in the present construction contract covers a distance of 320 kilometres (200 miles) from Lobito Bay; a portion of this has already been opened for traffic, and a further portion is now in course of construction.

It is intended to apply the proceeds of the present issue of Debentures to the following purposes, viz.:—

(a) In applying for and paying up the Working Capital Shares in the Mineral Company above mentioned at par.

(b) In providing funds for the construction of further sections of the Benguella Railway by paying up the uncalled balance on the Shares held in the Benguella Railway Company, and taking up further Shares as funds are required by that Company for construction at par.

(c) For the general purposes of the Company,

Provisional scrip will be issued, and application will be made in due course for a special settlement and quotation in the Debentures on the Stock Exchange.

Prospectuses and Forms of Application, upon which alone applications will be received, may be obtained from the Bankers or Solicitors, or at the Registered Office of the Company.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 463. SATURDAY, NOVEMBER 17, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. **Six Months - 11s.** **Three Months - 5s. 9d.**

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied or less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.,** plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

The South African Confusion.

"Do not oppose us, for the Chinese will do what you could not do—drive out the British." These are the words of Mr. Smutz, one of the leaders of the Transvaal Boers, a man of high character and untainted probity, and he declared that they represent the temptation put before his people by the mine cosmopolites when they were leaving no means untried in order to conjure away opposition to importation of the yellow serf. What do our sentimental Jingos think of an attitude like that? Facts prove the truth of Mr. Smutz's statement, for the Chinese have been driving out the British, as the statistics repeatedly given by Mr. Winston Churchill demonstrate. That is bad enough, but it is not the worst by a long way, and we fully sympathise with those members of the House of Commons and the large majority of the electorate throughout the country in the impatience felt by them at the apparent supineness of the present Government. We often hear it said that in the manner of manly dealing with the canker now eating into the morals of black and white alike in South Africa this Government is little or no better than the last one. That is an extreme statement and by no means to be justified, for this Government is getting ready a constitution to be bestowed upon the inhabitants of the annexed South African Republic. It has also taken steps to put an end in time to the Chinese plague, and could not perhaps do much more in that way than has been done in the present state of domestic and Transvaal finances.

True as this may be, and fair as it is to accept excuses, the fact remains that no appreciable progress appears to have been made in ousting the cosmopolites from their evil supremacy over the economic life of the Transvaal. These men with their Chamber of Mines, their great financial power and their perfect unscrupulousness continue to set not only the home Government, but the local administration of Lord Selborne practically at defiance, and they are at the present moment busy intriguing, misrepresenting, suborning and coercing with a view to render the new constitution abortive. They stick at nothing, and have almost the entire Press in their hands, and a few brigands when need is. Had it not been for the patriotic initiative of the *Daily Chronicle* in organising that syndicate of newspapers whose special representative sends frequent illuminating letters and telegrams from the centre of corruption, we should at the present time know nearly as little of the real state of affairs in the Transvaal as we did at the time when the Jameson Raid was organised, and the *Times*, as agent of the conspiracy, published that forged letter of distress as a genuine document. Sir Percy Fitzpatrick might still be the recognised exponent of South African feeling, and we should at the best be hesitating whether to regard his employers as the greatest of Imperial patriots or the most abandoned of self-seeking millionaires. We have, however, attained to some knowledge of the true position, and the nation has made up its mind about Chinese labour as a thing to be got rid of, as a moral gangrene corrupting the social life of the native population of the Transvaal, coloured and white.

Why, then, is the Government hesitating to deal with this abomination in a frank, resolute, straightforward fashion? We are quite sure it is not the fault of the Prime Minister, and are not disposed to blame

any of his colleagues, although Lord Elgin comes in for a good deal of strong language in some quarters when this subject comes up for discussion. Our impression is and has long been that the real obstruction, the real source of the hesitancy, the mumbling fashion of speaking, the hiding up and putting off is to be found in the attitude of what is called "society," especially that portion of society which surrounds and hangs by the Court. It is perfectly well known that from very early days in the history of gold and diamond mining and land grabbing in South Africa, great titled personages were inveigled into the net of the South African adventurers. They were involved in the Jameson Raid, and some of them staked large sums of money in the adventure of the Chartered Company as well as in South African mining and finance companies. So powerful was this section of fashionable or courtier society that it was able to lead or impel our present King, then Prince of Wales, to put in an appearance at the sittings of the House of Commons Committee appointed to investigate the Jameson Raid when the late Cecil Rhodes came up for examination. The Prince ostentatiously paraded himself as the raider's friend, and so effective was his intervention that the Committee's "investigation" petered out, and became futile. These same influences are powerful to this hour, and unless those zealous members of the House of Commons, who are now conferring together with a view to bring further pressure upon the Cabinet so as to force it to deal with the Chinese immorality in particular and with the whole question of mine labour in South Africa in general, make up their minds to go behind the Government and drag into light the hidden social influences brought to bear upon it, blocking its way, hindering it on every step, they will never do much good. Are these members also overawed by the titled personages, or are they frightened with tales of the shattering bankruptcies which might follow any serious attempt to upset the present arrangements whereby more gold is every month being extracted from the bowels of the earth, while misery is spreading alike amongst the white population of the Transvaal, especially of the Witwatersrand, in whose interests we were instructed to believe we undertook a formidable war, and dividendless mine shareholders in this country, now eating their hearts out? We should like a frank answer to that question, because if the Radical and other members of Parliament now anxiously seeking to improve the state of affairs in Johannesburg are at the same time overawed by, or cringing to, these high social influences, there is not the least hope that the crisis they are taught to dread can be averted. The mining industry in South Africa will go from bad to worse as now conducted, because there is little or no genuine economy exercised in it, and still less enlightened and honourable supervision given to it. Monopolies devour it on every hand, and the cosmopolite capitalist alone profits. Every increase in the output of gold may be said to signalise another plunge of the Kaffir market down towards hopeless insolvency.

But what would you have the Government do? We have said again and again, and are more confirmed in the opinion with every week that passes, that the mining industry ought to be taken completely out of control of these cosmopolite adventurers, reorganised, consolidated, and placed under a mixed commission, composed of Imperial representatives and delegates from the white population of South Africa. We should guard the interests of genuine shareholders with the utmost jealousy, but the whole industry should be freed from the grasp of the mere promoter, the working of the mines systematised, and their development carried out according to the most enlightened system of mining to be found in the world. As now conducted, Witwatersrand mining is a horrible business from many points of view. We hear that the ventilation of many of the underground workings is abominable, and the death rate of the blacks is so ghastly in its magnitude as to make us often inclined to doubt whether the gold extracted does not carry a curse with it to all who receive it. If the mining industry were handled in this determined fashion, the costs might be reduced to an extent that would liberate a large amount of revenue, now either non-existent or stolen and wasted, with which to provide dividends, recruit sinking funds, and furnish some considerable portion of the cost of administration. Surely the population of the country where the minerals are have some right to consideration—to a share in the benefits accruing from their extraction. Only by sweeping away the bosses with their swarms of directors and dependents, their monopolies, and innate malignity could reforms get a chance. Of that we have no doubt whatever, and morally we here should get by the change into a clean and pure atmosphere instead of one of foulness and moral decay. Our own Kaffir market would be cleansed, and many a mine share, now a mere gambler's token, might become an object of prudent investment.

About the debate in the Commons on Thursday night we have little to say. It was opened by Mr. Lehmann in a speech of great self restraint, dignity, and absence of party asperities, and the example thus set was followed by all the leading speakers. For all that we cannot help feeling that the results were inadequate. What is the use of talking about "minimising" the moral disease when it is a question of 52,000 males, and mostly degraded males at that, deprived of their wives and families? And the abomination of Sodom, as fruit of this unnatural state of affairs, was known to be inevitable from the outset. We knew it, and insisted when Mr. Lyttelton was saying all things to the self-respecting and clean-minded in order to fulfil the behests of his inspirers, the South African cosmopolites, that there would be no "wives and families" about, and that the "Chinese experiment" would bring unnamable moral filth and contagion in its train. But nobody paid heed then, not even his Grace of Canterbury, as anxious seemingly to "support the Kaffir market" as anybody; and now when the inevitable stands revealed even the Prime Minister talks of "working slowly and surely," of "cutting down, if not altogether pulling up the weed." Yes, and only two women are said to have come from China! Language of this kind cannot satisfy the moral sense even of the man in the street, and equally unsatisfactory is the reiterated assertion of "the only constitutional method" of dealing with this Chinese pestilence, the method of leaving its elimination from the Transvaal to elected representatives to be chosen under the constitution about to be accorded. The people of the Transvaal have never had anything to do with bringing in the Chinese. That was the work of Lord Milner and the late British "Imperial" Government, and it is unfair, not to say cowardly, to run away from our responsibilities in the way the Prime Minister, the whole Ministry, seeks to do. "A tremendous amount of feeling would be excited" by our interference, Sir Henry Campbell-Bannerman said; it would be "setting party against party." Who told him that? Of whom is the pro-Chinese party composed in the Transvaal? Not of the Boers, not of the British settlers, not of the remnant of the white workers at the mines; only of the cosmopolites and their hirelings and tools. No, it will not do; a bolder policy must be adopted and a manlier. In the interests of this country, whose good name is befouled, of the Transvaal whites and of mine shareholders alike, the Chinese ought to be sent home as fast as possible, and the opportunity taken to place the mines under such strict control as would rapidly and completely emancipate them from the blighting domination of a small group of soulless adventurers, who know no country, no moral law, no humanity—nothing but the art of getting rich by no matter what expedients.

Consolidated Gold Fields of South Africa.

Two years ago Lord Harris, of Seringapatam, a great cricketer, assumed the bottle-green hue of pessimism when outlining the far-off future of the Rand. Not a gleam of light could he discern to relieve the

deepening gloom should we persist in intercepting the "cheap" help from China. A year later he threw off his jaundice, and was scarcely recognisable in his make-up of radiant prophet of wealth. For the brute help from China had meanwhile brought relief to the darkened land of the mine boss, of watered stock and gold, the day of pocket-filling had come again for all punters. There was no doubt of his lordship's sincerity, of his strength of conviction, for he gave evidence of both by distributing 3s. per share amongst the hungry shareholders of his company in that affable, benignant way which plainly said: "This time next year you will get more." Such was the hope he encouraged both by word and action. A Liberal Government, if the country should be foolish enough to allow such, dare not in peril of an appalling catastrophe intercept that vigorous, orderly, moral, efficient, persevering, docile, and cheap, awfully cheap, Chinese arrival, whose energy might even vitalise exhausted mines, might be made to yield paying gold for the good of the Gold Fields Company, with its bales of shares, facetiously described as investments. If the directors could see their way, after a ruinous war and a year of almost unexampled depression, to increase the dividend from 2s. 6d. per share to 3s., what could they not hope to do after a twelvemonth of the benefits of cheap exotic labour? This was no deduction from a smiling benevolence, for Lord Harris said, in plain enough English: "You may accept this, gentlemen, as an indication of the directors' confidence in the future." Unhappily, his lordship's reputation as a veracious, reliable prophet is likely to be damned for ever, for stupid facts have been giving him the lie ever since. The light he saw was darkness, and the darkness appears to be deepening towards despair. Punters and shareholders alike looked for another half-crown at least, and possibly 3s. 6d., this time, and up went the price of the share. It was precisely as it had been twelve months ago, as far as anticipation went, but the realisation was far less pleasant. "No dividend" is poor consolation to the "bull" carrying shares on which he has a heavy loss at 8 per cent. contango. You would have done better to believe in the Investors' Review, friend, although it has no lord on its staff to do its prophesying.

The annual report is only an amplification of the preliminary statement. "We could have paid a dividend," say the directors, "had the labour outlook been free from doubt." This is tantalising, for the pessimism of the directors alone would seem to stand between the shareholders and their chunk of profits. Said profits seem appreciably larger than the previous year's. Twelve months ago the directors decreased the forward balance by transferring £1,000,000 to the "reserve fund," a mere book entry, but useful as help to the balance-sheet maker, for this time they write off £700,000 for depreciation, offering thereby a more acceptable explanation of the inability to pay a dividend than a doubt, based on prejudice and pure cussedness or ignorance, that future labour conditions will not be exactly in accordance with boss ideals. We last week indicated how skilled labour could be applied. We have often done it, but the interest of shareholders is made subservient to political ambition and the esurience of the share manufacturer. It their motives were enlightened, would they not be willing to spend the millions already lost by the public and won by them in order to find out what highly-paid white labour, using the most perfect tools, could do? Mr. Robinson is willing to do it; why cannot the Gold Fields crowd? Well, it is not cricket as they understand the game.

The bosses, this company's board among them, want to play a game that will bring abundant gate money, and think the old fakes just the very thing. No, good friends, they are not. Yours was a false, a forcing game; the public is tired of it, and you have not enough business acumen or imagination to adopt or invent a new. Your market galvanising devices are as stale as the Wizard of the North's machine-worked magic. We are weary of this folly, and ready to wish the noble Lord Harris and his brood well dumped in King Leopold's land; yet why did the bosses reduce Kaffir wages at the end of the war? Was it not to create a fictitious dearth of indigenous labour? Are not obstacles even to-day placed in the way of those who could get blacks by offering fair wages and humane treatment?

Looking to the imposing scope of this company's ambitions, it is curious to note that it has but five concerns that are crushing and earning profits. A great number of others are in various stages of development, and will continue to need a great deal of help from the hungry parent. No wonder it cannot afford to dissipate one sovereign in dividends. Its interests are not confined to the Rand or the Transvaal. Many are in Rhodesia, and some in West Africa. How will an abundant supply of Chinese labour improve the prospects of these? Rhodesia is a doomed country so far as its gold wealth is concerned. This will never become a profitable industry; labour alone cannot make it so. And West Africa is really as hopeless. Here are assets practically worthless should it ever become necessary to convert them into solid cash. They can be carried in the balance-sheet, mixed with the conglomeration of other paper, valued at arbitrary and inflated prices, but they will have to be placed on the rubbish heap and burned some day. That amalgamation scheme again, which a few months ago astonished us all, whereby the directors affiliate the South Geldenhuis Deep, the South Rose Deep, the Rand Victoria East, and the Rand Victoria Mines; an admirable conception from some points of view, but will it give the parent relief? If it does it is sure to be followed by others designed to lessen the responsibilities and finnacial burdens of the debt-worried Gold Felds Company. "Debt-worried"! Nonsense. Listen to this:—"With the view of extending the company's operations attention has been paid by the directors during the year to various propositions, which have been submitted to them in connection with mining and other ventures in various countries. In some instances business which may prove of a remunerative nature has been taken up, but not to an extent calling for any special comments." In various countries? One would have thought the company's interests were already spread over a sufficient number of countries to warn the directors not to venture further, and if they had any regard for the shareholders they would not dismiss the matter in this curt fashion.

These general notes done with, let us analyse the actual sources, the income and earnings during the past year as far as revealed. The directors take good care to make this hard labour. There are, as usual, but two credit entries in the profit and loss account, the tiny revenue from transfer fees, and the general jumble-up in this style: the £492,110 otherwise received came from "sales of investments, dividends, commission and sundry receipts, less amounts written off." Not an illuminating entry you will say, but it is not intended to be; why should shareholders, docile sheep, be told anything? The total income was £42,873 more at £493,073. Expenditure rose £7,600, so gross profit was £37,224 higher at £409,469. But what is the use of that when £700,000 has to be written off for depreciation? The balance brought forward was only £984,688 because the dividend paid last year docked it to some extent. Even so the aggregate "free balance" was brought up to £1,394,157 by the year's profits. But had another 15 per cent. dividend been paid, that and the £700,000 written off would have together brought the free balance down to £394,157, and the company's bankers might have begun to doubt whether it was sufficiently in funds to provide them with margins on their loans. And what would its poor dependents have done for help? "Yelp," echo answers.

The company's real poverty is disclosed in the balance-sheet, though to a superficial observer this might give the appearance of prodigious wealth. Con-

trast these figures, last year's and this. The least expert will understand:—

LIABILITIES.

Nearly £4,500,000 is locked up in a mass of paper, mostly waste paper, for much of which buyers could not be found at 1s. 6d. per lb. We judge by the past, for this year again the directors omit their precious "list of investments." They promised to continue it, but dare not, for the hollow structure might not bear the exposure, monument of the promoters' skill in paper architecture that it is.

So much for the shareholdings. The investments on reserve account are to the extent of £1,000,000 in high-class securities, and have to be since the company's bankers would not lend them that £1,619,000 on the aforesaid waste paper. Loans at short call show us the extent to which the company depends on these advances from bankers to carry on its contango business. These are contango loans, and were this money withdrawn from the "bulls" half the Kaffir Circus would callapse forthwith. There may be no immediate need to call the loans in, but it is to be noticed that they fall appreciably short of the indebtedness to sundry creditors, a formidable sum which shows how the business is locked up in the fortunes of the market. With the preference dividend, the contingent and other liabilities the company owes something like two millions, and there is no knowing when a considerable part of this may be required. It would be interesting to know what securities have been pledged as security over and above the £1,000,000 in good stocks. What interest is the company now paying for the loans? On these matters, however, neither shareholders nor the public are likely to be enlightened until—never mind. About £400,000 is owing to the company by debtors of sorts and £261,000 represents cash advances and mortgages, but how much of this aggregate is immediately recoverable? Cash is £210,793, but when the preference dividend and the debenture interest are paid it will shrink considerably.

Such is the position of this promoter's phenomenon. In the past nine years it has paid out to its shareholders the magnificent sum of 15s. 6d. per share or a little over 1s. 8d. per annum. It paid higher dividends in the first five years, 1892-7, but those were the years of Kaffir madness and booms. It has given its shareholders plenty of paper, too, especially Simmer and Jack scrip. But the glorious days of the past, when abundant harvests were to be garnered out of the pockets of the demented, are not likely to come again. The ruined public have been taught too many lessons, and the Kaffir market must await a new generation of fools. But ere they can come into being, we fear the best mines will be worked out and the Consolidated Gold Fields with them. It cannot afford to wait. Each day adds to its financial burdens, and twelve months hence the position must be worse than it is now. What hope the monstrosity had, and it was never great, has been ruined by Chinese cheap labour and the colossal ignorance and pigheadedness of those in charge of the business. Taking in shares for the deluded may be a fine business for a time, but it is neither good mining nor prudent finance.

Economic and Financial Notes and Correspondence.

"Argyll Motors."

We hope the directors of this undertaking will not jeopardise future stability by over-trading in its early days. The Stock Exchange seems to have brought an unusually intelligent judgment to bear on the company's position, and on the day when the results for the past year were made known a sharp relapse took place in the market value of the shares, notwithstanding that superficially, at least, the operations of the business seemed to have turned out remarkably well. Some dealers in the shares evidently knew more than they should have done. Stories were to be heard that although a very large profit was disclosed the resources of the company were so severely locked up that far from the suggested 10 per cent. dividend being justified greater prudence would have been shown if no ordinary share distribution at all had been recommended. When the report made its appearance the strictures passed on the company's finances were seen to be quite justified, and despite the profit on motors account of £125,134, it is abundantly clear that the payment of the ordinary dividend now proposed will impose a very severe strain on the resources. The shares of motor companies just now are all the rage, but we have witnessed booms of a similar type before, and while a large number of companies may have a good future before them, the public must exercise great caution in the selection of its investments if severe losses in connection with this industry, as with so many others in the past, are not to be encountered. We do not say for a moment that Argyll motor shares will not eventually form a very fair speculative investment, because we believe the business at bottom to be quite a good one, and there is no doubt that the cars enjoy considerable favour with the motoring public. At the same time prudent and intelligent administration is necessary if the company is to have a permanent success, and after we have gone through the examination of the balance-sheet shareholders will perhaps be able to form an opinion of the perspicacity and judgment so far displayed. In its present form the company dates back to as recent a period as March, 1905, when a company known as the Hozier Engineering Company, of Bridgeton, Glasgow, was expanded into the existing enterprise.

The Hozier company had a capital of only £31,000 with a debenture debt of £14,900, and on the strength of a jump in profits from £6,102 to £21,062 the "Argyll Motors" was given a share capital of £500,000 in 30,000 6 per cent. preference shares of £5 each and 350,000 ordinary shares of £1 each. Of this capital 6,666 preference and 83,333 ordinary shares went as purchase consideration, including £68,473 for goodwill. Apart from 81,600 ordinary shares specially allotted, the public was asked to subscribe the remainder of the capital, and we believe did so. The first report of the reconstituted undertaking made its appearance just twelve months ago, and revealed a profit of £32,532, which was considered good enough to justify the issue in December last of £100,000 in 4½ per cent. first mortgage debenture stock. Of this money £5,000 was used to pay off an existing heritable bond upon a part of the property, and £50,000 was to be spent on additional works, machinery and plant, leaving £45,000 for further working capital, an important matter in view of the present position of the company's finances. At the present moment the share capital paid up, including £11,343 paid in advance of

calls, amounts to £369,701, and after allowing £1,750 for debenture stock redeemed the fixed debt outstanding appears at £104,350. This makes a total capitalisation of £474,051, and allowing for the shares that went to the vendors, we gather that about £357,000 in cash has come into the directors' hands on behalf of the company. Let us see what has been done with the money. The works, buildings and machinery at Alexandria and Bridgeton have a balance-sheet value of £221,934 after deducting £4,529 for depreciation, and the machinery, plant and tools, with a wastage allowance of £10,068, appear at £197,720. The next item in the balance-sheet is the stock-in-trade which has aroused so much discussion, and there is no doubt at all that the value on hand of £207,228 is exceedingly heavy. When the rumours were first current that the company had a large quantity of cars on hand, the chairman repudiated this statement, and his denial perhaps was strictly accurate because the finished cars appear at only £43,041, not an excessive figure. But in addition to this there is work in process to the amount of £131,889, besides raw material of £32,298 and drawings and patterns of £3,911. The last-named has been reduced by £1,955 on account of depreciation, but we are disposed to think that expenditure of this nature should be entirely written off the year's profits.

Goodwill remains at £68,474, and although £3,132 has been written off the preliminary and debenture issue expenses the item still stands at £12,529, to come off future profits. Sundry debtors owe the comparative trifle of £28,266, and £2,681 is held in the shape of bills receivable, but the investments of £19,340 consist of Feu-Duties and interests in representative companies, and would hardly be available for current needs. This brings us to the last item in the balance-sheet, cash on hand, and there is no doubt at all that the company should not attempt to carry on the immense business it is doing with a bank balance of £902. It is ridiculously inadequate, and when we look to the debit side of the account, and note the tremendous floating liabilities which have been piled up, it seems certain that notwithstanding the creation of £100,000 of debenture stock only twelve months ago a further appeal for capital will soon become imperative unless the stocks on hand can be very rapidly completed and realised. Just take note of the fact that to cash creditors the company owes the enormous sum of £114,754 besides £45,867 to trade creditors and £73,620 on bills payable, a total of over £234,000. No wonder it has become necessary to borrow £4,575 from bankers, and but for this the cash balance would be a minus quantity. When certain allocations from the past year's profits have been made the reserve funds will amount to £18,000 apart from a suspense account of £13,177, and it might be well to know for what purpose the latter credit is held. To the profit on motor account already mentioned, £125,134, we must add profits from Feuing land £8,896 and transfer fees £175, making a total of £134,205, but against this we have to deduct £59,290 for trade expenses and salaries, £8,936 for interest and £19,850 for depreciation and preliminary expenses written off, so that the big credit is quickly whittled down to £46,129. Balance from previous account was £666, making £46,795, and after paying the preference dividend the directors recommend a distribution of 10 per cent. on the ordinary shares, with £5,000 to a special preference reserve and £6,000 to general reserve, carrying forward £6,950 subject as before to payment of directors' commission, auditor's fee and balance of income-tax. This statement cannot be considered a satisfactory one, and we are almost inclined to doubt if the business is in a position to take full advantage of the excellent prospects for the coming season described in the report. We are told that orders have already been booked for a larger number of cars than the company delivered during the whole of last year, and although this is satisfactory enough from the purely trading standpoint, it is useless to book a large trade if the resources of the enterprise have already been over-strained and are not large enough to finance it.

Houlder Line.

The directors of this well-known shipping line are evidently of a retiring disposition. They do not seem anxious to lay an account of their achievements before the world, and we have had to procure a copy of their report and accounts for the year ended December 31, 1905, from a private source. We are, however, not altogether surprised at the directorial reticence. Results such as those now displayed are, perhaps, best kept as dark as possible, because the shareholders seem to be waking up to the true position of affairs, and in letters to the Press have been expressing the view that an independent investigation into the condition of the business might prove beneficial. We are rather inclined to agree. The report, which, it will be noted, is issued just about ten months after the accounts are closed, tells us that the competition in the frozen meat trade has continued, and freights have remained at an extremely low level. Owing, however, to the disturbances in the East, the directors were able to obtain satisfactory contracts for the conveyance of troops and horses, and the profits of the steamers therefore show a material advance over those of the previous twelve months. The improvement notwithstanding, the results are still deplorable. The profits on voyages of steamships, &c., after providing for insurance and all working and management expenses, are returned at £30,458, to which must be added interest, including income on investments and transfer fees, making a total of £32,181. Out of this must be allowed the book value of the insulation and refrigerating machinery of the *Thorpe Grange*, which has been replaced, £3,000, remuneration of trustees for debenture holders and auditors' fees £305, and debenture interest £9,000, leaving an apparent credit of £19,876. It is raised to £27,023 by the sum brought forward, but £20,000 is at once allowed for depreciation and reserve, so that the directors can do no more than carry forward a slightly smaller sum than the credit brought in at £7,023. The whole of the share capital, of which £200,000 in preference shares was subscribed by the public, therefore gets no return of any kind, and the depreciation allowance is seriously short of the actual wastage. The matter is not referred to by the directors, but we learn from the auditors' certificate that instead of £170,000 which has been accumulated, the total depreciation and reserve at the date of the balance-sheet should amount to £226,848. That means a shortage of approximately £57,000 and even if the company's fortunes should materially revive, of which there seems no present prospect, there would be all this deficiency to make up before the board dare recommend the payment of preference dividends.

We are quite aware that the vendor directors, as holders of the ordinary shares, are as great sufferers as the preference proprietors, but this does not make the experience of the latter any the more cheerful, and in the absence of a really satisfactory explanation of the bad results we are inclined to think that the shareholders should not cease agitating until proper reforms have been instituted. Past experience leads us to the opinion that the internal management of the business is not as satisfactory as might be desired, and in these days of ever-increasing competition only those enterprises administered with great intelligence and foresight can hope to succeed. At the end of December, 1904, the book value of the steamships was £736,007, but the reinsulation and new refrigerating machinery of the *Thorpe Grange* cost £13,602, making a total of £749,609. From that must be deducted the value of the old machinery £3,000 which has been written off profits, as already indicated, leaving the value of the fleet at £746,609. The insurance fund which stood at £8,000 has been charged with £2,097, being the claims and returns in respect of the premiums received on lines underwritten on the fleet prior to December, 1904, leaving the balance at £5,903. This, however, has again been increased to £6,700 by adding £797, a proportion of the premiums received on underwriting during 1904. Floating liabilities, including bills pay-

able and balances due on steamships purchased, stand at £151,371 against debts to come in of £179,064. Investments at cost, details of which would be welcome, are valued at £58,768, and the item of cash, out of the balance-sheet total of £1,009,439, is just £7,217. Decidedly a case for inquiry.

The United States Steel Corporation.

Glowing prosperity white-hot is revealed in the figures of this gigantic combination for the quarter ended September 30, whose outlines we have already given, and for the nine months of the current year to that date. Altogether the nett earnings for these nine months came to $114,874,147 or about £23,000,000 sterling. In the same period of 1905 the nett earnings were only $84,572,000, and in 1904 $51,710,000. The present year's nett revenue is therefore more than twice that of two years ago, and the prosperity shows no signs whatever of abatement since the unfilled orders at the end of September weighed 7,936,884 tons, 321,000 more than the highest previous figure in the history of the company. After meeting all fixed charges, and setting aside no less than $34,500,000 for additional construction and property, besides appropriating $5,041,073 for sinking fund and setting aside $15,730,000 for depreciation and reserve funds and $6,500,000 for special improvement and replacement funds, there was still $35,951,693 left as the result of the nine months' work. Out of this only $26,539,294 was paid away in dividends, the common stock getting only 1¾ per cent. per annum, so that $9,412,399 was left as free revenue. Such wealth is quite staggering, and yet when we come to look into the figures a little we discover that including the $34,500,000 set aside for building the new plant at Gary, Illinois, the total appropriations for wastage and depreciation come to less than 8½ per cent. per annum upon the entire capital involved, exclusive of subsidiary railways. That does not strike us as sufficient, but it is impossible to deny that monopoly and drastic tariffs have done amazingly well for this gigantic combination. What have they also done for the worker and the consumer? We do not find that any portion of the magnificent wealth has been set aside to form a fund for aged or disabled workmen.

Pears' Capital Reorganisation.

The manner in which the directors of A. and F. Pears lay before the shareholders a scheme for the extinction of the deferred shares will no doubt commend the proposal to a good many of them, quite apart from the fact that on its merits the scheme seems quite worthy of acceptance. At the last annual meeting the view was expressed that the finances of the company would be benefited if the directors would bring forward an equitable scheme for cancelling the deferred shares, of which two of them are the sole proprietors. Within a very short time the board has settled upon a plan and presents it to the shareholders with a long explanatory statement setting forth details of the precise position. Every possible information that any shareholder could wish is afforded, and whether the scheme be approved or not, no proprietor can afterwards say he acted in the dark. The average dividend paid on the deferred shares since the constitution of the company in its present form has been 4½ per cent., and the directors now offer to exchange their 150,000 deferred shares for 60,000 ordinary shares, which, as we know, carry a preferential non-cumulative dividend of 10 per cent. Provided this dividend is maintained, the present deferred holders will get in the future the equivalent of 4 per cent., or slightly less than the average hitherto. This may not seem a great sacrifice, taking into account that the shares will now rank on a par with the ordinary capital, but we have to remember that the deferred shares are entitled to all the profits after the ordinary dividend has been met, and that the existence of the deferred shares rather stands in the way of a substantial allocation each year to the reserve fund. In order to pay 5 per cent. on the deferred for the past year, the credit to reserve was reduced from £5,000 to £3,500, and at the meeting lately held the chairman expressed the view that further additions to the fund were unnecessary. On the basis of the last twelve months' profit this would mean the payment of a further 2 per cent. or more on the deferred capital, whereas if it is extinguished the money could either be placed to reserve or used to pay a higher dividend on the whole of the ordinary capital. We hope the policy hitherto pursued of strengthening the reserve will be continued, as 10 per cent. is a very fair dividend for an industrial company of this kind, and the recent formation of the Soap Trust will no doubt bring home to the directors the necessity of being in a strong financial position. Should the scheme be carried through, it will be possible to write off from the goodwill account a sum of no less than £90,000, being the difference between 150,000 deferred shares of £1 each and the 60,000 ordinary shares to be given in exchange, so that in this way the position will be materially improved. Not only that, but should the liquidation of the company ever become necessary for amalgamation or other purposes, there would be only £60,000 to rank with the ordinary capital, instead of £150,000, and, on the whole, we are inclined to think that the ordinary proprietors get the better of the bargain.

A Motor 'Bus Breakdown.

The first of the multitude of motor 'bus ventures promoted early this year to commit the happy despatch has decided to end its wretched existence earlier even than we expected. To Manchester belongs the credit or discredit—it depends upon the point of view, and whether you are a shareholder or not—of leading a successful crusade against the motor 'bus, and before long Manchester may have many imitators. It is no doubt very fortunate that the public did not become badly bitten by the motor mania, and when the prospectus of the Manchester District Motor Omnibus Company was issued in March last the outside response was probably of a very feeble kind. The capital was fixed at £300,000 as befits the importance of a motor 'bus company seeking the patronage of the city of Manchester, and 200,000 £1 shares were offered for subscription. The minimum on which the directors could go to allotment was £75,000, and this sum was underwritten by the British Transport Syndicate, which in due course entered into various sub-underwriting contracts. Two of these were with the Wolseley Tool and Motor Car Company and John I. Thornycroft and Co., who agreed to subscribe for 19,250 and 12,000 shares respectively. These companies, by the way, contracted to supply 40 motor 'buses between them, and the effect of the business really was that they took payment in shares. This we made clear when handling the company's share list in September last, and the next report of Thornycroft's ought to be interesting. We wonder what the loss will be. Before the prospectus of the 'bus company was issued a couple of vehicles were sent to Manchester to run over various routes, and since no opposition was aroused the directors decided to go to allotment. A garage was fitted up and negotiations were entered into with the authorities for the licensing of routes which was duly arranged. So in July a regular service was started, meeting with fair success according to the chairman of the concern, and in due time the route was extended to Levenson. In doing this, however, the directors seem to have committed a grave tactical blunder. To get to Levenson the 'buses passed some "big" residential houses and then the trouble began. The occupiers no doubt thought it a great impertinence that motor 'buses should use the public roads. They were made, of course, and are maintained at the expense of the rates for the exclusive use of private motor-cars, which usually stink just as much as any motor 'bus we have ever encountered and run at twice the speed. Anyhow, a deputation of residents waited on the authorities, and in addition to the refusal of any more licences those already issued were allowed to lapse. The company's 'buses and the concern itself therefore came to a dead stop, and the "convenience of the many had been

sacrificed to the prejudice of the few." So said the chairman of the company on Tuesday last when a meeting was held to make arrangements for the company's obsequies. They could remain in a state of suspended animation, he said, until a better vehicle was devised or the prejudice died down, but the shareholders wisely decided on winding up. "Are we likely to get anything out of the liquidation?" asked one of them. The chairman was very dubious, but he hoped and believed that a call would be avoided. It seems that 10s. per £1 share has been paid up, and we think the unhappy proprietors had better write it off as lost. Perhaps they are lucky to get off with that. Had the business continued the loss might have been more.

The Macfadyen Failure—A Word of Warning.

Under date November 12, a correspondent writes to us as follows:—

"In your paper of 10th inst. you remark on the disgraceful state of affairs revealed in connection with the failure of P. Macfadyen and Co. and Arbuthnot and Co. Could you not with advantage point a moral while the failure is fresh in the memory, with its awful consequences to so many depositors least able to bear the losses, viz., hundreds of hard-up Anglo-Indians and societies, who seem to have had their savings with the Madras house. Could you not show the folly of military and Government officials, or Baptist missions, or any individuals or societies out in India, employing private banks who issue no balance-sheets instead of doing business with the ordinary banks (only too numerous), about whose stability one can usually find some tidings. The Oriental Bank and others have shown us that even publishing balance-sheets will not always protect from bad business and consequent failures, but it forces bankers to face the situation, and the history of several banks shows that this has been the salvation of them, and, therefore, of their depositors.

"If it be true that Arbuthnot and Co.'s deposits have been in any large degree put out on coffee estates, and the failure caused by the lock-up—in itself not improbable—then it shows how long their fate has been impending, and how serious the situation is now likely to be. Almost a generation has passed since the coffee crisis in Ceylon. Though coffee on the main land of India may have lingered a little later, it was clear that it was only a question of time before it followed the course of that in the island. Any way, it was clear enough, and this is the point I wish you would press, its fate was clear enough to force anyone who had to publish a balance-sheet to value the assets, to put a price on the securities against which the deposits were lent out. Valuing the assets in time would save the banker. If the banker perversely ignored the shrinkage in values extending over years, probably it would come to light and to the knowledge of the depositors."

The Imperial Cold Storage and Supply Co., Limited.

No wonder the report of this De Beers monopoly organisation for supplying butchers' meat to South Africa is delayed in issue. Its year ended on March 31 last, and last year the report came out early in August. It has now reached us indirectly through a subscriber, and bears the date, "Cape Town, October 17." As usual, the story is a miserable one, and we cannot withhold our sympathy from those amongst the public who were tempted to invest in the company's shares. The accounts are not so full as they ought to be, but the gross earnings disclosed amounted to only £151,599 for the past year, and show a decrease of £35,400 on those of the previous year. Not only, therefore, is there nothing for the shareholders, but the company is only able to show a nett profit of £12,996 after various writings off, some of which represent neglect of the company's interests in the past. Therefore the shareholders are to be asked to sanction a reduction in the share capital by one-half. The nominal capital is £2,000,000, but 250,000 shares were kept in reserve, and these are wiped out as preliminary to the reduction in the actually issued capital. Should this reduction be sanctioned, as perforce it must be, the capital will be brought down to £875,000 in £1 shares, each shareholder receiving one share in the reduced capital for every two now held. The debenture issue of £500,000 remains untouched, and it alone seems to represent about as much money as the company ought to have raised for the purpose of carrying on its business. The whole affair was a disgraceful attempt to grab at an excessive profit through monopoly, and the usual device was employed of buying up businesses at fancy prices, and loading upon the new organisation an excessive amount of capital. Besides the debenture debt the company owed at the date of its balance-sheet £256,722 to sundry creditors and its cash at bankers, in hand, on fixed deposit and on short loan, came to only £172,632. Out of the profits of the past year £12,660, or 20 per cent. of their value, has been utilised to write down the cost of plant and machinery, £18,307 has to be written off as loss on realisation of discarded machinery and sundry assets and £13,750 has also been written off against Buffalo Cold Storage shares held, leaving the final nett profit as above stated. All shares and debentures held have been taken at cost for the purpose of the balance-sheet except the above-mentioned Buffalo Cold Storage shares, which have been written off as valueless. How many of the remaining investments are worth 50 per cent. of the sum they stand at in the books? Directors' fees were cut down last year to £2,980 against £5,000 in the previous year, and some of the rats have left the sinking ship, but several new directors have been taken on, and we hope they may do something to improve the position. But what can be expected of a concern that not only bought up other companies at excessive valuations but which carries £404,566 as goodwill, and whose properties, buildings, plant and machinery stand at £997,888? It should be added that the company shows sundry debtors for £397,322, but £22,000 has been written off this item as provision for bad and doubtful debts. How much more will have to be written off before this asset is brought down to its realisable value? The usual grumbles appear in the report about the state of business in South Africa, and there is indication, the directors say, of severe competition, arising mainly from the fact that the installations of cold storage plants in South Africa are much in excess of the present requirements of the trade. They also refer to the imposition of a Customs duty on imported meat which may lessen the consumption of that commodity.

New Zealand Railways.

A pamphlet upon this part of the State property of New Zealand's Socialist Government has just been circulated by the Auckland Chamber of Commerce. The Chamber does not endorse all its statements, but the fact is significant that it should allow the statistics and arguments to come out with its imprimatur in any form. Mr. Samuel Vaile has written the pamphlet, and readers of The Investors' Review are already familiar with the attitude he has consistently maintained towards the present administration of the State railways. His figures have always seemed to us to be intelligently and carefully put together, and they exhibit a state of affairs very similar to that revealed in the story of Sir Joseph Ward's defunct New Zealand Farmers' Association. Two points are raised in Mr. Vaile's essay, one of local interest—viz., the favouritism displayed towards the railways in the south island compared to the starvation meted out to the more extensive and important lines of the north island. Into that question we shall not here enter further than to say that if the facts are as Mr. Vaile's figures demonstrate, politics have much more influence over the administration of the State railways of New Zealand than can be good for the community.

To us, however, the most interesting point in all Mr. Vaile's statistical essays on this subject is the exhibit he makes of the loss involved in working the

system. Even the Government is compelled to admit that the railways do not pay their full working expenses together with the interest charges upon the capital sunk, but Mr. Vaile says their figures are, in the slang of the day, "faked." If the accounts were made up now on the same system as they were previous to 1889—on the system adopted by leading railways in this country—the loss exhibited would have been very much greater, and Mr. Vaile brings it out at an aggregate of £3,702,000 since 1900. In order to eke out the relatively apparent prosperity of these railways, the Government lugs in an item of account described as the sums earned for services done to other Departments of the Government. No figures for this particular item in account-building are given for the years 1900 and 1901, but Mr. Vaile assumes £50,000 a year for these two years, which is smaller than the smallest amount shown in the four subsequent years, including 1905. Adding in this the total fictitious addition thus made to the revenue in the six years is £389,046. Add that to the loss of £3,313,000 shown if the accounts had been made up as they were previous to 1889, and we reach the figure above stated. Where does the money come from that hides this devouring of the people's substance? It must come out of loans, and that is a consideration which ought to warn investors in this country to look out for unpleasant surprises in the direction of New Zealand. The figures for the past year are just as bad, and according to a letter by Mr. Vaile published in the New Zealand *Herald* of September 27, amounted to £697,000—for the year ending June 30 last, that is. This loss has gone on increasing, and even Sir Joseph Ward admits a loss of £344,000, including the 4 per cent. interest charged on the capital sunk in the lines. The year's record, says Mr. Vaile, is a shameful one, but socialistic finance in New Zealand has many shady aspects.

Colombia.

The Land of Goshen must have been a second-rate kind of place compared with Colombia, judging by the superlatives used by Mr. Barrett, the United States Minister to the Republic, in describing its natural wealth. Until the theft of Panama by the United States, the chief impression the man in the street had of Colombia was a warm place somewhere in America, where the inhabitant varieds their usual pastimes of hunting presidents and shooting each other against convenient walls by doing a little desultory trade. That the country was bigger than Germany, Holland and Belgium put together, that the climate instead of being only a few degrees cooler than Hades was in reality most varied and pleasant, and that it enjoyed the unique advantage among the Central and South American Republics of having a coast line bordering on both the Atlantic and Pacific Oceans never seemed to have dawned upon the public, or the company promoter would have long since laid his hand on it. Still, it is not too late to mend this, and Mr. Barrett's report, with its wealth of superlatives—a positive or two would be refreshing—certainly describes a country not only flowing with milk and honey, but pretty well everything else. Thanks to the three great spurs of the Cordilleras that traverse the Republic from North to South, there seems to be nothing which cannot be grown there, the climate ranging from tropical heat to unchanging snow. Moreover, the inhabitants appear to have been much maligned in the past. Their thoughts, instead of being fully occupied by revolutions and promiscuous executions, are in reality inclined towards peaceful arts, and their greatest ambition is to have lasting peace and quiet to enable them to pursue them. These two possessions, an unrivalled climate, and an industrious population would alone serve to make Colombia a wealthy State without the addition of untold gold, iron, coal, and other minerals, which are known to exist. Is it surprising, therefore, that Mr. Barrett should chide his countrymen for letting the development of this earthly Paradise pass into other hands? Since Panama was "freed," the interest of the United States in its sister Republic seems to have waned, and American business houses are being ousted by British and German enterprise, an English corporation having even gone the length of buying out the principal American railway, steamboat, and development company in the country. But perhaps his fellow-countrymen, while sharing his optimistic views on the future of Colombia, have little faith in the possibility of a lasting peace, and are merely biding their time until the next revolution comes along, to give them the opportunity for armed intervention and a display of the Munro Doctrine. They may hold off too long, and while they are waiting European interests may grow to such an extent, that the next forcible change of Government may cause a repetition of the Venezuela method of debt-collecting. For there is one passage in Mr. Barrett's report that is sure to attract the attention of the mining bosses here—and if they get into a country almost anything is possible. Speaking of the gold deposits of Colombia, he states that "experts declare that some day there will be a boom here like those of the Klondike, California, and South Africa," and this alone is of sufficient importance to tempt the magnates to the country. But to us there is something repellent in this flowery report from the pen of the United States Government official, after the way that same Government behaved towards Colombia in the Panama affair. The underhand intrigues, the sordid shifts, the mean expedients then employed by the politicians of the great Republic to effect their grab, now renders this semi-official attempt to interest the American public in Colombian affairs again particularly unpleasant and liable to suspicion. A strong feeling against the United States still exists, and Mr. Barrett admits it, over the way Colombia was treated in the Panama business, and we should have thought that for the present, at any rate, the better policy, to say nothing of the better taste, would have been discreet silence.

American Business Notes.

We are still sceptical, indeed more sceptical than before, of the truth of the figures exhibited by the New York Associated Banks. They do not accord with known facts, and last week's seem more divergent than ever. Concurrently with the steady return of securities pawned in Europe, the advances of the banks again declined. Last week the reduction in loans was $7,293,000, and it is impossible that this shrinkage could occur on any conceivable supposition while yet the banks had to take over and lend upon bales of securities coming home from Europe. Where are these securities? Are they locked up in the big insurance companies whose control is still completely in the hands of the financial groups that play marauder upon Wall Street? Are they dumped with Western banks or the banks of Boston and Philadelphia? Or are they in the position of Mahomet's coffin? We do not know, but even admitting that lodgment may be found in these directions or in the air for a portion of the returned paper, it is still hard to believe that the advances of the Associated Banks of New York can be diminishing, because prices have not recoiled on the Wall Street Stock Exchange to any serious extent. On the contrary, some of them are almost as high as ever, and every "break," as it is called, in the market compels the financiers to engage their credit more deeply than ever in support. They buy like fury to prevent the break from becoming an avalanche of ruin. Last week the reduction in deposits of the Clearing Banks amounted to $17,070,000, partly caused by the big reduction in loans, but still more by the steady drain of currency into the interior. This drain is shown by a decline of $5,849,000 in specie and $2,982,000 in legal tenders. The general reserve is consequently down by $8,831,000 and the legal reserve is less by $4,267,000, so that the proportion, in spite of the reduction in the deposits, has fallen off by $4,564,000, thus wiping out the surplus of $3,045,000 shown the previous week and replacing it by a deficiency of $1,519,000. This is the third time during the present autumn that the return has exhibited a shortage in the

legal proportion of reserve to liabilities. No wonder, therefore, that the price of short credits on Wall Street has risen to 20 per cent. and upwards, or that borrowers there should be offering 15 per cent. in Paris for call money transferred to New York by telegraph!

The Treasurer of the United States issued his annual report of the operations of the Treasury on October 30. Ordinary revenues and expenditures for the fiscal year 1906 resulted in a surplus of $25,669,322 as compared with a deficit of $23,004,228 for 1905, so that the available cash balance on June 30 last was $180,689,354. The money of the country increased during the year by $186,866,727, of which $118,050,777 was in gold, $5,450,396 in silver, and $65,392,554 in National Bank notes, while the Treasury notes decreased $2,027,000. The aggregate stock of money at the close of the year was $3,069,976,591, of which $2,736,646,628 was in circulation.

About April 1 an unusual stringency in the money market was relieved by the temporary increase of deposits out of the excessive accumulations of money in the Treasury with depositary banks to enable them to import gold. Through this aid more than $49,000,000 in gold was imported. The balance in banks to the credit of the general fund May 5 was $102,708,123, the highest point reached during the fiscal year. The National Bank notes presented for redemption during the year amounted to $296,292,885 against $308,298,760 in 1905. The gold coin and bullion in the Treasury June 30, 1905, amounted to $706,592,399; at the close of the fiscal year 1906 it had advanced to $807,051,690. By October 26 it attained a maximum of $877,296,238. The United States paper currency issued amounted to $629,896,000 and redemptions were $577,445,100, leaving a nett increase in the volume outstanding of $52,450,900.

Mr. E. H. Harriman seems to be the butt of all kinds of criticism just now, because of the efforts he and his group are making to obtain control of the Illinois Central. One of the latest of his critics belongs to the class of college professors who assume that their positions entitle them to pass judgment on all things and sundry, without regard to their knowledge of the subjects of which they speak. Mr. Harriman in the present case has fallen under the lash of a Professor Hill, of the Chicago University, who finds that the great railroad magnate is attempting to unload securities on the public and make millions out of the bargain. Such actions, the learned professor argued, produced sentiment in favour of public ownership. "The Illinois Central has been managed," in Professor Hill's opinion, "honestly and with conservatism, as railroads go." Here, then, is an opportunity for Mr. Harriman to reorganise and refinance it, and this is a danger to the shipper and investor. The professor, who is instructor in the university courses on railways, asserts that seven groups of men operate more than two-thirds of the railways of the United States, and since this consolidation of interests was effected in 1900 freight rates, which were steadily decreasing, have risen from .72 to .81 of a cent a ton mile. From all this it is evident that Mr. Harriman's contributions to the Chicago University have not been on the lavish scale of those of Mr. John D. Rockefeller.

The speculations in New York on the kerb in Nipissing Mines in Ontaria, Canada, reached a climax on October 30 when the $5 shares were quoted and sold at only one-eighth of a dollar under $34. This is equal to 677½ for $100 par value, while Standard Oil was but 596. The capital of the company is $6,000,000 in 1,200,000 shares, and when first put on the kerb was selling at only $3. In order, then, for the mine to have a value equal to the price quoted it should have enough ore to offset $40,650,000 capital, $10,000,000 cost of mining and $25,000,000 interest for the period during which the silver is being extracted. At the quotations given there should be at least $75,000,000 worth of ore in the mine. The Guggenheim Exploration Company and Kuhn, Loeb and Co., who have been purchasing for foreign account, now control fully two-thirds of the stock. Two new companies having claims next to the Nipissing mine were launched on October 30, and are certain to be followed by others, so crazy is the spirit of speculation in New York at the present time.

The articles of incorporation of a new Trust company to be known as the New Netherlands Trust Company were registered at Albany, capital of the State of New York, on October 31. The capital will be $1,000,000, and the directorate includes a number of prominent New York business men.

There were rumours in New York that the Mutual and New York Life Insurance Companies were making heavy advances of money to their agents to be spent in securing support for the administration candidates in the elections for trustees. The subject had been brought before the State Superintendent of Insurance, and the general solicitor for the Mutual had been sent for by the New York District Attorney regarding it and other matters that had been brought to his notice.

New Yorkers are said to be becoming seriously alarmed over the growing extravagance of the city's administration. The budget for next year, which was adopted by the Board of Estimates on October 30, amounted to $130,421,405, being an increase of $13,616,015 over that of last year. Had the full appropriations asked for by the heads of departments been approved of, the increase would have been quite $10,000,000 greater. For a population of some 4,000,000 of people, and for the kind of service given in return for their taxes, there is probably no city in the world so badly administered; while its franchises are bartered away without any regard for the rights of its citizens.

The committee of Wabash "B" debenture bondholders has made public its plan for the exchange and retirement of the company's debenture mortgage bonds and other bonded indebtedness, funded notes and equipment obligations, and to provide funds for development of the company's property. This plan proposes that holders who by November 30 next have deposited their bonds for transfer with the United States Mortgage and Trust Company shall receive negotiable deposit receipts entitling the holder of each receipt for $1,000 par value debenture "A" bonds to $795 par value of new bonds, $580 par value in preferred stock and $580 par value in common stock; for each $1,000 par value of debenture "B" bonds $720 in new bonds, $520 par value in preferred stock and $520 par value in common stock. In case at least 95 per cent. in face value of the debenture "B" bonds shall not be deposited for exchange (except the company agrees to accept the amount deposited) the deposited bonds are to be returned without charge. The committee and its individual members have agreed to deposit for exchange all the debenture mortgage bonds owned or controlled by them, and recommend to debenture mortgage bondholders a prompt deposit and exchange of their bonds.

The Real Estate Trust Company, of Philadelphia, which was wrecked last August by the president, Mr. F. H. Hipple, who afterwards committed suicide, has been reopened. It was expected that there would be a run on the banking department, but the directors having, as alleged, practically refunded $2,500,000 matters went smoothly, and the deposits are reported to have exceeded withdrawals. It is stated in a Philadelphia despatch that the reopening was arranged with the depositors, who agreed to let two-thirds of their $6,600,000 remain as preferred stock.

Four of the five cottonseed-oil companies recently sued by the Attorney-General of Arkansas for violation of the State Anti-Trust Law arrived at a compromise with the State authorities by paying a fine of $1,250 in each case. The case against one company was dismissed. The original suit was for penalties of $135,000. Under the terms of the agreement the companies will be permitted to continue in business in the State provided they conform with the Anti-Trust Law.

The State of Kentucky through its Commissioner of Insurance has issued a notice to Mr. C. A. Peabody, president of the New York Mutual Life Insurance Company, calling for the reinstatement by it of the State agents recently dismissed by it for refusing to canvass the policyholders of the State in favour of the candidates for trustees put forward by the administration of the Mutual. The notice sent to Mr. Peabody is authoritative and peremptory, and seems to have disturbed the company's officials, who refused to discuss it. It was epitomised as follows :—

Mr. Prewitt, the State Commissioner of Insurance, believes the telegram sent to all Mutual agents, directing them to use their best efforts to bring about the election of the Mutual's administration ticket, and saying failure to do so would entail dismissal from the employ of the company, was coercion, and therefore improper.

Mr. Peabody is instructed by the Kentucky Commissioner to withdraw this order. He is also directed to reinstate all agents whose contracts were cancelled as a penalty for disobeying the company's edict, and a time limit is named for compliance with Mr. Prewitt's instructions. Should the company fail to reinstate these agents within the specified time, Mr. Peabody is informed, Commissioner Prewitt will revoke the Mutual's licence to do business in Kentucky.

The New York Chamber of Commerce at its last meeting adopted the report of the special committee on currency reform submitted a month before, and approved the recommendations. That relating to a central bank of issue, however, is not likely to be pursued any further, the committee regarding it as politically impracticable. This is the third time that an effort has been made to establish such an institution in the United States since the founding of the Republic, and each time it has failed for the same reason. Mr. Stuyvesant Fish opposed a central bank under Government control, believing that the American public would object to it, but he did not think they would be against a great central institution under private management.

The United States Government is giving very close attention just now to the development of Japan's cotton industry, and the way in which the Japanese insinuate their goods into Manchuria by catering in the smallest details to the wants and tastes of the Chinese, particularly in the matter of piece goods already dyed and ready to make up. It is feared that before long the Japanese will have the entire control of the Manchurian cotton goods market, and cut deep into the markets for other goods, especially the flour trade.

The railroad casualties in the United States for the three months ended June 30, according to the Interstate Commerce Commission report for the quarter, shows that the total number of casualties on American railways to passengers and employees was 16,937. For the previous quarter they amounted to 18,296. For the year ended June 30 there was an increase of 546 in the total number of employees killed, and 10,098 in the number injured ; but there is a decrease of 119 in the number of passengers killed, while there is an increase of 1,145 in the number injured compared with the totals for 1905. The damage to cars, engines, and roadway by accidents amounted to $2,373,924.

The Mormon Church, which has for some time been negotiating the sale of its various properties, created on a communistic basis, has disposed of the most valuable of them to Mr. E. H. Harriman and others associated with him in railway affairs. The property thus acquired is the Utah Light and Railway Company, with a $10,000,000 capitalisation, which controls all of the electric lighting and most of the street railways of Salt Lake City, and has nett earnings of more than $700,000,000 a year. The negotiations were conducted on the Mormon side by John F. Smith, president of the Utah Light and Railroad Company, and also head of the Mormon Church. It is understood that the control of the stock of the company was held by the Gas, Water and General Investment Company of London as a holding company for that and several other Mormon enterprises. It will now be held by the Oregon Short Line, which is controlled by the Union Pacific, and is the usual holding company for all the Harriman corporations. Its charter is said to be very "elastic," and confers greater powers than the charters of any other Harriman company. Other properties of the Mormon Church are reported to be under negotiation, the Elders of the Church having come to the conclusion recently that it would avert criticism if they disposed of such of their properties as might be injured by hostile legislation. A syndicate headed by a Mr. H. H. Vreeland, of New York, is said to be the intending purchaser. It is to be remarked that since the Mormons came to the decision to part with most of these properties already sold or negotiating, the attacks on their Church and its peculiar doctrines have almost ceased in the Press controlled by influential financial personages.

Passing Events.

Natal is hard up. We have known it to be essentially bankrupt as a State for many a year, but it got such a flush of new loans soon after the war ended that it has been able to go on and make a parade of wealth for which there was no adequate foundation. Now, however, its Government has confessed through the speech of the Governor at the opening of its fifth Parliament on Tuesday last that the revenue has fallen far short of the estimates, "in spite of the limitation of expenditure," whatever that means. We presume it means that the income has dwindled so that no attainable economy in outlay has been sufficient to allow the Government to make ends meet. Further taxation is, therefore, necessary, and the Ministry proposes to tax incomes derived from unoccupied lands as one step towards making good the deficit. It is but a tiny step, and meantime what about those temporary loans raised to pay for the ghastly rounds-up of the blacks, in course of which such horrible butcheries occurred? We are in no position at present to float another loan for Natal in the City of London. Its scanty white population will have to find the money themselves, or else let their State go bankrupt. "Nay, let us federate," they hint, and find neighbouring States deaf.

Mr. James J. Hill is a dreadfully ambitious man. In a speech recently made by him at Chicago he declared that the United States urgently required another 120,000 miles of railways and a canal between St. Louis and New Orleans. Well, if he will build the railways nobody here will object, but in the meantime the existing 200,000 odd miles of iron road in the Republic seem to want a lot of money to keep them going, and nearly all the great and small railroad corporations throughout the country are desperately hard up. Perhaps the Congress of Bankers, which is going to meet to evolve some plan whereby rampant gambling may be supported by reckless emissions of paper money, may come to Mr. Hill's aid, and issue bank notes against bonds of the new roads.

We trust that Mr. Lloyd George will be able to get his Bill for the creation of a domestic industrial census through Parliament. This particular reform has long been demanded by thoughtful statisticians, and there should not be any greater difficulty in compiling such a census than was encountered by the Customs service when it started to obtain returns of imports and exports. It is merely the unfamiliarity of the proposal which causes producers of all classes to hesitate, to express doubt and alarm at what they describe as this "inquisitorial" measure. They have, however, no reason to mistrust the staff at the Board of Trade. On the contrary, the particulars of individual businesses are no more likely to be disclosed by it than are the income-tax returns furnished to the Inland Revenue Board at Somerset House. Secrecy granted, the trouble of making a return should be no obstacle, provided too many details are not asked for. A boot manufacturer, for example, need only be asked to set forth the quantities of the various materials used by him and the price, together with the aggregate quantity and value of the finished product actually disposed of, with, perhaps, the quantities and estimated values of the stocks brought in at the beginning of a year and

carried out at the end of it. The cost price in all instances should be furnished, so that there need be no disclosure of profits such as Somerset House might lay hold of in order to see whether another turn could not given to the income-tax screw. The same particulars could be furnished with equal ease by manufacturers, big and little, of all descriptions. The bad and doubtful debts would not be included, simply the particulars of overturn. We hope, therefore, that Mr. Lloyd George will persevere and get his way.

We cannot help thinking that Mr. Arthur Chamberlain deserves more recognition than he has received for the handsome way in which he has faced the collapse of Tubes, Limited. It has been an awful smash, and the pity is that Mr. Chamberlain should have persevered with a hopeless enterprise so long. As we have often pointed out in this journal, the company had never any chance of success. Its inception was bad, and the load of capital put upon it by the promoters smothered it from the begining. Mr. Arthur Chamberlain, however, thought otherwise, and he is now manfully facing the music. As he told the unhappy shareholders at the meeting held yesterday week in Birmingham, he holds 43,000 ordinary shares, on which he will have the pleasure of paying a call of a shilling and an equal number of preference shares not worth a penny. Also he possesses £23,000 worth of the company's debentures, and has lent it £4,750 of his own money in addition, and the wind-up leaves nothing for anybody. So utterly empty is it of anything like assets that Mr. Arthur Chamberlain has made himself personally responsible for all claims against the concern, and has made arrangement with his banker that all bills should be honoured on his own guarantee. We wish there were more company chairmen able and willing to encounter misfortune with a frank and resolute straightforwardness such as this.

What appears to be a fairly equitable scheme has just been formulated by the directors of the Argentine Land and Investment Company for the purpose of funding the heavy dividend arrears on the preference shares. The full rights of the holders are to be clearly recognised, which is something gained in these days of preference interference, and the entire sum owing to the preference shareholders is to be provided out of future profits. Up to December 31, 1905, the amount owing on each preference share was 24s. 6d., and it is proposed to fund these arrears into an inscribed income stock to carry interest until redeemed at the rate of 4 per cent. per annum, amounting to £5,339. When this money, together with the fixed 5 per cent. dividend on the preference shares, is provided each year, the ordinary capital is to be entitled to a dividend of 5 per cent., and any revenue beyond that will be applied in the redemption of the newly created inscribed income stock until the whole of it has been cancelled. If the profits of any year are insufficient to pay the preference dividend for that year the deficiency will be funded by the issue of further inscribed income stock, so that the position of holders is quite safeguarded. After extinction of the whole of the inscribed stock the profits will be divisible exactly as at present provided by the articles of the company, and we hardly suppose shareholders will have much hesitation in accepting the scheme.

A suggestive and interesting volume has just reached us. It is entitled, "A Report of the First Indian Industrial Conference held at Benares on Saturday, December 30, 1905," and is printed at the *Indian Press*, Allahabad. Is India waking up and resolving to enter the comity of nations, to assert itself as a great country possessed of infinite capabilities and determined to take the development of its resources into its own hands? Something of the kind is unquestionably foreshadowed in this interesting volume, and we are glad to see that Englishmen and Indians have joined hands in contributing to its contents. There are several papers, for instance, upon co-operative credit institutions, two of them by Indian gentlemen and two by Englishmen. Mining, matallurgy &c., are dealt with by Rao Bahadur G.V. Joshi, and the development of the mineral resources by Mr. T. H. Holland. Hand loom weaving in India is treated of by Rao Bahadur Raoji Bhai Patel, as well as by Sir Henry Cotton, Mr. S. P. Kelkar, and Dewan Bahadur R. Ragoonath Rao. These are but samples of a great variety of topics, many of them handled in an interesting and suggestive way, and we should advise Lancashire manufacturers to get the book and study it. The movement it suggests may in time mean much to them, although not necessarily anything hurtful. You cannot develop a country without increasing its buying capacity.

We have already published a few of the "secret" gold reserves declared by some of the South African companies. Not all have come into line yet, and credit must be given to the Wernher-Beit group for being the first to publish these figures. Here are those made known during the past week:—Bonanza, 672 ozs.; Ferreira, 8,975 ozs.; Robinson, 13,659 ozs.; New Modderfontein, 201 ozs.; Robinson Central Deep, 4,119 ozs.; Crown Reef, 3,542 ozs.; French Rand, 523 ozs.; Geldenhuis Deep, 647 ozs.; Jumpers Deep, 1,276 ozs.; Ferreira Deep, 5,021 ozs.; Rose Deep, 519 ozs.; Langlaagte Deep, 4,076 ozs.; Crown Deep, 1,185 ozs.; Durban Roodepoort Deep, 560 ozs.; Nourse Mines, 979 ozs.; Glen Deep, 2,022 ozs.; Van Ryn, 3,406 ozs.; Meyer and Charlton, 3,304 ozs.

It is to be feared that we shall never generate much enthusiasm, patriotic or other, in this country for the Welsh gold mining industry, for its accomplishments in the past ten or twelve years do not justify any hope in its future possibilities. This is emphasised by the greatly disappointing career of the St. David's Gold Mines, the one upon which the strongest hopes have hitherto been fixed. After many unhappy vicissitudes of fortune the directors now issue a circular in which they express their regrets that the recent unfavourable returns, and especially that for October, render it necessary to make a further and final call of 3d. per share. They do not abandon themselves to despair, but still clutch at hope in a way that excites some sympathy. At least, this is what the manager does, for though he acknowledges the unfortunate results of the final clean-up, "it is to me," he says, "a sorry consolation to know the mine has been in similar straits before, and can only hope that its history will soon repeat itself in the shape of another rich find. If favourable appearances of the reefs count for anything, it should not be delayed long, as they have never looked more promising than at present." It is well he can keep up his spirits thus.

Almost farcical were the proceedings at the meeting of the Rhodesia Gold Fields. The amalgamation scheme between this company and the Consolidated Exploration and Development, of the Gold Fields group, was ridiculed by the assembly, as it deserved to be. But ridicule was not strong enough to defeat the determination of the directors and the legal and other forces they have behind them. Mr. Percy Lindley held the proxies of more than 500 shareholders, who, for once in a way, showed some intelligent regard for their own interests. But this made not the slightest impression on the obdurate board, nor did the pitiful story of one shareholder, who wrote:—"My savings are all gone; my shares have cost over £500, and I am nearly ruined. It is a crying, scandalous shame." Mr. Lindley suggested an inquiry into the company's affairs and position, and after answering the speaker's arguments in a wild and desperate way the chairman said he would welcome a committee of inquiry, but not one composed of opponents, which would probably damage the beautiful scheme. The upshot of the meeting was that the report of the directors was rejected by an overwhelming majority, and other motions had a like reception. Polls were forthwith demanded, and these were declared on Wednesday. For the adoption of the report and accounts, including the amalgamation scheme, 110,470 votes were recorded and 61,629 against, so the resolution was declared carried. As regards the proposal for altering the articles of association in a manner to facilitate the carrying out of the

first resolution, 109,900 votes were given for its adoption and 61,199 against, a majority of 48,701. As, however, this motion required a three-fourths majority, it was not carried. So maybe we have not heard the last of this business.

In the House of Commons Mr. Winston Churchill confirmed all that Mr. J. B. Robinson has said in regard to the difficulties he has met with in recruiting in Portuguese territory. As the result of representations made in July last by the Secretary for Foreign Affairs to the Portuguese Government, a licence was granted to Mr. Holmes, the approved agent of the Robinson group, and the Government believed that this would give the group the same facilities as were enjoyed by the Witwatersrand Native Labour Association. When, however, Mr. Holmes went to Portuguese territory to commence recruiting he found that the permission was construed by the Portuguese authorities as personal to himself only, and he was expected to conduct the recruiting business alone. Of course, the effect of this was to render inoperative the licence which had been secured. But the Government does not intend to let the matter rest in this unsatisfactory state. Negotiations are now proceeding with the Portuguese authorities with a view to securing for Mr. Holmes and the interests he represents the effective facilities hitherto refused.

Towards the end of September the directors of the Sheba Gold Mining Company surprised us all by issuing a very good report, the results of the twelve months' working being better than many sanguine ones looked for. Prospects foreshadowed even an improvement on these in the current year. True, the general manager complained of the scarcity of native labour, but this is such a general complaint that it was nothing to shed tears over. Now the directors announce the unpleasant news that they have decided, commencing with the present month, temporarily to reduce the mill to a 60-stamp basis. The reason assigned for this step is the scarcity of natives, and it is urged that such a policy will enable the general manager to release a number of "boys" hitherto employed in stoping ore for development and exploratory work, which it is proposed to push forward vigorously. This will, of course, reduce the monthly output and profits, an effect that will make shareholders feel impatient, if not angry, for they have had a very anxious time of it in recent years. It cannot be helped, we suppose, but it is strange the decision should come when the Transvaal Chamber of Mines reports an increase in the native supply.

Mr. Robertson Lawson, the hon. secretary of the International Policy-holders' Committee, has issued a final appeal to policy-holders in the Mutual Life Insurance Company of New York and the New York Life Insurance Company to send in proxies to the committee so as to enable it to defeat the administration of these companies. The capitalists, in other words, have taken possession, and mean to hold on at all costs. He points out that the present self-constituted management of the Mutual was elected last year by the votes of 199 out of 450,000 policy-holders, and those of the New York Life by a vote of 2,328 out of 800,000 policy-holders. He also refers to the perfectly emancipated and unscrupulous efforts of the men in possession to defeat the opposition, and says that the managers of the companies have neglected to send out forms of proxies for the use of that opposition. They simply ignore it, and are doing their utmost to drive the policy-holders into submission to their will. It is a degrading business all through, and all we can say is that the policy-holders have our sympathy.

Western Australia wants another loan of £2,467,000, of which £1,193,400 is to be spent on new railways and the balance on harbours, rivers, water supply, sewerage, and the development of agriculture and the gold fields. This is all very well, but where is Western Australia going to procure the population which will give security for these continual loans? It is in a state of revolt against the Commonwealth, and may break loose unless coerced, and its internal affairs are by no means in that flourishing condition which justifies this further appeal to the British investor. Happily, the London market is not in a mood to be wooed just at present.

Brave men were they who bought New Vaal River Founders' shares at over £6,000 a-piece, six of them forming part of the estate of the late Mr. Ernest Schwabacher, were put up for auction on Thursday, and the mart was crowded to suffocation. Bidding for the first share started at £1,000, and it was knocked down at £3,250. Lot 2 fetched £3,100, lot 3 £4,100, lots 4 and 5 £5,000 each, and lot 6 £6,500. Immediately the buyer of lot 1 re-sold his share for £6,250, capturing a profit of £3,000, less commission, in a few minutes. The entire six shares realised £26,950, an average of £4,492 per share. If this is not madness what is? There are in all 12 founders' shares of £1 each, entitled to 20 per cent. of the surplus profits, after payment of 20 per cent. per annum on the ordinary shares. But when on earth will the company earn 20 per cent. on its ordinary capital? And even if it does earn so much in years to come, what surplus will be left to repay this £27,000? Was the display organised to stimulate the public to go mad over the ordinary shares? It is sheer gambling, of course, and is all done to make a certain impression on the public.

Critical Index To New Investments.

Glynhir (Steam, Gas and House Coal) Collieries, Limited.

With a modest capital of £50,000, divided equally into 7 per cent. preference and ordinary shares of £5 each, and an authorised debenture debt of £20,000, of which 4,300 of each class of share and 100 5 per cent. first mortgage debentures are offered for subscription, this company acquires a colliery at Pontardulais, Glamorganshire. Four seams of coal are stated to exist on the property, including the Hughes seam "referred to in the Royal Commission on Coal Supply" which appears to be eminently suitable for gas making, and it is estimated that there are 9,690,000 tons of coal available without counting the smaller seams. There is also a seam of fireclay underlying the Hughes vein, from which the directors expect to derive a considerable profit. The lease granted by the owner of the property passed through several hands before it was acquired by Mr. F. G. Vivian for £4,000 in cash and £1,000 in shares, and that gentleman disposes of it, together with the benefit of a contract for shaft-sinking and equipping the mine, for £8,000 in cash and £2,000 in shares. For the actual work the company has in addition to pay to the Waterworks Lighting and Power Investment Corporation £19,000 in cash and £3,000 in shares, and the promoter of the company, a Mr. H. P. Davies, takes a further £5,000 in cash and £1,000 in shares for his services and for preliminary expenses. Taking the selling price at 13s. and the cost of working at 6s. 6d. per ton, against 14s. 3d. and 7s. 6d., which are the actual figures at present, and an output of 300 tons per day for 250 days, an annual profit of about £24,000 is brought out or sufficient to provide debenture interest and preference dividend, with a surplus of about £18,000. Comparisons are proverbially odious, but merely "as an instance of the increasingly prosperous condition of collieries generally" the directors set out the results obtained by W. Cory and Sons for 1905 and 1906, although we believe that company does not own any collieries, and also the profits of the Main Colliery Company for the year ended June 30 last, while they quote current prices of the shares of four other concerns which stand at a substantial premium. The new venture may be as successful as these, but it would appear to have handicapped itself from the start by allowing too many middlemen to have a finger in the pie.

Ethiopian Rainproof Monopoly Co., Limited.

A concession giving the sole right for 25 years to import and sell in Abyssinia all kinds of waterproof cotton goods and other rainproof material granted by the Emperor Menelik is used as the basis of this company, which has a capital of £100,000 in £1 shares. For this concession the vendors ask £37,500 in shares and £5,000 in cash or shares, half at their option and half at the option of the directors, out of which they pay the Augusta Syndicate £15,000 in shares for acting as promoter. In addition the Syndicate takes a commission of 2½ per cent. in cash and 5 per cent. in shares and an over-riding commission of 2½ per cent. in cash for guaranteeing 25,000 of the 60,000 shares offered for public subscription. According to the prospectus, the supplies of brown cotton sheeting have hitherto come almost entirely from the United States, but it is less suitable than the new material to be supplied by the company owing to the increase in weight after exposure to the heavy downpours that prevail in the country. Statistics compiled for the French Government are quoted to show that the imports of that material in 1905 amounted to about 1,000,000 pieces valued at £320,000, and the vendor estimates that a profit of approximately 3s. per piece can be made. The directors assume that if the company controls only one quarter of the quantity now imported, the nett profit would be £37,000, apart from anything to be earned upon the other materials in which the company proposes to trade. Further, they "are of opinion, from information in their possession as to the magnitude of the trade this company is likely to do, that it will have unusual advantages and all the elements of a sound and prosperous business." This, however, can only be an opinion, and does not alter the fact that the venture is a highly speculative one, and not too attractive at that.

Tarapaca and Tocopilla Nitrate Co., Limited.

This company has contracted to purchase for £730,000 in cash sundry nitrate grounds and oficinas in the Province of Tarapaca from Messrs. Clarke, Bennett and Co., of Iquique, who have acquired them from the Deutsche Saltpeter Werke Aktien Gesellschaft. All the share capital of £400,000 has been privately subscribed, and in order to raise the balance of the purchase price the company has sold to the Law Debenture Corporation £400,000 5 per cent. 10-year registered mortgage debentures at the price of 91¾. The debentures, which are repayable at 105 by annual instalments, are offered for sale by the Corporation at the price of 95, payable 5 per cent. on application and 90 per cent. on allotment. A letter from the company which accompanies the prospectus states that in his report on the property Mr. Hunt, late manager of the Lagunas Nitrate Company, estimates the amount of manufacturable nitrate which can be obtained from the grounds at 27,098,500 quintals. The oficinas, under the present combination, have been allotted an initial export quota of 1,600,000 quintals, entitling the proprietors to sell during the twelve months ending March 31, 1907, 1,160,000 quintals, and on this basis it is calculated that the life of the properties should be 25 years. At a cost of production of 5s. 1d. and a selling price of 8s. 6d. per quintal, the gross profit on an output of 1,160,000 quintals of over £198,000 per annum is brought out. The picture conjured up by these figures is so alluring that it makes us wonder why the Germans should sell, and still more why they should stipulate for the whole of the purchase price in cash.

Landaulette Motor Cab Co., Limited.

This company has been formed with a capital of £75,000 in £1 shares to acquire the benefit of a contract with the Farman Automobile Co., Limited, for the supply of a number of "Mascot" cars up to 150 at the price of £300 each, for which it pays £7,000 in cash and £4,250 in shares. Of the cars acquired it is proposed to use 100 fitted with taximeters as cabs for public hire and 50 for private hire. Mr. Pereno, who is managing director of the Farman company, and also apparently the promoter, enters into calculations to prove the profitable nature of the business. Taking the earnings of the public cabs at 30s. per day for 300 days, he brings out a revenue, after deducting drivers' wages, of £33,750 per annum, and calculates that after paying running expenses, including £50 per cab for tyres, £50 for depreciation and £40 for repairs, there would be a gross profit of £14,650 per annum. From the private cabs at £4 4s. per day for 120 days, and making the same allowances for tyres, depreciation and repairs, he looks for another £14,570, or a total of £29,220, from which he deducts £5,990 for working expenses, leaving £23,230. This Mr. Pereno estimates would leave £11,980 for reserve fund, directors' fees, &c., after paying 15 per cent. on the shares—a very pretty sum on paper, and we can only hope anticipations may be realised even in part. Of the total capital 70,000 shares are offered for subscription, of which Newfoundland Industries, Limited, has underwritten 15,000 for a commission of 10 per cent. in cash and 5 per cent. in shares.

Mount Cattlin Copper Mining Co., Limited.

The Phillips River Gold and Copper Co., Limited, having spent about £20,000 on a copper mining property at Ravensthorpe, Western Australia, is willing to hand it over to this company for £100,000 plus such sum as may have been expended since August 1, 1906. Apparently, too, they want the whole amount in cash, and feel sure of getting it, as they invite subscriptions for all the 200,000 shares forming the capital, and have not gone to any expense for underwriting. Three experts have examined the mine, and all agree that it will develop into a fine property, but the largest estimate of ore reserves developed only shows a gross approximate value of about £115,500, and over £100,000 in hard cash seems therefore a pretty full price.

John Knight, Limited.

This well-known undertaking of soap makers, &c., was established in 1817, and was converted into a private company in 1902 under the title of John Knight and Sons, Limited. Business, however, has improved so considerably during recent years, and particularly since the opposition to the Lever Trust, that the directors have decided to increase the capital, and intend to give their customers an opportunity of securing an interest in the company. A new company has therefore been formed, with a capital of £570,000 divided into 500,000 ordinary and 70,000 deferred shares of £1 each, of which 150,000 ordinary shares are offered for subscription, and another 150,000 ordinary together with all the deferred shares and £105,000 in cash are taken in payment of the purchase price, the remainder of the ordinary shares being held in reserve. The ordinary shares are entitled to a dividend of 6 per cent. and to half the surplus profits after 15 per cent. has been put to reserve. For the past three years the average profits have considerably exceeded £30,000, and on this basis the earnings should be sufficient to pay 7½ per cent. on the ordinary shares without taking into account any additional profits to be earned on the £45,000 new capital now provided. Of the assets to be acquired freehold land and buildings, plant, &c., represent £183,188, and with stock and sundry debtors, cash and investments and £68,068 for goodwill the total is brought up to £356,397, from which there fall to be deducted sundry liabilities amounting to £31,397. The proposition seems a very straightforward one, and the shares should be a fair commercial risk.

Issues by Tender.

North Warwickshire Water Company.—Applications are invited for £10,000 first mortgage 5 per cent. debentures for the purpose of carrying out additional works for the supply of Knowle and other districts in the county of Warwickshire. No details as to income are given, the directors merely stating that the interest is amply secured upon the present water rentals and that the whole of the property and undertaking is charged with the repayment of the debentures in ten years' time.

MINING RETURNS.

Abbontiakoon Block 1.—Treated 6,000 tons, 3,250 ozs.

Abosso.—Crushed 3,158 tons, 1,807 ozs.; cyanide 2,456 tons, tailings 612 ozs.; total, 2,419 ozs.

Alaska Mexican.—Crushed 21,316 tons of ore, value, $35,453; saved 345 tons sulphurets; value, $27,276.

Alaska United.—Crushed 21,010 tons ore; value, $22,014; saved 313 tons sulphurets; value, $13,113.

Ankobra (Taquah and Abosso) Development.—No. 1 dredger, 107 ozs.; No. 2 dredger 132 ozs.

Antenior.—Crushed 1,270 tons, 322 ozs.; cyanide, 800 tons, 104 ozs.

Attasi.—Crushed 3,920 tons, 918 ozs.; trial of cyanide plant, 1,960 tons sands, assay value being 2 dwts. per ton.

Bernheim.—Crushed 1,425 tons, 582 ozs. (equals 8·16 dwts. per ton); tailings assay 3 dwts. per ton.

Brilliant and St. George United.—Crushed 2,285 tons, 992 ozs.; residues (tailings and concentrates), value £3,548.

Brilliant Central.—Crushed 1,300 tons; value, including residues (tailings and concentrates), £3,800.

Brilliant Extended.—Crushed 4,318 tons for £10,300.

Brilliant Gold.—Stockholm: Clean-up from 186 tons, value per ton is £1 18s. 9d.

Briseis Tin.—Shipped 19 tons, including 6 tons on account of New Brothers Home No. 1.

British Broken Hill Proprietary.—2,259 tons crude ore produced 345 tons concentrates, containing 217 tons lead and 8,970 ozs. silver.

Broken Hill Proprietary Block 10.—Plant treated 11,500 tons crude ore, producing 1,481 tons oncentrates, containing 918 tons ead and 47,392 ozs. silver.

Buffelsdoorn Estate.—622 ozs. from 4,400 tons slimes treated.

Burbank's Main Lode (1904).—Crushed 740 tons, 534 ozs.; 690 tons by cyanide for 152 ozs.; total, 686 ozs.

Cape Copper.—Ookiep, 1,057 nett tons at 18 per cent. equals 190 tons fine copper; Nababeep, 4,185 nett tons at 4 per cent. equals 167 tons fine copper.

Chinese Engineering.—Coal 23,500 tons, sales 24,000 tons, consumption 1,325 tons.

City and Suburban.—Crushed 25,000 tons, 10,110 ozs.

Consolidated Gold Fields of New Zealand.—Progress: Crushed 4,765 tons of ore, value £8,095. Golden Fleece: Crushed 1,104 tons of ore, value £2,078. Wealth of Nations: Crushed 890 tons of ore, value £1,423.

Copiapo.—600 tons copper ore, averaging 12 per cent.

De Lamar.—Crushed 1,148 tons, yielding $13,600.

Durban-Roodepoort.—Quartz milled 11,020 tons, 3,322 ozs.; tailings 7,930 tons, 1,119 ozs.; slimes 3,190 tons, 196 ozs.; total, 4,637 ozs.

East Gwanda.—Crushed 5,403 tons for 2,319 ozs.; concentrates, 201 tons, containing 664 ozs. gold, 765 ozs. silver; total, 3,002 ozs

Smelter.—33½ tons matte produced, containing 245 ozs. fine gold, 434 ozs. fine silver, and 4·43 tons metallic copper.

Etruscan.—Value of the copper, £3,670.

Forbes Rhodesia.—Cyanide, 725 tons, 215 ozs. Dumbleton crushed 452 tons, 272 ozs.

Gaika.—Mill crushed 1,049 tons, 555 ozs.

Geldenhuis Estate.—Crushed 17,250 tons, from mill 4,449 ozs.; from tailings by cyanide, 2,206 ozs.; from slimes, 613 ozs.; from dump by the "Stark" process, 605 ozs.; total, 7,873 ozs.

Great Boulder Perseverance.—Sulphide Plant: 15,067 tons for 6,631 fine ozs. gold and 711 fine ozs. silver.

Great Boulder Proprietary.—Crushed 12,979 tons for 12,052 ozs.; tailings (old) 2,557 tons for 461 ozs.; total, 12,513 ozs.

Hannan's Reward and Mount Charlotte.—Crushed 2,475 tons, 468 ozs.; royalties, £283.

Jubilee.—Crushed 5,248 tons, 1,227 ozs.; cyanide 4,018 tons, 526 ozs.

Kelantan.—Recovered 52 ozs.

Knight's Deep.—Crushed 30,580 tons, 11,247 ozs.

Komata Reefs.—Crushed 1,560 tons, recovered £3,925.

Langlaagte Estate.—Crushed 29,510 tons, 5,725 ozs. Concentrates, cyanide 630 tons, 985 ozs.; tailings, cyanide 19,820 tons, 1,986 ozs.; slimes 13,519 tons, 1,102 ozs.; total, 9,788 ozs.

Luipaards Vlei.—Crushed 13,667 tons, 2,740 ozs.; tube mills, 467 ozs.; cyanide 1,477 ozs.; slimes 224 ozs.

Matabele Reefs.—Blanket: Crushed 2,169 tons, for 518 ozs.; cyanide 500 tons, for 62 ozs. Alice: Crushed 380 tons, for 195 ozs. Wolframite, output ⅜ ton; 501¼ carats diamonds, and 4,079 carats other stones.

Messina (Transvaal).—Output 60 tons: mine assay, 56¾ per cent. copper.

Meyer and Charlton.—Crushed 12,755 tons, 2,182 ozs.; from cyanide, 4,010 ozs.; total, 6,192 ozs.

Montana.—Drumlummon: Treated 4,564 tons tailings and fines, estimated to realise $10,000; total, represented by 540 ozs. gold and 4,800 ozs. silver, $13,100. Lucky Giri Group: Crushed 2,000 tons ore, producing bullion bars and cyanide precipitates, represented by 670 ozs. gold and 570 ozs. silver, $13,900.

Mount Lyell.—Treated 31,325 tons of ore; in addition 206 tons of purchased ore and metal-bearing fluxes; converters produced 638 tons blister copper containing—Copper 631 tons, silver 56,243 ozs., gold 1,727 ozs.

Mount Morgan (Queensland).—Chlorinated 20,900 tons, 9,788ozs.; converters 276 tons of blister copper, value £128 per ton.

New Goch.—Crushed 3,177 ozs. from 21,789 tons, cyanide 4,972 ozs.; total, 8,149 ozs.

New Queen.—Crushed 317 tons, 181 ozs.; £500 from 984 tons by cyanide; concentrates £99.

Nigel Deep.—3,721 tons, 1,610 ozs.

North Broken Hill.—Treated 2,060 tons crude ore, producing 380 tons concentrates, containing 257 tons lead and 6,384 ozs. silver.

North Randfontein.—Crushed 14,227 tons ore, 3,864 ozs.; concentrates, cyanide, 1,170 tons, 311 ozs.; tailings, cyanide, 8,750 tons, 1,343 ozs.; slimes, 5,103 tons, 536 ozs.; total, 6,054 ozs.

North White Feather.—Mill crushed 1,880 tons, 565 ozs. bullion; cyanide, 874 tons, 32 ozs.; total, 597 ozs.

"O.K." Copper.—Treated 565 tons crude ore, 56 tons fine copper.

Oroville Dredging.—Returns for the week, $23,500.

Palmarejo and Mexican.—Zapote: Crushed 3,716 tons; treated 2,700 tons, producing $12,290 gold, $40,760 silver.

Penhalonga Proprietary.—Crushed 7,000 tons ore, 752 ozs.; concentrates, 125 tons, 747 ozs.; total, 1,499 ozs.

Porges Randfontein.—Crushed 14,707 tons; 4,331 ozs.; concentrates, cyanide, 1,295 tons, 462 ozs.; tailings, cyanide, 9,023 tons, 1,172 ozs.; slimes, 4, 290 tons, 313 ozs.; total, 6, 278 ozs.

Regina Diamond.—Washed 80 loads, producing nine carats including one 5⅛ cleavage, balance small.

Rezende.—Crushed 3,000 tons, 572 ozs.; sands, 2,550 tons, 288 ozs.; concentrates, 25 tons, 146 ozs.; total, 1,006 ozs.

Rhodesia.—Colleen Bawn.—Crushed 647 tons, 145 ozs.; cyanide, 352 tons, inclusive of 16 tons concentrates, 312 ozs.; slimes, 299 tons, value 10 dwts. per ton by fire assay stored.

Rhodesia Goldfields.—Crushed 1,370 tons, 312 ozs.; cyanide 640 tons, 286 ozs.

Rhodesia Matabeleland Development.—Crushed 230 tons, 142·3 ozs.

Rice Hamilton.—Sabiwa: Crushed 1,575 tons, 155 ozs.; cyanide 1,000 tons, 173 ozs.

Robinson Deep.—37,000 tons, 17,574 ozs.

Robinson Randfontein.—Ore crushed 16,027 tons, 3,443 ozs.; concentrates, cyanide 1,450 tons, 417 ozs.; tailings, cyanide 9,450 tons, 1,564 ozs.; slimes 5,306 tons, 480 ozs.; total, 5,904 ozs.

Roodepoort United.—Crushed 15,660 tons, 3,955 ozs.; cyanide 1,401 ozs.; total, 5,356 ozs.

St. David's Gold Mines.—Crushed 1,464 tons, 16 ozs.

Salisbury.—Crushed 5,450 tons, 1,715 ozs.

Sansu.—Crushed 2,210 tons, 870 ozs.

Simmer and Jack.—62,000 tons, 23,579 ozs.

Simmer and Jack East.—34,790 tons, 11,143 ozs.

South Randfontein.—Crushed 15,576 tons, 3,353 ozs.; concentrates, cyanide, 1,575 tons, 491 ozs.; tailings, cyanide, 9,650 tons, 1,416 ozs.; slimes, 4,448 tons, 477 ozs.; total, 5,737 ozs.

Surprise.—Crushed 2,983 tons for 1,096 ozs.

Tasmanian Copper.—Smelter 4,109 tons of ores, fluxes, &c., producing 172 tons of matte, assaying 64 per cent. copper.

Theta.—Crushed 1,885 tons, 828 ozs.; 915 tons by cyanide, 119 ozs.

Tyee Copper.—Tyee ore 1,851 tons, customs ore 441 tons—2,292 tons; matte produced 186 tons, value $24,886.

Van Ryn.—Crushed 22,370 tons, 6,657 ozs.; cyanide 14,400 tons sands, 1,983 ozs.; slimes 7,684 tons, 567 ozs.; total, 9,207 ozs.

West Rand Central Gold.—Crushed 2,275 tons, 490 ozs.; 1,850 tons by cyanide, 441 ozs.; total, 931 ozs.

Willoughby's.—Crushed 1,527 tons, 554 ozs.; cyanide 735 tons, 209 ozs.

NEXT WEEK'S MEETINGS.

MONDAY, NOVEMBER 19.

British Vacuum Cleaner.—Parson's Green Lane, noon.
City Brewery (Lichfield).—Lichfield, 4.15 p.m.
Cleveland Trust.—Middlesbrough, 11.30 a.m.
Kenward and Court.—11, Queen Victoria Street, 3 p.m.
Scottish and New Zealand Investment.—Edinburgh, 3 p.m.

TUESDAY, NOVEMBER 20.

Amazon Telegraph.—42, Old Broad Street, noon.
Anglo-Egyptian Bank.—27, Clement's Lane, 3 p.m.
Consolidated Gold Fields of South Africa.—Cannon Street Hotel, noon.
Pan de Azucar Nitrate.—Winchester House, noon.
Tati Concessions.—Winchester House, noon.

WEDNESDAY, NOVEMBER 21.

Ashby's Staines Brewery.—Staines, 2.30 p.m.

THURSDAY, NOVEMBER 22.

Allsopp, Samuel, and Sons.—Cannon Street Hotel, noon.

FRIDAY, NOVEMBER 23.

Fourth City Mutual Building Society.—Cannon Street Hotel, 5 p.m.
Scottish Australian Investment.—Winchester House, noon.

LONDON AND WESTMINSTER BANK.—Liabilities on October 27 consisted of current accounts and deposits £26,381,952, accept, ances and endorsements £1,363,645, and other liabilities £737,338, against which there were cash in hand and at Bank of England £3,780,950, money at call and short notice £5,680,225, Imperial Government securities £3,885,000, bills discounted, loans, &c., £16,588,216, and other securities £1,384,899.

Answers to Correspondents.

Holt.—(1 and 2) We should hold both of these for the present, as we think a recovery in this market is probable in the near future. (3) These also should be good enough to keep. (4) We are not greatly enamoured with this company; its debenture debt is too unwieldy, and it might be as well to sell out. (5) This security likewise is uncertain, but there is no urgent need to sell. (6) The reorganisation has left this company much stronger, and the preference dividend seems fairly secure. (7) This company does a good and useful business, and we see no reason to sell. (8) One of the best industrial undertakings in England, and the shares should certainly be kept. (9) This undertaking is also a fairly sound one, and its business seems likely to continue profitable. (10) There is no prospect of a permanent improvement in this company's position, and we regard reconstruction as inevitable sooner or later. The market seems a little steadier for the moment, and it may be well to take advantage of the present recovery to get clear. (11) Does a splendid business; shares should be held. (12) A very good company of its class, and present dividend should be maintained, so hold your shares. (13) Capital here seems a bit top-heavy, but company does a good business on the whole, and shares might be kept. (14) The company is making very slow progress, but it is improving its position, and you should hold the shares in the meantime. (15) As you have so few you might hold on in the hope of an improvement in price. (16) These are also worth holding on prospects. (17) One of the most promising shares in the Westralian market, and should be held. (18) These are quietly improving in intrinsic value, and the company may do better in future. (19) We continue to hear good accounts of this company's position and future. (20) This is so speculative a venture that you might clear out if that is possible. (21) Hold most certainly, for the company should benefit greatly from the price of copper. (22) There is not the slightest reason to sell this stock, which s amply secured. (23) Both these are good to keep. (24) Hold hese for the present. (25) Keep these, as the mine indications are .mproving. (26) These are likewise worth holding for a possible appreciation in value. (27) Very speculative, and you may as well cut your loss now as later. (28) We do not look for much improvement in the price, and they are certainly not worth keeping. (29) The company has not a good record, and despite the high interest paid, it would perhaps be as well to realise. (30) Hold these for the present. (31) Keep the bonds as the line is doing pretty well. (32) We are less sure of this, but the bonds should be quite safe. especially as the country is so progressive. (33) These, of course, are a perfectly good security, and the same may be said of the next on your list. (36) The recent actions of the Government caused some doubt as to the advisability of investing in this country's loans, but the issue you hold should be good enough. (37) The line is doing so exceedingly well and its prosperity seems so likely to continue, that you should certainly keep your stocks. (38) This company, too, appears to have a sufficiently good outlook to justify your holding on. (39) A powerful undertaking, shares in which should be held. (40) This company's position is far too weak to make the debentures a desirable purchase. (41) We fail to see how you are to derive any benefit from selling No. 23 to take up a security like this, where the yield is liable to fluctuations in exchange. (42) A most unsatisfactory security and one we would be very sorry to recommend. (43) Leave this alone for the time being, as you have plenty of better investments in your list. (44) An undertaking which during the past few years has only been able to scrape together enough to pay its preference dividend hardly seems the kind which anyone with a real regard for the investor's interests would recommend.

A. D.—(1) This is managed by a high-class, reputable firm of engineers, and possesses many chances of success, but these chances are speculative, as the company is still in the development stage. (2) We regard this as a highly speculative share, and it is impossible to say if it will ever earn dividends.

F. T.—(1) You might hold those you have, but we think things are just a little too doubtful at present to advise you to average. (2) We do not think you would gain any benefit in the long run by averaging these, as prospects look too uncertain.

J. W. Cairnduff.—Not at all suitable for an investment nor even fairly good as a speculation.

W. B. J.—(1) A first-rate security. (2) This loan possesses special security of a substantial kind, and as it can be bought under par seems reasonably cheap. (3) This also looks fairly cheap allowing for accrued dividend in the present price. (4) The company has improved its position to such an extent during recent years that the debenture stock can be considered a sound investment. (5) A good enough security and reasonably priced. (6) This is a fair security, but not so good as the others in your list, and as you already propose to put £1,000 into the country, you might leave this alone for the present.

S. A. G.—You would doubtless have to wait a very long time for an improvement in this company's position, and dividends seem remote indeed. Still, your loss is too heavy to accept immediately, and you should wait a while to see how things turn out.

W. Morrow.—This venture is backed by influential people, and the business in your country seems to be profitable. There is, however, no hurry to buy shares of this kind. Wait till the company is at work. We cannot trace any balance to your credit.

L. E. W.—(1) Over capitalisation and dishonesty on the part of former directors are at the bottom of the trouble. (2) No; we fear that a realisation of the assets would disclose a very severe shortage in the capital you mention. (3) There is no obvious reason why the court should refuse to sanction the scheme, as we do not hear that opposition is threatened. Your conclusions are right regarding the order of claims in the event of liquidation. Documents returned as requested.

A. G.—We regard it as a very speculative enterprise. See what we say in our comments on the report.

S.—The insurance company is one of the strongest of its kind and it seems a pity to exchange shares in it for speculative mine shares.

PUBLIC INCOME AND EXPENDITURE.

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and November 10, 1906:—

REVENUE AND OTHER RECEIPTS.

—	Estimate for the year 1906-1907.	Total Receipts into the Exchequer from April 1, 1906, to Nov. 10, 1906	Total Receipts into the Exchequer from April 1, 1905, to Nov. 11, 1905.
Balances, April 1:	£	£	£
Bank of England	—	9,334,212	6,352,909

The Investors' Review.

The Week's Money Market.

BANK RATE 6 PER CENT. (Advanced from 5 per cent on Friday, October 19.)

Norfolk House, Friday Evening.

In some respects the Money market is in rather better position, but only in some respects. During the past week another £379,000 in gold was added to the Bank's stock, and as £231,000 in coin came in from the circulation as well as £337,000 in notes, the reserve is up by £947,000 to a little over £20,000,000, but that has not helped the market in any direct way. On the contrary, it is poorer because the Government has added £477,000 to its accumulations, while £458,000 has been paid back by the market on other securities. Also it would seem that £497,000 has been swept off the market by the Bank, either by the sale or pledge of a portion of its Government securities, and accordingly the other deposits, which include bankers' balances, are actually less by £519,000, and the total of £40,357,000 is at least £5,000,000 too little in the present circumstances of the open market and for this time of year.

Doubtless it is well that poverty should prevail there provided it does not force any large dealer in credit to stop payment, and the good effect of a scarcity of the kind here indicated was seen this week in the steady maintenance of outside discount rates. Most of the time business in the finer class of three months' remitted bills was done at $\frac{1}{16}$ under 6 per cent., but much of the paper was not bought anywhere below that figure, and January bills often commanded 6⅛ per cent. The result was that towards the middle of the week business began to flow into the Bank, and it has been discounting short bills in fair amounts at its minimum.

It did nothing to-day, however, but, on the contrary, had most of a small amount due to it paid off, and there were various faint indications outside of a tendency to let rates slip back. Leading bill brokers quoted $5\frac{15}{16}$-6 per cent. for full three months' remitted bills, but the Continent was buying such to a moderate extent at $5\frac{7}{8}$ per cent. or less. There is not a great deal to be done in this way because the French exchange is too high, but even a small amount at cutting figures tends to depress our market. It was also difficult to get more than 6 per cent. on 60-day bills, and we fear the rates for long maturities, fours and sixes, were respectively no better than $5\frac{11}{16}$ and $5\frac{1}{16}$ per cent., at any rate, where payment could be deferred till next week.

Money, too, became easier, although the joint-stock banks got 5½ per cent. for all seven-day advances in the morning, and the open market quotation for call money was also up to that rate for a time. Both the Treasury and the Japanese Government, however, are said to have released money, and we hear that the Japanese Government agents lent a fair amount for a month at $5\frac{5}{8}$ and $5\frac{3}{4}$ per cent., which is shrewd business on their part as the money will be available towards the end of December. The joint-stock banks were also lending a little more freely, and call loans accordingly became over-abundant in the afternoon at $4\frac{1}{4}$-4½ per cent.

Gold is coming in, and to-day's receipts at the Bank amounted to £190,000, of which £103,000 consisted in eagles sent over from Paris. We hear that the Bank of France is quite willing to lend the Bank of England gold if asked to do so, and meanwhile the high Paris exchange is allowing gold to be withdrawn from the Bank of France at 4 per mille premium for shipment to London. There is also a small supply of about £375,000 due in on Monday from the Cape, and as the price of bars continues at 77s. 9d. per oz. the Bank will get the whole of that.

All these comforting changes notwithstanding, the horizon does not perceptibly clear, and there is no reason yet to abate the dread that if rates were allowed to decline now we should have New York upon us for more gold, and a violent rebound of the market that might carry it much beyond 6 per cent. By keeping rates firm all round and backing up the present 6 per cent. Bank rate we may escape without a 7 per cent. rate, but if the market is allowed to slip back, that can come upon us, and worse.

SILVER.

The United States Government announced this week that it would not make any further purchases of silver at the high prices now ruling, but this decision has not so far had any appreciable effect on supplies coming from America. Buying here, both for the bazaars and of a speculative character, has been good all the week, and compared with last Friday quotations show improvements of $\frac{3}{16}$d. at $33\frac{1}{16}$d. per oz. for cash and 33d. per oz. for future shipment. Tenders for the Rs.40,00,000 India Council drafts offered on Wednesday amounted to Rs.1,82,30,000 in bills and Rs.1,20,00,000 in telegraphic transfers. Applications were accepted for Rs.24,51,000 in bills and Rs.15,49,000

in transfers, tenders at 1s. 4 1/16d. and 1s. 4 3-32d. per rupee respectively receiving about 13 per cent. Money in India has hardened considerably, both the Bank of Bombay and the Bank of Bengal having raised their minimum rates of discount by 1 per cent., and the sum to be offered next week is increased to Rs.60,00,000.

BANK OF ENGLAND.

Stock Market Notes and Comments.

We do not like the way the Stock Exchange is behaving at a time like this. Both by word and act its members are treating the monetary crisis either as a negligible quantity or as practically at an end. This is not so, and those people who are eagerly driving prices up and gambling away without thought of the morrow will presently find themselves pulled up sharply. Just because the Bank of England is getting in a little gold they talk of a reduction in the Bank rate in the beginning of next month, and busily advise their clients that now is the time to buy. Perhaps it is the time to buy good securities in a prudent way, but it is not the time to enter into speculative commitments, large or small, depending in ultimate resort upon facilities to borrow. With a Bank reserve of only £20,000,000, and the whole of the end of the year requirements of every description to provide for, there are bound to be some tremendous squeezes for money between now and December 31.

And we are not at all sure that beneath this simulation of busy buying and apparent solidity of markets there is not concealed a mass of very deep-seated insolvency, securities of all kinds in masses pledged with banks, or held by people who have great difficulty in carrying what they have got, and who could not sell now without revealing their ruin. How could it be otherwise? It is all very well for the Stock Exchange to say that it is not loaded up, that it could stand any amount of strain because there is "no stock in the market," as the phrase is. That is the tale one week. Another spasm of excessive dearness comes along, the markets are frightened at the prospect of an immediate advance in the Bank rate to 7 per cent., then everybody has stock, is a seller and can find no buyers. The quantities of securities which could not be freely marketed in large amounts without knocking markets silly must be something incalculably great, and whether the Stock Exchange is carrying them directly or the banks for customers does not much matter. They cannot be turned into hard cash.

In the meantime it is impossible that the high rates which have for some time ruled at the periodical settlements on the Stock Exchange have been paid without serious loss to many, and as these rates must continue over, at any rate, the remainder of this year and probably well into next year, on a favourable view of the future, there is always the imminent danger, under our feet, as it were, that some exhausted house, some bank or banks even, may be confronted with an inability to go on. What would happen then? There would be no markets at all for a certain number of hours or days, and no man would be able to tell whether he himself was solvent or any of his neighbours. Markets are trading with a possibility of this kind immediately in front of them, and therefore we cannot but look with fear upon the recklessness with which speculation has developed in certain directions in the very middle of the present stringency. It is not wholesome activity, except perhaps where the small investor is coming along with his hundreds to invest in Home Railway stocks or in what he considers good Industrial debenture stocks or preference shares, but where it is gambling pure and simple it is not only reckless, but from the point of view of the dangers lying around supremely foolish.

We should like to know what is going on beneath the surface of markets, but as long as the strain is concealed, can only hazard conjectures. How much of their resources, for instance, are banks losing at the present time by the action of their depositors in withdrawing their money, either to invest it themselves or to lend it at the higher rates of interest ruling on the market? To what extent, in other words, will our banks be forced to drive their customers back upon the Bank of England as the last week of the year draws near? Will it be to an extent that must embarrass the discount houses, whose means are also being withdrawn from them? To hear the light-headed man in the street talk, one would suppose that a 6 per cent.

Bank rate was a most ordinary occurrence, and really did not affect anybody to an extent worth mentioning. That is not the experience of those who deal in credit, and the larger their credit commitments the more dangerous is the influence of high rates for market money, not merely upon their chances of profit, but upon their capacity to stand the strain to the end. Look where we will, indications of strain are abundant, and there is no market in a position to indulge in unbridled gambling.

The Week's Stock Markets.

After the settlement of the 19-day account had been concluded dealers in the Stock Exchange assumed a rather more cheerful mood, and one or two of the investment sections of the markets looked better than for some time. Money at the settlement was naturally very dear, and the lowest charge for bankers' loans was 6½ per cent., any new money required costing 7 per cent. Contango rates, therefore, were again rather onerous, but on the whole the account open for the rise seems to have been sensibly reduced, and dealers reported a considerable take-up of stock on the part of the public. This not only reduced the supply in jobbers' hands, but helped to give a healthier tone to markets generally, and business in the first day or so became decidedly brisk. The statements in the House on Thursday regarding the Chinese labour question rubbed off a little of the gilt before the close, but most sections were inclined to shake themselves free from Kaffir influence, and if they continue to do this there is perhaps no reason why the present renewal of public confidence should not be sustained. Consols enjoyed a small rise and two or three other British funds also displayed a tendency to improve, but it cannot be said that the gilt-edged market has so far shown much activity, and, perhaps, it can hardly be expected to do so until the monetary position is more assured. The position of the Bank of England, however, is showing improvement, and a rapid rise in the French cheque, although mainly due to the transmission of funds to this side for settlement purposes, has had the effect of bringing a little gold from Paris. It is of course much too early yet to think of any reduction in the Bank rate, because we are by no means yet clear from the possibility of a higher one, but immediate indications are that the existing 6 per cent. rate will now carry us through the year. Nothing of consequence happened in the Home County and Corporation section, but the Colonial inscribed market continues fairly steady, and one or two fractional gains were marked. Carry-over rates in the latter department were 6½ to 7 per cent.

The Foreign Bond market did not find much business to do until the week was near its end, but a statement in Paris that the projected tax on French rentes had been abandoned, and a fairly easy mid-monthly settlement there aroused more interest in international securities on the Continent, and the influence was soon felt on this side. Paris bought Spanish, Turkish, and Russian stocks in a modest way, and new Russian loan improved to 6½ discount. There was also a considerable amount of investment buying in Japanese issues, which went steadily up throughout the week, and Chinese bonds also found favour in a small way. Brazilians were another favourite spot, and fractional advances were also secured by a few Argentine issues. Peruvians and Uruguays, however, were a trifle easier, after being rather better, and in the Central American group Venezuelans went up and Colombians down. Carry-over charges in this department were moderately heavy, and 6 to 8 per cent. was paid on the South American group, together with Chinese and Japanese 6 per cent. first series. On Japanese 1902, 1905, and 4½ per cent. first and second series the rate was 5 to 7 per cent., and on the 4 per cent. sterling, 1899, 4 to 6 per cent. In the Central American group stock was not taken in for less than 7½ to 8½ per cent., and as much as 8 to 10 per cent. prevailed on Peruvian preferred and ordinary. Russian old fours were done at 5 to 7 per cent., but the new fives could not be borrowed on at for less than 7 to 9 per cent. Spanish sealed were continued at 5 to 6 per cent., but Turkish Unified seemed to be a little scarce and could be carried over at 2 to 4 per cent. Movements during the account were mainly upward, and Argentines enjoyed an all-round advance of ⅛ to 2. One or two Brazilians were up ¼ to ½, but others showed losses of ⅛ to 2⅛, the largest drop being due to dividend deduction. Chilians and Chinese were lower as a rule, but Costa Rica and Honduras issues were all up 1. Cuban rose ⅜ and Japanese were ⅛ to ⅜ better. Hungarians and Italian rentes both put on ⅜, and Russian 4 per cent. 2⅛ and 2¼, and the new loan gained 1. Other European stocks showed small fractional movements either way, and losses of 1⅞ in Egyptian Unified and 2¼ in Russian Series II. were due to the deduction of interest.

The Home Railway market has been pretty well cleared of floating stocks through the persistent buying of the small investor, and now that interest has been roused, it seems likely to continue. Business this week has been on a steadily increasing scale, and a further stimulus was applied by the collapse of the Clyde strike on Wednesday. The victory of the masters in this case was taken to indicate that the labour unions were not so powerful as they had claimed to be, and dealers are now beginning to realise that all their talk of injury from labour troubles had been exaggerated. This change of front is all to the good of the market, and it now looks as if the activity might continue for a considerable time yet, bringing in its train a steady appreciation of prices. One of the most marked improvements this week has been the rise of several pounds in Metropolitan stock on the recovery shown in its traffic receipts. These were still down compared with the corresponding week a year ago, but the decrease was only £1,500 against declines of about double that in the earlier part of the current half-year. North-Eastern has also rebounded in a notable fashion, and Scotch stocks naturally have benefited considerably by the termination of the Clyde trouble, while amongst other advances of £1 or over we find Great Eastern, Great Northern deferred, Great Western, North-Western, and Midland deferred. The presence of the small investor was not felt to such an appreciable extent during the account ended on Monday as in the present week, but it had a certain amount of influence which was reflected in the making-up list by fair gains in all but a few minor instances. Midland preferred and Great Central preferred led the way with improvements of 2¼ each, the deferred stocks rising ¾ and ½ respectively in sympathy, and Brighton ordinary and preferred gained 2, while the deferred was 1 up. Great Western, Great Northern deferred, and South-Western ordinary and deferred all put on 1½. North-Eastern was 1⅜ better, Furness 1, and North-Western and Hull and Barnsley ¾ up. South-Eastern ordinary advanced 1, and Chatham ordinary and first preference ⅝ and 1⅛, but the second preference of the latter company fell 2½. Caledonian ordinary rose 1, and the deferred 1½, and North British ordinary and deferred were ½ and 1⅛ up. Underground things showed irregular movements, District and one or two debentures of the new "Tubes" being ½ up, while City and South London fell 1, and Central London ordinary and Metropolitan dropped ½ each. Carrying over charges were much about the same as last time at 7 to 7½ per cent., but on Dover "A" the rate ran up at times to as much as 10 per cent., while on Caledonian and Great Northern deferred stocks contangos were less than half that figure.

Several influences have been at work to make Wall Street depressed and unhappy this week, not the least being the extreme stringency of money, which at times rose to 20 per cent. The New York Bank statement was also disliked, and the belief is growing that the statement does not reveal the true position, while it was freely asserted that the Standard Oil group had been manipulating both money and stock markets to force out weak holders.

Operators were further disheartened by Mr. Shaw's announcement that he would not again give any help to the market except in the case of panic stringency, and a good deal of selling was reported on Monday. As usual, however, the decline was followed by support which was ascribed to the banks, and Milwaukee and Pacific issues especially were taken in hand. The buying of Milwaukee was accompanied by rumours of rights to stockholders in connection with a new issue, but it was more generally believed that the movement was due to manipulation, and again Standard Oil was credited with being the prime mover. Towards the middle of the week it was practically admitted that the scarcity of money had been due to an attempt to bluff the Treasury into providing additional funds, and this having failed loan rates were allowed to drop back to the more moderate figure of 6½ per cent., and occasionally even less. With the easier conditions quotations rapidly recovered, and the movements on balance show large gains in most of the favourites. Milwaukee showed the most sensational gain, but Union Pacific were decidedly better as the result of large purchases against call options sold for the mid-January account, and Missouri and Kansas rose on the decision of the Supreme Court at Kansas awarding the company a large area of land in the State, estimated to be worth upwards of £2,000,000. On the other hand, Erie were driven down in the beginning of the week by the labour disputes, and although they improved later, on a settlement being arrived at, the recovery did little more than wipe out the earlier loss. The account open at the settlement on Monday proved to have undergone very little change, notwithstanding the bales of securities said to have been shipped to New York, and contangos at first were stiff at 8½-9 per cent., owing to the high rate asked for money by some of the banks. Dealers, however, were able to obtain all they needed elsewhere, and the rate ran off to 7½-8 per cent. Movements on the account were mostly adverse, the largest being a decline of 7 in New York Central. Great Northern preference were 5 down, Chesapeake fell 4½, Union Pacific 3, Louisville 2½, and Denver common, Erie, Southern Pacific, and Southern ordinary and preference lost from 1½ to 2. Against these Northern Pacific improved 8, Missouri and Kansas rose 1½, and National of Mexico preferred stocks put on 2½ and 2.

The speculation in Hudson's Bay shares caused operators to pay some attention to Canadian Pacific shares, and the price advanced rapidly for a time. Wall Street influences, however, still govern this market to some extent and a setback followed, but it was not long before the upward movement was resumed. Grand Trunk stocks were weak and idle at first, but they too hardened up as the week went on, and the ordinary and third preference finished with gains of £1 or so. Of other Colonial railways Rhodesia Railways debentures and Klerksdorp-Fourteen Streams debentures were fractionally better, but New Cape Central debentures were marked down 1. On the account Canadian Pacific shares were 1½ lower, but Grand Trunk ordinary and third preference showed improvements of 1½ and 1 and Alberta stock put on 9. Money in this section was 7½ to 8 per cent. at first, but here also the rate eased off during the day.

In the Foreign Railway market Mexican issues were in strong demand as the deduction of the dividend made them look cheap, and in spite of a little reaction they ended with nett gains ranging from 1½ to 2½. A big business was also done in Buenos Ayres Great Southern ordinary stock as well as in the new scrip, but the Argentine group as a whole was not very active and changes on the week in either direction were unimportant. Great Western had been lifted on talk of the line being absorbed by the Buenos Ayres and Pacific, but fell back when the chairman of the latter company announced at the meeting that only a closer working arrangement had been discussed. Central Uruguay and Uruguay Northern both met with a fair measure of support, Guayaquil and Quito junior bonds rallied sharply and Leopoldina ordinary, Antofagasta deferred and Colombian National debentures were all better at the end, while Paraguay Central debentures suffered a relapse, but business was never really active in any of them. The sensation caused by the Mexican dividend announcement is reflected in the making-up list by gains of 16½ in the second preference, 8½ in the ordinary and 4½ in the first preference. Mexican Southern ordinary was sympathetically affected to the extent of 2½, but Interoceanic preference shares and "B" debenture stock, on the contrary, fell ⅝ and 1½. Argentine Railways, as a rule, show only fractional movements on the account, but Buenos Ayres Great Southern ordinary exceptionally fell 5½. Bahia Blanca and North-Western preference lost 2 and Buenos Ayres and Pacific first preference 1½. The ordinary stock of the last-named company gained 1, Argentine Great Western ordinary 3, East Argentine 1½ and Cordoba Central first preference also put on 1½, but the first debenture stock relapsed to that extent. Antofagasta preferred and deferred declined 1½ and 3½, Colombian National second debentures 3½ and Costa Rica second debentures 1½. The only movements of importance amongst Uruguayan issues were advances of 8 each in the preference and preferred debenture stock of the Northern company, a fall of 6 in Midland Uruguay debenture stock and a gain of 2 in that company's ordinary stock. San Paulo ordinary improved 2, but United Railways of the Havana ordinary has dropped out of the running for the present and showed no change. Rates on South American things generally were from 7½ to 8½, and on Mexican Railway stocks the charge ranged from 8 to 9 per cent.

A good many old favourites again came to the front in the Miscellaneous market, and in some directiont business was on a very large scale. The Hudsonss Bay insanity continues unbated, and a tremendous ou't-burst of buying sent the price up to about 128, being a gain on the week of over £16. Anglo-American Telegraph deferred was also much favoured by speculators, and further sharply advanced, and all textile issues were exceedingly active. Coats and English Sewing Cotton were marked out for special favour, and Coats Ordinary shares went up to about 6½. The statement was again put about that a capitalisation of the reserve fund was contemplated, and dealers in London were eager buyers, but the market was soon flooded with shares from Glasgow, and the best price was not nearly maintained. We have witnessed incidents of this kind before. In the Motor section, Daimlers, Darracqs, Humbers, and Argylls were all very good again, and Iron and Steel shares met with moderate support. Interest in Nitrate shares has rather died down for the moment, the Stock Exchange not being able to run too many booms at the same time, but Gramophones were still bought, and Sweetmeat Automatic were advanced a little on the revenue statement for October. Cements were offered rather freely, but Oil Cake Ordinary had a small rise, and Apollinaris shares recovered on the announcement of an interim dividend at 5 per cent. Lyons' shares were not influenced by the declaration of the interim payment of 25 per cent. per annum, and Catering shares generally were neglected; but among Meat issues Nelsons were rather better. Breweries were flat, Guinness, City of London, and Allsopps being prominently so, but Bieckerts still advanced. Cunards were better in the Shipping list, and of Telegraphic securities generally Great Northern and West India and Panama improved. London Docks deferred finished rather lower, and London General Omnibus relapsed sharply when it was found what a serious effect the motor strike had had on the traffics. Carry over charges ranged from 7 to 9 per cent. on the majority of speculative issues, but in some instances the charge rose to 10 and even 12 per cent., these rates being specially noticeable in the Cycle and Motor department. The making-up list showed a few striking changes, Coats, for example, being up 11s., and English Sewing Cotton 3s. 3d. Daimler Motor preference rose ½, Darracq ordinary ½, Gordon Hotels ordinary 1⅛, and the preference ½.

Several Nitrates were $\frac{1}{16}$ to $\frac{5}{8}$ better, Pease and Partners gained $\frac{5}{8}$, Schweppes ordinary were 3s. 3d. better, Dunlops put on 1s. 3d. to 2s. 7½d., Humber 5s. 9d., and Rudge 3s. In Bieckerts Brewery ordinary the rise was 5, Hudson's Bays were 9½ higher, Anglo "A" advanced 3½, Great Northern Telegraph 1½, and National Telephone deferred 1½. Lever Brothers preferred showed a loss of $\frac{9}{16}$ in consequence of the Soap Trust agitation. Enfield Cycle receded 2s. 6d., Allsopps and Watney, Coombe issues were 1 to 2 down, Eastern Telegraph dropped 2½, Standard Bank of South Africa 2, and Commercial Union Assurance 2½.

This morning markets were still in a confident mood, and prices were accordingly lifted, Consols showing the example and Home Railways following at first, though later prices for them became weaker, only, however, to rally again before the close. Special objects of interest among players such as Hudson's Bay shares were violently driven up early in the day. Yankee Railroads were also firm, and Home Railway stocks appear to be growing in favour with investors and speculators all over the country. Great Northern deferred was a leading favourite to-day, and most South American Railways in which there was any business tended upwards. The scrip of Buenos Ayres Great Southern new shares is now quoted at $\frac{3}{4}$ premium for the special settlement. As for Hudson's Bay shares, the highest point they touched was about 129, and then they fell back, rose again, and finally left off about 126. The market for them looks dangerous. The Kaffir Circus took the denunciation of Chinese labour very well, and put prices up a shilling or two.

THE WEEK'S PRICE MOVEMENTS.

BRITISH FUNDS, &c.—Rise: 2¾ p.c. Annuities 1905 ¼, to 84¾-85¼, 2½ p.c. Annuities Acct. ¼, to 85-85⅛, Irish Land Acct. ¼, to 97⅞-98¼, India 3½ p.c. Acct. ⅛, to 103⅜-104¼, do. 3 p.c. Acct. ¼, to 92½-93.

MINING NEWS AND NOTES.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* ONE SHILLING *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* INVESTORS' REVIEW.

We have had another splendid Rand output, showing a substantial increase over September, also an improvement in the supply of labour, but it has not helped the market in the least. Nor has the simultaneous publication of the report of the Consolidated Gold Fields assisted to stimulate business, speculative or other, and the market is as quiet as ever. True, the language of the report is lugubrious, and the directors gaze dejectedly at the outlook, but this pessimism receives no countenance from the October returns of the Chamber of Mines. Still, the public seem to care nothing one way or the other, and are interested in the Kaffir Circus more as sellers than buyers. Prices are still sickly and flabby and continue to give way. Paris is not disposed to take any of the gold shares, no support from that quarter being reported during the week. Operators are looking forward with a certain expectancy to the speech of Lord Harris at the Consolidated Gold Fields meeting, in the hope that he may be able to say something cheering, despite the report. They feel, however, that whatever he says will not really affect the situation materially, only there is little else for them to do in these dreary times but hang on and hope.

Rhodesians have been as spiritless as Kaffirs, for this section has been affected by the heavy decline in Tanganyikas. It appears that the new debentures did not meet with a kindly reception from the public, that the underwriters were landed with about 80 per cent. of the entire issue, and it is not to be wondered at that they have fallen to 30s. or so discount and that the price of the share has reacted sympathetically. The meeting of the Rhodesia Goldfields, at which the shareholders rejected the directors' ridiculous amalgamation scheme, has not helped this market, for the conduct of the board will not make a favourable impression on shareholders in other companies. When they saw it was almost unanimously opposed by the meeting they should have complied with its wishes and abandoned the scheme. Instead, they are determined to carry it through, if possible, but shareholders would be foolish to support it with hard cash.

Diamond shares have again been rather erratic, New Vaal Diamonds in particular. These, as usual, have fluctuated violently all the week. An official circular announces that the meetings held at Kimberley on Saturday passed off satisfactorily and that all the resolutions were carried unanimously. But this tells us nothing of moment. Evidently, it means that the meetings approved of the proposed issue of debentures, but there is nothing in this to boast of nor to get excited about. The full

reports of the meetings are promised to the shareholders as soon as they arrive from Kimberley, but could not the company have afforded to send a cabled summary of the proceedings? De Beers are much higher, Jagers are firm and Premier Diamonds a little steadier than they generally are. Some say Paris is buying De Beers, some say not, but the rise is accompanied by rumours that a good dividend will be declared next month.

West Africans have in the last day or so improved a little on the promising results recorded in the report of the Abosso Gold Mining Company, but the entire section is still very dull and it will take a great deal to arouse it from its torpidity.

Very little has been done in the West Australian department. Ivanhoes and Kalgurlis have been consistently good, but most of the other leading shares have shaded off. Even Deep Leads shares are a trifle easier. Broken Hill shares of all sorts have displayed some activity, chiefly, it is declared, on extensive colonial dealings.

Copper shares have been quite buoyant, the advance in this group embracing several of the less known companies. Anacondas and Rio Tintos are still the most conspicuous, but Cape Coppers, Tharsis and Namaquas are all appreciably higher than a week ago, whilst Mount Lyells have fluctuated on dividend declarations, which totalled with bonus 3s. 3d. per share, no more than was generally looked for. Amongst Indians Champion Reefs have been dullish, but other shares steady.

Transvaal Gold Output.—It is a fine return, showing considerable progress in gold winning, but it has in no way helped to raise prices in the Kaffir Circus. The aggregate was 540,609 ozs. of fine gold, of which 521,397 ozs. came from the Rand itself, and only 19,212 ozs. from the poor mines working outside it, the value of the whole being £2,296,361, the figures comparing with 505,111 ozs. in weight, and £2,145,575 in value for September, which was a shorter month by one day. Thus the increases were 35,498 ozs. and £150,796 respectively. This time, however, the return is exceptionally interesting, as it includes 14,968 ozs. "gold reserves," which were declared by several companies. If we deduct this amount the increase for the month was 20,530 ozs. Including these reserves it is the highest output ever reached, and exceeds the previous best in August by 31,494 ozs., or 16,526 ozs., exclusive of the gold previously held back. Compared with October, 1905, the increases are 125,082 ozs. and £531,324 respectively. In the native labour supply there was a nett gain of 2,458 against a loss of 7,387, the number employed at the end of the month being 76,035, but this does not include those working for the Robinson group, who are no longer members of the Chamber of Mines. So altogether there is little or nothing to grumble at.

Tanganyika Concessions.—The following circular has been issued by the directors:—The directors' attention has been drawn to some comments which have been published in the Press relative to the validity of the option given to convert the debentures into shares. I am instructed to inform you that the prospectus and the terms of the issue were carefully settled by counsel on behalf of the company, particular attention being drawn to the point now raised, and my directors are advised that the option given is valid and binding on the company. As, however, my directors do not attach any great importance to the right to redeem the debentures before December 31, 1911, but do desire to put the debenture holders' rights beyond all question, they have resolved to waive the company's right to redeem the debentures before that date, and the option to convert the debentures into shares will remain open to the debenture holders at £8 per share—*i.e.*, one share for each debenture, until December 31, 1911, and the form of the debentures has been settled accordingly.

Tati Concessions.—The years go quickly by, and it is still impossible to say when the shareholders in the Tati Concessions will receive a dividend. Better times have been promised so frequently that they must be remarkable men if they feel they can still cling confidently to hope; many must have abandoned anything so sustaining as hope long ago. In the twelve months to June 30 the total Tati revenue was £13,053, divided over trading account, hotel receipts, claim rents, hut rents, waterworks, and cattle account, and the gross profit amounted to £5,281. To this falls to be added £2,159 interest on investments, and the directors have taken credit for accrued interest on these (£1,065), also accrued interest (£1,998) for three years on the debentures held in the subsidiary, the Premier Tati Monarch Reef. Transfer fees gave £27 and discounts £33, making a total of £10,564, of which nearly £2,000 ought not to be counted. After allowing for administration expenses, debenture interest, &c., they show a profit of £2,766, but only the odd £766 is fingerable, and though this raises the credit balance to £6,092, a distribution is not to be thought of. Some items in former balance-sheets are now consolidated into a suspense account, aggregating no less than £165,353. The greater part of this consists of the debenture stock held in the Premier Tati Monarch, the accrued interest on this—which, as we see, is likewise treated as revenue—advances made to it prior to its closing down, and shares valued at 1s. per share. Is it possible that such are recoverable? We fear not. The directors, however, think a large portion will be realised, so they evidently fear a part will be lost. But when? "When times are more propitious," they say. This is vague, and is looking very far ahead. The receiver is still in possession of the Premier Tati, no proposals have yet been received for working it on tribute, and none for purchasing it. We are not surprised, for is it worth anything to anybody? The same item also includes expenditures on other properties which do not look hopeful concerns. So the loss will have to be met sooner or later, but we can sympathise with the desire to defer the painful necessity in the hope that something might turn up.

Abosso Gold Mining Company.—We congratulate the shareholders on the results submitted in the directorial report for the financial year to June 30, for they are better than they promised to be some months ago. In the first two months of the year only 20 stamps were in operation, and the full battery of 30 stamps did not start until September 1, 1905. These crushed 44,794 tons of ore, for a recovery of 35,689 ozs. of fine gold, equal to 15.96 dwts. per ton, the value of the whole being £152,256, or an average of £3 8s. 1.41d. per ton. Sundry receipts added £1,263, making the entire income £153,519. The nett profit is £58,638 after allowing for every kind of expenditure, and £6,850 is brought in, making £65,488. Take £9,351 for depreciation, and the available surplus is £56,137, so the directors pay a first dividend of 10 per cent., which requires £34,951, and leaves the substantial balance of £21,186 to carry forward. It is gratifying to note that the recovery was as high as 92.15 per cent. of the gold contents, which does not include any proceeds from the slimes, these being accumulated for future treatment. Costs averaged 40s. 5.35d. per ton, a high figure, but they have since been reduced to 35s. per ton, or thereabouts. Prospects, indeed, look quite hopeful. At the end of June 110,376 tons were developed of an average value of over 18 dwts. per ton, sufficient to keep the present mill going for two and a-half years at the present rate of crushing. So shareholders can look forward hopefully for a few years.

Taquah and Abosso Gold Mining Company.—This is the parent of the Abosso Gold Mining Company, and its prospects have improved simultaneously with those of its subsidiary. It has been twice reconstructed in its struggling career, but it may now be able to avoid a third one. Nor has it advanced to the stage when the directors issue a profit and loss account, although it is really about time they presented one. In Africa the general expenses amounted to £10,419 and on this side to £3,945, total £14,364, to be added to the previous balance of £25,763. From the aggregate of £40,128 has to be deducted £16,208, which consists of revenue from some gold recovered, rents, profit on sales of shares and interest on loans and investments. So the deficiency in the present balance-sheet is £23,919. The report says considerable progress has been made in opening out the Taquah mine and in equipping the property with the new plant. Nearly the whole of the plant has now been dispatched, and it is expected that the productive stage will be reached early in 1907. The gold recovered was from unsorted ore broken during development work and treated by 10 heads of the old mill. In all 4,397 fine ozs. were obtained, of a value of £18,671, at a cost of £4,952 for treatment.

Commonwealth Oil Corporation.—The directors have hurried to issue their report, their first one, before they have received the completed accounts from Australia. Accordingly, the balance-sheet gives only the London figures. Possession of all the properties agreed to be purchased has been given to the company, and the leases have been either transferred into the company's name or otherwise secured to the satisfaction of the solicitors in Sydney. Working operations are yet only in the initial stage, so it is impossible to say how the company will get on in the future, whether it will be a successful undertaking or a failure. That will largely depend upon the market for oil and coal, and neither looks very favourable at present. It has been found possible to avoid the construction of a costly railway tunnel through the properties, and this is something to the good. Further development has taken place in connection with the coal deposits, and as soon as definite information is obtained it is to be forwarded to the shareholders. As regards the railway, it is anticipated that the line will be ready for the transportation of shale in the course of next summer. The New South Wales Shale and Oil Company's business was acquired last April, and a trial balance of the first three months' working shows fair results, but the profit is not included in the balance-sheet, as it forms part of the Australian accounts not yet fully rendered. Head office expenses, including £1,120 for directors' fees, amounted to £2,095, whilst the income from interest, exchange and transfer fees totalled £1,233, so there is a first deficit on London account of £862. Cash totals £35,885 and creditors are owed £1,447.

Menzies Consolidated Gold Mines.—The revenue account for the year to July 31 shows a profit of £4,563, raised to £5,180 with the sum brought in. In this period 17,587 tons were crushed, yielding 6,176 ozs. of gold, whilst in the cyanide plant 14,215 tons of tailings and slimes were dealt with for 2,322 ozs.; there was also obtained from concentrates 2,320 ozs., making a total recovery of 10,818 ozs. Early in the present year, as funds became available, the directors were able to give practical effect to the scheme of development outlined a year ago, so in April orders were given for £3,761 worth of new machinery. The cost of sinking the new shaft is estimated at £8,000, and it is hoped that the major part of the funds necessary for this will be provided out of the current and future profits. Before undertaking this expenditure the directors considered it prudent to arrange for further capital in case of any unforeseen contingency. So they secured a guarantee to provide £6,000 on 10 per cent. debentures if and when called upon to do so at any time before May 1, 1907. Thus the debentures will not be issued unless the money is required. The manager estimates the ore reserves available for extraction above the No. 10 south level at 21,984 tons, but it is pointed out that he has calculated only ore opened up on three sides, and that nothing is included

below the above level. For all that, prospects of success are very doubtful.

Zoroastrian, Limited.—Once again unpleasant news comes to the shareholders through the medium of a directorial circular. One or two statements therein are somewhat contradictory. For instance, the directors say that the battery and cyanide plant have been constantly employed in public crushing and in the treatment of tailings purchased, and they believe that certain improvements now being carried into effect will enable the business to be conducted at a profit. At the same time, they have been reluctantly forced to the conclusion that the mine cannot, under existing labour conditions, be made to pay. So they have sought for "some more promising sphere for the company's activities," and have actually turned their attention to lead-mining in Wales, presumably because they see the prices of lead and zinc advance on the market. So they have secured an option of purchase over a couple of mines in Cardiganshire. It is proposed to form a new company, under the title of the Cardigan Mines, to acquire and work these properties, likewise to take over the assets and liabilities of the old company. Shareholders will be entitled to one 2s. 6d. share credited with 1s. 6d. paid up in respect of every 5s. share. This will be the third reconstruction of this Guernsey registered company, and it should be the last.

Tasmanian Consols.—The first report from Mr. A. R. Canning, M.I.M.M., the recently appointed mine manager, is just issued. He states that a very payable proposition exists, basing this opinion on the assumption that the ore chute of the western reef holds downwards and retains its present extent and value. Subsequent developments confirm this opinion, he adds, and recommends that subsequent efforts be concentrated on this proved body of ore. In the immediate future operations will be energetically carried on to develop the western reef pay body. With an output of 31,000 tons per annum, he estimates that on a 10 dwt. extraction a profit of £36,000 should be earned annually. But in order to make this possible a new modern battery of 20 heads will have to be erected. It is not until May next that the directors anticipate regular returns.

Dolores, Limited.—This Mexican company holds nearly the entire capital in the American concern, the Dolores Gold Mining Company. A report and balance-sheet are issued for the period ended September 30, accompanied by a lengthy report from Mr. J. B. Farish. But there is no reason why these could not have been postponed awhile, seeing that the audit of the accounts of the American company for the financial year are not completed. The directors are apparently anxious to issue the report of Mr. Farish, but this hardly tells shareholders very much more than they already knew. Recently they were informed that the American company proposed to increase its capital, and that the English company would do the same by issuing 66,000 £1 shares at the price of $5 each, the proposal to be considered at the meeting on the 26th inst. The balance-sheet, dated September 30, shows the London expenditure to have been £1,779 against £47 from transfer fees, showing a deficit of £1,732. Mr. Farish's report is very lengthy, and covers everything of importance, going into the history of the company, and describing all-round conditions. He states that the profits from the operation of the Dolores mine amounted to $267,621. All of this has been used in the payment of the Gow contract, equipment, interest on the sums borrowed, New York and London expenses, &c. In other words, he remarks, had the company been provided with ample working capital, the directors could have paid regular monthly dividends aggregating a sum equal to the total profit. At June 30 the company still owed $173,374, which has been reduced a little by the profits earned since then.

Mexico Mines of El Oro.—The report covers the period from formation, October 14, 1904, to the end of June last, and the directors have much to say of an encouraging character. As, however, the mine has not yet reached the producing stage no profit and loss account is issued. When the company was floated the directors decided to defer the erection of reduction works till the mine was further developed; now they have commenced to put up a 20-stamp battery, with tube mills and cyanide works, estimated to have a capacity to treat 100 tons of ore daily. It is anticipated that this mill will be in operation during the early part of next year. According to the general manager, the average value of the ore in the ore bodies exposed is not less than $15 per ton in gold currency, and should this be maintained the company should do well. The amount of ore blocked out and ready for extraction on June 30 was 110,700 tons, but the directors point out that this allows only 22,900 tons for ore contained in the mine below the No. 4 level. Mr. Lionel Phillips, owing to his business engagements in South Africa, has resigned his seat on the board, and Mr. L. Breitmeyer, another well-known financier, has been elected to the vacancy.

Palenque Gold Mining Syndicate.—At last the directors of this British Columbian company, which has been in existence since 1898, pay a dividend. The accounts now issued cover a period of two years to June 30, and these show the small profit of £1,188, making, with the amount brought in, a credit of £1,505. So the directors divide £1,403 in giving 8d. to each priority share, and about 4½d. to each ordinary share, because, say they, the results to September 30 show an approximate profit of £1,800, that the estimate to the end of the year is favourable, and that the general position of the mine is satisfactory. But this does not justify dividing up to the hilt.

Lancefield Gold Mining Company.—The three furnaces of the new sulphide plant have now been started, and it is expected that the remaining two will be set going before the end of this month. Messrs. Bewick, Moreing and Company report that experimental runs of the plant for adjustment purposes during the past month have proved most satisfactory, some 1,700 tons being treated. During the past four days the residues have averaged only 4s. per ton from ore assaying 34s. 3d. per ton, but it is expected that these results will be further improved by more systematic work. The ore-drying appliances have proved of less capacity than the remainder of the plant, and are being expanded with all speed, and until the additions are completed the mill cannot be run at full speed. In the opinion of the directors these results may be regarded as proving the complete success of the new treatment. It is, however, impossible to give an estimate of the capacity of the new plant or the costs of treatment until further experience is gained. The directors propose to close the accounts at the end of December and to hold the annual meeting as soon thereafter as practicable.

Obenemasi Goldfields.—The directors announce the receipt of a cable from the mine stating that the reef has now been cut in the No. 2 level, and at the point where intersected the value is 9 dwts. per ton. In consequence of the reef dipping away from the shaft instead of towards it it has taken a much longer time than the directors anticipated to cut into it in this level. The directors seem jubilantly to feel that this proves there is gold at this depth, and though the delight may be natural, it by no means assures the ultimate success of the company. For instance, 9 dwts. is not a rich ore, particularly as it is only 1 foot 4 inches wide, but, of course, it is hoped the width and value will increase as it is driven upon.

Gopeng Tin Mining Company.—This Cornish company enjoyed a fair measure of success in the year ending July 31, the profit amounting to £21,043, the largest it has ever earned. Expectations for the future are most hopeful, for it is officially anticipated that when the new pipes are fixed the returns will be increased. At the last annual meeting a bonus dividend of 1s. per share was declared, taking £3,560, and during the year three dividends of 1s. per share and one of 1s. 3d. per share, were paid, absorbing £15,130, a total disbursement of £18,690, leaving the still large balance in hand of £12,009. These are most encouraging results, due undoubtedly to the high price of tin, and they should foreshadow a successful career for the company

Broken Hill Proprietary Block 10.—According to the cabled results from the other side, this company earned larger profits in the half-year ended September 30 than in the previous periods. We are told briefly that the operations resulted in a nett profit of £53,000, out of which £30,000 was distributed in dividends, leaving the company with the substantial credit balance of £148,600. By-products on hand and unsold total 110,000 tons, and these appear to be accumulating at the rapid rate of 60,000 tons annually. Ore reserves, estimated conservatively, are computed at 774,000 tons. The shareholders' meeting is to be held on the 28th inst. and copies of the report and accounts are promised to the London shareholders about the end of next month.

Broken Hill Proprietary Block 14.—This company also did better in the past financial half-year, the operations, so says the cable, giving a gross profit of £23,310, and a nett of £12,700. The credit to the profit and loss account is now £44,000. Available sulphide ore reserves are estimated at 188,000 tons. Meeting is to be held on the 26th inst.

Company Reports and Balance Sheets.

*** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Great Northern Railway Company (U.S.).

Mr. James J. Hill's special road did a fine business last year. Its gross receipts amounted to $53,076,661 in the year ended June 30 last, and working expenses came to $26,853,145, besides which $1,822,954 was disbursed as taxes. This left the nett income from working the agglomeration of leased roads forming the principal property of the company at $24,400,562. In addition $1,409,256 came from miscellaneous sources, so that altogether the free revenue was $25,809,818, and after meeting the nett rent of the St. Paul, Minneapolis, and Manitoba Railway, the Eastern Railway of Minnesota and other rentals, $4,107,095, besides paying 7 per cent. on the Great Northern Company's stock which took $9,148,520, and paying $151,875 as interest on the sterling loan, there was enough left to enable $5,130,910 to be set aside for improvements, renewals, and equipment, and still $5,148,571 over by way of surplus to carry forward. Compared with the previous year, this shows remarkable progress, for rentals, dividends on the stock and interest charges were all less in 1904-5 than in 1905-6, and only $3,000,000 was put aside in the earlier year to meet improvements. Apparently the company is able to work its business at 48.61 per cent. of the gross receipts, a remarkably low percentage for such a property, but whether this proportion is kept down by sums set aside for betterments and improvements, or whether it is a genuine result of the newness of the property, of the comparatively light mass

of the traffic, there are no statistics presented in the report to enable us to judge. Like all new roads, however, the lines embraced in the Great Northern system are continually struggling to make good the deficiencies of original construction, and last year 7,547 lineal feet of bridging was taken out, the road being filled up with embankments, besides which 2,454 lineal feet of steel bridges were put in. The cost of upkeep indeed cannot be separated from the cost of improvements in any satisfactory way, and that doubtless warrants the directors in devoting such large amounts every year out of the exhibited nett income to purposes which in this country would be flatly charged to capital. During the year, however, a good deal of capital would seem to have been spent, for Mr. Hill says in his report that $8,989,000 had been advanced to dependent companies for construction purposes, besides $3,423,459 paid for new equipment supplied to the Great Northern Railway Company itself. These expenditures, however, would seem to have been justified, as there was a large increase in the business done, attributed principally to the wonderful development in North Dakota and on the Pacific coast. Gross earnings, therefore, increased by 17.81 per cent. while working expenses went up 20.57 per cent. During the year the company made several reductions in its freight rates, and that may help to account for the relatively greater increase in the expenses than in the receipts. No addition was made to the bonded debt of the company last year, but $25,000,000 additional capital stock was sanctioned on September, 1905, bringing the entire stock up to $150,000,000, of which $149,546,000 was issued and outstanding on June 30 last, so that almost the whole of the new $25,000,000 seems to have been sold. Where this additional money, some £5,000,000, went, we are unable to trace, but that may be because the full pamphlet report is not before us. Much of the money, however, would seem to have gone into new constructions on various subsidiary or maintained lines, such as the Dakota and Great Western, the Billings and Northern, the Brandon, Saskatchewan and Hudson's Bay, and the Midland Railway of Manitoba. The company, indeed, is mixed up in all sorts of things besides railways, and holds a variety of investments from which it receives dividends. Principally, however, the money has been sunk in small lines of railway designed to support and feed the main system. Altogether the capitalisation of the company amounts to $410,000,000. This includes $109,114,000 representing the cost of securities in the hands of the Northern Pacific, Great Northern, and joint Chicago, Burlington and Quincy combine.

Northern Pacific Railway Company.

In its year ended June 30 last this company earned $61,223,476 gross, being an increase of $10,500,590 upon the income for 1904-5, freight yielding $7,180,335 more, and passengers $3,032,369 more. Working expenses took $31,095,432 or only $4,286,674 more, the proportion being 50.8 per cent. of the receipts, or a decline of just 0.2 per cent. upon the previous year. It followed that the nett revenue of $30,128,043 showed an increase of $6,213,916, which was 49.2 per cent. of the gross income. This, however, did not include taxes, which absorbed $612,000 more at $2,213,000. Deducting taxes the nett revenue is, therefore, brought down to $72,915,000 which was still an increase of $5,602,000 on the previous year. To this income from working the lines $1,719,346 had to be added as dividends and interest on securities owned and interest on deposits, a decline of $202,221 on the preceding year. Bonded debt interest took $38,157 more at $6,986,140, and dividends on stock absorbed $10,850,000. The small sum of $160,469 was also paid in rents, making the entire outgoings for interest and dividends $17,996,609 and leaving $11,637,740 as the surplus for the year, an increase of $5,361,499. Out of this large surplus $3,000,000 was again set aside for additions and betterments on existing lines, and $2,000,000 was applied in depreciation of equipment against nothing the previous year, besides which $1,081,980 was appropriated to the insurance fund. These deductions aggregate $6,081,980 or $3,081,980 more than was set aside in the previous year, and leave the nett surplus for the year at $5,555,760 or $2,279,518 more than for 1904-5. The average length of road operated by the company last fiscal year was 5,401 miles, and like all railways of this age and character, money has continually to be spent in improving the road. Last year, for instance, 173 bridges were replaced, and three eliminated by lines changed and abandoned, making the total length of timber structures replaced by steel bridges, embankments, or other permanent substitutes from July 1, 1885, to the end of June last 103.76 miles. Building is also going on all over the system, as well as enlargements and yards and such like. All this appears to be done without much addition to the capital account, for there was no change at all in the amount of the common stock of the company during the year, and the increase in the bonded debt was only $869,963. The company, however, possesses betterment and enlargement funds which have been steadily piled up and added to mostly out of revenue, although the nett proceeds of land sales have also been appropriated, and the aggregate of these funds on June 30, 1905, was $43,042,869. This was brought up to $48,804,954 during the year under review, of which $2,012,486 came from land sales and $1,537,500 from the sale of prior lien bonds. The whole of this money was not spent, but $4,125,797 was disbursed, and the debt of the company would have had to be added to by the amount of the prior lien bonds sold, but for the fact that they were already issued and as it were kept in stock in the company's treasury. Doubling of the lines is being pushed forward steadily, and subsidiary lines are likewise under construction, so that the apparent wealth of the Northern Pacific does not exclude the probability that large fresh issues of capital will be required at an early date. Like its neighbours, in fact, it is hungry for money, and it is only putting in 85 lb. rails into its main lines, single or double.

Rohilkund and Kumaon Railway Co., Limited.

In submitting the accounts for the half-year ended June 30 last the directors of this undertaking point out that to save work they have, with the approval of the Government, made certain alterations in the form in which the accounts have been made out in India. This has necessitated corresponding alterations in the home accounts, but the directors believe that the figures still give all the information that the shareholders require. We, however, are not so sure of this, because the traffic statements of the Rohilkund and Kumaon and the Lucknow-Bareilly are no longer given separately. Upon the whole system the total revenue for the period under review was Rs. 13,13,402 compared with Rs. 10,01,754 in the opening half of 1905. A substantial increase took place in the coaching revenue, notwithstanding a falling off in the first class, due to the fact that in 1905, owing to the earthquake at Mussoorie, a greater number of European visitors than usual visited Naini Tal. In the second and intermediate classes, the latter having been introduced on the company's old line, satisfactory increases were recorded, and a very large advance in third class was due to the opening of the Bareilly-Soron Railway and to a considerable development of traffic on the old lines. The season is described as a prosperous one for the districts served by the railway, and the pilgrimage centres and local fairs were well attended. The opening of the line just mentioned also had a considerable influence on the goods traffic, not only producing new business, but causing a considerable development on the old system. Important gains took place in grain and seeds, timber, sugar, and salt, due to good crops and demand for food grains in Rajputana, the decrease that occurred in the first half of 1905 in consequence of the damage caused to crops by severe frosts being more than made good. An increase in construction and revenue stores was mainly in the carriage of materials for the new lines, and the increased quantity of wood fuel for locomotive purposes. Sundries also gave a considerable increase, but the cart and tonga service realised only Rs. 5,382 against Rs. 10,382. The gross earnings of the service were higher, but the expenses were still greater. Working expenses showed the quite moderate rise of Rs. 78,648 at a total of Rs. 5,24,433, and the ratio between expenditure and income was down from 44.30 per cent. to 39.80 per cent. With the exception of special and miscellaneous there was an increase under all heads, the advance in maintenance charges being due to relaying portions of the line with 50 lb. rails and to heavier repairs of stations and buildings. Under locomotive, carriage and wagon, traffic, and general expenses the increases were due chiefly to the opening of the Bareilly-Soron Railway, and the advances must be considered moderate when the much larger traffic dealt with is taken into account. Nett earnings come out at Rs. 7,93,135 against Rs. 5,60,433, of which the company's share is Rs. 2,24,712. Out of this Rs. 86,884 is credited to the Bareilly-Soron extension for interest during construction, and the balance which belongs to the original line has been brought home at the rate of 1s. 4d. per rupee, realising £8,011. After adding £766 brought forward, providing for contribution to provident fund, and making other adjustments, the amount available for dividends is £10,760, and the directors recommend a payment of £3 per cent., together with a bonus of 10s. per cent., the same as for the corresponding period, carrying forward £3,760. During the half-year the capital expenditure for extensions was £96,854, including £3,396 spent on stores, and the directors report that during the dry season and up to the beginning of the monsoon fair progress was made with the works on the Moradabad-Ramnagar to Lalkua-Kashipur lines, although for a part of the season severe epidemics of cholera and malarial fever broke out amongst the working people.

H.H. The Nizam's Guaranteed State Railway Co., Limited.

The gross earnings of this company's broad gauge system for the half-year ended June 30 were Rs. 25,81,866 or an increase of Rs. 2,12,953, compared with the corresponding period of last year. Working expenses, however, went up Rs. 1,84,222 to Rs. 9,67,867, so that the percentage of working expenses to gross earnings is 4.41 higher at 37.40. Receipts from coaching traffic improved by Rs. 73,770, and the goods traffic was larger by Rs. 1,39,607, chiefly from coal, food grains, and seeds. The rise in working expenses was mainly due to heavier charges for the renewal of girders. Balance of nett earnings is Rs. 16,13,999, an advance of only Rs. 28,731, and this converted into sterling at just over 1s. 4d. per rupee produced £108,169 compared with £106,087. After deducting £7,040 payable to the Government of India on account of the Bezwada extension, the balance left is £101,128, and as the sum required to meet the guarantee on the debentures and sinking fund, together with 5 per cent. per annum on the capital stock and debentures on which the guarantee has expired, amounts to £85,000, there is a surplus of £16,128 divisible equally between the Nizam's Government and the company. As usual the company's moiety has been credited to the reserve fund. On the metre gauge system the revenue showed a trifling decline of Rs. 5,147 at a total of Rs. 18,12,541, but the working expenses were smaller by Rs. 6,287, so that the nett earnings are better by Rs. 1,140 at a total of Rs. 9,37,924. The proportion of expense to gross income amounted to 48.25 per cent. against 48.46 per cent. There was

a substantial increase of Rs. 51,835 in the coaching traffic, chiefly from third-class passengers, but this was more than off-set by a drop in goods of Rs. 55,818, due to the failure of the crops arising from unseasonable rains. The nett earnings in sterling worked out at £62,895, and a surplus which appears of £22,395 will be adjusted between the Government and the company at the end of the year.

Anglo-Egyptian Bank, Limited.

It would no doubt be very difficult for an Egyptian bank to keep itself entirely free from the land speculation which has been proceeding in the country for the last two or three years, but we have gathered from the speeches of the chairman of this well-conducted institution that it has exercised every caution in connection with the business. We hope all other Egyptian banks have been as circumspect, because even when the percentage of advances in one direction is not excessive and liberal margins are allowed, there is always a certain risk in making loans on real estate. The Australian crash is not readily forgotten. For the twelve months ended August 31 last the gross profits, after providing for bad and doubtful debts and contingencies, amounted to £194,022 or an increase of £25,446 against the preceding twelve months. At the same time the expenses went up £10,661 to £64,129, so that the balance of profit comes out at £129,893 or an increase of £14,784. With £36,000 or £21,000 more brought in the total at the disposal of the directors is £165,892 against £130,108, and in dividing the credit they commence well by adding £50,000 compared with nothing to ordinary reserve. The staff provident fund receives a little more at £1,893, but the pension reserve is credited with £20,000 less at £10,000, and after raising the dividend from 12½ per cent. to 15 the balance carried forward is £7,000 less at £29,000. The reserve fund is now £50,000 in excess of the paid-up capital, but the pension reserve does not appear as a separate entry. On August 31 the deposit current and other accounts stood at £3,122,534 or a reduction of £151,830 compared with the previous balance-sheet, while bills payable were down from £2,845,260 to £2,168,284. Last year were included in the balance-sheet the liabilities on bills negotiated £1,345,589, with their *per contra* entry, but now there is an item of liability on bills of exchange rediscounted £790,483 not included in the total of the balance-sheet, and mainly for this reason the aggregate is only £6,431,711 against £8,570,322. Notwithstanding the reduction of resources the cash in London at branches and in transit amounts to £948,137 or an increase of £236,724, indicating possibly that in time of speculation and inflated values the directors were anxious to be prepared for any contingency. Sundry investments are not much altered at £349,838, but the advances and other accounts are £690,703 lower at £4,022,662, and the bills receivable are less by £336,450 at £1,086,074. Freehold premises in Egypt have a book value of only £25,000, and the figure is doubtless a modest one.

Samuel Allsopp and Sons, Limited.

We might say a lot about the history of this unfortunate business but small good would now result from opening old sores and it may perhaps be to shareholders' interests to accept the position as it stands and make the best of it. It is in no sense giving our sanction to the amalgamation proposals, which the board has laboriously brought to a conclusion, to say that the fusion of Allsopp's Brewery with the businesses of Thomas Salt and Co. and the Burton Brewery can hardly make the position worse than it is. With the directors' report, which has been made up for a period of 15 months so that the amalgamation scheme might be concluded before its presentation, comes a minority report of the advisory committee appointed rather more than a year ago. It contains little that is fresh or enlightening, but since we have given publicity to the views of other members of this committee it is only fair to briefly recapitulate what the minority has to put forward. They begin by saying that the frequent publication of statements by the committee is inimical to the interests of the business, but it is to be feared that all along there has been far too much desire on the part of interested parties to blot out the past and whitewash those responsible for the terrible losses which have landed the business in its present plight. The committee acknowledge the assistance accorded them by the directors and officials and go on to express their conviction that the fusion of the three breweries whose names are now familiar will prove beneficial. The whole of the beer now being brewed on separate premises with separate staffs could be produced at Allsopp's Brewery alone with the present staff and this should result in a very considerable profit for Allsopp's. We do not know that anybody is anxious to traverse this statement, but since it is practically the only defence which the minority committee can offer it must be said that the case for the fusion is not nearly so strong as the case against. A new director in the person of Mr. W. G. Sinclair has been appointed and will act as joint managing director, the intention being to relieve the chairman from the duties of managing director. During the past year time and attention have been devoted, we are told, to the disposal of the Kursaal, concerning which negotiations are still pending and the result of an examination of the accounts at Burton gives the minority committee the impression that expenditure has been cut down as low as possible consistent with good management. This report is signed by Messrs. D. Jackson and J. H. Kettell, and is not the kind of document to favourably influence shareholders who have made up their minds that the scheme is a bad one.

The directors' report for the 15 months to September 30 is a pitiful commentary upon it. The board has to confess that the value of the beer sold is 5 per cent. less than in the corresponding period, and this follows an aggregate shrinkage during the previous four years of about 13 per cent., but it is some satistion to note that almost the whole of the drop occurred prior to December 31, 1905. Since then the trade has shown a gradual improvement, which is still more marked in the last three months. The gross profit for the 15 months is returned at £388,510 compared with £318,310 in the previous 12 months, so that allowing for the difference of the period a further small decline is shown. Interest received of £45,607 is subject to a deduction for interest paid of £27,993 and the nett credit is £17,614 compared with £13,608, so that in this case the position is slightly improved. Dividends on investments are fully £3,000 higher at £11,834 and rents, after deducting the rents payable on leasehold houses, reached £48,482, or an increase of about £11,000. With transfer fees of £261 the total income is £466,702 compared with £348,355. The various items of expenditure also reveal a very important growth and the general management outlay came to £236,207 or an increase of £49,598. Various repairs and a loss of £2,044 on houses under management required another £35,017 and the item of pensions which has aroused so much controversy appears at £10,823. Whatever may be the opinion concerning the equity of continuing these payments there can be no question that they mean a very heavy drag on the company's profits. Bad debts written off and reserve for doubtful debts, loans, &c., show a small reduction to £13,257, which is something gained and £15,390 has been allowed for depreciation of leasehold property and on the lager beer plant. Further provision for old loans, &c., would have taken £13,849, but the board was able to utilise sundry reserves, apparently not required for other purposes, to the amount of £13,126, so that the debit on this account is only £723. Under all heads the outgo reaches a sum of £343,445 compared with £273,010 and the nett revenue is £123,259 instead of £111,345. Total fixed charges, however, come to no less than £188,362 including an additional sum of £6,307 on account of the compensation fund levy. The deficiency to be provided is, therefore, £65,102 and the position between this year and last is summed up in the statement that taking the corresponding 15 months compared with those just expired the shortage of fixed charges is about £13,000 larger, of which more than half is due to the new compensation fund and expenses connected with it. Coming to the balance-sheet the most important item, perhaps, from the shareholders' standpoint is the debit to profit and loss account which now amounts to £121,030. Trust certificates to the amount of £12,500 have been paid off during the period under review reducing them to £262,400, but even so the fixed debt still amounts to £3,182,400 and amalgamation or no will prove a crushing weight for all time. Liabilities on sundry trade accounts, deposits, &c., amount to £354,075 and a further amount of £182,511 has been raised on loan secured by borrowing powers. Reserve fund for depreciation on realisation of securities held against loans, &c., amounts to £89,887 and few can doubt that all this money will be required. The goodwill remains, as we know, at the figure fixed at the formation of the company and the whole of it amounting to £1,431,988 must be considered absolutely lost. Additions to the premises and plant were £11,729 raising their total to £899,899 and the only depreciation allowance is £3,932 on the lager plant, a fact to which the auditors very properly call attention. Most people would suppose that the present or immediate past was hardly the time for adding to the capital obligations of the company, but it appears that the directors have been acquiring certain groups of properties to which they say an important amount of trade attached. The full benefit of this has not yet been experienced, a phrase with which we are all too familiar, but the point is that these purchases have involved an addition to the freehold and leasehold properties of £143,624 raising their balance-sheet figure, after allowing £11,458 for depreciation, to £1,547,638. Sums owing to customers and on other accounts amount to £390,475, trade loans now appear at £444,696 and sundry trade investments, after deducting reserve for depreciation at £279,626. The amalgamation proposal is now awaiting the sanction of the Court and we need only express the hope that all predictions will be falsified and that the outcome of the fusion will prove beneficial to the long-suffering shareholders of each concern.

Bushell, Watkins, and Smith, Limited.

We cannot say very much that is good on behalf of this brewery business, but shareholders are accorded a great deal of information in the profit and loss account and can see clearly where the company's revenue is spent. During the 12 months to June 30 the gross profit on brewing and spirit trade account amounted to £23,528 besides which £3,532 came in from rents and £172 from interest and transfer fees making £27,231. From this the total charges, including interest on mortgages and loans and allowance for repairs and depreciation of leases, reached £17,152 leaving the nett credit at £10,079. Add to that £852 brought in and there is £10,931 at the disposal of the board. Debenture interest and preference dividend require £7,695 between them and the compensation charge which would be a new item comes to £666 so that only £2,569 remains. It need hardly be said that none of this should be distributed by way of ordinary dividend, but nevertheless the directors propose a payment of 2½ per cent. and place £500 to reserve fund, but in order to accomplish these things the carry-forward has to be reduced to £407. With this £500 the reserve fund will now stand at £8,732 after making good the loss on sale of five Canterbury properties and writing down some of the

company's own debentures held as an investment to their par value as suggested in last year's report. This reserve goes against assets and goodwill of £241,552 and shareholders can judge whether it is sufficient as well as we can. The company's share capital is £160,000 and in addition to the mortgage debenture stock of £60,090 there are mortgages and loans including interest of £35,505. Another £7,980 is owing for trade liabilities and rents payable, and book debts, rents and loans are no more than £7,963. The investments mentioned, in the company's debenture stock, amount to £3,230 and the cash actually controlled by the company is only £237, a further amount of £621 being in the hands of the debenture holders' trustees. Consumable stock is valued at £6,706 and plant, casks, horses, &c., appear at £13,890.

Ashby's Staines Brewery, Limited.

It is much to be doubted if this company has any right to pay a dividend of 7 per cent. on the ordinary shares for the past year. The financial position does not justify it in any way. At the end of September, 1905, the property and goodwill appeared at £626,815 and £4,901 has been since added, making £631,715. Against this there is leasehold depreciation allowance for the year £2,071 and a total sum of £10,000 written off fixed plant, the accumulation, we suppose, of a good many years. Then we further have to deduct £50,000, which the directors have found it necessary to raise on mortgage in order to keep the finances even tolerably straight, and after transferring from brewery rebuilding, new plant account, whatever that is, a sum of £13,177, the balance-sheet value of the property and goodwill is £582,821. As an offset to such a ponderous item the business possesses a reserve fund of just £11,000, and if the directors were willing to pledge their word that balance-sheet figures are realisable values they would display more courage than discretion. In addition to the mortgage of £50,000 just mentioned the company has borrowed £10,000 on loan and £10,524 by means of a bank overdraft, and evidently has the greatest trouble imaginable in keeping things going. A further sum of £13,632 is owing to creditors against debtors of £11,613, and unless the bankers or someone else are willing to come forward with a little more of the ready the company could not pay the dividends it proposes. Profits for the year ended September 30 last, including rentals, and after charging renewals, repairs, depreciation, directors' fees, management, and bad and doubtful debts, reached £32,130, or an increase of about £1,000 compared with the previous year. Interest on debentures was £8,170, as usual, and income-tax drew off £1,848, leaving £22,112. The 5 per cent. preference dividend next takes £7,125 and the 7 per cent. proposed on the ordinary shares requires £8,550, so that in order to add £2,000 to reserve, being twice as much as was put by last year, it is necessary to reduce the carry forward from £2,335 to £2,022.

City Brewery Co. (Lichfield), Limited.

We can compliment the directors of this company upon one thing, and that is that the balance-sheet and profit and loss account show two years' figures, so that comparison can easily be made. This comparison unfortunately is not a good one so far as the year to September 30 last is concerned, as the gross profit shows a reduction of £420 at a total of £28,632, and the nett rentals are £306 less at £5,755, so that altogether the income was £34,387 against £35,113. An effort seems to have been made to economise in various directions as salaries, commission, &c., expenditure for cartage, horse-keep, and carriage, as well as the allowance for bad and doubtful debts, all show fair savings. Debenture interest and bank charges, however, were somewhat larger, and an extra £442 was allowed for repairs, renewals and depreciation. There was also £202 against nothing to provide for the compensation fund, but the savings already indicated mean that the total outgo was £149 less at £26,438. Balance of nett profit is therefore brought out at £7,949 or a drop of £577, and with the addition of £965 brought forward, the directors have £8,914 to distribute. So after paying the preference dividend of 5 per cent., the ordinary shares get a distribution at the same rate, £2,000 is placed to special reserve to meet compensation fund charges and property depreciation, and £1,164 is carried forward. Outlay on the freehold and leasehold properties and loans during the year was rather more than £3,000 raising their total to £294,522, but after providing depreciation the valuation of the brewery land, buildings, plant, &c., is £491 lower at £21,425. Stocks are moderately larger at £16,499, and nearly all the cash held a year ago amounting to £2,095 has disappeared, the balance being now only £46. The directors have reduced the loans by £1,375 to £44,330, but the sums owing by the company are £1,691 larger at £10,582. Ordinary reserve is evidently to remain at £26,500 but the special fund now created increases the total accumulations to £28,500.

Robert Younger, Limited.

Although the preference shareholders have the larger stake in this Edinburgh brewery business, holding £100,000 out of a total of £180,000, they are not allowed to see a balance-sheet of even the most sketchy character, and can have no idea of how the company really stands. The directors merely report that business for the year ended September 30 was good, and that it resulted in a nett profit of £20,062, after paying directors' fees and making ample provision for depreciation and doubtful debts. This was £1,927 more than the profit for the previous twelve months, but only £716 was brought in compared with £1,582, giving an available balance of £20,779 against £19,717. Preference dividend absorbs only £5,000, so the directors, after paying the usual dividend and bonus making together 15 per cent. on the ordinary shares, generously transfer an extra £500 at £2,500 to reserve, bringing that fund up to £22,500, and carry forward £1,279 or £562 more.

West India and Panama Telegraph Co., Limited.

Business seems to have been brisker with this undertaking during the six months ended June 30, and the gross revenue from messages, subsidies, &c., increased by £4,226 to £30,999. Expenses, including £1,595 more spent on repairing cables, were £2,451 heavier at £25,681, leaving the nett revenue £1,775 better at £11,318, and with £1,047 or £553 more brought forward and £1,772 received from interest, the disposable balance came to £14,138 compared with £11,794. Out of this it is proposed to distribute 8s. per share on the first preference shares against 6s. per share a year ago, half of the amount representing arrears to December 31, 1905, and the other half being on account of dividend to June 30, 1906, and to carry forward £313. With this payment the arrears on the first preference shares remain at £3,456, but those on the second preference have now risen to £16,808, making a total of £20,265 to be cleared off before the ordinary shareholders can hope to see any return on their investment. A good deal of special work in restoring and partially renewing some of the cables which were broken in the beginning of the year had to be undertaken, and the outlay amounting to £18,271 has been charged to the reserve for depreciation of cables. This brings the fund down to £93,596, and the directors say that they have considered the question of increasing the fund, but in view of the state of the revenue have decided not to make any addition at present. Yet something should be done in this direction as the expenditure on cables, stations, land lines, instruments, concessions, &c., remains at £1,314,756, a figure which is obviously in excess of the real value of the property. The depreciation fund on the cable ship, however, has been increased by £1,297 to £9,161, against a valuation of £37,015. Liabilities to sundry creditors are only £520 up at £6,927, while sundry debtors have risen by £2,631 to £6,833, and bills receivable and cash show an increase of £1,921 at £20,327, but the improvement in these assets hardly represents progress as it seems to be due to the realisation of investments which are £21,099 down at £80,663.

Clerical, Medical and General Life Assurance Society.

The report for the year ended June 30 last shows uninterrupted progress. New insurances to the amount of £753,652 gross, and after deducting reassurances to £708,652 nett, was written, the smaller figure being the largest the society has ever retained at its own risk in any year. The nett premium income was £22,775 and the total premium income £331,817. Income from interest was raised to £175,283, the average earnings being £3 18s. 10d. per cent., and after adding in £15,225, the capital paid for annuities sold, we reach a total income of £524,891, from which claims took away £207,071, while working expenses took over £46,000 or about 13.85 per cent. of the nett premium income. After meeting all outgoings, there was an excess of £239,258 including £13,042 at the credit of the redemption assurance account. This added to the previous accumulations raised the funds of the society at the year's end to £4,564,865. The directors invite all members to meet at the chief office on January 3 next at one o'clock to hear the declaration of the society's 16th quinquennial bonus, which is bound to be a good one.

Trust and Loan Company of Canada.

At the last meeting of this prosperous company it was suggested that half-yearly meetings were unnecessary and that the shareholders should be called together once only in each twelve months. The directors have decided to act on this recommendation and will, therefore, meet the shareholders in May of each year unless circumstances render it desirable at any time to summon an extraordinary general meeting. The accounts, however, will be prepared and presented each six months, and those for the half-year ended September 30 have just made their appearance. They disclose a very flourishing condition of affairs, the income from all sources being returned at £50,786 or an increase of £4,933 against the corresponding period, which in turn showed an improvement of £6,676. Debenture interest, however, was again on a higher scale, requiring £20,979 compared with £19,168, and after providing this, together with expenses in London and Canada £7,630, and other small charges, the balance of nett profit is £20,594 or an increase of not quite £3,000. From this the sum of £5,422 is added to reserve in accordance with the charter of incorporation being a moiety of profits over 6 per cent. dividend, and £15,172 remains for disposal, which is increased to £36,864 by the balance of £21,692 brought forward. This is slightly less than the sum available 12 months ago, but then a special credit of £4,120 was received from interest adjustment account, and in view of the actual increase in profits the directors see fit to add a bonus of 1 per cent. instead of ½ to the regular dividend at the rate of 6 per cent. per annum making the payment for the half-year 4 per cent. compared with 3½ per cent. There then remains £23,864 to be carried forward. On March 31 last the reserve fund stood at £187,354 and has since been credited with interest on investments £2,532 and interest on sums uninvested £351, in addition to the surplus profits now set aside, making a total of £195,660. On the other hand, £325 has been deducted for income-tax, £1,459 for loss on realisation of securities in Canada, and £1,081 for decrease in the value of investments,

leaving the fund at £192,794, subject to a deduction of £500 on account of doubtful debts. The greater part of this fund is represented by high-class investments standing at £157,651, and the cash balance of £28,686 is doubtless ample for a business of this sort. The investments in Canada, most of which consist of mortgages, show a sharp increase to $7,090,390, and sundry debtors are somewhat larger at $297,557, the two items together equalling £1,518,071. Sundry creditors and contingencies account appears at £8,986, and the company owes £45,000 on bills payable and in transit.

Scottish and New Zealand Investment Company, Limited.

The liquidation of this undertaking, which has been proceeding for some time past, is now almost at an end and as practically all the assets have been realised the directors think that the moment has arrived for voluntary winding up with a view to a final distribution to the shareholders. Steps to this end will therefore be taken at an extraordinary general meeting called for Monday next. The company's balance-sheet on June 30 last totalled only £27,687 of which £22,500 consisted of the balance of the share capital after the repayments already made, reserve fund £5,182 and £4 owing on account of interest. The principal assets representing these liabilities were the loans on mortgage in New Zealand £1,047, property on hand £14,549, temporary deposits £7,370, £1,200 of Consols standing at £1,116 and farm stock at valuations £3,114. The operations of the year have resulted in a reduction of the amount lent on properties of £2,817 and an increase in the amount lent on loan of £530, but it is rather difficult to say exactly how the shareholders will stand when the whole of the property has been realised. They cannot get back all their capital in full, as although a reserve fund of £5,182 exists there is a loss to be faced of £7,549 on the Ermedale property which stands in the books at £14,549 and has been sold for £7,000. This the directors tell us was the best price obtainable. There seems to have been great difficulty in selling the property which was foreclosed many years ago, but the purchaser has agreed to take over the stocks at a valuation now being made. Last 12 months the income from all sources was £1,006 against an expenditure of £1,049, but a loss of £754 was entailed on realisations in the colony and the year's operations resulted in a deficiency of £798. This has been deducted from the reserve fund leaving it at £5,182.

Scottish Australian Investment Co., Limited.

As foreshadowed in the last two half-yearly reports this company has now succeeded in extinguishing the balance of its drought losses and as the result of the working for the six months to June 30 is able to make a good beginning with the work of clearing off the arrears of dividend. The season was subject to some fluctuations, dry weather alternating with heavy rainfall in the earlier months and some damage was done by floods to stock, dams and fencing in some parts of Queensland, while in New South Wales operations were impeded by dry weather and frost. As the half-year progressed, however, conditions improved and the season on the whole was so favourable that gross profits including £1,390 realised in London were no less than £25,655 up at £77,279. Administration expenses, income-tax and sundry small charges left a nett profit of £71,547 compared with £45,786 for the corresponding period of 1905 and after meeting debenture interest the amount available was £65,172. Of this the debit balance brought forward swept away £24,747 and the directors propose to pay off three years' arrears of dividend on the 6 per cent. guaranteed preference stock and to carry £4,425 forward. This leaves another three years dividend or £36,000 still outstanding on this stock in addition to which £120,000 is due on the 5 per cent. guaranteed preference stock, so that there is a good deal of leeway still to be made up, but the immediate outlook seems very favourable and given a fair measure of good fortune it ought not to be long before the company is able to start afresh with a clean sheet. Freehold property in land and houses is valued at £551,078 and leaseholds at £58,342 the increase in these two items amounting to £37,869 while pastoral properties have risen by £48,756 to £690,577. With regard to the last-named the auditors state that the deficiency of £56,773 in respect of four of the properties mentioned by them a year ago has been reduced by £2,501 and that they learn from the directors that the sums standing against pastoral properties as a whole are more than covered by the values shown in the valuations received from Australia. Loans secured on land, crops, &c., are £14,782 lower at £27,665 and other securities have increased by £15,198 to £29,557, but the loans on pastoral properties which a year ago stood at £18,653 have now disappeared from the balance-sheet altogether. Sundry debtors and bills receivable are £12,576 down at £14,294 while cash comes to £40,957 more at £98,230 against which liabilities on open accounts have dropped to a trifle of £1,710. During the year the sheep on the various stations increased by 108,224, the cattle by 2,821, the horses by 313 and the goats by 729, while pigs showed a small decrease of 27, the totals being 565,762 sheep, 20,390 cattle, 1,793 horses, 857 pigs and 800 goats.

Lanka Plantations Co., Limited.

During the year ended June 30 this company gathered a crop of 1,016,163 lbs. from 2,286 acres, or an average of 444 lbs. per acre, and with an average price of 6.90d. per lb. the amount realised was £29,191. We have not last year's report to make comparisons, but the directors state that the quantity harvested and manufactured exceeds the figures of any previous season, and characterise the revenue derived as fairly satisfactory. In addition, 1,283 cwts. of cocoa were gathered, producing £3,064 against 887 cwts. for £1,940, and with £13 from rubber the total income amounted to £32,268. Expenditure in Ceylon, less £1,182 charged to capital account, took £24,316 and £143 was paid for insurance, leaving a balance of £7,809, of which interest on loans, administration expenses, and other charges took £1,535, and with £3,402 brought forward the amount available came to £9,676. Preference dividend having been paid, £923, being one-tenth of the amount charged to suspense account during the ten years to June 30, 1905, is written off, and a dividend of 3 per cent. is paid on the ordinary shares, leaving £3,415 to be carried forward. Capital expenditure for the year came to £1,182, making a total to date of £174,557, and against this the company has no reserves of any kind. In fact, it seems to be pretty hard up, as floating liabilities, including £3,900 due on loans and £13,429 on bills payable, amount to £17,922 to meet which there are £4,335 to come in from sundry debtors, £6,345 held in produce unsold and £1,700 in cash. The suspense account still stands at £4,019, and at the present rate of progress will take about six years to wipe out. Rubber planting, however, is being pushed forward as vigorously as circumstances permit, and if the company can continue to obtain the satisfactory price of 5s. 6d. per lb. secured on the 50 lbs. sold last year, it may be able to pull round in time.

"Irish Times," Limited.

This newspaper evidently enjoys a very wide popularity, as the profit for the year ended September 30, after meeting ordinary charges of every kind, came to £32,807, besides which £254 was received for dividends, interest, and transfer fees. Income-tax for the year was £1,476, and £2,341 was allowed for depreciation on premises, plant, &c., leaving the nett credit at £29,244. This profit provides the dividend on the 5¾ and 6¾ per cent. preference shares, together with distributions aggregating 10 per cent. on the ordinary shares, with £1,000 placed to reserve and an increase in the carry forward from £2,122 to £2,863. Including a capital fund of £3,500 the total reserves will now amount to £8,365 against the item of premises, plant, goodwill and copyright of £441,513, and investors who take shares in a business of this sort are no doubt aware of the risks they run. Should anything happen to interfere with the prosperity of the journal a large part of the assets would, of course, immediately become quite worthless, and for this reason the directors would perhaps be better advised to pay a smaller dividend and place rather larger sums to the reserve fund. The sum due to sundry creditors is £12,482 against £25,050 to come in from debtors, but the existence of a debt reserve fund of £3,726 rather gives the impression that the whole of this item is not quite good. Investments at cost have a balance-sheet value of £7,081, and cash in bank and on hand stands at £16,798.

Components, Limited.

The gross profit earned by this cycle business for the year ended August 31 was £16,533, including £694 for rents and £71 for transfer fees. This is an improvement of some £4,400 compared with the previous twelve months, but the nett balance of £5,552 is only about £1,300 larger. The charge for maintenance and alterations of plant was £3,270, and depreciation required £2,449, while maintenance and alterations of buildings took a further £556, interest on bank charges reached £903, and debenture interest £3,802. The directors explain that the policy of ceasing to manufacture motor bicycles has been carried into effect. Considerable progress was made during the year in the disposal of stocks, and the balance left on hand will be sold during the current period, but the realisation of motor stocks as foreshadowed a year ago has entailed greater sacrifices than could be covered by the reserve set aside for the purpose, and the balance had to be met out of revenue of the year. The motor car department has been sold to an entirely separate company, but as the legal formalities relating to the transfer of the property have not yet been completed, the sale is not dealt with in the present accounts. The expansion of the business still continues, we are told, and the volume of turnover is steadily increasing, the contracts and orders on hand indicating that this improvement will be maintained in the new season. Shareholders will be very glad to hear such news, because they cannot have any of the profit earned during the past year. There was a balance of £9,507 brought in, making with the nett revenue a total of £15,059, and the directors recommend that the whole of this sum should be carried forward. The freehold and leasehold land and premises have a balance-sheet value of £71,739, while the plant, machinery, tools, &c., are entered at £66,230, and as no reserves are possessed against these the directors are probably wise to keep the balance of profit in hand. At the date of the balance-sheet the company owed £29,292 to sundry creditors against debtors £47,457, and as the stock is valued at £63,876 the company is fairly well supplied with working resources. Patent rights appear at £5,075, and investments, valued by the directors, are put in at £29,070, but we imagine the last item is a rather doubtful quantity.

Lady's Pictorial and Sporting and Dramatic Publishing Co., Limited.

The special outlay for improving the publications of this company foreshadowed twelve months ago took place during the year ended September 30 last, and the directors now say that the result has been of a satisfactory nature. Revenue both from circulation and advertising has increased, but as the entire expenditure has been charged to the income of the year the result of the forward policy does not yet show itself in the profit and loss account. The profit on publications, indeed, shows a

further sharp shrinkage to £18,362, and with interest on investments and deposit of £897 and £6 from transfer fees the revenue from all sources is £19,265 against £21,529. Out of this the directors' fees take £1,250, and after paying the preference dividend the board has to reduce the ordinary share dividend by another ½ per cent. to 5, and the credit to reserve fund from £2,000 to £1,000. The balance carried forward is then reduced from £4,393 to £3,909. On the face of it this cannot be considered a very satisfactory display, but as the exceptional outlay mentioned is said to have run to several thousand pounds we may perhaps give the company a year or two to see if the special measures taken to improve the publications bear good fruit. The company, of course, can never be financially strong because the assets almost entirely consist of the "purchase of the business and copyrights," purely intangible matter, standing at £329,847, against a capital of £349,993 and a reserve fund now reaching the trifle of £21,000. A fair quantity of liquid assets is possessed as the reserve fund investments stand at £20,096, although their market value is only £18,540, and cash and Consols represent a further £15,594, while sundry creditors are only £4,696, against debtors and bills receivable of £17,267.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Salvador.—12s. per share for the year ended June 30, on the preference shares, being at the rate of 6 per cent. per annum.

BREWERIES.

St. Louis.—8s. per share on the preference shares (making 8 per cent. for the year) and 7s. per share (or 3½ per cent.) on account of arrears.

MINES.

Brilliant and St. George United.—6d. per share payable on Dec. 14.

Broken Hill Proprietary Block 14.—1s. per share on the ordinary shares and 1s. 3·6d. per share on the preference shares.

MISCELLANEOUS.

Apollinaris and Johannis.—Interim for six months ended Sept. 30, at the rate of 5 per cent. per annum on the ordinary shares.

Borax.—3d. per share.

Carthagena and Herrerias Steam Tramways.—Interim of 2 per cent., or 4s. per share, payable 21st inst.

Claudius Ash, Sons, and Co.—Interim on the ordinary shares at the rate of 6 per cent. per annum.

Egyptian Estates.—Interim on ordinary shares of 1s. per share.

Fine Cotton Spinners and Doublers.—Interim at the rate of per cent. per annum on the ordinary shares for half-year ended Sept. 30.

J. Lyons and Co.—Usual interim at the rate of 25 per cent. per annum on the ordinary shares for half-year ended Sept. 30.

John Bland and Co.—Interim at the rate of 5 per cent. per annum for half-year ended Oct. 31.

Kenward and Court.—Final of 3 per cent., making 6 per cent. for the year ended Sept. 30, carrying forward £257.

Land and House Property.—4½ per cent. on the ordinary shares for year ended Sept. 30, placing £1,000 to reserve, and carrying forward £1,517.

Lockharts.—On the preference shares at the rate of 5½ per cent per annum for six months ended Dec. 30, 1905.

Nantyglo and Blaina Ironworks.—£2 10s. per share on account of arrears on the preference shares.

New Zealand Loan and Mercantile Agency.—At the rate of 5 per cent. per annum for year ended June 30.

Provincial Tramways.—Final of 4s. 6d. per share on the ordinary shares, making 7s. 6d. per share for the year.

R. E. Jones.—10 per cent. for year ended Oct. 31.

Tredegar Iron and Coal.—Interim of 2½ per cent. for half-year ended Sept. 22 on the amounts paid up on the "A" and "B" shares.

Union Steam Ship of New Zealand.—8s. per share for six months to Sept. 30 with a bonus of 4s. per share from the insurance fund.

Wm. Roberts (Tipton).—Interim at the rate of 10 per cent. on the ordinary shares.

BOOKS RECEIVED.

Report of the First Indian Industrial Conference, Held at Benares on December 30, 1905.

The Law Relating to Railway Traffic, by Thos. Waghorn. (London) Effingham Wilson, 54, Threadneedle Street, E.C. Price 1s.

Forms and Precedents for Use of Accountants. Vol. I.

Abbreviations to Judicial Trustees. Edited by Geo. Lisle, C.A., F.F.A. (Edinburgh) W. Green and Sons, Giles Street, Edinburgh.

We are requested to state, for the information of policyholders in the Mutual Life Insurance Company of New York, that ballot papers (in sealed envelopes) may be sent to the London office, 16, 17, and 18, Cornhill, E.C., whence they will be forwarded in bulk to the head office in New York, and, further, to say that if ballot papers have been lost or mislaid, forms may be had upon application to the company's representative.

UNION OF LONDON AND SMITHS BANK.—Deposits and current accounts on Oct. 24 came to £35,678,322, acceptances and liabilities by endorsement to £4,132,669, and other liabilities to £633,046, while assets consisted of cash in hand and at Bank of England £5,620,541, money at call and short notice £7,611,385, investments including reserve fund £6,347,527, and discounts, loans and other advances £20,045,734.

TRADE AND PRODUCE.

WHEAT.—Quotations for cargoes on the London market have remained practically unchanged all the week, business being extremely quiet and buyers apathetic. Deliveries of home-grown wheat, on account of the wet weather, have been of late more or less damp, and holders consequently found it difficult to effect sales except at a reduction. This is shown by the farmers' deliveries for last week, which totalled 63,764 qrs. averaging 26s. 6d., as compared with 76,726 qrs. averaging 28s. 3d. a year ago. Imports of foreign wheat were likewise smaller, being 289,100 qrs. as against 368,697 in the corresponding week last year, though those of flour were higher at 101,367 qrs. by 34,834. During the early part the United States markets were sustained chiefly on European advices which for the most part prove less depressing than anticipated. At the same time, there was neither real strength nor strong support, and frequent scalping and bear sales checked the effect of any tendency to rise. Towards the middle of the week, however, more activity was shown, as favourable news from European markets was backed by rumours of frost in Argentina, both of which led to considerable speculation until Bradstreet's estimate, which put the wheat in sight East of the Rockies at 70,987,000 bushels as compared with 69,533,000 last week and 56,235,000 last year, led holders to realise.

WOOL.—Arrivals to date for the sixth and last series of colonial wool auctions for the current year (commencing on November 27) amount to 49,193 bales, of which some 10,000 have been forwarded direct to the Continent and Yorkshire. On the Bradford market a sensational change took place at the beginning of the week, forties tops making an advance of ¼d. to 1d., while in some cases by way of protection as much as 1d. to 1½d. rise was asked. The advance was due to the heavy buying in tops and yarns in face of the undoubted scarcity of these materials, and there seems hardly any doubt but that prices will go even higher. In the Leeds district all classes of woollens are active, and the majority of manufacturers extremely busy. On Wednesday last over 11,000 bales of low foreign wool were offered for sale in London, but though the trade was fairly well represented transactions were confined within narrow limits, only about one-third of the offerings being disposed of, chiefly to home consumers.

LINEN.—Supplies of flax have been of fair size at the country markets, the quality for the most part being medium, while the demand has been brisk at stiffening prices. For yarns likewise the market continues strong, and a substantial volume of new business has been secured of late. Spinners have assumed a more difficult attitude than ever and will only enter into moderate transactions at extreme top rates, asking even then ample time for delivery. All departments have shown signs of activity, but tow yarns from 20's less upwards have received most attention, and most of these numbers have appreciated considerably. In brown linens a good tone still prevails, and though no marked change has taken place the volume of business still continues highly satisfactory. Moreover, the position of the manufacturers indicates a further accession of strength in the near future, not, perhaps, from any material expansion of consumption, but rather from the point of view of prices. Linen and union goods are both regarded as still too low, and apart from any further increase in yarns it is thought that makers must secure better terms for fresh engagements. For one thing, competition for business has seldom been as low as at present. German manufacturers are loaded up with orders that will carry them well through the greater part of next year, and are consequently by no means anxious to increase their commitments, while the French threaten to close down their mills unless they get better rates. These there should be no difficulty in getting, since buyers, no matter what they say to the contrary, will pay advanced prices, simply because they cannot cover their wants except on sellers' terms. As regards the individual branches of the manufacturing trade, there is nothing new to report save that any move would make towards improvement. Home and foreign trade in bleached and finished linens has, on the whole, been satisfactory. Its character has been of a steady, uneventful nature, but at the same time the aggregates have mounted to a respectable total, while prices have ruled firm with a strong tendency to mount higher.

COTTON (from our Manchester correspondent).—Although our market during the past week has been rather unsettled owing to the irregularity of American cotton in Liverpool, the amount of business going on has been of very fair extent. The all-round inquiry for piece goods is encouraging, and shippers have seemed more inclined to give out orders of weight. American cotton is very uncertain, and it is difficult for buyers of cloth or yarn to know what to do. The ultimate output of the crop is a matter for speculation, and the various reports from the belt influence the raw cotton markets either one way or another. In cloth for India numerous bids have been made to sellers, quite a number of which cannot be entertained. The demand, however, is so extensive that a fair quantity of orders have been entered. In various makes of cloth Calcutta and Bombay buyers have bought to an encouraging extent. Shirtings and lighter goods have been in demand. Dhooties move slowly, the bids not being of a practicable character. China still lags behind, and no improvement can be reported in the turnover. A little has been done here and there for Japan and other minor outlets of the Far East. The Continental markets continue healthy, but exporters find both price and delivery against them. A fair business has been entered for the Levant and Egypt. Those makers of cloth who also spin have recently

considerably increased their order lists, as their quotations are more reasonable than the prices asked by manufacturers who use bought yarn. T-cloths and Mexicans are stiffly held owing to deep engagements, but fresh business is not easily arranged. Printing cloths have moved off a little better in some quarters. Sateens and coloured woven goods are steady, with a fair turnover. Healthy reports continue to come forward from the home trade houses. Clearances are on a satisfactory scale, and the outlook is encouraging. It is understood that preparations are being made in an extensive manner to meet the spring trade. Home trade American yarns have continued well held, with a healthy demand in both twist and weft. Large contracts are not often mentioned, but spinners meet with enough business to keep quotations stiff. Shipping bundles have not moved quickly, but producers have plenty of work to go on with. Bolton spinnings have gained strength and close very strong. Order lists for spinners are more extensive than at any time this year. Full rates have to be paid for anything wanted.

In New York the cotton market opened steadily, and subsequently improved on good buying. Realisations quickly followed, and prices weakened on bearish private crop advices. Later, there was a sharp rebound, owing mainly to buying by spot houses, in anticipation of the revision of the differences between cotton grades on the 21st inst., and the market closes firm.

Copper.—Though at times quotations showed signs of irregularity, the general tone of the market this week was firm, and prices have, on the whole, kept steady. No signs of any change in the position have made their appearance, though for the time being the monetary position tends to check operations in the States. On the other hand, demand has unquestionably outstripped present production, and consumers, particularly those on the Atlantic, are now providing for their requirements as far ahead as they can. At the close prices show a firm tendency at £100 17s. 6d. for spot and £102 2s. 6d. three months.

Tin.—Eastern advices were firmer all the week, though business there was small. The market here, however, kept prices steady on the whole, though occasionally a set-back took place on offers for cash, but with no disposition to press forward sales the loss was on every occasion quickly made good. The market closes firm at the following prices:—Cash, £195 5s.; three months, £196 15s.

Iron and Steel.—Animated business is still reported from all centres of the iron and steel trades. There are no signs of a falling off in consumption. On the contrary, manufacturers of all classes of iron are working at full pressure, not only on orders for home account, but for foreign also. There has again been heavy business for the United States and Germany, accompanied by further withdrawals of pig-iron from public stores. In Germany the complaint is still general that deliveries of all sorts are far behind. All kinds are scarce there, and Germany has not only been a large buyer of pig-iron here, but has taken plates and rolled steel of various classes. All this, of course, has helped to keep up prices in every department. Warrants have been going out of Connal's public store at a great pace during the month. It is calculated that up to the present 50,000 tons of Cleveland pig-iron have lately been sold to the United States. In Scotland a similar condition of activity prevails, justifying almost the word "boom" in the description of the pig-iron market.

Rubber.—Messrs. W. J. and H. Thompson in their fortnightly circular state that during the past two weeks the market has been easier. Receipts during the closing days of October arrived in larger quantities at Para than at any time during the previous part of the month and had the effect of making possible buyers shy of operating. Hard cure fine spot declined to 5s. 2d. and soft fine to 5s. 0¾d., but Cancho Ball continues in good demand and is evidently in favour with manufacturers. Receipts at Para for October totalled 3,030 tons compared with 3,580 tons in October, 1905; receipts for this month up to the 10th inst. amounted to 550 tons. At the public auction of Plantation held on November 9 453 packages were offered—372 from the Straits and 81 from Ceylon. On the whole, the market was steady at slightly lower rates, but it was noticeable that more discrimination was shown in buying sheet and biscuits, pale thin quality receiving most attention, while thick dark sheet with immature rubber in it was only saleable at a reduction. In the auction on the 10th there was a good demand for Central American and Mozambique, which sold at full to advancing prices.

Sugar.—The sugar market has been rather steady since Thursday, though a temporary rise in May beet from 9s. 1d. to 9s. 2¾d. could not be maintained. There has been little variation in white sugars, the trade still working from hand to mouth. October statistics are complete, except for Belgian exports, and Mr. Czarnikow does not consider the figures unfavourable, the German consumption being maintained at last year's full level, and America melting 24,000 tons more. The quantities taken by non-statistical countries show a falling off, but are subject to slight corrections. Belgian exports on basis of production and stocks would calculate at about 53,000 tons, which is out of the question, says the same authority, though a preliminary figure of 30,000 tons has been taken, but by United Kingdom imports (12,000 against 16,000 tons), and one American steamer, last year's figure should not be exceeded so much. It seems that another mistake in stocks must have been added to a previous error. Complaints about the French production still continue, various small factories have finished work with 50 to 60 per cent. of last year's weight, and others are following shortly. In the United States buyers are still apathetic, and quotations remain unchanged.

Tea.—The Board of Trade figures published last week showed a decrease of fully 7,000,000 lbs. in the imports for the five months ended October 31, and Messrs. W. J. and H. Thompson state that a belief is now gaining ground amongst buyers that the total Indian supplies are likely to fall short of requirements. Fears of such a contingency have stimulated the demand, especially for teas under 8d., and fair common tea has been in greater request than for some months past, with the result that prices closed ¼d. to ½d. above those ruling a fortnight ago. Useful liquoring qualities at about 7d. were also higher, and better grades were firm at about recent levels. Supplies of Indian tea offered amounted to 41,178 packages, and the average realised was 8.07d. against 8.02d. a week ago, and 7.46d. last year. Importers brought forward 18,873 packages of Ceylon, there also was a good inquiry, especially for medium grades, between 6d. and 8d. per lb. Higher priced teas, on the other hand, were slightly weaker, and as the quality generally of the teas now offered is not quite so good, the average price worked out at 8.46d. compared with 8.48d. last week, and 7.56d. in 1905. Only 1,553 packages of Java teas were offered, and with keen competition prices were better for all grades.

HAMPTON PLAINS ESTATE.

It is no surprise to learn that this company is to be reconstructed, for it has long been apparent, despite the oft-expressed hopefulness of the directors, that it was in a bad way, and we are not sure that reconstruction is better than final liquidation. At the end of 1901 the directors made an issue of £100,000 debentures. This was secured by a trust deed under the provisions of which a redemption fund of not less than £5,500 per annum should take effect this year, but the company has not the cash to meet this. All interest to the end of September has been paid. Before, therefore, the shareholders can sanction reconstruction it will be necessary to get the approval of the debenture-holders to several concessions asked of them. These are that the new capital shall not be burdened with the payment of debenture interest until after November, 1910, that thereafter the fixed interest shall be 4 per cent. instead of 6, but should in any year the company earn 10 per cent. on its share capital, then the debentures will get 6 per cent.; that the 10 per cent. premium on redemption be waived; that the commencement of the redemption drawings be postponed till 1912; that the trustees will then have it in their discretion to dispense with these wholly or in part; and that the proceeds of any of the existing assets shall be applied to the redemption of the debentures. Such are the concessions asked for, almost enough to take their breaths away, and the trustees have accepted them. Indeed, we are told, the greater number of the debenture-holders have agreed to sacrifice so much. As for the ordinary shareholders, in lieu of the existing shares of 16s. each, 372,083 of which are issued and fully paid, they will have the right—not a precious one—to apply for an equal number of new shares of 10s. each, with 7s. 6d. paid up, leaving a liability of 2s. 6d. per share. This will supply £46,510, if all are taken up, but there is really no inducement to anyone to pay a fifth of the price, the recent making-up figure. And what will the directors do with the money if they get it? They merely promise to take "especial care to improve the existing assets in any direction which promises to increase the revenue without serious financial risk." What is such a vague promise worth to those who have already lost so considerably in this concern? It is to be presumed this has been the directors' care during the past fourteen years, and the state of things to-day is the outcome of it. And the chances and opportunities of success to-day are undoubtedly less than they were in the early nineties. The directors seem to think there is a profitable opening in taking options over or by purchasing small mining leases which prospectors have carried beyond the first stages. But even if there were such an opening in a place like Western Australia, how far would the new capital go? And what encouragement is there to float such things on the London market? It is significant to learn that the directors have taken no steps to underwrite or guarantee the new shares. Is it because they feel assured the shareholders will readily subscribe them, or because they could find no underwriters or guarantors? Nor do they intend to hold an ordinary general meeting to pass the accounts, but, all the same, have kindly furnished a balance-sheet and profit and loss account to June 30 for the information of shareholders. The profit and loss account covers the very long period of three years and three months, and this action of the directors is in itself not such as to deepen the faith of shareholders in their diligence or anxiety to give them all needful information. The revenue was only £13,456, and the entire expenditure £23,237, showing a loss of £9,781. To this fall to be added £17,925 for debenture interest and £2,000 written off the proportion of commission on the issue of debentures, making the total deficit £29,706, and the aggregate debit in the balance-sheet £40,820. This is a deplorable state of affairs, and there is little or no hope that better will be done after reconstruction. For the assets will still be the same, and a remunerative lot they are! There seems nothing to depend upon but directorial scrutiny in seeking opportunities which may never come. And the risks to prudent men, of seeking eventual success in this direction, are very great.

COMPANY MEETINGS.

A. AND F. PEARS, LIMITED.

SCHEME TO EXTINGUISH DEFERRED SHARES APPROVED.

An extraordinary general meeting of A. and F. Pears, Limited, was held on Wednesday at the Holborn Restaurant for the purpose of considering resolutions having for their object the extinction of the deferred ordinary shares of the company by allotting ordinary shares in exchange for them. Mr. Thomas J. Barratt (the chairman of the company) presided.

The Secretary (Mr. Edward Praill) having read the notice convening the meeting,

The Chairman said: Ladies and Gentlemen,—Your attendance at this present meeting has been called conformably with the promise made by the directors at our last annual general meeting, held here on October 25, in order that the proposal then advanced by an influential shareholder, Mr. H. W. Birks, should be brought forward for consideration. His proposition, as you will remember, is one that has been frequently suggested at, although not hitherto brought prominently before, our meetings —namely, to come to some arrangement for the extinction of the deferred ordinary shares. As the details of this proposition have been fully placed before you in the memorandum which has been posted to every shareholder with the notice of this meeting, in which the great advantage to the ordinary shareholders is fully and plainly set out; and as, furthermore, you are in possession of the fullest and most complete statement of the highly satisfactory position of the company, as furnished to you at the last meeting, of which, also, every member has had a verbatim report, it will be unnecessary for me to go into those details here. Now, ladies and gentlemen, speaking on behalf of Mr. Pears and myself, as the original vendors and the holders of all the deferred ordinary shares, I cannot refrain from saying that, in our opinion, the proposal of Mr. Birks does not appeal to us as being a very generous one, for we are asked to accept in exchange for the dividend of £6,000 a year, which we have received on our deferred ordinary shares, a dividend of £6,000 per annum on ordinary shares, but, at the same time, to relinquish our right to a further sum of £5,000 a year, upon which we have a distinct legal and moral claim. It must, therefore, be obvious to you that in consenting to the proposition—as we at once say we are willing to do—we are actuated now, as we have always been in the past, by a very sincere regard for the welfare of the company, in which we ourselves are so largely interested —indeed, to a very far greater extent than any other shareholders in the concern—and, under the proposed rearrangement, we shall hold not less than one-third of the ordinary capital, in addition to our interest in the preferred shares and debentures, which, after 14 years, is a very practical illustration of the faith that is in us. (Hear, hear.)

THE RESERVE FUND.

I do not anticipate that these statements can possibly be gainsaid, and I will ask Mr. Birks to move the first resolution, but before doing so, if any lady or gentleman in the room would like to ask any questions, I shall be very happy to answer them, so far as the interests of the business will permit. I would only remark that your directors, although they have stated that in their opinion the necessities of the business do not require an extension of the reserve fund, nevertheless they take note of the suggestion of so many shareholders that it should be continued; but it will always be in the discretion of the directors to deal with the question of reserve as circumstances may require. (Applause.

Mr. Dingwall said that he thought the shareholders should feel much indebted both to Mr. Birks for the suggestion he had made and to the directors for their ready acceptance of the proposal. In further remarks the speaker mentioned that a chemist from whom he had recently made a purchase of toilet soap produced by the company had said it was rather a pity that Pears did not make up a little more variety in the way of soaps, such as 2d. tablets, and that sort of thing.

The Chairman said he was afraid the chemist to whom the last speaker referred did not know that the company made a thousand different articles. They preferred, however, to hit hard upon one nail and drive that home, letting the others take their chance.

Mr. Andrew Pears' alluding to another remark made by Mr. Dingwall, said he was responsible for the manufacture of the articles which the company produced, and he was able to say that, although they sent out millions of cakes of soap during the year, they received only some twenty complaints. It was well that the shareholders should know that. (Hear, hear.)

Mr. Ash said that, notwithstanding the circular which the directors had issued, and what it said with respect to the non-necessity of placing anything more to reserve, he considered it of the greatest importance that the reserve fund should be increased. They had to thank the deferred shareholders that it stood at its present figure, for if they had claimed what they were entitled to the ordinary shareholders would have had to sacrifice a portion of their dividend, or else have had no reserve at all. There was no doubt the shares had not stood in the market at their proper price, and he believed the smallness of the reserve had had something to do with that. In more than one newspaper he noticed that prior to the last meeting comment was made upon the sum of £3,500 which was carried to reserve, the statement being made that it was too small. He personally was of opinion that not less than £5,000 should be put to reserve annually, and even then it would be some years before the reserve would reach an amount at which it would be in proper proportion to the capital of the company. At the last general meeting the chairman told them that the property was appreciating rather than depreciating. Well, that was a very satisfactory state of things. The depreciation fund stood at £86,000 odd, and that, for present purposes, might well be left as it was, without carrying any more to that fund. The chairman suggested also that they might have an appreciation fund—(laughter)—and he (the speaker) would be very glad to see such a fund on their accounts. He thought, however, that the present reserve was not sufficient. He was not a stockbroker, nor was he a speculator; but he would like to feel, both on his own account and on that of those who would come after him, that his shares stood in the market at a proper figure.

The Chairman said the directors sympathised with the last speaker and were entirely in accord with him. The vendors sympathised with him for the best of all reasons—in their own interests. They were the largest shareholders in the undertaking, as he had already said, and assuming that the arrangement now proposed was carried through, they would hold quite one-third of the ordinary capital, apart from their interest in preference shares and debentures. It would therefore be seen at once that the interest they had was consonant with that of the other shareholders. He did not think he could add anything further to the memorandum which had been sent out, for it gave the shareholders all the information that the directors had to give. He was letting the shareholders into a secret, however, when he told them that the goodwill would stand at a fewer number of years' purchase than that of any other kindred concern in the country.

MR. BIRKS PROPOSES THE FIRST RESOLUTION.

Mr. H. W. Birks, in proposing the first resolution, said he was very much complimented by the fact of the shareholders gathering there to discuss the proposals which had been submitted, because the whole occasion of their doing so was founded upon the remarks he made at the recent meeting. He was still further complimented by the fact that the directors had paid him the honour of practically reproducing all he said at that meeting as the basis of the circular which they had issued. It was quite unnecessary for him to emphasise the recommendation which he ventured to lay before the last meeting, because a verbatim report of what he then said had also been circulated. In the remarks made by the chairman on the present occasion the vendors spoke of his (the speaker's) proposal as not being very generous. Well, when he spoke at the meeting he did not think of calling it generous. What he said was that he had endeavoured to weigh the claims of the deferred shareholders on the one hand and of the ordinary shareholders on the other, always recognising the great importance of the preservation of the regular allocation of £5,000 at least to the reserve fund, and he left the matter there. However, if he was not generous in making the proposals he did make, the directors had been very generous to him in treating his remarks in the way they had done in adopting them *holus bolus*. He thanked the gentleman who first spoke for his recognition on the part of the shareholders of whatever part he (Mr Birks) had played in leading up to this result. There could be no question whatever that, with the disappearance of these deferred shares from future balance-sheets and the substitution of 60,000 ordinary shares for £150,000 of deferred capital, with a corresponding diminution in the item of goodwill, the balance-sheet would present features even yet more satisfactory than those which they had been accustomed to discuss over and over again at the annual meetings. It was important to remember that the vendors in the case of this company, unlike those in the case of many other companies which had been heard of in recent years, had stood by the ship through fourteen years—they could not call it stress of weather, because prosperity had reigned all the time; but there they had been, and there they remained, and seemed likely to do so; and when the shareholders knew that those gentlemen would henceforth hold a third of the ordinary capital they could not have a better guarantee of the continuity of the able management to which they had been accustomed than that one fact afforded. The market price of the shares, of course, had nothing whatever to do with any board of directors, and he admired a board of directors who rose superior to any consideration of whether shares were high or low; but it must be gratifying to all the shareholders to find that, after all this period, their shares did command the great value which was set upon them in the market. The recommendations he made had been received with accord on all hands. He did not think he would be revealing any confidence which the board had placed in him if he stated that nearly 800 shareholders had written to them acquiescing in these proposals. There was just one exception, and that was in the case of a lady, but he thought that if she were present at that meeting and saw the harmony that prevailed, even she would surrender and would throw in her lot with the rest of them. (Hear, hear.) The resolution which he begged to move was as follows: "That the directors of the company be authorised to enter into an arrangement with the deferred ordinary shareholders whereby the deferred ordinary shareholders agree to accept £60,000 in 60,000 ordinary shares of £1 each in the capital of the company in exchange for the 150,000 deferred ordinary shares of £1 each in the capital of the company now held by them." The shareholders had practically unanimously acquiesced in this proposal, and the newspapers had written almost enthusiastic articles recommending it. He supposed he might fairly reproduce the words of Sheridan in "The Critic," and say,

"Where they do agree their unanimity is wonderful." (Applause.)

Mr. Ash seconded the resolution, which was then put and carried unanimously, amid applause.

THE INCREASE OF THE ORDINARY SHARE CAPITAL.

The Chairman next moved: "That the ordinary share capital of the company be increased to £320,000 by the creation of 60,000 additional ordinary shares of £1 each, ranking for dividend and in all other respects *pari passu* with the existing ordinary shares in the company."

Mr. E. H. Byas, in seconding this, said that, although he was a director, he wished to speak as an ordinary shareholder in the company, and in that capacity he very sincerely and strongly supported the resolution which had just been passed, and also that which was now before the meeting, for he felt quite sure that what had been done was to the advantage of the ordinary shareholders, and, necessarily, of the whole company. They had to thank the deferred shareholders for so cheerfully agreeing to the proposal, because they were giving up a good deal. The main points that had struck him in connection with this reorganisation had been these: In the first place, they got rid of a complicated financial organisation, and the whole thing became a very simple matter. At present they had ordinary shares and deferred shares, but they would get rid of the deferred shares, which, generaly speaking, people did not understand. They did not know exactly where such shares came in, and they did not trouble to find out. From that point of view alone, therefore, it was very important that they should simplify their financial organisation as they were doing. Then there was no doubt about it that they were getting rid of £150,000 and paying £60,000 for it, so that whatever way it was put the operation was to the advantage of the shareholders. Then they would be striking off £90,000 from the cost of goodwill, which would mean that in future the balance-sheet would be on a much better basis than was possible in the past. The company was a very successful one, doing a good business, and for this they were greatly indebted to the chairman and Mr. Pears. As a director, he knew something of what went on. As Mr. Barratt had told the meeting, he and Mr. Pears held a very large number of shares in the company, and were thus immensely interested in it; they showed their interest in it by attending very closely to their duties, and doing their best for the other shareholders. As a proof of that statement, he had only to point to the success of the company. The gentleman who seconded the first resolution referred to the question of the reserve. Well, he (the speaker) was always strongly in favour of proper reserves being set aside, and he thoroughly endorsed what that gentleman said. What they were doing now, however, did not in any way prevent them from making an addition to the present reserve if it were considered necessary. He for one would keep a sharp eye upon that. But they must remember that for some time past they, as ordinary shareholders, had not contributed to the reserve, which had come out of the pockets of the deferred shareholders.

The Chairman: And it is going to come out of their pockets still.

Mr. Byas said the deferred shareholders had willingly submitted to a certain sum going to reserve which might have gone into their own pockets. In the future anything that was placed to reserve would come from the surplus profits after paying the dividend on the ordinary shares, so that they would all share in it. He was assured by Mr. Barratt that the reserve was sufficient for some time at all events. Indeed, he himself believed it was quite sufficient, but it might not always be, and, therefore, they must be prepared, if necessary, to increase that reserve, even at the expense of the ordinary shareholders. The scheme now being submitted was entirely to the advantage of the company in all its aspects, and to the advantage of every shareholder.

The resolution was carried unanimously.

The Chairman further moved: "That the capital of the company be reduced by cancelling the 150,000 deferred ordinary shares of £1 each."

Mr. Birks seconded this, and it was carried unanimously.

The Chairman announced that the second and third of these resolutions would require to be confirmed, and another meeting would be called in due course for that purpose.

Mr. Ferens, M.P., proposed a vote of thanks to the chairman and directors, and Mr. Dingwall having seconded this it was carried, and the procedings terminated.

EASTERN EXTENSION, AUSTRALASIA, AND CHINA TELEGRAPH CO., LIMITED.

The sixty-sixth half-yearly ordinary general meeting was held on Wednesday, November 14, under the presidency of Sir John Wolfe Barry, K.C.B.

The general manager (Mr. F. E. Hesse) read the notice calling the meeting, and other formal business having been transacted,

The Chairman said: The present half-year compares with the corresponding half-year of 1905, when the Russo-Japanese war gave an abnormal impetus to telegraphic communication with the Far East. The gross revenue for the half-year under review amounted, in round figures, to £303,000, against £348,000 for the corresponding period of 1905, showing a decrease of £45,000. This comparison is, however, somewhat misleading, because a considerable amount of revenue earned in 1904 was included in the revenue for the first half-year of 1905, owing to unavoidable delay in adjusting our accounts with other telegraph administrations preventing it from being credited to 1904, to which it really belonged. The actual decrease in traffic receipts between the two June half-years of 1905 and 1906 is, roundly, £20,000, and is entirely due to the exceptional traffic created by the Russo-Japanese war being now at an end. The Australian and other traffics which were not affected by the war continue to show a steady improvement, and the traffic of the Far East is settling down to its normal conditions. As I have said on former occasions, though wars may produce spasmodic increases in our business, there can be no doubt that our true interests are bound up in the real and steady progress of the countries which we serve and for which peace is all important.

The working and other expenses amounted, in round numbers, to £141,000, against £136,000 for the corresponding period of 1905, showing an addition of £5,000, which is accounted for by an increase of about £1,200 in the maintenance of cables, £1,000 in salaries and wages of the staff abroad, £1,000 in stationery and printing, £700 in maintenance and renewals of instruments and electrical apparatus, and to the other increases shown in the accounts. With regard to the item "legal expenses," £435 3s. 10d., this expenditure was incurred in resisting what your directors considered to be an unjust claim by the New Zealand Government for income-tax on the company's revenue from New Zealand traffic. The company's contention was that the tax was only assessable on the revenue earned on the company's cables between New Zealand and Australia, and not on revenue earned on the cables between Australia and India, as was claimed by the Government. The traffic in question being somewhat small, the tax did not represent a very considerable amount, but the principle involved was a very important one, and we felt that we must contest the claim. The Court of First Instance in New Zealand decided the question in the Government's favour, upon which the company appealed to the Supreme Court in New Zealand and the decision was reversed. Thereupon the Government appealed to the Privy Council here, which unanimously decided in the company's favour on all points and dismissed the appeal. (Cheers.) It will also interest the shareholders to learn that after many years' controversy with the British Inland Revenue officials and many appeals to the Special Commissioners of Income Tax against the mode of assessment of the company's profits, having regard to the life of our cables, the question as to the proper amount to be allowed for depreciation of cables has at last been satisfactorily settled by mutual adjustment of views on a subject which I admit is a difficult one, and this question is not expected to be re-opened for at least ten years.

The nett profit for the past half-year was £142,894, and, after adding to it the credit balance brought forward from the previous half-year, there remained an available balance of £163,958. The usual quarterly interim dividends of 2s. 6d. per share, or at the rate of 5 per cent. per annum, have been paid for the past half-year, leaving a balance of £88,958 to be carried forward.

The only cable interruption during the half-year under review which materially affected the traffic was between New Zealand and Australia, when both our cables were broken down for several weeks and the traffic had to be transmitted by the British Pacific Cable. Unfortunately, one of these cables is again interrupted, but as the other is working, the traffic on the present occasion has not in any way suffered. Our c.s. *Patrol* is now on her way to effect repairs and renew the weak portions of both cables, and the journey to and fro will involve her steaming over 10,000 miles. Since the close of the half-year several of the cables belonging to this and the associated companies have been interrupted by typhoon, earthquakes, and other disturbances, making it difficult at times to transmit the traffic with the usual satisfaction to the telegraphing public. As you are aware, many of the cables belonging to the associated companies have been laid not because they were required for the efficient transmission of the daily traffic, but with a view to safeguarding the main lines of communication against total interruption. With this surplus transmission power provided for adverse eventualities, we are enabled under ordinary conditions and circumstances to provide an exceptionally quick and satisfactory service, but when several cables—as sometimes happens without the public being aware of the fact—are simultaneously interrupted, and the whole of the traffic has to be carried by the remaining cables, assisted by the alternative lines of the companies with whom we have working arrangements, it is obvious that the same standard of excellence cannot be maintained during such interruptions, and some allowance ought to be made by the public—and, no doubt, is made by the public when they know the facts—for the difficulties which the companies have so frequently to contend with.

Since I last had the pleasure of addressing you the Pacific Cable Board have opened public offices in Sydney, and, by increased canvassing and advertising, have endeavoured to secure a larger proportion of the Australasian traffic for their cable, but, so far, they do not appear to have met with much success to reimburse them for their additional expense and trouble. I do not think I have anything more to say, unless the shareholders wish to ask any questions. I now move the adoption of the report and accounts.

The Marquess of Tweeddale, K.T., seconded the motion, which was carried unanimously.

Mr. F. U. Fuller said he thought that the shareholders could not separate without passing a hearty vote of thanks to the chairman and the directors, who evidently took the greatest interest in everything concerning the company's affairs. Of course, the shareholders could not always expect the same happy result as that of last year, but the present statement was very satisfactory. What had been done could not have been done

without a great deal of attention on the part of the directors, to whom, therefore, he proposed a very cordial vote of thanks.

Mr. G. J. Stammers seconded the motion, which was carried unanimously.

The Chairman having returned thanks, the proceedings terminated.

CLERICAL, MEDICAL AND GENERAL LIFE ASSURANCE.

The ordinary general meeting of the Clerical, Medical and General Life Assurance Society was held yesterday at the offices, 15, St. James Square, Mr. John Coles (chairman) presiding.

The Actuary and Secretary, Mr. Arthur Digby Besant, having read the notice convening the meeting and the auditors' report,

The Chairman, in moving the adoption of the report, referred at length to the death of the late Dr. Beale, the appointment of Dr. Hartley to fill the vacancy, the retirement of Mr. Whittall, the actuary, and the appointment of Mr. Besant in his place, speaking highly of the services of each gentleman. He went on to say: Since you met here last year the amalgamation of assurance companies has continued, and many of us feel some regret that old landmarks—old companies—have been swept away. There are now only 77 ordinary British life companies, and, with a growing population, there should be ample room for these. During the past year some features in the administration of leading American life offices have attracted attention in this country—these I shall refer to again presently, not, I hope, with any feeling of bitterness, but rather of regret—such a subject needs careful handling. Not many months ago a Committee of the House of Lords was considering, "What steps should be taken, by deposit of funds or otherwise, to provide adequate security for British policy-holders in life insurance companies which have their chief office outside the United Kingdom, but which carry on business in this country." From the nature of their report, it seems unlikely that anything will be done at present, but they wisely recommend that foreign life companies should be made, as far as possible, to comply with the Life Assurance Act of 1870. Looking around the field of life assurance, we are glad to note the prosperity of most of our British competitors; we are glad to have friendly relations with them all, and the reinsurances we give and receive help to cultivate these relations. Some of our competitors, however, coming across the Atlantic have sought business in this country for some time past with great confidence and energy, but in their eagerness for business they seem to have lost sight of the expense ratio problem, and the natural result of spending about 25 per cent. of their premium income is now hindering their progress in this country, and, as their methods are better understood, causing some disquietude in the minds of their existing policy-holders. £25 spent out of every £100 received must almost eat up the amount available for bonus. In British offices the expense ratio is about 13 per cent. on the average. These methods help to remind us that we must not, in our anxiety for new business, prejudice the position and bonus prospects of our existing policy-holders by increasing the expense ratio, or by admitting newcomers with less care, and thus increasing our normal death rate. Thus, if we doubled our new business, it would be no satisfaction to us or to our present assured if their cash bonus fell from, say, 35 per cent. to, say, 25 per cent. We have never ignored this problem—this duty. We shall continue to travel along our old road, making, as hitherto, steady progress, and we confidently ask those seeking assurance to examine the advantages we offer. We are, as you know, much interested in the world of finance—or investments—and the continued depression in first-class securities enables us to invest our savings to yield nearly 4 per cent. all round. I venture to think, however, we may expect that money, or what is called capital, seeking investment will grow, and sound securities, such as we hold, increase in value. Life assurance companies in this country represent large figures in the aggregate, as may be seen in the returns published this year. There we find, omitting industrial companies, that the year's premiums were 24½ millions; sums assured were nearly 700 millions; average interest was £3 15s. 5d., free of tax (ours about the same); invested funds, 334 millions. Any actuary present need not be reminded that the life funds in hand, which now exceed 334 millions, were only 100 millions in 1870, when the famous Life Assurance Act was passed; this speaks volumes for the growth of life assurance in this country. But when these figures are sifted it is seen how largely endowment assurances have contributed to this growth since 1870. The advantages of this form of thrift, the combination of investment with life assurance, are now fully understood, and the figures show a desire not only to provide against early death, but to insure a provision for old age when working days have ended. With the present improvement in trade we may look for a further development in this form of thrift. Coming now to the report we submit to you to-day in respect of the year ending June 30 last, it is in every way a worthy successor of those which have preceded it. We are making good, sound progress; we have never aimed at very large figures, but we must press forward. We have aimed at strong figures—that is, great strength—and the bonus report coming in January, upon which I dare not touch to-day, will show that our hopes are fully justified. Our actuary and the staff are now completing a most careful and thorough investigation of our assets and liabilities, and we know already that the results will be extremely satisfactory. I will deal briefly with the paragraphs in the report in the order in which they stand. You will observe we issued new policies last year for the nett sum of £708,000—that is, we retained that amount as against £627,000 in the previous year—in fact, last year was the best we had ever had. Our nett premiums also show growth, so we have abundant evidence that the society is more vigorous than ever. Our interest, £3 18s. 10d. per cent., was about the same as the previous year; but, as you know, a crushing income-tax comes off this, reducing our nett returns to 3¼. The light mortality of this year completes a quinquennium which is in every way a record. The favourable mortality experience will naturally have its effect upon the bonus to be declared in January. The whole saving of the year was greater than in any previous year (£239,000), and you may like to know where this has gone; it is more than accounted for by increases in mortgages in the United Kingdom (£200,000, in United States railway bonds (£20,000), and in railways guaranteed by the Indian Government (£38,000). Coming now to the accounts before you. It is sometimes hard to give figures, especially large figures, any attractive charm; but I claim for ours that they bring good tidings, the result of great care in the management and strict observance of the sound principles which I have endeavoured to explain at our annual meetings. The figures appertaining to the bonus which I hope to submit to you in January will certainly need no effort on my part to make them attractive. I beg to move the following resolution:—"That the revenue accounts and balance-sheet and also the directors' report now read be adopted and entered on the minutes."

Sir R. Douglas Powell seconded the resolution, and it was carried unanimously.

On the motion of Dr. Theodore Williams, seconded by Mr. Brodrick, the retiring directors were re-elected.

The dividends were formally announced; the Chairman announced the appointment of trustees, and a resolution was passed approving of a retiring allowance to Mr. Whittall of £1,200 per annum.

WHITE PASS AND YUKON RAILWAY.

The ninth ordinary general meeting of the White Pass and Yukon Railway Company, Limited, was held on Monday at Winchester House, Old Broad Street, E.C., Mr. Charles Colin Macrae (chairman of the company) presiding.

The Secretary (Mr. W. H. P. Stevens) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, went through and elucidated the items in the profit and loss account and balance-sheet, which, he said, showed a great improvement. There is, he proceeded to say, a very large gain in revenue; there is a substantial decrease in expenditure. There is the full dividend paid, and there is a larger carry forward. Of course, what I am most pleased to see is that the full dividend has been paid out of the earnings of the year without having recourse to the balance that you have always carried forward from the first year of your undertaking. (Applause.) In other words, looked at from the point of view of the accounts, nothing could be in a sounder, healthier, or more satisfactory condition than your enterprise, the White Pass and Yukon Railway Company, and if you are assured of its stability, it is in every respect a cheap investment, a good investment, and one which you can go to sleep upon. Now comes the question which is always the one which presents itself to you, and that is as to the stability of the investment. As regards the rail division, we carried 14,000 passengers in 1905, as against 11,700 in 1904, and we carried 34,000 tons of freight, against 33,000 tons in the previous year. On the river division we carried 7,600 passengers, as against 6,800, and we carried 29,000 tons of freight, as against 26,000 tons in the previous year. The revenues were as follows:—The gross revenue of those traffics works out at $1,770,000 for 1905, as against $1,720,000 for the year 1904—not a very great difference, for you will observe that the increase is only about $40,000; but the nett revenue works out at $[illegible] for this year, as against about $[illegible]—$598,000, to be exact—in the previous year. In other words, you will see that, although there is only a gain of $40,000 in the gross revenue, Mr. Graves makes a gain of $130,000 in the nett revenue. (Applause.) That, of course, is to me, or to anybody who understands about railway management, by far and away the most satisfactory feature of the whole thing, because it shows that the business is being worked with economy, and that those savings have been effected without in any way affecting the efficiency of the service. It is very easy to effect savings in connection with any mode of traction, such as railways, trams, or anything else, by starving the service, and probably many of my hearers are familiar with cases in this country where you suffer from that state of things, but when you are connected with an undertaking the revenue from which is always increasing, and when you find your passengers and freight increasing, while at the same time you find your expenses diminishing, then you are interested in a satisfactory undertaking. It is then you are interested in a satisfactory undertaking. It is an ideal position—reduced expenditure without [illegible] efficiency—and for that state of affairs we have to thank our local staff. I have on the two previous occasions when I have had the honour of addressing you given you my views, for what they are worth, on the question to which I have already referred—namely, the probable stability of your undertaking, on which, of course, depends its security as an investment.

I have told you in previous years in some detail how I arrived at the conclusions which I had then formed, and I do not propose this year anyhow to repeat myself, or to add substantially anything to what I then said. But I will say this—that, with

a year's added experience, my belief in the stability of the undertaking is not one whit lessened, but is, on the contrary, confirmed and strengthened—strengthened by what, in some respects, on a mere first and hasty glance, might be deemed discouraging features—namely, the shifting and moving populations, with a reduction of population at certain points served by our railway. Closer investigation, however, shows that that does not mean a passing away, but a redistribution, as you may say, of the population. I do not propose to anticipate what I shall have to say, if I live until this time next year, regarding the operations of the year that we are now in, but the experience of this year—1905—shows you that that fact to which I have alluded has not diminished the volume of your traffic either in numbers or in freight carried; and that, of course, is the absolute, conclusive answer to any misgivings which might arise in consequence of the shifting of the centres of population. I shall not weary you by enlarging on the theme, but I say that, to the best of my conviction, knowledge, and information, there is no reason whatever why anybody should hesitate to invest in the securities of this company from any fear as to the permanency of its business. There is one other general subject upon which I want to say a few words. In our report we have alluded to the very important operation which was carried through in the year under review—the extension of your 6 per cent. navigation debentures. That was a matter that naturally gave your board very great concern and anxiety. I confess that it was with very great reluctance that I personally—and I know I am also expressing the views of my colleagues—consented last year to paying a 5 per cent. dividend before some provision had been made for the redemption of this large sum of no less than £255,000 of second debentures falling due in five years—namely, at the end of 1910; but, after much discussion, we gave way on that occasion, persuaded by the very sanguine reports and estimates given us by Mr. Graves and our advisers as regards the subject of which I have just been speaking—the future prosperity of the territory traversed by your railway, and, consequent upon that, of your railway and river service. As I said before, those statements of opinion have been fully justified, and nothing has occurred to cause us to doubt or to feel less confidence in the opinions so expressed.

The Hon. Sidney Car Glyn seconded the motion, which was carried unanimously, without discussion.

The resolution was then passed approving of the dividend, after which the usual formal business was transacted.

BUENOS AYRES AND PACIFIC RAILWAY COMPANY.

The ordinary general meeting of the members of the Buenos Ayres and Pacific Railway Company, Limited, was held on Monday at Winchester House, Old Broad Street, E.C., Mr. J. W. Philipps, M.P. (chairman of the company), presiding.

The Assistant Secretary (Mr. W. R. Cronan) having read the notice convening the meeting and the auditors' report,

The Chairman said: Gentlemen,—During the past year the increase in our receipts was £354,000, and the increase in our profits was £191,000. This enables us to recommend you a dividend of 7 per cent.; it enables us to put £80,000 to reserve, to put £5,000 to the staff fund, and to carry forward £18,000, after providing out of revenue £57,000 for the renewal of the line—(hear, hear)—and you must remember that this is in spite of the fact that we have a large amount of capital lying totally unproductive. We are building an entrance, we are building important branches, we have large amounts of materials and stores lying out there for the building of these branches, and that money is to-day producing us nothing. During the current year no doubt some of the branches will begin to produce something, but we cannot expect a new branch in a new country to make you large returns in the first or second twelve months, and our access to the port of Buenos Ayres will not produce us anything material for some time to come. Therefore I think you will agree with me that the results we have been able to lay before you for the last year are not only satisfactory in themselves, but are doubly satisfactory when you think of this large capital outlay on which we are paying the interest out of profits now, and on which outlay we are likely to reap good profits in the years to come. After dealing with the reserves, which stood at £759,000, and with the Bahia Blanca agreement, also the improvements at Bahia Blanca, he went on to speak of the proposed working arrangement with the Argentine Great Western Railway. He said: Conferences have been going on between this company and the Argentine Great Western Railway Company, with a view to an arrangement for the closer working of the two companies. I am not in a position to make any statement to-day, but as soon as a definite point is reached, which, it is hoped, will be at an early date, you will be called together to consider the proposals. I may say at once that there will be no question of amalgamation, but the idea is that the two companies should endeavour in future to work more closely together for the improvement of the joint service to the benefit of ourselves and the public. To prevent these remarks of mine giving rise to any speculative element, I had better express my own opinion that there is nothing in the suggested arrangements which should, in my judgment, affect the price of stocks. Furthermore, I wish to point out that the whole matter will entirely depend upon how it is viewed by the Government of Argentina. We must undoubtedly lay the matter before them before we submit anything to our shareholders. Another resolution that you will be asked to vote upon is a resolution to convert into £200,000 of our first preference stock the £20,000 first preference shares which were recently sold at a premium. Those shares now issued complete the authorised issue of our preference stock, namely, £1,200,000. Then you will be asked to pass a resolution to convert into £2,000,000 of ordinary stock the 200,000 ordinary shares numbered 125,001-325,000 inclusive. In conclusion, he spoke most hopefully of the prospects of the Argentine Republic in the future, and paid a tribute to the industry and loyalty of the staff.

The Hon. Arthur Stanley, M.P., seconded the motion, which was adopted.

The following resolutions were also passed:—

"That the directors be and they are hereby authorised on and after November 12, 1906, to convert the 200,000 ordinary shares of £10 each, numbered 125,001 to 325,000 inclusive, into £2,000,000 ordinary stock."

"That the directors be and they are hereby authorised to convert the 20,000 5 per cent. cumulative first preference shares of £10 each, numbered 30,001 to 50,000 inclusive, into £200,000 5 per cent. cumulative first preference stock as soon as such shares are fully paid."

The meeting also approved of a motion authorising the directors to consent to the creation by the Bahia Blanca and North-Western Railway Company, Limited, of 60,000 shares of £10 each.

ARGENTINE GREAT WESTERN RAILWAY COMPANY.

The Argentine Great Western Railway Company held its ordinary general meeting at Winchester House, E.C., on Monday last, under the presidency of Mr. J. W. Philipps, M.P.

The Secretary read the notice convening the meeting and the report of the auditors.

The Chairman moved the adoption of the report and accounts, and remarked that the gross receipts increased from £618,000 to £741,000, and the expenses from £390,000 to £486,000, so the profits were £255,000 compared with £227,000. As the result the directors were able to make up the dividend to 6 per cent. for the year and to carry forward £21,000 after charging £40,000 for renewals to revenue. They would see that the item of compensation for claims stood at £19,000 or £18,000 more than in the preceding year. During the busy season in the past year the company had a great deal of trouble with the traffic, and there was considerable hostile criticism in the Argentine on this account. The difficulty arose out of a congestion of traffic, which was caused by two circumstances. In the first place there was a great delay in the port of Buenos Ayres owing to its not being large enough for the work now thrown upon it. The port was the property of the Government. The other cause of the congestion on the line was that at the time the company undoubtedly did not possess a sufficient number of engines. This, however, was not their fault. He told the proprietors at their last meeting that the directors reckoned upon an increased traffic, and that they had ordered more locomotives, but unfortunately the goods engines which they had ordered were from one firm, which made very late delivery. They were able to inflict a substantial fine on the firm for the delay, but it in no way compensated for the damage it caused to the company. The board had again ordered ample engines and rolling stock, and they had ordered the engines to be out in time for next season's traffic. The delivery had been punctual, and a recurrence of the trouble referred to was not anticipated. The wine traffic increased from 198,000 tons last year to 208,000 tons this year. Almost the whole of this increase was from the province of Mendoza, as the production of wine in the province of San Juan had been stationary. The percentage of wine to the total goods carried decreased from 37 per cent. to 33 per cent., a gratifying feature, it not being satisfactory for a railway to be dependent on one class of traffic. In conjunction with the Buenos Ayres and Pacific Company they purchased during the past year the hotel at Cacheuta, on the Transandine Railway, and they intended to improve the accommodation considerably. It was a large hotel, where visitors stayed during the hot weather. With reference to the prospects for the current year the vineyards covered a larger area by 10 per cent. than they did a year ago, and an increased production of 10 per cent. was, therefore, naturally looked for, but it was impossible to forecast results at present, the season not being sufficiently advanced. So far, however, no damage had been done either by locusts or by weather. The unfavourable features in the position were that the wages bill and the coal bill must be both higher in the current than they were in the past year—a feature which he thought was likely to be common to most, if not all of the Argentine railways. To set against that, however, the traffic showed an increase since June 30 last of £73,000. Having repeated the remarks made by him at the meeting of the Buenos Ayres and Pacific Railway Company with reference to a proposed closer working of the two companies, the Chairman stated that the directors had recently had the pleasure of a visit from Mr. Pearson, the chairman of their local board in Buenos Ayres.

Mr. Rose seconded the resolution.

After a little discussion the motion for the adoption of the report was put and carried unanimously.

The dividend was then approved of.

An extraordinary general meeting was afterwards held, at which a motion was carried for subdividing, as on July 1 last, each of the 87,500 shares of £10 each, numbered 75,000 to 162,500, inclusive, into two shares of £5 each, one to be a preference share ranking equally with the preferred stock already issued and the other an ordinary share ranking equally with the ordinary stock already issued.

A Prospectus is being issued which states, inter alia, as follows:—

This Prospectus has been filed with the Registrar of Joint Stock Companies.

The SUBSCRIPTION LIST OPENED on the 16th day of NOVEMBER, 1906, and will CLOSE on or before the 19th day of NOVEMBER, 1906, for Town and Country.

Mount Cattlin Copper Mining Co.,

Limited.

(Incorporated under the Companies Acts, 1862 to 1900.)

CAPITAL - - - - £200,000

Divided into 200,000 Shares of £1 each, all of which, less the Seven Signatories' Shares, are now offered for Subscription at par.

Payable—5s. per Share on Application, 5s. per Share on Allotment, 5s. per Share on the 1st January, 1907, and 5s. per Share on the 1st February, 1907

DIRECTORS.

JAMES TYHURST, Stondon Massey, Brentwood, Essex, Director of the Alabama, New Orleans, Texas, and Pacific Junction Railway Company (Limited) (Chairman).

HERBERT WILDON CARR, Bury, near Fulborough, Member of the Stock Exchange, London.

SECRETARY AND OFFICES.

E. PROTHEROE JONES, F.C.I.S., 347, Salisbury House, London Wall, London, E.C.

This Company has been formed to acquire and work as on and from the 1st August, 1906, the Copper Mining Property known as the Mount Cattlin Mine, situated at Ravensthorpe, in the Phillips River Mining District, about 32 miles distant from the Port of Hopetoun, in Western Australia.

The property comprises an area of about 50 acres, and is held upon a lease granted by the Minister of Mines of Western Australia, subject to the usual mining laws and conditions.

The minimum subscription upon which the Directors will proceed to allotment is the whole of the present issue of shares, namely 200,000. No part of the present issue has been underwritten.

It is intended to apply for a special settlement in the Shares on the Stock Exchange, London.

Applications for Shares must be made on the form accompanying the full Prospectus of the Company (upon the terms of which Prospectus applications for Shares will alone be received), and forwarded to the Company's Bankers, the Union Bank of Australia (Limited), 71, Cornhill, London, E.C., with the required deposit of 5s. per share.

Full Prospectuses and Forms of Application can be obtained from the Bankers and Brokers, and from the Registered Office of the Company.

London, dated 15th November, 1906.

BONMAHON COPPER MINES.

An extraordinary general meeting of the Bonmahon Copper Mines Development Syndicate was held yesterday at Cannon Street Hotel, E.C., Sir J. Power, the chairman, presiding.

The secretary, Mr. H. J. Dixon, having read the notice convening the meeting,

The Chairman said they were called together to approve an agreement which the directors, after many months of consideration, had arranged, and he was glad to say that the observations he made at the statutory meeting had been verified in a remarkable degree. He then pointed out that this was not the starting of a new industry, but the re-opening of what was once a dividend-paying and most prosperous copper mine. Like many other mines in Ireland, the Bonmahon was closed down not for the want of copper, there being an abundance of copper, but because of the tremendous fall in the price of the metal. Thirty years ago it was only £35 per ton, and at the statutory meeting it was £80, and showed indications of going higher. Then 30 years ago the most primitive methods were in use, and these were most expensive, so that it was impossible to pay large dividends. Another matter mentioned was that the idea that the sea water was in the mine had been proved to be untrue; there was nothing but surface water which had been accumulating. At the floating of the mines copper was £30 per ton; to-day it is over £100 per ton, and considering that they had an abundance of copper the prospects were very excellent. They were all satisfied with the success of the company, which was indeed a triumph. They were pioneers in the revival of the mineral industries of Ireland, and believed it was the beginning of a new era which would place Ireland amongst the biggest contributors of copper to meet the ever-increasing demand. He moved the confirmation of the provisional agreement.

Lord Orford having seconded the resolution,

The solicitor read the agreement, which provided for the formation of a new company with a nominal capital of £200,000 in £1 shares, to take over the assets of the existing company, the shareholders to receive two fully-paid shares for each share they now held, £75,000 to be subscribed in cash, and £40,000 held in reserve.

The resolution was carried unanimously.

Mr. Herbert T. Marks, the general manager, gave some details as to the progress at the mine. Out of the Bonivy section they had pumped 37 million gallons of water, and they were down to the 38-fathom level, which was at the bottom of the mine. On the Tankardstown section they had pumped out 25 million gallons and were down to the crown of the 34-fathom level. The greatest trouble experienced was not in the extraction of the water, but in the extraction of the old timber in the shaft. There was no doubt that the old company must have been past-masters of the craft of timbering, and the pumping machinery under present conditions could not be installed with the system then adopted. The timber, which was harder to-day than when it was put in the mine, had not only to be cut out, but in some cases to be blasted out, hauled to the surface and new timber put in. The cost of pumping, including the purchase of machinery, amounted to £2,261. If they added to that the proportion of general management expenses, which he put down at £500, the cost of pumping had roughly been £2,761, or, on the basis of the extraction of 62 million gallons of water, it cost roughly 10.84d. per 1,000 gallons. In addition they had timbered the shafts and exposed the ore bodies. They had made two shipments of ore; one went about 9 per cent., one about 7¾ per cent., and they were now shipping 5,000 bags of unpicked ore which would go from 3 to 3½ per cent. He estimated that the reserves in the 16 faces of ore amounted to about 60,000 tons, which would go about 3 per cent.

A vote of thanks to the chairman concluded the proceedings.

Blackpool Pier Company.

Business for this company was apparently a little better during the year ended October 31, as the nett revenue, after providing for all charges, came to £9,407 or an increase of £717 compared with the previous twelve months, so that the reduction then shown was more than recovered. With £1,300 brought forward, the total nett credit is £10,708, from which interest on mortgages takes £953 and £56 is written off the stock of chairs, forms, &c., leaving £9,698. Preference dividend requires £831, and a dividend of 10 per cent., together with a bonus of 2 per cent., is again paid on the company's stock, after which £1,000 is carried to reserve and £500 to contingent fund, the balance forward being slightly larger at £1,367. A year ago the improvement and contingent fund got £1,000, but nothing was added to reserve. The cost of the pier, including the jetty and new entrance, remains at the old figure of £112,797, and in view of the absence of direct depreciation allowance, we think the directors should place a larger sum to the reserve fund and declare smaller dividends. We do not know how long the pier is expected to last, but with the addition now made the reserve fund is only £11,000, which seems a very small accumulation considering that the company has been 44 years in existence. There is, however, the contingent and improvement fund already mentioned, and this now amounts to £9,648. It was built last year to £9,548 by the credit of £1,000 mentioned, but £400 was spent in redecking the pier, &c., reducing the account to £9,148, and the addition of £500 now proposed will restore it to the figure named. Floating liabilities amount to £1,300 against only £32 to come in from debtors, but the cash balance is fair at £9,328.

This Prospectus has been Filed with the Registrar of Joint Stock Companies.
The Subscription List OPENED on THURSDAY, November 15, 1906, and will CLOSE for TOWN and COUNTRY on or before MONDAY, November 19, 1906.

The Landaulette Motor Cab Company, Limited.

(Incorporated under the Companies Acts, 1862 to 1900.)

CAPITAL £75,000

DIVIDED INTO 75,000 SHARES OF £1 EACH.

ISSUE OF 70,000 SHARES.

The whole of which, with the exception of the amounts payable for preliminary expenses of forming and issuing the Company and guaranteeing Capital, will be available as Working Capital.

PAYABLE AS FOLLOWS:—5s. per Share on Application; 5s. per Share on Allotment; and the Balance as may be required.

SECRETARY AND OFFICES (pro tem.).

Stanley H. Bersey, A.C.A., 41, Coleman Street, London, E.C.

PROSPECTUS.

This Company has been formed to take over the benefit of a contract with the Farman Automobile Company, Limited, whereby the latter undertake to supply, at the rate of 12 a month, at the price of £300 each, up to 150 of their "Mascot" Cars of a design specially suitable for cabs for public and private hire, and also to take over the benefit of an option to take a lease of premises at Caroline Place, Fulham Cross.

The cabs will be of 8-10 h.p., geared to 4, 12, and 18 miles and upwards an hour; the bodies will be of the landaulette type, and in appearance similar to the electric landaulettes which have been so much in favour with the public.

The option over the premises at Caroline Place, Fulham Cross, S.W., is for a lease for ninety years at the low rental of £200 per annum. They are well adapted for the business proposed to be carried on, have a floor space of over 10,000 square feet, and with slight alterations can be made into a good garage, large yard, store-rooms, offices, &c.

The motive power of the cab will be petrol, of which there will be carried sufficient for 150 miles.

The engine will be the world-famed "Aster," and the arrangements of gear, control, and general detail of construction will be simple and effective. The cab can carry five persons in addition to the driver, with provision for luggage, and will be constructed to comply with the latest regulations of the Scotland Yard authorities.

A contract for a number of the cabs has already been made by the Farman Automobile Company, Limited, for service in Cairo.

Of the 150 cabs to be constructed, it is proposed to run 100 as public cabs with a taximeter attached.

The taximeter is an automatic register of the distance covered, and is in full view of the passenger, showing, at the end of the journey, the amount to be paid, so that no discussion as to the amount payable to the driver (which will be the same as the existing cab fares under the Hackney Carriage Act) is possible.

A vehicle capable of covering great distances in a short time, clean, smart, comfortable, and attractive, and running at precisely the same fares as the existing cabs, should be a commercial success.

CABS FOR PRIVATE HIRE.—The letting out of petrol motor cabs on hire is a business that has not yet been developed on a large scale in London, but it is believed it would be well patronised by the public, and should prove profitable. The Company proposes to set apart fifty cabs for private hiring.

Mr Augustus Pereno, the Managing Director of the Farman Automobile Company, Limited, has made a careful estimate, and the following is a copy of his report:—

To the Directors, THE LANDAULETTE MOTOR CAB CO., LIMITED.

GENTLEMEN,—I have carefully estimated the takings and expenses on the running of 100 8-10 h.p. "Mascot" petrol cabs for public hire, and 50 8-10 h.p. "Mascot" petrol cabs for private hire, and I am of opinion that the following figures are a fair estimate of such takings and expenses—

1.—100 CABS FOR PUBLIC HIRE.

	£ s. d.	£ s. d.
On a basis of 300 days per cab per annum, and taking 30s. per cab per day as a reasonable estimate, the takings would be per annum	45,000 0 0	
Deduct drivers' wages, say one-fourth of the earnings per day as indicated by the taximeter	11,250 0 0	
	33,750 0 0	

RUNNING EXPENSES PER ANNUM, TAKING THE DAILY AVERAGE MILEAGE PER CAB AT 60 MILES.

Petrol, 20 miles to the gallon per cab	£30 0 0	
Lubricants, 200 miles to the gallon per cab	9 0 0	
Pneumatic-tyres per cab	50 0 0	
Insurance per cab	12 0 0	
	101 0 0	
For 100 cabs the running expenses would therefore be		£10,100 0 0

REPAIRS AND RENEWALS

Depreciation, £50 per annum, or one-sixth of cost price of each cab, would be on 100 cabs	£5,000 0 0	
Repairs, 100 cabs at £40 per annum	4,000 0 0	
	9,000 0 0	
		19,100 0 0
Estimated gross profit on cabs for public hire		£14,650 0 0

2.—50 CABS FOR PRIVATE HIRE.

On a basis of 120 days only per cab per annum, and taking the all-round rate of four guineas per day, the gross revenue derived from 50 cabs would be	£25,200 0 0

RUNNING EXPENSES PER ANNUM, TAKING THE DAILY AVERAGE MILEAGE PER CAB AT 60 MILES.

Drivers' wages per day, 7s. 6d. per cab	£45 0 0
Petrol, 20 miles per gallon to the cab	12 0 0
Lubricants, 200 miles to the gallon per cab	3 12 0
Pneumatic tyres per cab	50 0 0
Insurance per cab	12 0 0
	£122 12 0

For 50 cabs the running expenses would therefore be £6,130 0 0

REPAIRS AND RENEWALS

Depreciation, £50 per annum, or one-sixth of cost price of each cab, would be on 50 cabs	£2,500 0 0	
Repairs, 50 cabs at £40 per annum	2,000 0 0	
	4,500 0 0	
		10,630 0 0
Estimated gross profit on cabs for private hire		£14,570 0 0
Total estimated gross profit		£29,220 0 0

Yours faithfully, A. PERENO.

From the above figures, showing the probable trade profits, have to be deducted the working and other expenses, which have been estimated as follows:—

Rent and taxes	£250 0 0
General Manager	300 0 0
Yard Superintendent £200, and Assistant £150	350 0 0
Washers and Attendants, 30 men at 30s. per week	2,340 0 0
Secretary and Office Staff	750 0 0
General Expenses, including Licenses, Rent of Taximeters, &c.	2,000 0 0
	£5,990 0 0

SUMMARY.

Estimated Gross Profit, as above	£29,220 0 0
Less Expenses, as above	5,990 0 0
	£23,230 0 0

To pay a dividend of 15 per cent. on the Share Capital of the Company only £11,250 are required, thus £11,980 are left over for Reserve Fund, Directors' Fees, and further dividend on Shares.

The preliminary expenses in connection with the promotion of the Company (except underwriting commission and brokerage hereinafter mentioned) are estimated to amount to £5,000.

The minimum subscription upon which the Company may proceed to allotment is fixed by the Articles of Association at 1,000 Shares, but, in fact, 15,000 Shares have been underwritten.

Mr. T. B. Burnham is Chairman and Mr. Augustus Pereno Managing Director of the Farman Automobile Company, Limited, and they hold respectively 3,088 Shares and 13,424 Shares of £1 each in that Company out of an issued Capital of 47,824 Shares of £1 each.

The following are the provisions of the Articles of Association as to the qualification and remuneration of Directors—

The qualification of a Director shall be the holding in his own right—alone, and not jointly with any other person—of 100 Shares in the Company, and, if not already qualified, he shall obtain his qualification within two months from the appointment.

The remuneration of each Director (other than the Chairman) for his services shall be the sum at the rate of £100 per annum, and the remuneration of the Chairman shall be the sum at the rate of £150 per annum, and in addition thereto, after the payment in each year of a dividend upon the Shares of the Company equal to 10 per cent. on the amount paid up or credited as paid thereon, the Directors shall be paid for such year a sum equal to 10 per cent. of the surplus profits (if any) of the Company which may remain and be available for further dividend.

The remuneration of a Managing Director shall from time to time be fixed by the Directors, and may be by way of salary, or commission, or participation in profits, or any or by all of these modes.

If any Director, being willing, shall be called upon to perform extra services, or to make any special exertions in going or residing abroad, or otherwise, for any of the purposes of the Company, the Company shall remunerate the Director so doing, either by a fixed sum, or by a percentage of profits, or otherwise as may be determined by the Directors, and such remuneration may be either in addition to or in substitution for his or their share in the remuneration above provided.

Application for a special settlement in the Company's Shares on the Stock Exchange will be made in due course.

Contracts referred to in this Prospectus and copies of the Memorandum and Articles of Association of the Company may be inspected by intending applicants for shares at the Solicitor's offices, on any day before the closing of the list of subscriptions, between the hours of 11 a.m. and 4 p.m.

Applications for shares must be made on the form accompanying the Prospectus, and forwarded with a deposit of 5s. per share to the Bankers of the Company.

If no allotment is made, the application money will be returned in full. If an allotment is made of a smaller number of Shares than is applied for, the balance of the application money will be applied in payment of the amount due on allotment.

A copy of the Company's Memorandum of Association is printed in the fold of the prospectus, and forms part of it.

Prospectuses and Forms of Application may be obtained at the offices of the Company, and of the Bankers, Brokers, Solicitors, and Auditors of the Company.

The Company will pay a brokerage of 6d per Share on all Shares applied for and allotted on application forms bearing brokers' stamps.

Dated Nov. 14, 1906.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 464. SATURDAY, NOVEMBER 24, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied or less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility for statements made therein.

The Investors' Review.

Notes on the 35th Annual Report of the Local Government Board.

It is dated 1905-6 and is signed by Mr. John Burns as President of the Board. In all its particulars and arrangements, however, it is just a facsimile of the reports compiled under and signed by his predecessors, and much of the information contained in it brings us no nearer current facts than March 31, 1904. We, therefore, hope that the energetic Radical President will stir his permanent officials up a little, so that by another year the history may be brought a little more up to date. We should like, also, if he could see his way to rearrange that offending and misleading contrasted summary of the respective growths of the National Debt of the United Kingdom and local debts of England and Wales, which appears on page ccxv. of the report, for it is a compilation useful only to reactionaries as a means of frightening the ratepayer into the belief that he is being ruined by the rapid expansion of local debts. The years 1874-5 are contrasted with 1903-4 in each instance, and the debt of the United Kingdom is shown to have risen only £27,229,540 in that time, while the debts of local authorities in England and Wales alone are greater by £301,062,046. At the earlier date the proportion of the local debt of England and Wales to the National Debt of the United Kingdom was only 12.10 per cent., whereas it is now 49.58 per cent. There is no denying that the growth of local debts has been stupendous, or that in some of its aspects this growth is warrant for no small disquietude about the future. At the same time it must never be forgotten that the bulk of these local debts have been incurred for objects more or less directly remunerative. In this respect alone they offer a most instructive contrast to the National Debt, which is almost exclusively the product of war waste and crime; all of it, indeed, except the money raised on Imperial guarantee to be lent to local authorities.

On page cciii. a summary is given of the amounts of borrowed money expended on various classes of public works up to the end of March, 1904. From this we learn that at least £173,000,000 of the total of £394,000,000, to which the local debts of England and Wales amounted at that date, has been expended upon revenue-yielding undertakings. Thus about £65,500,000 has been sunk in waterworks, £41,192,000 in harbours, docks, piers, canals, and quays, £23,284,000 in gas works, £22,000,000 in electric lighting undertakings, and nearly the same amount in tramways and light railways. Some of these undertakings must have directly paid, but their execution has contributed in every instance to improve the condition of the people, to advance their civilisation and their power of earning their living. To clap a debt raised for purposes of this kind alongside the war debt of the Empire is to mislead. Even the £48,000,000 laid out upon highways and street improvements must be deemed remunerative in an indirect sense, but what are we to say about the £38,000,000 spent on schools and school buildings, excluding poor law schools? Surely that money is also remunerative to the people at large, although it may provide nothing directly in relief of the rates. But how is it that the large public trusts still in existence all over the country have not been utilised to reduce the weight of this burden upon the community?

Whose fault is it that the City Livery companies still misuse millions of public funds?

There are really unremunerative items, however, in this long catalogue of borrowings, and we are not sure that we can look with complacency upon the £13,000,000 or so laid out for poor law purposes, or the £9,500,000 spent on lunatic asylums, or even on the £7,000,000 expended on public buildings, offices, and such-like; but markets, which have taken away nearly £8,000,000, should represent remunerative outlays, and also the £8,209,000 spent on the housing of the working classes. If we add these in, the total amount of money borrowed and laid out by local authorities on revenue yielding enterprises is brought up almost to £190,000,000, and we might go on to point out that the £36,000,000 or so laid out on sewerage and sewage disposal must also be beneficial to the communities by whom the money has been spent in improving health and the amenities of civilised life, a source, therefore, of real, if not rateable, profit. We dwell upon this point because various reactionary interests are raging against the extravagance of local authorities, and particularly the extravagance of the London borough councils and County Council, with sinister intent. All that has been good in the expenditure is ignored, and petty mistakes, items no matter how insignificant which can be twisted so as to represent waste, are seized upon and magnified to the beguiling of the ignorant electorate. The tactics employed are often shameful in their dishonesty and always pitiable in their exhibition of prejudiced ignorance. The more is the pity that a departmental report such as this should in any way countenance the reactionaries and provide them with ammunition. High though the rates are nearly all over the country, were their incidence fairly adjusted between the property classes and the rent-payers at large, were the owners of the ground on which buildings are erected compelled to bear a share of the local burden, there need be no outcry about oppression and the ruin of the small householder. It is, as we have often said, to divert the minds of the people from the true remedy, as well doubtless as to further schemes hatched by monopoly company promoters, that the false view about our local expenditure and the increase in local debts is harped upon. It is not an honest discontent and it serves dishonest ends.

Sticking to what may be called the text of this article, we should further like, if a comparative table of the kind animadverted upon above is to be introduced into the report of the President of the Local Government Board, to have one portion of it composed of a summary of the local debts of the United Kingdom and their expansion. It is a pity that this report should only deal with England and Wales. Scotland has a considerable local debt, and so has Ireland. The incidence of rates in Scotland is also heavy in many places as well as in Ireland, but in most parts of Scotland, at least, rates are divided between landlord and tenant, and it would be an instructive exhibit were we to have a classified summary of the local expenditure of both Scotland and Ireland drawn up so as to exhibit the weight of the rates, the classes on which the burden is laid, the increase in actual amount in the local borrowings over the past 25 years, and the uses to which the borrowed money has been put, together with the revenues, gross and nett, yielded by the various municipal investments. We have long thought that a clear and easily read display of this kind would have a valuable educative effect in showing the benighted people of England and Wales how much better they do things over the border, at least, than here. Has Mr. Burns's department no control whatever over the local administrative authorities in the other two kingdoms? Probably not; we cannot be sure, but at least he can exert a certain friendly pressure upon them in order to get the figures required, especially as his department's annual report deals in such leisurely fashion with comparatively remote statistics. All local accounts in both Scotland and Ireland are published somewhere and some time, and surely the Local Government Board is in a sense an Imperial institution, capable of assigning to some portion of its staff the task of collating and summarising the returns made by Scotch and Irish local governing bodies, so as to put them alongside the returns for England and Wales in a manner that would enable the student of domestic statistics to reach some intelligent estimate of the actual position throughout the country. We have no space in this article to deal with the poor law waste, of which there continues to be abundant evidence in this report, but that is a subject seasonable at any time.

Economic and Financial Notes and Correspondence.

British Fire Offices' Losses at San Francisco.

They have proved to be much greater than the original estimate, more than twice the amount we were sanguine enough to count upon when the disaster occurred. The following interesting particulars extracted from the "Commercial and Financial Supplement" of the *Times* may be taken as an accurate and authoritative summary of the results, and, disastrous though they doubtless are, it is most satisfactory to learn that no British insurance office has defaulted. Only one has been compelled to make a call upon its shareholders; the others have met the disaster out of their accumulated resources. They cannot, however, have paid away £10,500,000 without crippling themselves, and two at least of our old offices are seriously hampered by the amount they have had to find, so seriously that the question of their amalgamation with younger and stronger offices is now being discussed, and we cannot agree quite with the opinion of the able and well-informed writer of the appended extract that our companies did well to pay their usual interim dividends. They should have allowed the shareholders to feel at once some of the effects certain to ensue from this calamity. "No doubt," says the writer, "the depletion of funds will have its effect on dividends declared next spring and for some years." Yes, it must, and we fear that in more than one instance no dividends at all will be forthcoming if the losses are manfully faced. All the same, the record of these British offices when confronted by a disaster like the San Francisco earthquake and fire is something to be proud of.

Amount of the Settlements.

The settlements of the companies are now practically completed. Announcements have been made that large staffs of adjusters have been entirely disbanded, and it is possible to estimate how the loss will turn out. There is a consensus of opinion that the average saving, as the result of salvage, previous earthquake damage, &c., will not exceed 10 per cent. of the total sum insured, even after allowing for some additional saving in the case of the three British companies with "earthquake clauses." What these companies actually will save is as yet uncertain, and subject, to some extent, to legal judgments. This saving of 10 per cent., considering the exceptional circumstances, seems very small, especially when it is borne in mind that the expenses of settlement have also to be paid. Taking the British companies as a whole, however, it is remarkable that no company has defaulted, and that only one company has had to make a call upon its shareholders. The obligations of this company (State Fire Insurance Company) have, however, been discharged as fully and liberally as those of other British offices, and the burden of loss has fallen on the shareholders, not on the San Francisco policyholders. A large number of the claims of this, as of the other British companies, have been settled in full without any deductions, and in cases in which compromises were necessary and proper the deductions averaged little more than 10 per cent. If we assume the average deduction of 10 per cent. from the gross liability, it will be found that the gross payments of all the 18 British companies (and their subsidiaries) involved at San Francisco will, approximately, aggregate £15,000,000 to £16,000,000. This is, of course, by far the largest loss which insurance companies have ever had to meet, not only in the aggregate, but in individual instances. For example, taking the gross amount involved, as sworn to by the companies in the United States, and reducing it by the approximate salvage realised, we find that the amount pavable to the policyholders, before deducting reinsurances, will, in the case of the London and Lancashire (with its subsidiary, the Orient), approximate £1,800,000, of the Royal (with

its subsidiary, the (Queen) £1,600,000, and of the London £1,400,000. Of these losses, nine-tenths must already have been paid. In the Chicago conflagration in 1871 the insurance loss was £19,000,000, but of this only £1,300,000 was insured with British companies, or less than the gross amount which will be payable by each of the three companies which have been mentioned. It should be borne in mind that in most cases there will be considerable reinsurances recovered, and that the larger the gross figures are the greater will be the reinsurances. It is now practically certain that the nett loss of all the British companies combined will approximate £10,500,000, as compared with preliminary estimates of about £7,000,000. It is a striking fact that the British companies, which have paid so unprecedented a loss, should still feel able to continue their usual interim dividends to shareholders. Since the fire interim payments have already been declared by the Atlas, Commercial Union, Liverpool, London and Globe, London and Lancashire, London, North British and Mercantile, Phœnix, Scottish Union and National, and Union. No doubt the depletion of funds will have its effect on dividends declared next spring, and for some years to come, but for the moment there is no need to withhold the dividends which shareholders expect, and which are paid out of the earnings of 1905. Insurance companies' "interim" dividends are not anticipatory in the ordinary usage of the term, but are based on profits already earned.

The American companies compare more favourably with the British offices than might have been expected, seeing that they have been much more severely hit by the disaster. Out of about 90 American companies involved, some 15 have already either defaulted or have not yet paid their losses, and it is expected that by the end of the year some more of the native companies will have to reveal their shattered condition. More failures, after so great a disaster, might reasonably have been expected, and it is clear that since the Chicago fire, the native companies, like the British, have generally strengthened their finances, and have thus been able to face adversity. The loss which the American companies will sustain (after deducting £1,500,000 which the policyholders will probably fail to recover from those insurers who are unable to pay) may be taken as £21,000,000 gross and £15,000,000 nett. The force of the disaster has been much more severely felt by stockholders in America than it has by shareholders here. As against a call in the case of one small British company (the State Fire mentioned above), we find that the Hartford, the Connecticut, the Phœnix of Brooklyn, the Pennsylvania, the Niagara—all American companies of the first rank—not to speak of the Fireman's Fund (the largest Californian company, which has had to be entirely reconstituted), have all been compelled to issue fresh capital. Fortunately for them their reputation was, in each case, sufficiently strong to enable them to make the issues at an appreciable premium, so that fresh funds were available for meeting losses after providing assets against the additional capital liability.

In a third category appear the Continental companies, and here the record is deplorable, since out of 15 companies only 11 seem to have been able or willing to discharge their liabilities. The loss sustained by the solvent companies will approximate £3,500,000 gross and £2,500,000 nett, and, unless the recalcitrant companies (three German and one Austrian) repent and pay, we are afraid that the policyholders in San Francisco will, from that source alone, go short by at least another £1,500,000.

A brief summary of the nett payments by insurance companies is therefore as follows:—British companies paid £10,500,000 (no default); American companies paid £15,000,000 (£1,500,000 in default); Continental companies paid £2,500,000 (£1,500,000 in default).

A Grumble about Answers to Correspondents.

Occasionally letters like the subjoined reach us, and, as it were compel us to restate our position. To do as this correspondent says would be to break a rule adopted when this Review was first started as a protection to inquirers. Cannot the writer see that were we to do as he says, and give the names of the securities about which questions are addressed to us, we should be doing an injury to the correspondents, no matter whether they were buyers or sellers? If we were to name such-and-such a stock or share, and say, "This is good to buy," or that it ought to be sold we should tell all the world what to do, and prices would be sent up or down to the detriment of those who seek guidance from us. That is the reason why we have always abstained from giving any clue in our answers to correspondents to the security commented upon and it seems to us that any infringement of this practice would destroy the real utility of this section of The Investors' Review. But surely it is always open to those who wish for further information to write to us and obtain the names of the securities through a private letter. The fee charged for such information is small enough in all conscience, in view of the trouble taken to keep a record of all answers and the time occupied in looking them up and verifying them. We notice that people rush still to bucket shops and pay heavily for dealing with such, that they have apparently no objection to risk their money on the flimsiest possible advice; flimsy too also interested, because it is certain that if an outside speculative agency advises the public to buy it is a seller, and if it counsels selling it is to knock prices down so that it may buy. It could not live unless it played against its clients in this way, and the clients accordingly lose enormous sums of money every year by taking advice of this dangerous kind. We never mislead in that way, being neither buyers nor sellers, and the small charge made for giving accurate and honest information does not amount to an appreciable tax upon the means of investors. We are very much obliged to this correspondent for the cordial way in which he speaks of the educative value of the Review, but regret our inability to meet his wishes in the way indicated.

"As one who honours The Investors' Review, and has got a little idea of financial things in general—in fact, it has been an education to me in these matters—I beg to draw your attention to the "Answers to Correspondents" column in this week's issue. There are some forty-odd queries answered to one individual. My argument is this: Except to that person all that space is lost to your other readers, when, by mentioning the stocks, or some of them, it would become a *'Living Thing' to all.* I am sure it would *stimulate more inquiries,* and thus increase the income from that source and be a *most useful and engaging column to your readers.* I have no doubt you have good reasons perhaps for the course you pursue, but I think you 'hide your light under a bushel,' to your own detriment."

Mr. John Coles on American Insurance Offices.

In his very interesting and instructive speech at the meeting of the Clerical, Medical, and General Life Assurance Society held last week, this leading authority on the subject made the following observations about the wasteful system employed by these alien life insurance companies to get business in this country. His remarks are well worth reproduction in full, and we give them here with the remark that they might have been much stronger. So far as we can ascertain not one of the three big American life offices works its business at so low a ratio of cost as 25 per cent. of the premium income. Some of them exhibit a rate of expenditure amounting to at least 30 per cent., and were their outgoings to be calculated in strict relation to the short term character of many of their policy contracts we believe the percentage would turn out to be considerably higher. We hold, and have always insisted, that no life insurance business systematically conducted on such a basis of expenditure could be profitable to insurers. It is therefore satisfactory to learn from such an authority as Mr. Coles that the American offices are finding it increasingly difficult to obtain new clients in this country. They have been dishonest and unscrupulous competitors with home offices from the first, and one of our complaints has always been that these home offices submitted too tamely to the inroads and encroachments of the aliens.

Looking around the field of life assurance, we are pleased to note the prosperity of most of our British competitors; we are glad to have friendly relations with them all—and the reinsurances we give and receive help to cultivate these relations. Some of our competitors, however, coming from across the Atlantic, have sought business in this country for some time past with great confidence and energy, but in their eagerness they seem to have lost sight of the expense ratio problem—and the natural result of spending about 25 per cent. of their premium income is now hindering their progress in this country, and, as their methods are better understood, causing some disquietude in the minds of their existing policyholders. Every £ spent out of every £100 received must almost eat up the amount available for bonus. In British offices the expense ratio is about 13 per cent. on the average.

These methods help to remind us that we must not, in our anxiety for new business prejudice the position and bonus prospects of existing policyholders, by increasing the expense ratio, or by admitting newcomers with less care, and thus increasing our normal death rate. (Hear, hear.) Thus, if we doubled our new business, it would be no satisfaction to us or to our present assured if their cash bonus fell from, say, 35 per cent. to, say, 25 per cent. We have never ignored this problem—this day—we shall continue to travel along our old road, making, as hitherto, steady progress, and we confidently ask those seeking assurance to examine the advantages we offer. (Applause.)

South Durham Steel and Iron Co., Limited.

There is probably no doubt that this undertaking derives considerable benefit from its association with the Cargo Fleet Iron Company. We never objected to the alliance on principle, but we were certainly justified in protesting against the terms on which South Durham shareholders were asked to exchange their interests into shares of this Cargo Fleet Company. At the time even less was known about the latter than is available now and the records of the two companies make it abundantly clear that those who retained their shares in face of the urgent appeal from the directors to change have every reason to be satisfied with the result. The latest accounts, made up to September 30, cover a period of twelve months, as compared with nine only for the previous report, so that strict comparison of profits is not possible, but the result of the year's trading constitutes what is known as a record in the history of the company. The total output of finished material was 353,000 tons, which the directors believe to be in excess of the make of any other steel-producing firm in the kingdom. They go on to say that this output was only practicable through the company's association with the Cargo Fleet Iron Company, and we can only hope that the co-operation of the two concerns will in the future be attended with equally good results. The erection of the new Talbot plant has been pressed forward as rapidly as possible, but owing to unavoidable delay it will be somewhat later than expected before the work is completed. It is therefore to be assumed that these Talbot furnaces did not contribute to last year's profit, which reached £184,444 compared with £103,123 in the preceding nine months. Credit brought forward was £3,251, making £187,695 in all, from which interest on debenture stock takes £13,500 and the preference dividend £18,000. Income-tax, directors' fees, and debenture trustees' remuneration next absorb £3,353 between them, and £25,000 more at £60,000 is allowed for depreciation. Ordinary shareholders then receive aggregate dividends of 12½ per cent., £50,000 is placed to reserve and £4,092 is carried forward. The excellence of this result cannot be gainsaid, and the fact that no less than £110,000 is either added to reserve or placed to depreciation account is evidence of prudent finance. The provision of the necessary funds for the Talbot plant, already referred to, involved the issue of 100,000 ordinary shares at par in June last, and we find that the total capital additions for the year amounted to £61,682 raising the balance-sheet value of the land, buildings, plant, &c., to £772,370, after allowing the £60,000 for depreciation. Against this the reserve fund is now £75,000, apart from an equalisation of dividends account standing for £25,000, so that all round the position steadily improves. At the date of the balance-sheet the company owed a total sum of £158,376 to sundry creditors, but debtors stood for £213,994 and the stock-in-trade was worth £234,521. The total cash balance in the hands of the company including bills receivable amounts to £71,179 and the trifle of £453 stands to the account of the debenture-holders' trustees. The directors say that the order books are well filled for delivery during the coming year, and unless labour difficulties strike the company an unexpected blow there seems no reason why the result of the current twelve months should not be as satisfactory as the last.

British and Chinese Corporation, Limited.

A year ago the revenue of this corporation benefited to the extent of £27,339 from its interest in the issue of the Shanghai-Nanking Railway loan, but no such important work was carried through during the twelve months ended June 30. Earnings from interest, commissions, &c., consequently showed a heavy drop, but if the above-mentioned sum is left out as being exceptional the income shows an improvement of £1,652 at £19,326. Administration and general expenses in London and China, including agents' commission, took £5,271 and income-tax required £67, leaving a balance of £13,988 compared with £40,042, of which £5,393 is written off investments against £15,000 last year. To the surplus of £8,795 is added £14,532 from the previous account, giving a total of £23,327, and the directors are again able to pay a dividend of 10 per cent., carrying forward £10,827 or £3,705 less. New concessions obtained were valued at £8,792, bringing the total of this item in the balance-sheet up to £35,773, investments after allowing for the depreciation now written off stand at £14,230, and the cash balance, although £10,559 down, is still excellent at £97,852. Floating liabilities have been reduced by £2,218 to £982, while sundry debtors have risen from £642 to £1,455, and the position altogether seems thoroughly sound. The directors state that it was evident that the negotiations in hand and contemplated would require such unremitting personal attention as could not possibly be expected from the joint agents, the Hongkong and Shanghai Banking Corporation and Messrs. Jardine, Mathieson and Co. An arrangement was consequently made with Mr. J. O. P. Bland, late secretary of the Municipal Council of Shanghai, to become the corporation's representative in China and devote his abilities chiefly to negotiations with the Chinese in regard to pending and new business. Mr. Bland commenced his services in April, and has been engaged upon the negotiations for the Canton Kowloon Railway loan and for the balance of the Shanghai-Nanking loan. The agreement for the former has been signed and the offer for the second has also been accepted, so that the prospects for the current year would seem to be exceedingly favourable. Mr. Bland is now free to give his attention to the final agreement for the Soochow-Ningpo Railway loan and the Nanpiao coal concession, but matters do not appear to be sufficiently developed for the directors to be able to make any statement regarding them.

Dorman, Long and Co., Limited.

In commenting on the report and accounts of this much-expanded iron and steel business for the year ended September 30, we may say at the outset that the results obtained are probably a good deal in advance of the anticipations formed by the most sanguine proprietor, be he director or merely shareholder. When the company issued its report twelve months ago the directors gave vent to a long list of excuses in the endeavour to explain an actual loss which had occurred on the company's operations. It is, of course, quite well known that besides its own business the company is very largely interested in two kindred concerns, holding 60,000 ordinary shares £4 10s. paid in Bell Brothers and 79,954 shares of £5 each fully paid in the North-Eastern Steel Company. For the period under review both these companies contribute to Dorman Long's revenue in the shape of dividend payments, but last year nothing at all was paid by the North-Eastern Company and Bell Brothers could only produce a dividend by neglecting the all important question of depreciation. This dividend amounted to £15,000, and even taking that into account the profits earned by Dorman Long were only £10,923, so that actually there was a deficiency of £4,077. Now, however, the company produces a profit of no less than £176,232, a really extraordinary result measured against the achievements of the previous few years, but we want to inquire into the position rather closely, as it is to be feared that this profit is rather more apparent than real.

We should, for example, much like to know if the allied companies made good the depreciation deficiencies before declaring the dividends which now come into the coffers of Dorman, Long and Co. In the case of the North-Eastern Company the wastage question was neglected for at least two years, and for the year 1904 Bell Brothers failed for the first time to make proper depreciation allowance. Unless all the shortage was made good before the resumption of dividends the

profits now produced cannot be considered legitimate, and since depreciation must be provided sooner or later, shareholders should not run away with the idea that because big figures are now shown everything is as it should be. In dealing with the profit a bad beginning is made, as the debit balance brought forward amounting to £18,164 must be deducted, so that, instead of £176,232 the amount available is only £158,068. From this the interest on the first and second debenture stock takes £31,000, a further sum of £7,040 is written off the issue expenses of the second debenture stock and £13,528 goes against the experimental expenditure at the Clarence Steel Works, formerly carried in the balance-sheet as an asset. Directors' fees amount to £2,000, and after providing a dividend of 5 per cent. requiring £62,980 the board writes off £30,000 for depreciation and carries forward £11,520.

But as with the allied companies, so with the parent concern. For the two years to September 30, 1905, Dorman, Long did not allow a single penny for depreciation against ever-growing capital expenditure, and it is absurd to suppose that £30,000 is sufficient allowance for three years on assets valued at £800,000. It must be borne in mind that the company possesses no reserve of any sort, and possible investors in the shares should take note of the various facts indicated before being carried away by the undoubted revival in the iron and steel trades. Profits, and very good profits, are without doubt being made at the present moment, and we hope will continue for a long time to come, but practically all the businesses passed through a period of acute depression, and under the best conditions considerable time must elapse before the position of most of them can again become really strong. Altogether the outside interests possessed by this company are valued at £661,738, making with its own expenditure a total of £1,480,736. The issued capital is £1,259,594 in shares of £1 each, besides £650,435 in debenture stock, so that the first charge on profits each year for interest alone is somewhat burdensome. Debts due under all heads amount to £154,507, stocks are worth £388,894, being certified by the company's officials, debtors amount to £228,918, including the dividends on North-Eastern shares for the past year, and cash and bills receivable appear at £72,486.

What Shareholders in Rand Mines Should Do.

First of all, they ought to read the following extracts from a letter by its Johannesburg correspondent, printed in Monday's *Manchester Guardian*, in conjunction with the very outspoken, but wholly justifiable, letter signed "Anti-Gold Bugs," to be found in another column of this issue. As readers of this Review know, we have consistently and always resisted the policy of the financial magnates by whom the wealth of the Transvaal gold mines has been seized. What we have predicted has come true throughout, and it would have been well for those interested in the Kaffir Circus if they had taken heed of our warnings long ago. "Anti-Gold Bugs," however, points out very clearly the helplessness of these shareholders because of the way in which the mine bosses have fenced themselves round. The shareholders have no power to change the management, to examine accounts, to do anything effective to remedy their grievances. That is true enough; but there are other ways in which something might have been done, and if the minds of shareholders had not been corrupted by the skilful manner in which they were decoyed into concentrating all their thoughts upon the movements of prices on the Stock Exchange, they might have long ago, by banding themselves together, brought such pressure to bear upon the Home Government as would have compelled it to interfere in their interests. More than once in past years we offered to give them the help of the Investors' Review in coming together and conferring with each other, but no advantage has ever been taken of that offer, and now the helpless shareholders are in all probability destined to be just as much left in the lurch by the present Home Government as the last one. Readers will note that Mr. Creswell has adopted our suggestion that the mines ought to be taken over by the Imperial authorities, cleansed of their abuses and worked under State supervision in the interests of genuine shareholders and of the community in which they are situated. What is to hinder shareholders like "Anti-Gold Bugs" from organising themselves and agitating so as to drive the supine Government to take action in this direction? It is behaving precisely as if the permanent staff of the Colonial Office held it down and dissipated its energies as it did those of the last Government, and unless public opinion is emphatically and insistently brought to bear mining affairs in the Transvaal will go on drifting from bad to worse.

But notwithstanding the unpopularity of the pro-Chinese party, they have one argument of undoubted potency. This may be summed up in the phrase "If you repatriate the Chinese we will close down so many mines that thousands will starve and general bankruptcy ensue." This is no idle threat, for so close is the monopoly control of the mineral wealth of the Transvaal, and so dependent are all sections on its production, that the decision of half a dozen alien financiers could bring universal ruin upon the land. Consequently thousands are intimidated by this threat, and as it is put forward under the guise of necessity, the main efforts of the anti-Chinese party must be directed to showing the falsity of that plea.

To this work the Reform Club is especially directing its efforts, and at a crowded and enthusiastic meeting in Johannesburg last week Mr. F. H. P. Creswell let in such a flood of cold facts that the bullies of the Chamber of Mines are in danger of being submerged.

Mr. Creswell, in the first place, dealt with the situation that would be created by the repatriation of the Chinese at the expiry of existing contracts. He pourtrayed it at its very worst, inasmuch as he did not allow for any increase of Kaffir labour, though he held that another 30,000 could easily be procured. To simplify his argument, Mr. Creswell dealt with the producing mines, for the developing mines require but little unskilled labour, as the work can be economically performed by skilled whites and machines, and is at present so performed to a great extent. Mr. Creswell found that the producing mines would lose their Chinese in about the following order:—

From July, 1907, to January, 1908	22,000
From January, 1908, to July, 1908	16,000
From July, 1908, to January, 1909	7,000
From January, 1909, to July, 1909	6,000
Total	51,000

This meant that when by January, 1908, the first six months of repatriation had passed, the mines would still have, on the basis of 8,000 stamps dropping, a coloured labour supply of 1,368 per 100 stamps, and when all the Chinese had gone, there would still be 1,000 coloured labourers per 100 stamps.

To show what this meant, Mr. Creswell then quoted the report made by three eminent engineers to the Chamber of Mines in 1902, and which was produced in evidence before the Labour Commission on the demand of Mr. Quinn. Messrs. Price, Skinner, and Spencer reported:—

In a mine where rock drills can be run in the majority of stopes, we say that to run 100 stamps and to do the necessary development 1,000 to 1,200 natives, together with 125 to 150 skilled whites and 75 unskilled whites, should suffice, and with this number such mines should be in as good position as regards profits as they were before the war.

Consequently, argued Mr. Creswell, it had been shown to the Chamber of Mines, out of the mouths of their own engineers, that even were all the Chinese repatriated, there would still be sufficient coloured labour to run all the stamps now dropping on the Rand.

Mr. Creswell then proceeded to show how the truth of this theory had been practically demonstrated, and the revelations caused somewhat of a sensation. The Government, acting under the dictation of the Chamber of Mines, who represented that improper political use would be made of them, has refused to publish the statistics of employment on individual mines, which are furnished monthly to the Mines Department. Mr. Creswell had, however, been able to obtain from the Native Affairs Department the number of Kaffirs employed on a number of mines before the Chinese. Thus he made the remarkable discovery that in September, 1904, the following mines were running with the number of natives per 100 stamps as stated below:—

The Bonanza, 756; the Crown Deep, 778; the Crown Reef, 847; the Geldenhuis Deep, 716; the Langlaagte Deep, 690; the May Consolidated, 884; the Meyer and Charlton, 822; the Nourse Deep, 945; the Robinson Central Deep, 692; the Robinson, 815; the Rose Deep, the Simmer and Jack, 913; the Village Main Reef, 699.

It would be impossible to exaggerate the importance of this disclosure. It makes the introduction of the Chinese stand out in a more sinister light than ever. It shows that when the Chamber of Mines coterie were decrying Mr. Creswell as a "faddist," their engineers had gone further than he had in the

economy of native labour and the supplementary utilisation of white men and machinery. The Chinese were obtained, and the mines were flooded with coloured labour; the machines were taken out of the stopes to make way for black or yellow hand-drill men.

The process is now working out to its logical conclusion. Since March last there has been an increase of 4,592 coloured labourers on the mines, and there were 1,000 fewer white workers there in September than in March.

But the highest appreciation was reserved for the speaker's statement regarding the threat to close down the mines, that "he would deprecate resort to arbitrary or drastic measures unless necessity arose, but he was also convinced that they should make it clear that the Government would not hesitate to resort to the strongest measures in case of need, even to the confiscation of the mines and the handing of them over to such persons as would work them."

This is the sentiment that is getting abroad among the people, and of which the British Government should take note, lest they be so unwise to nominate such an Upper House as would hamper the people in the life-and-death struggle which is ahead.

Le Roi Mining Company.

The history of this relic of Whitaker Wright promotion gives an encouraging instance of what the determined opposition of shareholders can accomplish by the defeat of a board enamoured of a preposterous scheme of amalgamation. The idea of the directors was to join forces with three or four other British Columbian failures and because Mr. A. J. McMillan, the managing director, would have none of it he was promptly dismissed. Fortunately for the shareholders, Mr. McMillan proved to be a far cleverer and more powerful man than the directors probably had counted on, and he began at once, with admirable energy and literary skill, to place the whole matter clearly before the proprietary. As the controversy grew, the least intellectual could see that the case for the directors was pitiably weak, but so obstinate were they, so secure did they evidently feel, that they entered into a contract with the owners of the Trail smelter to ship the whole output from the mine there and to close down the company's costly smelter at Northport. Both plans looked so mad-headed that we strongly advised shareholders to give their whole-hearted support to Mr. McMillan and to remove Sir H. W. Tyler and his co-directors from the board. This they subsequently did, and elected a new directorate, who promptly reinstated Mr. McMillan in his former position. The fruits of this wise action are seen in the report of the fresh board, the first they have, of course, issued. Ever since 1899 shareholders have been waiting for a dividend, and might have waited until Doomsday had they sanctioned the schemes of the old directors. But Mr. McMillan promised them something early, and he kept his word, for in February last an interim distribution of 1s. 6d. per share was made, and the directors now supplement this with a final dividend of 2s. per share. This makes a total of 3s. 6d. per share, and is only 3½ per cent. on the £5 share, but it is better than nothing. Indeed, it is substantial, looking at the short time the new directors have been in power; and is it not a reassuring sign that the company may be other than a mere medium for the waste of capital? But the improvement is not a mere matter of dividend; the financial position is better all through. Matte and ore sales realised £296,956 against £272,251, the entire income amounting to £298,247. The nett profit is £12,603 less at £37,138, but it is arrived at after writing off £28,628 in respect of exploration and development, £18,163 for depreciation, £3,727 on account of the special expenses incurred in connection with the abortive amalgamation scheme, and after paying £3,464 to the British Columbian Government in full settlement of a claim made by it in connection with a revision of taxes for a period of five years. So altogether the performance is a most creditable one. A year ago the directors carried forward £150,539 and could pay no dividend; now, even when the final payment is made, no less than £150,927 will be taken to the credit of the next accounts. The balance-sheet, too, has been greatly strengthened. For the first time in six years nothing is owing to the bank, and cash totals £90,097, so the company is really in a position to pay a much large dividend, if prudence at the present juncture were not the better policy. These results must be pleasing to the shareholders, as thoroughly justifying their action of a year ago. Mr. McMillan having proved himself a man not given to empty boasting, they may gather much encouragement from his forecast: "The mine looks better than at any time since I have been connected with the company, and provided nothing unusual or unforeseen occurs, I look forward to more prosperous times than heretofore."

Government Statistics *v.* Chamber of Mines Returns.

The statistics of mine returns published by the Government Mining Engineer's Department of the Transvaal show us that the actual output of gold is greater than that returned by the Chamber of Mines. This is easily accounted for by the fact that the Chamber gives the returns of its own members only, while the Mining Department collects the figures from all the working mines, whether worked by individuals or companies. The latest monthly Government figures are those for September, and show a total of 507,031 oz. of fine gold, of a value of £2,153,727, against 505,111 ozs. and £2,145,575 declared by the Chamber of Mines, thus the official returns show increases of 1,920 ozs. and £8,152 respectively. In commenting upon these returns, the *Johannesburg Star* says the official figures reflect gold actually produced during the month, and an explanation of part of the difference may be found in gold won not having been accounted for in the returns furnished by the companies to the Chamber of Mines in the month in which it was produced. This may be some indirect reference to the practice of keeping secret gold reserves; if not, it clearly informs us that truthful returns are not always made to the Chamber. It is further explained that, while the value of the gold in concentrates is included in the returns made by companies to the Chamber of Mines, it is excluded from those sent to the Government Department, and in course of time is returned as gold produced by the metallurgical works. Further, such production as may be made by syndicates and private persons finds no record in the Chamber's analysis, except as through "Banks," but appears under the heading of "Miscellaneous sources" in the Department's returns. Taking the Witwatersrand only, the Government gives 488,246 ozs., value £2,073,940, against 486,522 ozs. and £2,066,614 published by the bosses' institution, while for the outside districts the Chamber's figures are 18,589 ozs. and £78,961 in value against 18,784 ozs. and £79,787 published by the Department. The number of mines crushing on the Rand is given as 66 against the Chamber's 65. In the number of mines milling in the outside districts the Chamber's analysis shows three producing mines at Heidelberg, three at Barberton, three at Lydenburg, and one at Klerksdorp, while the Government gives three for Heidelberg, 16 for Pretoria district and one for Klerksdorp, the total number crushing being 86. These are not serious differences, but they are interesting none the less.

The Rhodesian Mining Industry.

In their recent report the directors of the Consolidated Gold Fields boasted of the increase in the Rhodesian gold output in the past twelve months. Scarcely were the words written than October brings a notable decline, and in seeking causes for this the controllers hit upon the scarcity of native labour. We have, however, frequently pointed out that this increased output—it was only 124,337 ozs. in the year ending June 30—is not sufficient to benefit shareholders, for when it is spread over the many mines crushing each gets on the average very little, far too little to make all the difference between success and failure. This so-called improvement, as we have pointed out many a time, is due largely to the increase

of tributing operations, and dividends very rarely come from these, the royalties are so tiny. In fact, for a company to hand over its mine to tributors is practically a confession that it cannot work it itself at a profit. At the moment there are some 112 mines in all turning out gold in large and small quantities, but no less than 77 of these have batteries of five stamps and under, and what company can become a commercial success with so limited a crushing capacity? Upon this point the President of the Rhodesia Chamber of Mines had something suggestive to say at the annual meeting of that body. He also laid strong emphasis on the increased gold production, but had to acknowledge that 33 per cent. of the monthly output comes from small producers working on a royalty basis. Nor did he feel quite happy when looking into the possibilities of an improvement even from these limited sources. "I should like to point out," he said, "that there is some fear of this considerable item in our output not being maintained at such a high figure as has recently been reached, the reason being that the small worker and tributor confines his expenses as far as possible to immediate necessities involved in keeping his mill running on payable ore. That is to say, there is an undoubted and lamentable lack of development in the country at the present time, certainly insufficient to admit of a large increase in the amount of tonnage to be dealt with by small producing mines. If you examine the returns, as I have done, you will find that many of these small mines which have recently added such an appreciable quota to our total yield have not been continuously producing for the whole twelve months." Here is an official statement equivalent to a confession that no great importance attaches to these tributing returns, and that even they will probably fall off in the future. "I must warn you," he added, "we cannot at present look forward with any degree of certainty to the yield of gold from the small producer being maintained at the present figure." And, despite this belauded increase, instead of it turning losses into profits, the present need of the industry is more capital to replace that already wasted. Dozens of companies would appeal to the public to-day if they thought such an appeal would be listened to with practical sympathy. Through lack of means hundreds of stamps are lying idle, and are likely to remain idle for an indefinite time, even if it be possible ever to restart them. And, in all probability, shareholders and others would gain more from their idleness than from their working, for the ore, as is frequently the experience in Rhodesia, may not be rich enough to pay. And even the British South Africa Company, with all its magic, cannot change conditions for the better.

Cape Electric Tramways, Limited.

We know of no instance where our advice to shareholders has been more thoroughly justified than in connection with this company. The conduct of the business during the last year or two by the cosmopolitan band of British patriots responsible for its direction has been more discreditable than anything we can remember. As far back as October last, when an attempt was made to steal a march on the shareholders by making a debenture issue about a month before a very unsatisfactory report was issued, we counselled shareholders to clear out of the company while there was yet time, and before the further inevitable slump in the price of the shares set in. It was not without the fullest consideration of the position that we tendered such advice because the shares of the company had already experienced a very severe fall, and it is not altogether pleasant to tell the investing public to accept a heavy loss, even though one is sure that that loss must inevitably become greater. A year ago the shares of the company could be sold at about 25s. each, but the present price is just about 10s., and now that the report for the year has been issued we very much doubt if many could be disposed of even at that figure. The latest statement, which covers the 12 months to June 30, can only be described as disastrous. The tramways in Cape Town carried only 12,377,310 passengers compared with 15,020,503 in the previous year, meaning a shrinkage in revenue of over £33,000, at a total of £147,715. In Port Elizabeth the travellers fell off by 322,040 to 3,905,536, involving in this case a loss of revenue of £3,851 at a total of £42,857. The result is that the dividends declared by the two enterprises amounted to no more than £61,135, compared with £89,111 last year, and £110,162 in 1903-4, a drop in two years of no less than £49,000. Not only so, but the lease of that rotten Camps Bay Tramway, which the alien crowd tried to make perpetual, involved the company in a loss of £10,919. This was for a period of six months only, the lease expiring on December 31, 1905, and but for Mr. Parrish's self-sacrificing action in exposing the directorial game, it is to be assumed that this loss would not only have been doubled for the period under review, but the lease would apparently have involved the company in similar losses for all time.

The statement that the Cape Electric Company still retains the advantage derived from the operation of these Camps Bay Tramways, which act as a feeder to the principal lines, will probably raise a smile from most shareholders if they have got such a thing in them after perusing the present report. Deducting the deficiency mentioned, and adding £35 for transfer fees, the company's revenue appears at £50,251, and is promptly reduced to £38,654 by general charges, income-tax, interest, commission, &c. Interest on debentures takes another £24,799, a sum of £8,100 is allowed for redemption of the 6 per cent. debentures, and the premium on debentures redeemable on July 1 last amounts to £486, so that the actual nett balance is £5,269. Of this £4,000 is placed to reserve, and the sum remaining, together with £482 brought in, making £1,751 in all, is carried forward. We need not concern ourselves with the board's regret at the great shrinkage in the tramway traffic, and should indeed be rather gratified at the turn of events if the directors were the sole sufferers, but this unhappily is not the case. The creation in October last of £200,000 in "B" debenture stock seems to have been placed to the amount of £150,000, at the price of 90 per cent., but we hope the underwriters were landed with the stock and not the public. All the time capital expenditure is going on at a great rate, a large part of which should doubtless be charged direct to revenue, and it is the unwholesome way in which the concern is being financed, quite as much as our opinion of those in control, which induced us to tell the shareholders to clear out. Fully £107,000 was spent in the past year on betterments, renewals, and extensions, and these properties, which in the past year earned about £5,000 nett, after meeting charges, including interest, have a balance-sheet value of £1,240,543. The reserves, amounting to £192,039, a pretty substantial sum, we admit, are almost entirely involved in the business, and although the company has £37,841 invested in Consols, the fact must be noted that £41,547 has been raised on loan partly secured by this investment. Various other floating liabilities amount to £28,431 against debtors and remittances in transit of £3,632, and this concern with its balance-sheet total of £1,323,788 possesses just £793 in cash.

American Business Notes.

Last week's statement of the New York Associated Banks again shows an improvement, produced partly, but not wholly, by a decrease of $4,274,000 in their deposits. It is said that the banks are able to make this display by pledging the securities received back from Europe with interior banks. They are also probably leaning upon trusts and helping themselves to the moneys of the big insurance companies to an extent never likely to be disclosed. Last week, however, they did scrape together $2,103,000 in specie to add to their reserves besides $714,300 in legal tenders, and the loans simultaneously fell off $6,100,000, thanks to the transfers indicated, so at least it is alleged. It thus

follows that the deficit which appeared in last week's reserve has given place to a surplus of $2,375,000 over and above the legal minimum. This is $540,000 more than the surplus at the corresponding date last year, and could we reckon upon the improvement to continue it might be said that the crisis in New York is for the present over. That, however, is just what no one can do, and already by the middle of this week the short loan market in Wall Street is giving indications of a return to stringency. "But London is at last buying the inflated securities played with by Wall Street." Ah, well, in that case the stringency will be transferred here at an early date.

The New York State election that took place on November 6 has left a political situation which is probable unique in American politics. A Republican has been elected as Governor by a good but not an extraordinary majority, and the electors have given him a Republican legislature at Albany, the State capital, but they have furnished him with State department heads elected by enormous majorities from the Democratic ticket, that is from the Tammany list. The two salient features of the election were that the Democrats repudiated their party candidate, W. R. Hearst, and about 200,000 of them in the parts of the State outside the Greater New York voted for the Republican candidate, Chas. Hughes, and saved the situation for the Republican party. In the city of New York a large number of Republicans abstained from voting, for Mr. Hughes' dropping of the inquiry in the insurance scandals just so soon as he saw he would have to call into the witness box Mr. Cortelyou, President Roosevelt's former private secretary, and Mr. Bliss, chairman of the National Republican Committee, to explain where they got the money for the last presidential campaign and how it was expended, has remained unexplained, and left a doubt which no attempt has been made to clear up.

In Mr. Hearst's case his private and public record left much to be desired in a man aspiring to play the part of a reformer, and there is no doubt that it told heavily against him among the sanctimonious who are numerous among those whom New Yorkers dub "hayseeds" in the northern parts of the State. In New York itself he had a good majority, because its inhabitants have bitter recollections of the coal strike, two winters ago, and the advantage taken of it by the mine-owners' trust to raise the price permanently. The increase in the cost of living also is severely felt owing to the exactions of the meat and food trusts, which President Roosevelt is supposed to have "busted." These things combined contributed to such success as Mr. Hearst had, but there is no doubt he was "knifed," in the expressive American phrase, by the Tammany party so soon as they saw he could not be elected, for while his majority in New York City was over seventy thousand, the majorities of his associates on the Democratic ticket for the principal offices were infinitely greater. Besides that, his own Independence League threw him over at the last moment.

The nett result of the election is that Mr. Hughes, the Governor-Elect, will now be under an imperious necessity to prosecute the violators of the law and the embezzlers of the public's money who have hitherto escaped the notice of the law. The Democrats, who put him where he is, will insist upon it, and their elected officials will be there to see that he does not go back on his pledges. The honour, such as it is, of the Republican party is also involved, and unless he makes good his promises, the next election, two years hence, will probably see a third party in existence, which will dispense with the services of the leaders and bosses of both the old ones. The direct interference of President Roosevelt in the late contest has been the cause of much adverse comment, and it was freely said that there must be many skeletons in the Republican closet, which the party could not afford to have exposed, or he would not have sent his Secretary of State, Mr. Root, to harangue the electors of the State in favour of Mr. Hughes. That there was ever any danger to financial interests through the election of Mr. Hearst is hardly worth talking about. It would only have been another instance of the oftener it changed the more it would be the same thing. Mr. Hearst may be a demagogue in his talk, and he may allow demagoguery of a pretty low type in his papers, but in money affairs he has strong conservative instincts. Meantime, Mr. Roosevelt left the United States for Panama on November 8 on a battleship with a cruiser escort, where he will see prodigious activity among the workers on the canal *à la Potemkin,* and will return greatly impressed with the rate at which "the dirt flew" while he was there.

Three Commissioners—S. N. D. North, director of the Census Bureau; J. L. Gerry, chief of the Customs division of the United States Treasury Department; and M. I. Stone—who have been appointed by President Roosevelt to proceed to Germany to gather the information necessary in the negotiations for a modification of the tariff between Germany and the United States, left New York on November 6 for their destination on the *Kaiser Wilhelm der Grosse.*

The New York copper market has received specifications from two of the Chinese Viceroys for 1,600 tons of electrolytic copper for delivery as soon as possible. The agent who has been engaged to make the purchases states that 19 provincial mints have been working upwards of a year in making coins from copper bought in 1904-5, and within a short time ten mints will be in the market for large quantities of the metal.

The treaty recently concluded between Canada and Japan has, according to reports from Japan, been received there with a good deal of satisfaction. The *Nichi Nichi Shimbun* regards it as a happy event for both countries, and as certain to remove the obstacles that previously existed to the development of their mutual commercial intercourse. It also believes that with the increase of their commerce will disappear the unfriendly sentiments at one time displayed by the Canadians of the Pacific Coast towards Japanese immigrants. The *Jiji* also expresses gratification with the new treaty as tending to promote trade and good relations, and expresses the hope that Australia will soon follow the good example of Canada. The *Asahi* likewise is satisfied with the treaty, praises the Canadian Government for having let fall into oblivion past unpleasantnesses, and hopes it may lead to a close and durable friendship between the two countries.

The latest reports from San Franciso regarding the exclusion of the Japanese from the public schools do not indicate that the Californians are disposed to meet the wishes of the President on the subject. The Secretary of Commerce and Labour, who had been sent to inquire into the question and try and establish a *modus vivendi* that would be acceptable to the Japanese Government, was on his way back to Washington with his report. Nothing of its contents, however, had transpired, but Press despatches led to the belief that he had not met with much success. The New York *Sun's* San Francisco correspondent especially placed matters in a rather unsettling light, for after discussing the *pros* and *cons,* he points out that the people of the Pacific slope, especially the working classes, are unalterably opposed to giving the Japanese any privileges not allowed to the Chinese and other Asiatics. He even goes further, and states that there is a probability that during the next session of Congress the Californian representatives will introduce a Bill having for its object the placing of the Japanese on the same footing as the other Asiatics as to entry, residence and civic standing. As he says, "the Californian heartily dislikes the Japanese, and, what is more, he fears him." The farmers and fruit-growers of California depend to a great extent on the Japanese for their labour, but in the cities the ordinary citizens are as one with the labour unions in regarding them as undesirables. The general feeling along the Pacific slope is that the success in the war with Russia has turned the heads of the Japanese Government and people, and that they need, as the Americans say, "to be called down."

The Chicago bank-wreckers—Paul O. Stensland, president of the Milwaukee Avenue State Bank, and Henry W. Hering, cashier—were each given 14 years' imprisonment on November 5, one pleading guilty to forgery and the other to larceny and forgery. Stensland is described as "displaying great nervousness, weeping and quivering" during the trial, but Hering took the matter calmly, merely remarking when sentenced: "I worked for my master." Payment of the third dividend of 20 per cent. to the depositors was begun the same day.

The directors of the American Woollen Company have called a special stockholders' meeting to vote on an increase of the capital stock from $65,000,000 to $75,000,000 by the issue of $10,000,000 of preferred stock. They say that there has been an increase in the annual sales of the company's goods of $25,000,000 in the last six years, and the estimate is that the present year's sales will not fall much short of $51,000,000. In order to meet the demands of this growing business, and be less dependent on the banks, they recommend the issue of an additional $10,000,000 in preferred, to be issued from time to time as required. The present amount of preferred stock out is $25,000,000. The notification was followed by a severe fall in the company's stock, the feeling being that an additional charge of $700,000 annually ahead of the common stock was prejudicial to the interests of its holders.

Several insurance cases were reported as about to come to trial in New York shortly. The first mentioned was that of F. A. Burnham, president of the Mutual Reserve Life Insurance Company, George Burnham, junr., and G. E. Eldridge, vice-presidents of the company. The indictment against them is for grand larceny and forgery, in that they misappropriated funds of their company, known in 1901 as the Mutual Reserve Fund Life Association. It is charged that they took the money to settle private claims, and that false entries were made in the books under their direction to cover the expenditure. Other cases arising out of the affairs of the Mutual Life will be dealt with subsequently.

Passing Events.

An exceedingly important communication is that sent by the Johannesburg correspondent of the *Financial Times*, as it confirms many suspicions floating through the public mind, and foreshadows, with other portents, the breaking up of that recruiting monopoly, the Witwatersrand Native Labour Association. There is severe friction, he says, amongst the different Rand groups concerning the allocation of East Coast natives. The Albu group and Farrar Brothers are the most insistent opponents. It is contended that some of the larger groups keep their complements, on which the allocation of natives is dependent, at an unduly high figure. "For instance, a mine with large stopes can be run with machine drills with perhaps just half the complement of natives required if all the rock be broken by machines. In a case which I have in mind, rock drill mining is cheaper than breaking the rock by native labour." So he thinks it is within the bounds of possibility that an open breach may result, and, with the Robinson group gone, "the break up of the Witwatersrand Native Labour Association is likely to be only a matter of time. Thus the matter acquires special significance and importance apart entirely from its individual aspect." Meanwhile it is reported that the Eckstein group has purchased at par the shares of the Robinson mines in the Association, a step which will make this Rand house a greater power than ever. Luckily, however, other forces, which even the Ecksteins cannot control, may make that power well-nigh useless in shaping the destinies of the mining industry.

As a sequel to the friction arising out of the contest for seats on the board of the Consolidated South Rand Mines Deep, a writ was issued on behalf of Henderson's Transvaal Estates, Limited, and others, against Messrs. J. C. A. Henderson, Alfred Gaussen and R. L. Mayne for the purpose of obtaining a declaration that the new board of the company was duly elected, and to restrain the old directors from interfering in the affairs of the company. This was rendered necessary, it is stated, by Mr. Henderson's rejection on the recent poll of the proxy of Henderson's Transvaal Estates, on the allegation that it had not been authorised by the directors of that company. The secretary wrote, however, to say that the proxy was authorised at a board meeting, at which Mr. Henderson and Mr. Gaussen were present as directors, and the minute of which was subsequently confirmed and signed by Mr. Henderson himself as chairman. The action was heard yesterday (Friday) before Mr. Justice Warrington, and we are informed that a declaration in terms of the writ was granted, the defendants consenting.

They are exceedingly anxious in Western Australia—and the anxiety is natural enough—to devise some means of discovering new mines to replace the old ones now being rapidly exhausted. Nature, of course, would have the last word in this matter, but many think nature can be greatly assisted by legislative action. The second annual conference of mining managers has just been held at Kalgoorlie. One interesting paper read thereat was entitled "Desired Reforms in Mining Law." In this contribution the author, Mr. Haig, argued that, with the rapid depletion of the ore reserves in the producing mines, it is imperative that some means of assisting prospectors should be instituted, so that, if possible, new mines could be found to take the place of those worked out. The industry as a whole is, in his opinion, suffering from over-legislation, and it is only to be expected that so long as such conditions existed investors would look elsewhere when seeking opportunities for investment. We hardly think investors are troubling their heads very much about legislation, especially of the kind that will assist prospectors. They would much prefer the legislation that would severely punish dishonesty, for it is better to have one dividend-paying mine honestly than a score of new-found mines dishonestly managed. Though things are better now, this has been the one great trouble in the past, the main cause of losses incalculable.

There has undoubtedly been a marked improvement in the position and prospects of the great Mysore mine during the present year; in fact, it looks as if its present condition is better than it has been for a long time past. This will be welcome news to shareholders, who have suffered much anxiety in recent years, and even during the present year, owing to the unaccountable and steady drop, at one period, in the price of the share. It seems clearer than ever that the earlier weakness was due to a "bear" attack on the shares, which was the explanation we gave at the time. At the present quotation the yield is over 12 per cent. per annum, and that being so the share is really not cheap, for it would hardly be advisable to buy even a Mysore share at a higher figure, giving a much lower yield. According to the latest report from the mine rich ore is being opened up in each of the four sections of the property. Likewise, a marked improvement is noticeable in the bottom workings, where the lode varies from 3 ft. to 5 ft. in width and carries values of from 1½ ozs. to over 2 ozs. of gold per ton. The annual report will not be issued until next year, but promise is held out that it will be a good one, as good probably as any ever issued by the company.

As the *Pall Mall Gazette* city editor truly observes, there is nothing particular to be said about the Consolidated Gold Fields meeting. For those who like that sort of thing the harangue of the chairman, Lord Harris, is just the sort of thing they will like. He slurred over difficulties and took good care not to tell his listening shareholders how much money the company had borrowed from its bankers or what the position may be of the big contango account carried by it on the Stock Exchange. Does it carry any shares for defaulting clients, the depreciation on which has practically left the company uncovered? We cannot tell.

but we shall get light some day, of that readers may be quite sure, light from other quarters than the Board room. As usual—for it is the cue with all these mouthpieces of the South African mine bosses—the present Government came in for a great deal of crude abuse, not only from the chairman but from several other and often virulent speakers, and the wrath was falsetto throughout. Contrast Lord Harris's handling of the labour problem with that of Mr. Creswell quoted in another column and try to think for yourselves. Chinese labour must go, of that the paper magnates may be perfectly sure, and if they can be sent away with it so much the more will shareholders have ultimate cause for satisfaction.

Mr. Frederick S. Salamans, the joint liquidator of the failed International Bank of London, has not sent us his circular to the shareholders, but we gather from the *Pall Mall Gazette* of Tuesday that as a result of the investigation into the bank's affairs and of the private examination of the directors and officials he has recommended that proceedings should be taken against the board for misfeasance. Further he applied to the Court for leave to commence proceedings against the directors at the expense of the assets of the bank, and was opposed by Mesrs. Glyn, Mills and Company, as representing the creditors. The Court, therefore, declined to sanction the taking of proceedings at the expense of the estate until the creditors had been paid in full. This is a perfectly reasonable and intelligible attitude from the point of view of creditors. Why should they allow whatever assets they may be entitled to share in to be devoted to paying the costs of criminal proceedings when it is the duty of the State to bear such? A meeting of shareholders has been called to see whether they will find the money, and it is a shame that they should be asked to do it. If a man commits a burglary the State finds the means to bring him to trial and judgment, or if a small confidence-trick impostor allows his ingenuity to carry him too far, the police authorities promptly lay hold of him and bring him to justice, but if a board of directors allows the funds of a company to be abstracted and issues false or misleading balance-sheets year after year in the confidence-trick style, no harm need come to any member of it because the State does not take cognizance of malfeasances such as these. Shareholders ought to send a strong memorial to the Home Office setting forth the facts and demanding the intervention of the Public Prosecutor. What is he paid for if not to take up cases of this description?

The *Speaker* has instituted a series of prizes for essays on various subjects, and last week published three dealing with the question of the gold reserve. "Is it adequate?" was the question put, and three essays discussing this point are printed. We have read them with interest, but cannot say that they carry us much further. Mr. Laycock, the winner of the first prize, rather jeers at the idea of a big gold reserve, and we should be disposed to agree with him if all business was conducted on prudent lines, if no individual or corporation, finance house or bank, ever overreached itself, and if the whole trade of the world were conducted upon a strict basis of simple exchange of commodities. But as that ideal is never likely to be reached, a gold reserve is an absolute necessity as insurance against dangerous financial crises, and the very fact that the country now feels the want of such a reserve and is nervous lest one day some large manufacturer or user of credit should be found unable to meet engagements is proof sufficient not only that the present reserve is inadequate, but that credit has been over-stretched. Mr. Wall, who received the third prize, writes very sensibly and modestly on the subject, but we cannot agree with him in thinking that a legal tender paper money should be created and utilised to tide over times of crises. Devices of that kind might only add to the danger.

Canada is going to revise its tariff. So said Mr. Fielding, the Dominion Minister of Finance, in his speech at a dinner given to him in Ottawa on Wednesday. He naturally gave no details, because that is the business of the Canadian Parliament, but he did indicate that modifications in the present drastic tariff are in contemplation, and described the efforts the Government have been making to reconcile conflicting interests. Manufacturers want high tariffs and farmers would like to see a low tariff or none at all, and Mr. Fielding hopes that the measure to be brought in will satisfy all parties. But he went on to indicate that the industries of the country must be protected, and we should really like to know why one class of workman is to be pampered at the expense of another. The farmers must pay for the favours showered upon the ironmasters, weavers, spinners and workers in brass and wood, and in proportion as the burden is heavy on the agricultural classes will the progress of the country be retarded. Everything is roseate now in the Dominion, but there will be lean years, when the ravages of the tariff imposed for the purpose of propping up and coddling weak industries will become painfully evident. Although the tariff is apparently to be modified, it is still to be a differentiated tariff. Preference is to be given to the United Kingdom, and apparently a sliding scale of duties will be set up against countries which, in imitation of Canada, adopt a churlish attitude towards their foreign customers. High tariffs will be met by high tariffs, and the foolish war that has done so much mischief will continue.

According to the Johannesburg correspondent of the *African World,* some highly important stope drill trials are being carried out in the Robinson mine. This drill is known as the Gordon stoping drill and the Robinson started the trials some weeks ago with only one machine and to-day have twelve running constantly in charge of three miners. Each miner has four machines and four Kaffirs, and each has demonstrated that eight 3 ft. holes can be drilled per machine per shift. Several of the Kaffirs are already doing this regularly. It is estimated, he says, that there are about 50,000 Chinese and natives in the hand stopes of the Rand at the present day, and if the Gordon drill were universally adopted and performed as efficient work as it has done to date, we might expect this large complement to be replaced by these machines, and leave a surplus of nearly 40,000 available for expansion policies. Here is further disinterested testimony as to what can be done with the help of labour-saving appliances. Perhaps this is the very machine that Lord Harris is looking for?

The *Cornubian,* a Cornish newspaper, assures us there is a great misapprehension abroad as to the number of mines now working in the county. A London contemporary puts the figure at twenty only, but this, says the *Cornubian,* is below the mark, for exactly 30 different mines have offered parcels for sale at the tin ticketings within the past few months, and there are many which never appear at the ticketing, but sell their small output privately, in addition to others recently started, which have not yet produced any tin for sale. Another authority states there have been some good discoveries during the past week or so in three of the leading mines. In the Tincroft section of the Carn Brea property at the 170-fathom level a lode has been cut worth about £200 per fathom. Then at the 290-fathom level in the East Pool mine a valuable improvement has shown itself, and further development is awaited with considerable interest, because the discovery has an important bearing on the deeper workings of the mine. In the Grenville mine the manager has at the bottom level cut into the chute of tin met with in the upper levels.

Sincere congratulations to Mr. Lloyd-George on his success in piloting his Merchant Shipping Bill through the House of Commons. It is a good piece of work, and should change for the better the condition of the humbler portion of our merchant service, from whom hitherto all things have been expected with often little given in return. Not the least encouraging fact, however, in the history of this measure is the readiness,

on the whole, with which the shipowners have acquiesced in the provisions made with a view to the amelioration of the always hard lot of the common sailor.

Six lines of steamers to be subsidised by the United States in order to enable them to compete with the vessels of other nations in the ocean-carrying trade. So says Mr. Elihu Root, and we are not alarmed. But, the Morgan shipping combine, for one, otherwise the International Mercantile Company, will need a powerful lot of money to keep it on its legs and enable it to pay dividends on its globular mass of dishonest capital. And no line of American steamers can ever be solidly flourishing as long as the dog-in-the-manger tariff policy now adhered to remains popular with the Washington Government and its legislative bodies. We may have to subsidise too, though, or adapt our "Dreadnoughts" for the merchant service. To maintain a formidable navy for fighting purposes alone and at the same time protect our regular mercantile marine from the consequences of subsidised competition is more than even this country has strength for.

Some of the prominent textile combines have lately experienced very satisfactory trading conditions, but not all of them. The display made by the British Cotton and Wool Dyers' Association for the past six months is, indeed, terribly disappointing, especially after the optimistic utterances of the chairman at the annual meeting in May, when the shareholders were favoured with their first dividend of 2½ per cent. The good times then foreshadowed have apparently not come to pass, as the trading profit from May to September was only £36,000 against nearly £48,000 in the corresponding half of last year. Fixed charges were higher all round, and after adding another £12,500 to the depreciation fund the balance of profit is the delightful sum of about £1,000. As the sum brought in was something like £35,000 less, there is only £34,476 to carry forward against £81,989 a year ago, and the chances of a repetition of that 2½ per cent. are not exactly bright.

Letters to the Editors.

SALUS POPULI SUPREMA EST LEX.

SIRS,—The "passing" of the dividends of two of the most important of the share-punting companies has about given the moribund Kaffir market its *coup de grâce*. Under the present *régime* the position is hopeless, and shareholders are slowly coming round to your conviction that expropriation and nationalisation will be to the benefit of all but the bosses. As one who has a considerable stake in that distracted country (through shares purchased at high prices), I am naturally anxious to see a policy adopted which shall lead to clean administration, a resumption of dividends, however small, and some appreciation in the capital value of our shareholdings. That Goldfields will ever again soar to £19, or Chartereds to £9, or "Johnnies" to £7, we should be idiots to expect; but that an all-round improvement will take place if the State assumes control is as certain as that the sun will rise to-morrow morning.

As shareholders it behoves us to take long views and broad views. We ought to rise to a higher plane than that from which we can only discern our own immediate interests. *Salus populi suprema est lex.* We must realise that the people of the country have the first claim to live by its resources, and they may not be sacrificed or exploited for absentee millionaires.

"Ill fares the land, to hastening ills a prey,
Where wealth accumulates, and men decay."

It cannot be the will of Providence that villains shall luxuriate in Park Lane palaces, and spread themselves in every European capital, while Afrikanders lack bread. What benefits the people of the Transvaal will ultimately benefit us—the genuine shareholders—it is only the cosmopolitan gang of rogues who will lose their fat fees, and their creatures their fat appointments. In all seriousness, I ask my brother shareholders this—under ANY *régime*, can our position be worse than it is under the dominance of the gold-bugs? The writer, who can ill afford to lose as many shillings, has several thousand pounds at stake, but I would rather—infinitely rather—trust my interests to the British Parliament or the Transvaal Volksraad than to men who have been impeached in the Commons as being "without honour, without conscience, and without God."

The resolution passed at the recent indignation meeting at Johannesburg is the writing on the wall which foretells the doom of the wretches who—it is no breach of charity to suspect—are the lineal descendants of the impenitent thief.

The question of appropriation and nationalisation is doubtless a difficult one, but it is not beyond the resources of statesmanship. The Englishman's love of fair play is proverbial—it is from the men with the impossible names that we can never hope for it. As genuine shareholders, our interests will be safeguarded, even if short work be made of the extortionate claims of the bosses, who will then fare like their victims, neither better nor worse.

In your issue of the 10th inst. you reproach shareholders for their apathy, and ask, "what are we doing to force clean, humane, scientific, and economical methods of extracting upon the mine masters?" But, sirs, what *can* we do? Shareholders may—figuratively speaking—thirst for the blood of their oppressors; may regret they have not all one neck that they might swing from the same rope (and men have swung for crimes less heinous than those of the Randlords), and may be willing to spend money in addition to the huge sums already lost—but to what end? With their annual meetings in Johannesburg, and with a farcical seven-days' notice thereof to European shareholders (did Gilbert ever conceive anything more quaintly preposterous?), we are impotent, and the bosses can snap their fingers at us—and they do. But if shareholders are powerless, an outraged people may rise in its wrath with possible consequences it is not pleasant to contemplate. The Randlords are certainly wise in putting the broad seas betwixt themselves and the country they have desolated and ruined. The astonishment you express that no mutiny or revolt has broken out at Johannesburg is felt by most thoughtful people. But let the magnates be warned that there are limits to a nation's patience—as to an individual's—and if they cannot be reached in their persons, they have left hostages for their decent behaviour in the shape of the gold mines.

As to the Chinese who were to make our fortunes (and if they had, would it be worth the degradation?), should not our resistance to them have been more strenuous at the outset? As decent men, ought not our motto to have been, *Non tali auxilio*? But the answer to these questions, as well as to many others, is contained in that one word—impotence. The gang have plenary powers—the shareholders none. That the former should make a profligate use of their power was to be expected, fallen human nature being what it is. The only scourge left to us is the Press. If that is denied, we have nothing.

The real truth to which, because of its painful glare, we are prone to shut our eyes, is this: the mines will never pay, however cheap the labour; nay, I will go further and assert that, given FREE labour, they would never pay. By their swindling promotions, their monstrous capitalisations, their rotten finance, their eternal amalgamations and reconstructions, their bubble "banks," their share-punting trust companies, their liquidations, their "bearing" their own shares, their alternate rigging and wrecking tactics, by these and other detestable methods the bosses have ruined the market, have ruined investors, have ruined the Stock Exchange, have ruined the banks; in short, have ruined everything and everybody—but themselves. Not until a radical readjustment of capital to values is effected will there be hope for shareholders.

I have not minced my words, for I write for plain people who like to hear a spade called a spade. The favour of the Court, to which you allude, should be no protection to caitiffs who are a disgrace to the community, and a menace to the State. My remarks may offend a few of the mealy-mouthed of your readers, who would prefer the Georgian preacher's description of hell as "an uncomfortable place which it would be indecorous to mention to ears polite," but the vast majority, I am convinced, will agree with Mr. Gladstone that "guilt without bounds calls for denunciation without bounds."

ANTI-GOLD-BUGS.

November 19.

Answers to Correspondents.

T. A.—(1) The chance of a substantial rise is very remote. It is a speculative enterprise. (2) The prospects of either concern look very uncertain. Both are highly speculative.

Hardware.—This concern seems to be making progress, and the shares seem a fair speculation.

G. W.—(1) We think the improved prospects of this concern are discounted in the present price, and do not anticipate an immediate rise. As a lock up a very small purchase might turn out all right. (2) As you can get out without loss it might be as well to sell. The company has a hard struggle to make ends meet, and we see little prospect of any permanent improvement.

N. D.—As a speculation you might take a few.

F. E. D.—(1) The price of this seems to be quite as high as the prospects warrant. (2) This, of course, has a better chance than No. 1, but even it does not seem a tempting speculation at present figures. This answer leaves 5s. to your credit.

"28, Kestrel."—As far as we can see there is no immediate prospect of an improvement in any of these securities, although they are all very good class. If you must sell you had better do so without waiting. They always pass under his eye, and he thinks No. 1 should be sold first, No. 3 second, and No. 2 last.

Tyro.—(1) This is worth buying to a moderate extent. (2) It would hardly be advisable to risk too much in a concern of this sort, and we do not think you should go beyond the ordinary shares.

The directors of the Northern Accident Insurance Company of Glasgow, have entered into a provisional agreement for the amalgamation of the business of the company with that of the Royal Insurance Company.

RAILWAY TRAFFIC RETURNS.

Foreign.

Alberta Railway and Irrigation.—Earnings for week ended October 31, $6,362, increase $508.

Argentine North Eastern.—Traffic receipts for week ended October 5, $17,412, decrease $1,055; aggregate from January 1, $786,860, increase $72,847.

Assam Bengal.—Traffic receipts for week ended October 20, Rs. 1,05,581, increase Rs. 19,739; aggregate from July 1, Rs. 14,10,720, increase Rs. 2,72,758.

Canadian Northern Railway.—Traffic receipts for week ending November 14, $190,900, increase $57,300; total from July 1, $2,990,000, increase $1,053,300.

Lucknow Bareilly Railway.—Traffic receipts for week ended October 20, Rs. 23,374, decrease Rs. 3,801.

Quebec Central Railway.—Traffic receipts for the 2nd week of November, $14,145, increase $1,181; aggregate from January 1, $808,700, increase $108,017.

Rohilkund and Kumaon Railway.—Traffic receipts for week ended October 20, Rs. 21,269, increase Rs. 7,201.

White Pass and Yukon Railway.—Traffic receipts for the week ended October 31 amounted to $16,300.

English.

Cleator and Workington Junction.—Receipts for week ending November 17, £1,309, increase £97; aggregate from July 1, £24,481, increase £397.

Cockermouth and Keswick Railway.—Receipts for week ending November 17, £762, decrease £44; aggregate from July 1, £19,405, increase £641.

East London Railway.—Traffic receipts for August, £4,273, increase £30.

East and West Yorkshire Union Railways.—Traffic receipts for the week ending November 17, £431, increase £53; aggregate from July 1, £7,011, increase £247.

TRAMWAY AND OMNIBUS RECEIPTS.

Home.

Bath Electric.—Traffic receipts for week ending November 14, £672, increase £40; aggregate from January 1, £38,349, increase £6,691.

Blessington and Poulaphouca.—Traffic receipts for week ending November 14, £9, increase £3; aggregate from July 1, £528, increase £40.

Bristol Tramways and Carriage.—Traffic receipts for week ending November 16, £4,532, decrease £47; aggregate from July 1, £106,450, increase £4,615.

British Electric Traction.—Receipts of all the Associated Companies for the week ending November 16, £26,318, decrease £282; total increase from January 1, £120,767; 433½ miles, against 438¾.

Burnley Corporation. — Traffic receipts for week ending November 17, £1,096, increase £98; aggregate from July 1, £24,610, increase £2,062.

Dublin and Blessington.—Traffic receipts for week ending November 14, £127; increase £32; aggregate from July 1, £3,220, increase £193.

Dublin and Lucan.—Traffic receipts for week ending November 16, £95, increase £3; aggregate from July 1, £2,605, decrease £17.

Dublin United.—Traffic receipts for week ending November 16, £4,501, decrease £74; aggregate from July 1, £108,330, increase £5,733.

Edinburgh and District.—Traffic receipts for week ending November 17, £4,613, increase £15; aggregate from January 1, 1906, £228,652, increase £5,079.

Hastings and District. — Traffic receipts for week ending November 15, £626.

Isle of Thanet.—Traffic receipts for week ending November 17, £242, decrease £9; aggregate from October 1, £2,428, increase £273.

London County Council.—Traffic receipts for week ending November 10, £25,268, increase £11,597; aggregate from April 1, £845,208, increase £364,457. Miles 108¾, against 51.

London General Omnibus.—Traffic receipts for week ending November 17, £19,339, decrease £901; aggregate from July 1, £462,116, decrease £6,242.

London Motor Omnibus (Vanguard).—Traffic receipts for week ending November 17, £4,207, increase £2,652.

London Road Car.—Traffic receipts for week ending November 17, £7,429, increase £427; aggregate from July 1, £159,053, increase £3,104.

London United.—Traffic receipts for week ending November 16, £5,239, increase £731; aggregate from January 1, £287,584, increase £24,032.

Rossendale Valley.—Traffic receipts for week ending November 17, £200, increase £2.

Yorkshire (West Riding) Electric.—Traffic receipts for week ending November 18, £1,071, increase £429; aggregate from January 1, £39,147.

Foreign.

Anglo-Argentine.—Traffic receipts for week ending November 18, £16,460, increase £1,889; aggregate from January 1, £696,571; increase £81,608.

Brazilian Street.—Traffic receipts for the month of January, Rs. 43,391, increase Rs. 303. Total receipts from August 1, 1903, Rs. 2,47,609, increase Rs. 3,737.

Brisbane.—Traffic receipts for month of October, 1906, £11,721, increase £1,371.

The Investors' Review.

The Week's Money Market.

BANK RATE 6 PER CENT. (Advanced from 5 per cent on Friday, October 19.)

Norfolk House, Friday Evening.

Everybody is talking of easy money at the end of this month just because the Bank return looks more healthy. An increase of £1,340,000 has taken place in the reserve thanks to a nett receipt of £932,000 in gold from abroad and a return of £407,000 in coin from the internal circulation; but even so the reserve is only £21,364,000, and we have the usual South American demands for gold to supply. Less may be wanted for Argentina, but, on the other hand, Brazil may be in a position to take more, thanks to recent loans raised here, and in spite of the release of nearly £2,000,000 of Japanese money by the Bank of England as is shown by the increase in the other deposits. The total of these deposits, including Japanese money, is still only £42,844,000, and to carry us easily and comfortably over the end of the year the total both of other deposits and of the reserve should be at least £5,000,000 larger. It would be interesting to know what securities the Bank of England pledged with the Japanese Government agents when it borrowed that money now paid back. In repaying the money at this date the Bank appears to indicate to the market that it thinks the worst of the crisis over, or it may be that the money is being released gradually to avoid flooding the market on Monday when the £2,000,000 Treasury Bills are paid off.

All the same money is not going to be cheap next week for the Stock Exchange settlement. We shall be surprised if brokers and jobbers there get their supplies from the joint-stock banks at any appreciably less rate than prevailed a fortnight ago. Short advances, however, in the discount market have become easier, and instead of paying 5½ per cent. for seven-day money borrowers have been able to get it at 5¼ and latterly at 5 per cent.

With money cheaper rates of discount tend to fall, so that yesterday it was possible for holders of three months' remitted paper to get it discounted in the open market at 5 13/16 and even 5¾ per cent. Early in the week the rate on such bills was hard up to 6 per cent., and January bills could not be discounted under that figure. Often 6⅛ per cent. was charged for discounting these short bills, and the business was therefore diverted to some extent to the Bank of England. We hope this reduction in rates will not go very far, because we have by no means seen the end of our troubles yet. A 6 per cent. rate is not making credit institutions sounder or richer, nor is it adding to the wealth of the multitudes who borrow. As long, however, as nothing of the nature of a calamity occurs we shall rub along in hope, afraid only lest a too sudden cheapness should generate mischief.

To-day the discount market seems to have lost its head a little, and three months' bank bills changed hands readily enough at 5¾ per cent. In fact, the fine working rate slipped back quite early in the day to 5 11/16 per cent., and some people were talking of the Bank rate coming down next week. Others insist that it must come down next month unless something untoward happens in America, because more gold is likely to come from France. The Paris cheque was almost 25.28½ this afternoon, and that means more gold to us in all probability. In spite of this there is no superabundance of credit in the market, and rates will probably harden again, temporarily at least, next week.

Happily there are no large demands on account of new issues. The calls for next week all fall on Friday, and only amount to £145,000 altogether.

SILVER.

The quotation for spot silver hardened on Saturday last to 33⅛d. per oz. owing to the small supplies available, but since then Indian markets have developed decided weakness, and the decline there has frightened holders. Considerable quantities of the metal were consequently thrown on the market, causing a sharp break in prices, which continued with increasing force until to-day values were down to 32d. per oz. for both cash and future delivery. At the close, however, there was a recovery of about 3/16 from this level. Applications for the Rs. 60,00,000 of Council drafts on India on Wednesday amounted to Rs. 4,11,00,000 in bills and Rs. 1,29,00,000 in transfers. Tenders were accepted for Rs. 19,07,000 in bills and Rs. 20,93,000 in transfers, tenders at 1s. 4 1/16d. and 1s. 4 3-32d. per rupee respectively receiving about 9 per cent. With a steadily increasing demand for money in India the Council has again raised the amount to be offered next week to Rs. 1,00,00,000.

BANK AMALGAMATION.—The directors of Williams Deacon's Bank, Limited, announce that a provisional agreement has been entered into with the Sheffield and Rotherham Joint-Stock Banking Company, in virtue of which they buy its business and goodwill. The Sheffield and Rotherham Bank is an institution of high standing, and was established in 1836, with its head office in Sheffield and branches and sub-branches in Yorkshire and Derbyshire, where Williams Deacon's Bank, Limited, has already important connections. The fusion of the two banks should therefore tend to the consolidation and extension of the business of the company. The paid-up capital of the Sheffield and Rotherham Bank is £256,000, divided into 32,000 shares of £50 each, upon which £8 per share has been paid, whilst its reserve fund amounts to £246,000. The amalgamation will be effected by the exchange of one share of Williams Deacon's Bank, credited with £8 paid, for one share of the Sheffield and Rotherham Bank, and for this purpose it is proposed to create 31,250 new shares of Williams Deacon's Bank, Limited. The issue of these shares with £8 per share paid will increase the paid-up capital of Williams Deacon's Bank to £1,250,000. The remaining £6,000 capital of the Sheffield and Rotherham Bank will be satisfied by Williams Deacon's Bank without further increase of capital. The directors of the Sheffield and Rotherham Bank will continue to act as an advisory committee in Sheffield, and two of them will join the board of Williams Deacon's Bank, Limited.

BANK OF ENGLAND.

Stock Market Notes and Comments.

Markets have become mysteriously weak just when the monetary position seemed to be improving, but there is no accounting for price movements nowadays. They are so largely in the control of the giant operators or groups of operators, and the weakness of the last day or two has certainly been accompanied by a cessation of dealing by the general public. Very likely, therefore, the decline is merely a consequence of profit-gathering on markets essentially narrow and in places hollow enough. At the same time, should money really promise to become more abundant—which it will not be to any extent this side the new year—business would be almost certain to increase in volume, for there is a strong desire on the part of the outside public to speculate and to invest. This is seen in the excitement around such articles as Hudson's Bay shares and in the way new issues like those of the Buenos Ayres Great Southern Railway or that £225,000 in debenture stock put out this week by the Tilbury Railway are absorbed. The public snatches at new things like these, and gambles in the sporting favourites of the hour with an avidity that demonstrates the prevailing hunger. In spite of the uncertain outlook in the Home Railway market, we should probably find the buying fever high there also if people could feel sure that there was no 7 per cent. Bank rate in sight, and that instead the rate would be put down to 5 per cent. within the next few weeks.

No market is so dominated by gangs of depredators as that for Yankee railroad and trust shares, but even there the public has been plunging a little this week and seems quite eager to do more. We cannot look with favour on any movement of this description, but it is impossible to keep the younger generation heedful of past experiences. Always in former days when the public has been let in at the top of the Yankee market the natural sequence of events has forced it out at the bottom, and we have not the slightest doubt but what the same thing will happen again if we buy the common stocks of railroads and trusts at the fancy prices now current. Something that may look like accident would then occur one froward morning, and the whole magical structure would come hurtling to the ground; so sensible people had better leave Wall Street wares to the master gamblers. About no other section of the markets is there anything particular to say this week. Between the Continent and London business is very small, even in South African shares, and the play going on in Diamond mines and in Copper shares remains quite too mysterious for us to be able to say anything useful about it. All we can keep repeating is that markets whose movements are the outcome of hidden agencies are never markets for outsiders to play in.

The Week's Stock Markets.

Stock markets this week have been rather irregular in tendency. They opened in rather confident fashion with another outburst of gambling in American and Canadian Railways, but the artificiality of the recent rise was quickly revealed when the Brazilian gold export story was put about. Gold had been flowing into the Bank so steadily that dealers, who are becoming quite monetary experts, began to think that the stringency was now a thing of the past, and instead of a probable rise in the Bank rate being discussed, those market speculators with fairly heavy commitments for the rise began to talk of a reduction. The knowledge, however, that a large amount of gold would be sent to Brazil in connection with the new currency scheme quite upset the optimistic anticipations of the "bulls" and prices of all investment securities soon lost their early bloom. The Bank return showing a substantial addition to the reserve put a rather better complexion on affairs later in the week, and prices in some directions were disposed to recover. It is none the less evident that markets do not possess real strength, and no doubt part of the realising was in anticipation of next week's settlement, operators for the rise being anxious to escape the high carry-over charges which are certain to again prevail. Consols went above 87 for the account at the start, but were quickly knocked back when it became known that gold was leaving the Bank, and closed substantially lower. Other British Funds also tended downward, with particular weakness in Irish Land stock, and India 3 and 2½ per cent. Bank stock, however, was a little better. London County issues showed signs of reaction among Home County and Corporation stocks, but the Colonial inscribed list continues fairly firm.

Very little of an interesting character took place in the Foreign Bond market, which was inclined to be dull most of the week under the influence of easier advices from Paris. Just at the start the scrip of the new Russian loan improved to 5⅜ discount, but there was

a quick fall to 6 discount, and other issues of the country sympathetically declined. Spanish, Turkish, and Portuguese also went back in a small way and modest Continental sales depressed Brazilians and Argentines. Buenos Ayres Cedulas were inclined to mark out a line for themselves, and rose almost to 24, the new scrip to be given in exchange under the settlement rising to 65¾. Peruvians eased off pending the issue of the annual report now about due, and it seems that the market is looking for a dividend of 1½ to 1¾ per cent. on the preference stock against 1½ per cent. paid a year ago. Uruguays were another dull spot, but the Central American group received enough speculative support to bring about several substantial rises. Guatemalan, Honduras, Costa Rica, Colombians and Venezuelan bonds all went up, and retained the higher figures to the end, with the exception of Costa Ricas, which slightly reacted. Japanese and Chinese were inquired for on investment account and marked rather higher figures.

Investors were still busy in the Home Railway market during the end of last week and the beginning of this, but their inquiries were diverted from the "heavy" stocks to those of the passenger lines. Brighton deferred came in for a good deal of attention for no particular reason, while Chatham and South-Eastern benefited by the revival of the Channel Tunnel and Ferry schemes. The buying, however, was checked by reports of heavy gold withdrawals for Brazil which set dealers once more discussing the probability of a 7 per cent. Bank rate, and, although no serious weakness developed, prices in most cases slipped back a little. They hardened again when it was found that the loss of gold on balance was much less than had been feared, but it cannot be said that the recovery was very pronounced in any of them. Metropolitan stock has been exceptionally strong owing largely to the interference with motor-bus traffic by the stricter methods adopted by the police in licensing vehicles. Tilbury stock improved on the issue of fresh capital to pay for the widening of the line between East Ham and Barking, the substitution of bridges for vehicular traffic in place of level crossings and other works at Barking, the rebuilding of Tilbury Station, the completion of the equipment of the line for electrical traction as far as Barking and the provision of additional working stock. The issue which took the form of about £225,000 4 per cent. debenture stock was allotted to holders of ordinary stock in the proportion of 12 per cent. of their holdings at 110 per cent. and was promptly quoted at 2 premium. Fixed interest stocks received a fair amount of attention, and a large number of them scored advances of 1 or 2, while Chatham 2nd Preference was £4 higher.

The improvement in the weekly return of the New York Banks, unreal though it was, and the easier monetary conditions ruling here gave the bulls a chance, of which they were only too willing to avail themselves. Most of their energies were devoted at first to Union Pacific, and glowing prophecies were made of the results to be shown by the forthcoming report, whilst Great Northern received a stimulus from assertions that the company intended to take over the complete control of the Chicago, Burlington, and Quincy line. A fairly large business was also done in Missouri, New York Central, and Southern Pacific, and it was said that the public on this side had at last been tempted in. Whether this be true or not business in Wall Street remained almost entirely professional, and the speculation became rather wild. Some of the gamblers professed to be so disposed to discount the future that they were buying Atchison on prospects of an increase in the next dividend due five months hence, but ostentatious bidding on flimsy pretexts of this kind is always suspect, and it was believed that the demonstration of activity in the few selected stocks was merely to cloak unloading elsewhere. Money in New York hardened to 12 per cent. on Tuesday, and rates were nearly as stiff on Wednesday, while the talk of gold going from the Bank of England created a good deal of nervousness, and anxious inquiries were made as to the possibility of a rise in our Bank rate to 7 per cent. this week. Union Pacific relapsed sharply, and other things went back with them, but the cliques have the market well under control, and speedily brought about a rally. The official announcement with regard to the ore deal on Thursday helped to bring about a further rise in Great Northern preferred stock.

Canadian Pacific shares were taken in hand by Wall Street on Monday afternoon, and the price was jerked up nearly $5, but for the next day or two the market seemed undecided. The price consequently fluctuated pretty freely, but a fresh outburst of activity on Thursday sent it flying upwards again, and both the old stock and the scrip of the new issue ended with substantial improvements. Grand Trunk stocks on the contrary have been quiet, with a tendency towards lower figures most days, and although the rally in Canadian Pacific shares was reflected here the nett gains on balance did not amount to more than 10s.

The Foreign Railway market as a whole has been without much animation, even when other sections were buoyant. Argentine things, however, were firm, with a fair amount of business in East Argentine and Entre Rios stocks, which left prices decidedly higher on the week. Activity was also displayed in Buenos Ayres Great Southern, but the tussle between bull and bear was about equal, and it closed without material alteration. Bahia Blanca and North-Western, however, was firm, on the new issue of guaranteed shares, while Buenos Ayres and Pacific ordinary gave way. Mexican Railway stocks went back at first on profit-taking, but soon recovered, and the preference issues on balance showed gains of £1 to 30s. Leopoldina stock was firmer and slightly better, and Cuban securities were steady, but Antofagasta Ordinary gave way.

Miscellaneous markets, although showing less activity than recently, were fairly busy at one or two points, and a good many interesting movements occurred. Several bank shares were shifted about, and those of the London and River Plate Bank sharply advanced 6 on the good profit statement just issued and the offer of new shares at par. In the Brewery division Allsopp's stocks were weak before the meeting, and did not rally after the gathering was held. City of London Brewery preference stock was particularly flat, an attempt to sell causing the jobbers to mark the price 6 lower. Motor and Cycle shares again came into considerable favour, and prominent issues like Humbers, Darracqs, Daimlers and Rovers all went up, in some cases to a substantial extent. Catering shares on the whole were fairly steady, but Slaters were rather dull when the report was issued. In the Textile group Coats were sold with some persistence by those who bought in anticipation of another capital reorganisation and Bleachers receded owing to the formation of a new bleaching company. Sewing Cottons at first sympathised with other shares but recovered again, and finished fairly firm-looking. A considerable number of improvements took place in the Iron and Steel section in consequence of the good reports now being issued, but there was an all-round reaction among Nitrate shares, due to the fall in market prices of the fertiliser. These have been sustained by Continental speculation of a particularly aggressive type, but the production is on such a large scale that the "bears" have been able to attack the market with success. Telegraph Construction shares were rather weak and Price's Patent Candle dropped about a couple of pounds, it being thought that the company's profits must be adversely affected by the prevailing high prices for tallow and other raw materials. London Docks stocks had a sharp fall when it was announced that the Government would not proceed with the Port of London Bill for another year, but speculators are endeavouring to revive the market with stories that the Government may eventually accept the scheme of the Dock companies instead of bringing forward their own measure. Hudson's Bays have been a wild and excited market, but the price was steadily pressed down most of the week and one time reached 120 or quite £10 below the highest figure lately touched. Pekin Syndicate after being better went down with other speculative shares, and profit-taking sales in

Anglo-American Telegraph deferred caused a reaction to about 26¼. The shares of the Niger Company were very firm again, and in the Shipping section Furness Withys were bought in a large way and jumped to 32s. British Electric Traction shares slowly recovered, but Cape Electrics fell back to 10s. on the disastrous report dealt with in another column.

Beyond the "wave of depression," as one member of the Stock Exchange called it, a slight recoil in prices, nothing whatever of interest happened in markets to-day. Indeed, Consols closed steady, and only one or two of the heavy railway stocks were a trifle off. Colonial stocks are said to be in short supply, and were it not for the enormous weight of the American account, next week's settlement might be faced with equanimity. It may be mentioned that London and River Plate Bank new shares are quoted at 62 to 62¼ and new Tilbury debenture stock at 2 to ½ premium.

TRAMWAYS AND OMNIBUS.—Rise: Anglo-Argentine, ½, to 7½-7⅝, Auckland Electric Deb. 1 to 104-106, British Columbia Def. 2, to 125-130, British Electric Traction ½, 4½-4⅝, do Pref. ½, to 84-85, Carthagena ½, to 8⅝-9⅞, City of Buenos Ayres ½, to 5⅝-5⅞, London General 1, to 87-92, Sunderland Deb. 2, to 89-92, Yorkshire Deb. 1, to 93-96. **Fall:** B.A. and Belgrano "B" Pref. ½, to 4½-5½, London Road Car ½, to 3½-3⅝, Sao Paulo 2, to 112-115.

WATERWORKS.—Fall: Colne Valley Deb. 2, to 113-118.

Critical Index To New Investments.

KYNOCH, LIMITED.

This company is best known as makers of cordite and other munitions of war, but it also carries on a good many other businesses, including the manufacture of soap and candles. A fine opportunity for extending this branch having arisen through the attempt to create a soap trust, the directors consider a desir-

able that the company should have at its disposal a considerable increase of capital. They have accordingly issued 12,500 £10 ordinary shares at par, and this week offered £100,000 4 per cent. debentures at par, partly for the purchase of more machinery and partly to give the directors command of floating capital which will enable them to buy raw material in the open market at favourable opportunities and in larger quantities. The new debentures will rank *pari passu* with the existing issues of £400,000 and will be secured by a floating charge on the whole of the company's undertaking and property valued at £1,595,438. For the past five years the average annual profits have been £91,828, or sufficient to pay the whole of the debenture interest nearly five times over, while the average amount carried forward would have met this interest more than twice over.

Port of Para.

This is an American company with an authorised share capital of $17,500,000, which has acquired a concession for constructing harbour works at the Port of Pará. How much of this capital has been issued is not disclosed, but a good deal of it, at any rate, would appear to be water, as an issue of £3,600,000 in 5 per cent. first mortgage 50-year gold bonds has been authorised to provide funds for the actual construction. Of this amount, £1,250,000 was offered for sale this week, £900,000 in Paris and Brussels and £350,000 in London, the price asked for the latter portion being 92½ per cent. The Federal Government of Brazil has granted a special gold tax of 2 per cent. upon the total imports into the Port to provide interest at 6 per cent. per annum on the cost of the works during and after construction in case the nett revenue should not at any time be sufficient. It is estimated, however, that on the basis of the business for 1905 a gross revenue of £478,500 should be earned, and as working and maintenance expenses are fixed by the concession at 35 per cent. a surplus of £309,816 is brought out, while interest on the entire issue of bonds will only require £180,000. The trade of Pará has shown a steady increase during the four years 1902-5, when the Federal Customs revenue on imports rose from £708,000 to £1,722,000, in spite of the lack of facilities.

Bahia Blanca and North-Western Railway Co., Limited.

The report for the past year issued in October showed that a considerable outlay had been incurred on this company's new line from Nueva Roma to Huinco Renanco on the Buenos Ayres and Pacific Railway, as well as on extensive additions to the works in Bahia Blanca and at the port owned. To meet this expenditure 6,000 new £10 shares have been created, and these were offered this week, together with 65,000 existing shares in the form of shares carrying dividends at the rate of 4½ per cent. guaranteed by the Buenos Ayres and Pacific Railway. The shares will be converted when fully paid up into stock ranking *pari passu* for capital rights with the existing £1,354,000 guaranteed stock, and were issued at par, preference in allotment as regards one-half of the amount being given to applications from share and debenture holders of this company, the Buenos Ayres and Pacific and the Villa Maria and Rufino Railway. Gross receipts of the company's own line have increased from £85,943 in 1903-4 to £166,400, and as these should be considerably augmented when the extension to Huinco Renanco is completed the guarantee should be easily covered.

Wheal Commerce Tin Mine, Limited.

This company is formed with a capital of £50,000 in £1 shares to acquire a tin mine in Cornwall, with certain plant and machinery, on which it is said a considerable sum has been spent in development. The mine has only been worked on an experimental scale during the past three years, and during that time has produced 80 tons of black tin, realising £7,272, yet the original vendors, who at first asked £20,000 for the property, eventually accepted £6,500 in cash and £6,000 in shares. This company, however, does not get it anything like so cheap, as the Straits Syndicate, Limited, asks £12,500 in cash, £6,000 in shares and £6,500 in cash or shares, or just double what it paid. It is estimated that with an output of 50 tons a day on the present cost of working, and taking the selling price of the tin at £100 per ton, a profit of £12,185 should be earned, which would be sufficient, after providing for royalty and administrations, to provide a dividend of 20 per cent.

MINING NEWS AND NOTES.

*** *Frank and unbiassed answers are given to all questions relating to Mines. Address Editor Mining Section and enclose* One Shilling *for each question asked. No bucket shop circular or advertisement should ever be responded to without first consulting the* Investors' Review.

Whilst quietness has ruled all the week in the Kaffir Circus, we have seen a sudden and quite remarkable advance in Rhodesians. Why have they been put up in this capricious way, without any justifiable reason? For copper shares and gold shares, even Bankets, have risen together, and it is impossible that simultaneous developments should have happened favourably to affect so many diverse interests. The explanation is, insiders say, that the Chartered report will be out very shortly. Well, why should that improve the intrinsic values of highly speculative gold shares? Because, it is surmised, the revenue will exceed expenditure. The logic is bad, but it sufficed as an inducement to dealers to mark Chartereds higher, and they could not leave the mass of other stuff out in the cold. Even should the rumour be based upon fact, upon information that has leaked out of the board-room, that income and outgoings will really show an equilibrium, how can it improve the prospects of those mines that have not for years made ends meet, and are never likely to? "But it will gladden the hearts of the public and encourage them to buy." Nothing of the kind. They have had quite enough of Chartereds and Rhodesians, and will not be foolish enough to buy rubbish at a dearer price than they could get it a week ago. Look at the return for October which we analyse elsewhere. It shows a great drop upon that for September, yet we have been assured, time and again, that the industry is marching forward at a glorious pace. Latterly there has been a reaction from the best, for the profits looked very tempting to some of the gamblers.

Kaffirs have been very dull. Speculators hoped that Lord Harris would deliver a speech more hopeful than the message given to the world in the report, but he disappointed them. He is still a pessimist, and cannot see any cheering ray of light in the present darkness. He misapprehends and exaggerates the feelings of the country in regard to the Government's attitude towards the labour question. So dealers felt it would not do to put up prices in face of his lordship's gloomy prognostications, and in many cases they are lower than they were a week ago, including Gold Fields.

The announcement by the General Mining and Finance Corporation of an intended increase of capital by 625,000 new £1 shares has not made a good impression. These are subscribed at £1 5s. by Messrs. Albu and some German finance institutions, and will be offered to the shareholders at £1 10s., or practically about the market price, thus offering them little or no inducement to take them up.

Irregularity has been the distinguishing characteristic of the diamond section. In the opening of the week De Beers, Jagers, and New Vaals were exceedingly strong, but subsequently all three have heavily relapsed. De Beers have been pushed up on expectations of a higher dividend, and the reaction is probably the effect of profit-taking. Premier Diamonds are also lower, but they stand quite alone, subject to influences which do not affect other diamond shares. They are still the playthings of cliques of "bulls" and "bears," and it is impossible to foresee how the fortunes of the game will fluctuate from hour to hour.

Westralians also are erratic. A very large holder of these has died in the person of Mr. Ludwig Loeffler, and the market is conjecturing what will be done with his interests. He is said to hold 100,000 Perseverance, 50,000 Lake Views, 40,000 Oroyas, 15,000 Golden Horseshoes, 12,000 Ivanhoes, and 11,000 Great Fingalls. Several months ago, when it was known this gentleman was such a large buyer, the rumour went that he was acting on behalf of a German syndicate. Most of the leading stocks in this group have given way, generally about ⅛ each day.

Loddon Valleys, after a lengthy quietness, have had another sensational rise on the latest news from the other side, but it may be as transient as the still more surprising rise of a fortnight or so back.

Copper shares have been invariably good on the further rise in the price of the metal, the most prominent stocks, such as Anacondas and Rio Tinto, with the less known ones, all joining in the advance. Cape Coppers have been notably strong, and more or less substantial improvements are shown in Mount Lyells, Tharsis, Spasskys, Great Cobars and Utahs. At the close, however, there is a tendency to go back on profit taking.

In the Miscellaneous group Esperanzas have been, as usual, mercurial. They gained as much as ⅛ on the October profit

of £97,027, which compares with £86,177 for September, but have practically lost it all since. Report says there is a "tap" on; also that the mine is likely soon to come to an end of its supplies of rich shipping ore, after which operations will have to be confined to the treatment of average grade ore at its own plant. Indian shares have been consistently firm; Broken Hill descriptions active, whilst much gambling has been going on in various Siberian shares. Amongst New Zealand things Waihi's have again unaccountably weakened.

VOGELSTRUIS ESTATES.—In sending out the October returns the directors of this company announce that in order to meet the wishes of the shareholders they have decided, as from next month, to publish the approximate profit. It is to be understood, however, in their warning, that such profit is only estimated and will be subject to allowances for depreciation and such other charges as may be incidental to the final adjustment of the accounts at the end of the year. In order to provide this information it will be necessary for the monthly circular to be issued about the middle of the month instead of at the commencement. We should not have thought it would involve such trouble to supply this useful information. It would only be adopting a method that has been universal for years, and seems very easily carried out by numerous companies.

MESSINA (TRANSVAAL) DEVELOPMENT COMPANY.—There is really little of moment in the report of this company, which covers the lengthy period from January 13, 1905, to June 30 last. By the work carried out, it is said, a large body of ore has been developed and much knowledge obtained as to the occurrence of the various lodes. In the balance-sheet the general expenditure is entered at £4,879 and as only £20 was received from transfer fees the nett deficit is £4,858. It looks as if more capital may be wanted soon, but as the company is now making monthly shipments of copper ore—are they forcing these?—they may be able to avoid this disagreeable necessity.

GWALIA CONSOLIDATED.—The directors have issued a report upon the mine written by Mr. Percy Durant, a shareholder, who has paid a visit to it. And this is how he writes of it:—"With our property itself I am greatly impressed, and I feel sure it is going to be one of the big mines of Western Australia, for I know of nothing outside Kalgoorlie which can show such a length and width of gold-bearing ore as the lode running through the Violet leases," and much more of a like enthusiastic kind. But we listen to Mr. Durant's ebullient language with calmness and much scepticism, for it is very hard to believe that this mine will become the great success he predicts for it. For it is over eight years old, being originally formed in 1898 as the Star of Gwalia, and it absorbed such failures as the Prince of Gwalia, the Pride of Gwalia, and the Empress of Gwalia. The accounts for the year ending June 30, 1904, showed a total nett loss of £561,533, which was extinguished by reducing the capital by £545,598, and appropriating £6,839 profit. The company has certainly done better since, and as the issued capital is only a little over £47,000 in 2s. 6d. shares, it may in the future earn dividends. It is doubtful, however, if it will recoup the tremendous losses of the past, and yield a fair profit to old and present shareholders.

AUCKLAND PARK REAL ESTATE.—It is not astonishing to learn that conditions in Johannesburg in the past twelve months have not been favourable for dealing with this company's property; but the directors cling to the hope that early next year, when the elections are over, conditions will greatly improve. In the prevailing stagnation only a few sales have been possible, and in order to do some business the directors adopted the policy of selling property by instalments. This, they argue, appeals to a class of thrifty artisans and tradesmen, not only in the Transvaal, but in other parts of South Africa, and as it has been found to answer, they propose to continue and extend it. No profit and loss account is yet presented, and the balance-sheet is dated June 30 last, the Johannesburg figures being incorporated to March 30. Administration expenses in London came to £1,279, and revenue from interest and transfer fees to £767, whilst in Johannesburg expenses totalled £6,134, against £2,288 from revenue stand licences and rents and £647 from fees, interest and sundries. The aggregate deficit is now £8,614. Cash and liquid resources are abundant, and liabilities are trifling in comparison.

BRILLIANT AND ST. GEORGE UNITED GOLD MINING COMPANY.—The output in the six months ending August 17 was:—Brilliant and St. George mine, 9,668 tons, yielding 6,720 ozs. 18 dwts. gold, valued at £23,727, and 14,940 tons of residues treated by the cyanide process producing 9,309 ozs. 8 dwts. 11 grs. of bullion, worth £15,437, making a total of £39,164, an average of slightly over £4 1s. per ton. During the term tributors crushed 321 tons 16 cwt. for nearly 210 ozs. of gold, of a value of £944, inclusive of residues, thus making the total output from the mine 9,989 tons 16 cwt. of stone, for £40,108. The Hope Lease tributors crushed from old workings 247 tons 3 cwts. for a return of close on 166 ozs., realising £1,000. During the six months the company netted a profit of £12,225 from its operations, out of which it distributed dividends amounting to £7,200. Cash balances have increased from £22,094 to £25,775 and stocks and debtors stand at £4,821. Although the company has done fairly well, the outlook is not so promising as shareholders would like it to be. Though the expectations of the directors were realised they warn shareholders that unless the unexpected happens production will show a falling off next year.

MOUNT READ MINING COMPANY.—This Australian concern has had an uphill fight of it for many years, and five years ago was reconstructed. Up to the present no successful treatment process has been discovered, various methods having been under consideration. In their report to June 30 last the directors say during the last few months there has been a revolutionary change in the treatment of mineral products, especially in the Broken Hill district, in relation to zinc ores, so they are now cherishing renewed hope. A policy of development is being pursued with the object of opening-up the main lode in the 600 ft. tunnel, and according to the last report from the mine manager the total length of the tunnel was 1,279 ft. The company has been approached with offers to let certain portions of the mine on tribute, but the terms could not be entertained.

BRITISH BROKEN HILL PROPRIETARY COMPANY.—This company has again experienced another good half-year, thanks to the activity and the advance in prices in the metal market. In the six months to the end of June it made a gross profit of £47,964, and a nett profit of £42,195, which, with the balance brought forward, gives a total of £52,756. So the directors have decided to declare an interim dividend of 2s. 6d. per share. Altogether 56,338 tons of sulphide ore were raised and concentrated, the cost of stoping being 12s. 2½d. per ton, and of concentrating 5s. per ton against 9s. 10½d. and 4s. 3½d. respectively in the previous half-year. These higher working costs were caused chiefly by the fire in an adjoining mine. Ore reserves are reported at over 600,000 tons down to the 600 ft. level. Further ore bodies have been proved below that level of Block 15, though the lower developments in this portion of the company's property have not at present altogether realised expectations. Substantial progress has been made with the additions and improvements to the plant and machinery, though owing to the scarcity of good mechanics it has been impossible to accomplish as much as had been hoped.

NEW QUEEN GOLD MINING COMPANY.—This is a twice-reconstructed Queensland company, and we should not be surprised if a third reconstruction became necessary before long. For the directors again issue a disappointing report for the past twelve months, the more disappointing as they felt emboldened by what have proved to be unreliable appearances in the mine, to pay a dividend of 6d. per share. The solitary previous distribution was of a like amount in 1900-01. Total revenue from gold mining and other sources was £40,124 and the nett profit, after charging all outgoings—though no allowance seems to be made for depreciation—was £4,950. From this fall to be deducted the debit of £831 in the previous accounts and the £3,973 absorbed by the interim distribution, leaving £146 to be taken forward. Of course, the directors should not have been in so great a hurry to pay a dividend, looking to the state of the finances and the uncertain future, nor were they even justified in doing so by the feeling that mine prospects at the end of last year began to look more favourable. For the reef in some of the levels of the lower formation seems to become poor, and work in these levels had to be stopped, thus reducing the output from that part of the mine. Despite these disappointments, the directors do not abandon hope, for they have recently made improvements to the mill, and increased its capacity considerably. Prospects are described by the managers as encouraging, and they are hopeful that the exploratory work now in hand may result in important discoveries at any time. Even these hopes, however, may be insubstantial.

LODDON DEEP LEADS (VICTORIA).—In submitting their report for the past twelve months, the directors say that it is the "happy position" of informing the shareholders that they have been able to finance the company without calling upon them for further assistance; also that they are confident of the early success of the company. Mr. McEvoy, one of the directors, has spent twelve months on the property, and writes a favourable and hopeful report, and though we hope the company will be successful, it is early days to feel assured of this. "From what we have already proved," says he, "I am confidently able to say that, with a sufficiency of working capital, there is every prospect and hope of your property turning out a valuable one, and as we are now beyond the prospecting stage we can look forward with confidence to success."

VICTORIAN CONSOLIDATED GOLDFIELDS.—The directors report that since the transfer of the property to the new company they have been mainly occupied with the erection of plant and machinery, and on October 25 the manager cabled: "Mill trial very satisfactory." This plant is capable of treating 1,500 tons of ore per month, and preparations are now in progress for commencing crushing at an early date. At the time of the transfer of the property 20,000 tons of ore were available for crushing from the 300 ft. level, and since then the main shaft has been deepened from 300 ft. to 358 ft., from both of which levels further ore supplies will be available. Experiments have demonstrated that concentration is an essential part of the process of extracting the gold, and, accordingly, a plant for this purpose has been included in the new mine equipment. It is believed that chlorination can be dispensed with, and the concentrates treated with cyanide.

IVANHOE SOUTH EXTENDED GOLD MINING ESTATES.—This poor Westralian company continues to pile up its debit, for it is not yet winning any gold. Amongst its assets are some dividend-yielding shares in another company which brought in £886; interest on loans gave £751, and transfer fees £34, total £1,671. Expenditure took £2,675, so there was a further loss of £1,003 to add to the old deficit, raising it to £10,098. Will the company be compelled to reconstruct? Not yet awhile, at any rate, for it has funds wherewith to carry out the development work planned. It is impossible to say what the future will bring forth.

KELLY'S QUEEN BLOCK GOLD MINING COMPANY.—The quantity of gold produced from all sources in the six months

ending August 24 was 3,601 ozs., and nearly 132 tons of concentrates, the whole realising £18,746, with £2,266 from residues. Small sums were received from other sources. As the expenditure amounted to £16,549, the nett profit was £2,282. Two dividends, of 6d. per share each, were paid, leaving a fair balance to take forward.

Ankobra (Taquah and Abosso) Development Syndicate.—A fair measure of progress was attained by this West Africa company in the past twelve months, but success is still a long way off. Two dredgers were at work, and these returned 2,645 ozs. of fine gold, realising £11,244 at a cost of £9,657. Work, however, was, as usual, retarded by the lowness of the Ankobra River, consequently it was not possible to work either machine full time. The management, it appears, has recently been reorganised, resulting in considerable economy and improved supervision, but it will need a great deal of economy to enable the company to pay dividends. No profit and loss account is drawn up and according to the balance-sheet the administration expenses in Africa and London came to £2,526. From this has to be deducted the profit of £1,588 made from gold mining, leaving a nett deficiency of £938, raising the total to £24,025. Unless considerably more rapid progress is made it will take the company many years to wipe this out. Free resources are very meagre, cash and gold in hand amounting only to £1,667, against much heavier liabilities.

Sudan Gold Field.—The directors are able to report a certain measure of progress in the development work in the past financial year, and it may be said at once that indications in various directions look promising. But it will be a long time yet before the company can expect to win gold. Mining and general expenditure in the twelve months, including depreciation, amounted to £19,980, whilst £1,500 was received in cash as consideration for options (relinquished) over portions of the company's concession. Allowing for £76 from transfer fees and the nett excess expenditure was £18,404, making the aggregate in the balance-sheet £29,273.

Kelantan Gold Dredging Company (No. 1).—The directors have to confess that the estimates in the experts' reports upon which the prospectus was based have not been realised. Instead of sufficient high-grade ground to keep five dredges working for about 12 years, it is now estimated that the company possesses only sufficient low-grade ground to keep three dredges running for six months from September last. This is staggering news to the shareholders. Under such circumstances, the best policy to suggest itself would be the final winding up of the company, but the directors hint at no such thing. On the contrary, they desire to prolong the company's existence by amalgamation with the Duff Development Company, the parent concern. Under this scheme the directors of the Kelantan Company propose to call up the balance of 5s. per share on the 80,000 partly-paid shares, whilst the Duff Development will issue to the liquidator of the Kelantan 78,000 fully-paid £1 shares and 9,750 6 per cent. debentures, each shareholder in the latter to be entitled to his proportion of each after paying his calls. There is little or no encouragement to shareholders to put more money into such an enterprise. It would seem more prudent to cut their loss.

East Indian Coal Company.—The nett result of the working for the financial year ended April 30 is a profit of £15,977, arrived at after making the usual allowances for depreciation of plant, machinery and buildings. A sum of £3,664 is brought forward, giving the directors a total of £19,642 to deal with. So they pay a further dividend of 7 per cent., making 10 per cent. for the year, with a bonus of 5 per cent., place £2,000 to the reserve for the equalisation of dividends and carry forward £2,642. Attention is called to the fact that the Rs. 2,00,000 of debentures were redeemed on April 30 last and the directors recommend that the £5,000 which stood at the debenture reserve account be transferred to and written off block account. The company's output has suffered from the general scarcity of labour and the extension works have also been seriously delayed. On the other hand the market for the company's products has been a very firm one and it has benefited materially from higher prices.

Hastings (British Columbia) Exploration Syndicate.—In the past year or so this British Columbian company has enjoyed a fairish measure of success, but it is uncertain how long this can be maintained. During the financial year ended May 31 last the ore shipped to the smelters realised £10,070 nett, comparing with £10,099 in 1905. The returns show an increased output, but owing to the lower grade of the ore the average value was nearly $5 per ton less than for the preceding year. Payment of the second instalment of the purchase price of the Blairmore coal lands, due to the Dominion Government, has been completed, and all interest paid up to April 1, 1906. It will be necessary to provide about £1,300 for the third instalment, due in June, 1907, and a like amount for the final payment in 1908. No satisfactory offers have been received for the properties, but the directors are taking further steps toward negotiations, which they trust will lead to a satisfactory result. Cash in hand in London and British Columbia totals £3,032. Administration expenses were substantially the same as those for the preceding year, but the cost of development work increased to the extent of £777.

Queensland Gold Returns.—The Queensland gold returns for October are:—Charters Towers, tons crushed 21,200, 18,700 ozs.; Croydon, 3,900 tons, 1,600 ozs.; Gympie, 18,200 tons, 10,200 ozs.; Mount Morgan, 21,100 tons and 8,700 ozs. (also 2,800 ozs. from copper ore); Ravenswood, 1,600 tons, 1,900 ozs.; other fields, 4,900 tons, 3,500 ozs.; alluvial, 1,100 ozs.; total 48,500 ozs.

Company Reports and Balance Sheets.

**** *The Editors will be much obliged to Secretaries of Joint Stock Companies if they would kindly forward copies of Reports and Balance-sheets direct to the Office of the* Investors' Review, *Norfolk House, Norfolk Street, W.C., so as to insure prompt notice in these columns.*

Bengal and North-Western Co., Limited.

The result of a well-spread increase in the business of this undertaking for the half-year ended June 30 last was an improvement in the gross earnings of Rs. 8,49,578 at a total of Rs. 75,15,938. Against this the working expenditure was up by Rs. 3,36,220 to Rs. 29,90,491, the proportion of expenditure to gross income being 39.79 per cent. against 39.82 per cent. Revenue from coaching traffic went up by Rs. 3,23,558, the main incident being the continued growth in the number of third-class passengers, and it is worth noting that in the last five years the rise has been from 4,951,793 during the first half of 1902 to 7,415,609 in the period now being reviewed. The second and intermediate class traffic also steadily improves, but the first class remains practically stationary. Goods revenue advanced about 4 lakhs, the result of handling an additional 130,196 tons, and the directors say that the crops on the whole were good. The traffic in wheat and linseed, although not yet normal, was much better than in the previous year, when the crops were destroyed by severe frosts. There was a great demand for sugar in Rajputana and Punjab, the traffic being so brisk during the half-year that the tonnage carried was nearly double that of 1905. Coal, rape seed, salt, and tobacco also did extremely well, and the only leading commodity to show an important decrease was rice, which was affected by a partial failure of the crop in some of the Tirhut districts. The steamboat earnings were also on a satisfactory scale, mainly in goods traffic, due to the increased export of linseed and the increased imports of coal and salt. Apart from this service there was an increased outlay in all expenditure departments, and particularly in maintenance of way and works, where a special charge of Rs. 1,50,000 occurred in part adjustment of the cost of relaying 93½ miles on the Doab line with 50-lb. rails, and in renewing some of the small girder spans which were weak on the Tirhut State Railway. An adjustment of some of the charges to revenue for doubling the State line between Bachwara and Barowni Junction also contributed to the additional outlay. The increases in other departments were due to the greater length of line and heavier traffic handled. Nett earnings of the joint undertaking amount to Rs. 45,25,447 against Rs. 40,12,190, and the company's share, amounting to Rs. 22,98,364, has been brought home at the rate of 1s. 4d. per rupee. After adding £19,676 brought forward, providing for interest on debenture and preference stocks, and making other adjustments, the balance to be dealt with is £127,269. From this the directors recommend a dividend of 3 per cent. on the ordinary stock, leaving £48,894 to be carried forward. Capital expenditure for the half-year was on a considerable scale, and in order to meet further outlay £100,000 in 10,000 second preference shares of £10 each were offered to the shareholders at par in the early part of the present month.

New Zealand and Australian Land Co., Limited.

This is a very big business indeed, possessing a capital of £1,550,000 in £1,000,000 preference "A" stock and £550,000 ordinary stock, besides a debenture issue of £804,350 part of an authorised amount of £1,250,000. The latest balance-sheet was struck on March 31 last, and on the whole can be considered a fairly satisfactory production. Freehold lands have a value of £1,485,821 and the leasehold lands stand at £380,734. The amount owing by purchasers of land in New Zealand is £195,321, and the live stock on the various runs is worth £441,157, or at least we hope so. Other striking items on the assets side of the account are temporary investments £294,970, produce on hand and afloat £51,392, cash £6,296, and deficit on value of land sold, being, we suppose, the difference between the original cost and sale price, amounts to £25,521. The company's ordinary floating liabilities are commendably small, and need no description, but a sum of £43,428 is due by instalments to the Government to complete the purchase of freehold estates in New South Wales. There is a contingency fund of £105,000, which is now to be raised to £205,000 by a contribution of £100,000 from the past year's profits, besides a reserve of £75,000, leasehold and improvements sinking fund £65,592, and insurance funds £16,952. This means total accumulations of £362,544, and it is pleasing to find the directors referring in the report to the necessity of building up the reserves in proportion to the increasing liabilities undertaken in connection with the purchase of new assets and additions of large numbers of sheep and cattle, all of which involve heavier risk. A prolonged period of dry weather in central Queensland during the year ended March 31 at one time threatened a disastrous drought, but copious rains fell just in time to avert a catastrophe, and, with this exception, the weather was on the whole favourable for the operations in both Australia and New Zealand. The wool clip reached 18,602 bales exceeding that of the previous year by 3,097 bales, and yielded a profit of £300,301. The return per bale was £16 2s. 10d. compared with £14 12s. 9d. in 1905, being with one exception the highest price obtained during the past 28 years. The values of all classes of sheep have continued to rule exceptionally high, and the surplus stock fetched very remunerative prices, the revenue under this head amounting to £96,136 against £74,440 in the previous year. Cattle also showed a small increase, but as the

lands suitable for cropping are sold, the revenue from agriculture in New Zealand naturally becomes less, and for the period under review amounted to only £4,811. The income in the colonies for the past year was £435,843 and in London £16,924, making with £2,309 brought forward a total of £455,076. From this the total charges, including £26,825 for depreciation and £32,035 for debenture interest, drew away £221,167 leaving £233,909 as the nett profit. The dividend of 4 per cent. on the preference stock requires £40,000, and the directors propose a dividend of 7 per cent. on the ordinary stock, together with a bonus of 5 per cent., one-half to be paid on December 10 and the other moiety on June 10 next. The deficit on land sales already mentioned, £25,521, is then written off, £100,000 goes to the contingency fund, and £2,388 is carried forward. The outlay on capital account during the year was rather important, additions to freeholds for land purchases and improvements effected being £255,262 against deductions of £42,665 for land sold and depreciation, &c., leaving the nett increase at £212,598. In regard to leaseholds, the additions were £39,800 and the deductions £35,115, so that in this case the increase was only £4,684. Notwithstanding these additions, the total debenture debt was reduced by £44,600, and we learn from the report that further important freehold purchases have been met from the temporary investments of £294,969, so that no advance in the debenture debt for the current year need be contemplated. Since the close of the books on March 31 the estates have as a whole been favoured with a good season, though parts of New South Wales have been dry at times, necessitating the shifting of large numbers of sheep from several of the estates to others which were able to afford relief. Remunerative prices are still obtainable for all classes of fat and surplus stock, and the business generally appears likely to continuously prosper.

WEARDALE STEEL, COAL, AND COKE CO., LIMITED.

The accounts of this enterprise for the year to September 30 do not make such a striking display as some of the other Christopher Furness iron and steel companies, but the company does a very steady-going business, and after all it is better to be a shareholder in a company which pays a regular dividend than one which is liable to violent ups and downs. During the worst period of the iron and steel slump following the boom of 1899-1900 this company always managed to produce a pretty good result, and has paid its shareholders 6 per cent. per annum ever since it was formed. It appears that the profits were adversely affected by the low prices realised for coal during the early months of the financial year, and although a gradual improvement subsequently set in, the company's existing contracts prevented it from reaping full advantage of the rise. These contracts, however, are now practically executed, and the new contracts at higher prices are apparently bringing in greater profits. The irregular way in which the miners worked, particularly in the eastern part of the county, was another drawback, and the total profit of £68,801 was proportionately smaller than the £104,766 produced for the previous 15 months. Balance brought forward was £34,220 making £103,022 and after providing debenture interest, income-tax, &c., and £30,000 for the 6 per cent. preferred ordinary dividend, the directors again pay 6 per cent. on the deferred shares, adding another £25,000 to depreciation reserve. The carry forward, however, is just about halved at £17,017. The directors seem to be doing their best to develop the various resources of the business, and important improvements and extensions have been effected during the past year at a nett cost of £48,412. This addition raises the company's own capital outlay to £874,632, in addition to which it has interests in the Cargo Fleet Iron Company and the Talbot Continuous Steel Process to the extent of £379,676. The reserve for depreciation will now be £275,000. Debts due to the company, including £50,887 to come in from the Cargo Fleet Company, amount to £108,607 against creditors of £56,524, and the stock-in-trade, &c., is worth £105,482, but the company ought to possess more cash and bills than £4,361 considering that it has about £20,000 to provide for dividend and interest payments.

JAMES NIMMO AND CO., LIMITED.

The trading revenue of this coalmasters' business in the year ended September 30 was £37,672 against general charges of £12,741 and an interest charge of £3,047. Directors' fees required a further £400, and including £153 from interest on investments, &c., the balance of profit is £21,678. There was also a sum of £3,751 brought forward, making the total available for disbursement £25,388. Having provided £10,000 for depreciation and also the preference dividend, the directors propose to pay 10s. per share or 5 per cent. on the ordinary shares, carrying forward the considerably reduced sum of £2,888. The financial year, we are told, began unfavourably, and continued so for some months. Towards its close, however, an improvement set in which has been maintained, and with the industry unburdened by the coal tax the directors think the prospects for the current year are encouraging. They have received a favourable offer for the surface lands at Lathallan, Fifeshire, and have decided to accept it. The minerals, however, have been reserved to the company on what are considered satisfactory terms, and very full powers have been retained for the working of the coal. Two shafts are being sunk at Auchengeich, near Chryston, in connection with new leaseholds in that neighbourhood, and a considerable additional area has been added to the Canderrigg leasehold. Boring has been proceeding in this area, and the results which are being obtained are described as satisfactory. Capital expenditure for the year was £25,437, practically the whole of which was laid out in the erection of a washer at Canderrigg colliery and on the new undertaking at Auchengeich. This outlay brings the total original value of the properties to £408,577, but the aggregate depreciation allowance to date of £111,500 reduces the book value of the property to £297,077. The company does not possess any reserve fund, the only accumulations being the contingency and suspense account of £10,200. Debtors and other sums owing, including £31,000 due on loan, amount to the rather considerable total of £74,775, and the investments, after taking into account the stocks of coal, &c., £5,387, add up to only £60,162.

SWIFT CYCLE CO., LIMITED.

There is no doubt at all that the operations of this concern were exceedingly profitable in the year to August 31. In fact, business has been steadily progressing ever since the capital was reorganised and cut down to a reasonable figure in 1901. This reduction, however, which entailed very great sacrifices on the part of the shareholders, cannot be readily forgotten, and we are not altogether sure that the directors are justified in asking the shareholders to now, in a sense, replace capital originally paid for the business but never justified, by further subscriptions above par value. When the company was formed in 1896 it had a capital of £300,000, divided into 100,000 6½ per cent. preference and 200,000 ordinary shares of £1 each, but the disasters which overtook the enterprise along with so many of its rivals involved the cancellation of £160,000 of ordinary capital, leaving it at £40,000. Therefore, although the directors now recommend a dividend of 20 per cent., this represents only 4 per cent. on the money originally subscribed by the public, and it remains a question whether the funds no doubt necessary to meet the extension of business, the result of the considerable success in the manufacture of motor-cars, should not be provided from the profits instead of by means of an increase of capital. The proposal of the directors is to create another 60,000 ordinary shares, of which 40,000 will be offered for subscription at a premium of 2s. 6d. per share, but would it be too much to ask the original vendors to subscribe this money, deferring the acceptance of any dividend until the existing attenuated ordinary capital has had a dividend equivalent to, say, 10 per cent. on its original amount? The £160,000 written off represented promoters' booty, and it is surely not too much to ask them to now assist the company in its present needs. Trading profit for the year to August 31 was £41,876, interest amounted to £85, and transfer fees to £111, a total of £42,072. This is an improvement of £6,868 compared with the previous twelve months, and against the profit there are such charges as directors' and trustees' fees £1,505, depreciation £4,428, maintenance and repairs £1,635, income-tax £682, and interest an debentures £3,750. The balance of nett profit is therefore £30,072, which is raised to £32,430 by the credit brought forward. Preference dividend requires £6,500, and after adding £15,000 to the general reserve, 20 per cent. or 10 per cent. more is paid on the ordinary shares and £4,430 carried forward. The reserve fund now amounts to £47,000, apart from a special reserve of £7,500 for extension of motor department, very fair accumulations which ought to render unnecessary the raising of additional capital, except that the policy of selling bicycles upon the gradual payment system has resulted in locking up a large part of the company's resources. Such debtors, for example, stand at the very considerable amount of £59,202 against only £29,888 to come in from sundry creditors. Cash and bills, however, amount to £26,615, and the stock-in-trade is valued at £43,629. Various additions have been made to the property during the year, the most important being the £7,500 spent on extension of the motor department.

CASTNER-KELLNER ALKALI CO., LIMITED.

The Right Hon. Gerald Balfour has been promoted to the chairmanship of this company, and shareholders, perhaps, may thank his former constituents that he now has more time to devote to its affairs. Time was when Mr. Gerald thought he would be so busy deriving amusement in the House of Commons from the escapades of the present Government that the idea of attending to such a prosaic business as a company directing never entered his head; but fate was unkind in January last, and after he found they could do without his services in Central Leeds, he returned to the board of the Castner-Kellner company, in which both he and brother, the leader of the Opposition, are so largely interested. He can now look after the thing on behalf of the family. The latest report issued by the company is for a period of six months only, to September 30, the directors having decided to end the financial year on that date instead of March 31. Business was just about maintained in this period, as the balance on trading account amounted to £37,502 compared with £38,421 for the previous twelve months. Transfer fees were £52, making £37,554, and after providing for general and other charges, directors' fees, &c., the profit was £18,047. Debenture interest, &c., reduces this to £14,773, and after appropriating £15,000 to depreciation reserve the directors propose a dividend at the rate of 7 per cent. per annum, carrying forward £14,773 against £14,548 brought in. The directors are pleased to announce that the new works at Wallsend-on-Tyne are now working satisfactorily, and we note that the balance-sheet valuation of the land, buildings, plant, and machinery has further increased by nearly £200,000 to £938,000. Purchase of patents remains at the old figure of £125,000, and the purchase of the Aluminium Company stands as before at £201,177. The total capital expenditure is therefore £1,852,227.

and we may be sure that the total depreciation reserve, although fairly substantial looking at £130,000, is not too much. In other ways the company is not over wealthy, and there are suspense accounts to the amount of £7,445 standing on the credit side to be written off some day. Creditors are not particularly heavy at £34,730, but they are a good deal in excess of the sum to come in from debtors, and stocks, bills receivable, investments, and cash can only make up a total of £51,826.

Kellner-Partington Paper Pulp Co., Limited.

Extraordinary success attended the operations of this undertaking for the past year which ended on September 30, the trading profits at all centres, after providing for expenses, repairs, and maintenance being returned at £306,459. A sum of £24 came in for transfer fees and £47,053 was brought forward, making the entire credit £353,536. Interest and bank charges took £10,664, and directors' remuneration for the year 1905, together with managing directors' salaries and commission for the past year, head office expenses and audit fee altogether reached £17,365. The directors then write off £80,000 from the land, buildings, and plant, and £12,487 from certain shareholdings. Another £20,000 is transferred to insurance account, and £50,000 to reserve, meaning that under all heads the company puts by no less than £162,487. The amount still left is £163,020, which provides two dividends of 10 per cent. each, making 20 per cent. for the year, with an additional £17,067 carried forward at £64,120. The £80,000 provided brings up the aggregate depreciation to date to £515,000, and the book value of the land, buildings, and plant is now £564,121, including £70,447 spent during the period under review. The reserve fund of £150,000 and the insurance account £40,000 or £190,000 constitute additional barriers, and, considering the fine profits earned, there can be little doubt that the properties are worth far more than their balance-sheet figure. Investments in various foreign enterprises stand at £121,787 and while it would perhaps be hypercritical to ask the directors how much these contribute to the total revenue, the fact that it is necessary to write down one of the items naturally creates a little doubt. Floating liabilities, including £52,518 owing on loan or to bankers, amount to £123,234, but book debts and cash balances stand at £272,410 and stocks are valued at £173,562, apart from the forest properties in Austria, which are entered at £43,154.

Orders and Handford Steamship Co., Limited.

Recent additions to this company's fleet seem to have had a favourable effect on its revenue, the freights, hire, return brokerages, &c., for the twelve months to October 31 being £80,712 against £69,201 in the preceding year. Transfer fees came to 27s. 6d. or 10s. more, and on the expenditure side there is an increase of £4,232 at £29,305 in the port and general charges. Wages, victualling, coal, stores, &c., cost £23,962 or an increase of £2,590, and the insurance charges were larger by £329 at £11,320. Management and other incidental outlay was £3,696 against £3,260, and after subscribing £21 to the Newport Hospital £12,407 remains, an improvement of £3,924. Out of this an interim dividend of 2s. 6d. per share has been paid, and the directors now propose a final 4s. per share, making 6½ per cent. for the year, with an increase in the balance carried forward from £236 to £936. Before paying these dividends the directors allowed £5,500 for depreciation of the steamers whose balance value is £109,000, representing a tonnage of 20,850. The total amount allowed for wastage to date is £53,115, and considering that the average age of the vessels is only 5½ years, the present book value of £5 4s. 7d. per ton must be considered very modest. The company, however, does not possess any reserve fund, and the total floating liabilities amount to £20,705 against only £5,963 to come in from sundry debtors, £2,260 held in cash, and unexpired insurances of £3,738. Included in the liabilities is a sum of £13,500 still owing on account of the steamer *Refugio*, the latest addition to the fleet, and later on the company may have to make another small issue of capital.

Barry Graving Dock and Engineering Co., Limited.

This company possesses a share capital of £175,000 in 15,000 ordinary and 2,500 preference shares of £10 each. Of the ordinary shares 2,500 were issued at a premium of £6 each, giving further capital of £15,000, and there are also 4 per cent. mortgage debentures to the amount of £65,000. Against all this the capital expenditure has amounted to £304,111, but after allowing for the redemption of £15,000 debentures the nett outlay is £289,111, so that the debit to capital account is £34,111. The gross profit for the twelve months ended September 30 was £35,248, including £7 for transfer fees, and after meeting all charges the nett credit is £19,542. Deducting £2,600 for debenture interest £16,942 is left, which is raised to £30,759 by the sum of £13,817 brought in. Preference dividend having been provided, the directors declare dividends of 8 per cent. on the ordinary shares, adding £2,000 to reserve contingency account, and carrying forward £15,572. This contingency fund will now stand at £9,301, and there is also a reserve for working capital of £40,000, so that the debit to capital account is of no great consequence. A sum of £24,477 is owing to sundry creditors, and although there is practically no cash in hand debtors owe £50,732 and stock is valued at £10,912.

Anglo-Sicilian Sulphur Co., Limited.

The slight delay in the issue of this company's balance-sheet, which usually appears early in October, is mainly due to difficulties which arose in coming to final arrangements with the Consorzio, which, it may be recalled, has arranged to purchase the company's stock upon the terms approved at a special meeting held on July 10 last. The directors, however, are glad to state that the provisional bond certificates which later on will be exchanged for definitive bonds, have now been received, and when the latter are available it is proposed to deal with or dispose of them upon the best terms obtainable. It appears that the sale to the Consorzio involved a loss of £298,105, being the difference between the cost of the stock and the price it realised. To meet this loss the directors have applied £172,467, representing the whole amount standing to the credit of reserve for eventual depreciation of stock, and £125,638 from the general reserve, reducing the amount to the credit of this fund to £26,515. Other reserves consist of capital guarantee fund £130,162, and reserve for debts in Italy £19,527, apart from the difference in exchange account, which now stands at £88,559 compared with only £18,705 last year, in consequence of the Sicilian assets and liabilities having been converted at 25.25 lire to the pound sterling, which is slightly above the present rate of exchange instead of at 27.00 lire as in previous years. The provisional bonds received from the Consorzio are valued in the balance-sheet at £783,366, and there are also investments on account of capital guarantee fund £105,047. Sundry debtors, outstanding and trade advances amount to £125,750 against creditors of £85,327, temporary investments appear at £14,567, and the cash balance at £39,605. The total gross revenue for the year was £63,071 or the very heavy drop of £75,075 compared with the preceding year, which itself showed a shrinkage of £49,759. After deducting working expenses and a sum of £908 lost upon the sale of certain investments, there remains a nett profit of £30,906. This, however, is insufficient by £12,293 to pay the preference dividend, and to meet income-tax of £1,200, and this deficiency is taken from the capital guarantee fund. No dividend, of course, is possible on the ordinary shares, but the directors remind the proprietors that when the liquidation of the company takes place, and all liabilities have been discharged, including the repayment of the preference capital, the surplus assets become the exclusive property of the ordinary shareholders. As their capital is only £35,000, and the various reserves we have indicated reach a very substantial sum, the outlook for these ordinary shareholders seems a promising one.

Pillsbury-Washburn Flour Mills Co., Limited.

In their report issued twelve months ago the directors expressed the opinion that the year then current would produce a satisfactory result, but for a variety of reason these expectations have been falsified and the actual outcome of the year's trading can only be considered disappointing. Business appeared to be fairly profitable during the first four months of the year, but after that no profit of importance on milling could be made, and the revenue from all sources was only £128,446. Of this the company spent £31,132 on repairs and renewals, while the fees of the local committee came to £1,620, so that only £95,694 was left. This credit is increased to £95,941 by interest and transfer fees, and after providing London expenses and loss on exchange, there is just enough remaining to meet the debenture interest and preference dividend, transferring the trifle of £2,576 to reserve. The half-million of ordinary shares therefore receive no return. Additions to the amount of £23,016 were made to the property account during the year increasing it to £1,660,680, and against that there is only a reserve fund of £10,784. A year ago this account stood at £43,703 but £35,495 was applied to the redemption of the balance of the preference income certificates outstanding reducing the fund to £8,208. It is raised again to the figure mentioned by the transfer now made from profits. The company has tremendous stocks, no less than £823,633, most of which has to be carried on credit, as the great sum of £665,150 is owing on bills payable and £247,210 to creditors Debtors, after providing for bad and doubtful debts, are also important at £194,674, bills receivable and other securities amount to £13,253, and the cash balance is £108,820, of which nearly £60,000 will be required for dividend and interest payments.

Cold Storage Trust, Limited.

This company is interested in five South African cold storage enterprises, and it is really painful to read the account of their achievements set forth in the report for the year ended June 30. We had a good deal to say last week about the affairs of the Imperial Cold Storage and Supply, and shareholders are no doubt already aware that after crediting the trifling profit of £12,996 brought forward, that company carried out a deficit of £82,059. As to the Rand Cold Storage and Supply Company, it managed to produce a loss of £14,387 to March 31, 1906, increasing the deficit to date to £58,261, and although Sparks and Young, Limited, had a balance on the right side of £5,459, it nevertheless carries forward a loss of £11,069. The statement regarding the Port Elizabeth Cold Storage Company is worded in such a way that we are not at all sure what has really happened. For the year to June 30 there was a nett profit, including the amount brought forward, of £5,000, which was carried out to the current year. How much was brought forward? More or less than the £5,000 here mentioned? After providing for all bad and doubtful debts the Pietermaritzburg Cold Storage Company managed to produce a nett revenue of nearly £193, and this also was carried to the credit of the current year. In all these enterprises the Cold Storage Trust is interested to the amount of £1,099,989, this being the par value of the various

holdings with the exception of 108,659 ordinary shares of £1 each in Sparks and Young, which are valued at £176,441, that company's profit being £5,459 as mentioned. Against these holdings there is an investment reserve of £373,244, reducing their balance-sheet value to £726,745, but we should think that quite half that amount would have to go before the assets were brought down to anything near their true value. The company's capital amounts to £768,000 in 618,000 ordinary and 150,000 7 per cent. cumulative preference shares of £1 each, and while £10,208 has been left on deposit by certain subsidiaries, some of the others seem to have borrowed to the amount of £20,140. Floating liabilities and assets about balance, but the cash at bankers reaches the trifle of £423. Properties in Capetown, apart from the various share and debenture holdings, are valued at £42,968, and these seem to have returned a revenue of £2,194 in the year to June 30. Income from investments was £16,315, and interest and transfer fees, &c., gave £986, making with £9,254 brought in a total of £28,749. General administration rates, taxes, &c., amounted to £6,137, leaving £22,612, and the directors propose to pay the dividend on the preference shares, carrying forward £12,112. Nothing is given to the ordinary shareholders in consequence, the directors say, of the heavy depreciation in the value of the investments, and if all that loss has to be made up before the shareholders stand in the chances of seeing a return on their capital are remote indeed.

Liverpool Warehousing Company, Limited.

This company seems to have extraordinary ill-luck in the way of fires. A year ago the directors reported that five of the company's premises had been seriously damaged by fire and from the statement for the year to September 30 last just issued we learn that during the past season fire has occurred in three of the warehouses. Fortunately the loss was covered by insurance and the damage done has since been repaired. Notwithstanding these accidents the business was again fairly profitable, due, of course, to the flourishing condition of the textile trades, and the gross storage rents and profits on porterage, cartage, &c., are returned at £109,305 or an improvement of nearly £4,000 compared with the previous year which showed an excess over 1903-4 of something like £25,000. This time, however, the improved revenue is entirely neutralised by a rise in outlay which amounted to £63,478 compared with £58,810, interest on mortgages and debenture stock required another £15,846, and after providing £550 for leasehold redemption and £2,000 for depreciation of machinery and plant the nett balance is £32,567 including £5,137 brought forward. This profit is just a trifle in excess of that shown a year ago, but the credit from previous account was £500 larger. Preference shareholders are therefore to have 18 months of dividend which will bring the payment down to September 30, 1903, leaving just two years in arrear, so that under the best conditions the unfortunate ordinary shareholders are still a long way off a return on their capital. Even when all the preference deficiency has been caught up, if it ever is, the ordinary shareholders can hardly stand in for any surplus profit as apart from a fire insurance fund of £11,159 the company does not possess reserves of any sort. A year ago this fire insurance reserve was only £8,545 and the directors say that as the account now exceeds £11,000 they have restored to the general assets £20,000 originally allotted to the fire insurance account by cancelling the mortgages held by this fund on the property of the company. Twelve months back the company also possessed a general reserve of £4,605, but this has been used to write down to present value the investment for general account and to cover the loss by depreciation on the investments which had to be sold to pay the fines for extension to 999 years of the remainder of the Lord Derby leases. With £17,253 added within the period under review the premises and goodwill now have a balance-sheet value of £1,021,667, while the machinery, plant, horses, &c., are entered for a further sum of £28,740. On some of these assets there is a mortgage of £3,100. The amount due to sundry trade creditors is £21,354 and on the other side there are debtors £39,507 and cash £9,930 besides investments of £21,391 of which £6,657 are held on leases renewals account and £11,159 on fire insurance account.

Lloyd's Packing Warehouses, Limited.

During the year ended on September 30 last this Manchester business earned a trading profit including income from freeholds, and after deducting £8,274 for depreciation, of £24,217. From this the interest on debenture stock mortgage and loans required £7,295, directors' fees £700 and dividend on the preference shares £3,614. An interim dividend at the rate of 4s. per share has also been paid on the ordinary capital and after transferring £3,000 to reserve the directors propose a further ordinary distribution at the same rate making a total of 8s. or 8 per cent. for the year, carrying forward £4,756 compared with £2,915 brought in. The business may therefore be considered to have done fairly well and the financial position is tolerably good although there are one or two directions in which it might perhaps be strengthened. After providing depreciation to date of £52,402 the freehold land, buildings, leaseholds, goodwill, &c., stand at £394,145. Against this there is a reserve fund of £44,000 and a fire insurance fund for certain machinery of £1,118, but the result of having these accumulations invested in the business is that the company is rather short of liquid resources. The actual capital issued is not nearly large enough measured against the expenditure, with the result that besides £35,000 raised on mortgage and £13,946 by way of loan it has also become necessary to borrow £14,056 from the company's bankers. Moreover the cash balance is exceedingly small at £1,260 and despite an excess of debtors over creditors of £7,300 and stock-in-trade of £24,000 it would not be surprising if further borrowing became necessary before the dividends can be paid. From the report we learn that the new warehouse in Whitworth Street, India House, is now approaching completion and will be opened for business purposes early next year. When this takes place the directors may perhaps think it wise to bring the actual capital more in conformity with the outlay so that the finances may be improved.

Spies Petroleum Co., Limited.

The directors of this company submit a short statement to the shareholders setting forth the result of operations for the six months ended July 13 last. During this period the company worked 165 days and produced 3,007,540 poods of oil, including 24,935 poods yielded from spouters. For the previous six months, when work was uninterrupted by strikes, the output was 3,793,420 poods, the yield from spouters being 815,720 poods while in the corresponding half-year of 1905 the baling gave 2,805,785 poods and spouters 506,710 poods, work during the period being stopped for seven days by labour troubles. During the period under review work was interrupted for 16 days from the same cause. Since July 13 production has shown a considerable improvement, notwithstanding further strike interruptions, the total output for the period to October 28 being 1,961,035 poods or an average daily output of 21,315 poods. The crude oil sold and delivered during the half-year amounted to 2,478,556 poods, realising 528,565 roubles, an average price of 21.32 copecks per pood, and since July 13 about the same average price has been obtained. Gross profit realised from these sales was 330,318 roubles, and after deducting 148,060 roubles for drilling and deepening the nett balance is 182,258 roubles, which, however, is subject to depreciation of land and buildings and to reserve for imperial taxes and insurance. At the exchange of 9.45 or just over 2s. per rouble the profit in sterling amounted to £19,286, and £588 also came in for transfer fees and interest making £19,874. Out of this London expenses and English income-tax absorbs £2,521 leaving £17,353, which is raised to £23,541 by the credit of £6,188 brought forward. Such balance is apparently carried forward for inclusion in the complete annual accounts. Since the date of the last report the directors have made arrangements for the acquisition of 80 additional dessiatines of oil-bearing land in the Grozny oil field, which, with the land already in possession, will make a total holding of 140 dessiatines. Work upon the Baskakoff plot, the acquisition of which was noted in the last statement, is already being energetically pushed forward and results may be hoped for within a few months. Operations upon some of the other new plots have also been taken in hand.

British Vacuum Cleaner Co., Limited.

The trading profit earned by the company owning this useful invention during the 15 months ended September 30 was somewhat smaller than in the previous year, which the directors attribute to the larger sum expended on advertising and to the considerable reductions which have been effected in the charges for house to house cleaning in order to controvert the idea that the company's process was an expensive one. The trading profit, after providing for bad and doubtful debts, was £7,516, dividends from subsidiary companies produced £1,440, and the sum of £2,323 came in from the sale of foreign patents, an item which should, we think, have gone in reduction of goodwill and patents, instead of being brought into the revenue account. With this sum included the total income was £11,304, of which the rather considerable amount of £3,598 was spent on advertising. Depreciation took a further amount of £1,558, and £479 was written off the preliminary expenses, while law costs amounted to £733, surely a heavy sum. Other small debits reached £168, and £4,768 remains as nett profit. To that is added £661 brought forward, making £5,429, and although this would have permitted a dividend on the capital, the directors think it wise to devote most of the money to strengthening the financial position in view of increasing business and anticipated trade developments. They therefore add a sum of £4,000 to reserve and carry forward £1,429. This reserve fund will now amount to £6,000, against goodwill and patents of £27,426, while the shares in subsidiary and foreign companies, valued by the directors, are entered at £39,948. The plant, stock of materials, &c., including plant leased for installing in public and private buildings, has a book value of £25,152, and against creditors of £6,096 sundry debtors stand at £13,091 and cash appears at £5,327. With the object, we suppose, of effecting as much economy as possible and also because the centralisation of the various departments at one spot has proved satisfactory, it is proposed to gradually dispense with district depôts and to carry on the business by means of receiving agents in various parts of London and the suburbs. Vacuum cleaning does not apparently comprise the sole operations of the company, as it has acquired special secret recipes for the making of preparations for ceiling, wall-paper, paint, and enamel cleaning. These are now being manufactured in bulk, and, we are told, give proof of becoming valuable extensions to the cleaning business.

Land and House Property Corporation, Limited.

Gross revenue from rents for the year ended September 30 increased by £1,005 to £37,187, but ground rents, rates and taxes insurance and repairs took £970 more at £20,011 and with

a drop of £36 to £1,244 in interest received the nett revenue was £27 down at £18,420. On the other hand interest charges took an additional £600 and administration charges rose by £69, but with a reduction of £261 in law costs and small savings in other directions the balance available showed a decrease of no more than £363 at £7,121. To this was added £1,435 brought forward giving a total of £8,556 and after providing for preference dividend the ordinary shares again receive 4½ per cent., but only £381 is put to reserve against £1,000 a year ago leaving £1,518 to be carried to the new account. In addition to this transfer from revenue the reserve benefits by £619 bringing the total up to £23,461 of which £22,826 is invested outside the business. Even so, however, it seems a small amount to represent 25 years' accumulation especially as capital commitments are heavy. Freehold properties are valued at £204,389 and leaseholds at £157,460 and as the issued share capital only amounts to £149,480 the company has had to raise no less than £165,033 on mortgages and £9,350 by debentures besides which it holds £18,124 on deposit. It has also been necessary to borrow £6,000 from its bankers and as sundry liabilities, including this item, come to £12,578 while sundry debtors owe no more than £8,575 and cash is comparatively trifling at £1,241 more money is urgently needed. There are, however, 5,860 4½ per cent. cumulative preference shares of £5 each unissued and these the directors offer for subscription to members and their friends at par, recommending them as a very safe investment, an opinion which can hardly be endorsed after a study of the figures given above.

Morecambe Pier and Pavilion Co., Limited.

The gross income of this small company during the twelve months to September 30 was £3,821 and the nett profit £1,118, so that with £1,086 from previous account the credit for disposal is £2,204. Debenture interest requires £440, and after providing the preference dividend the directors allow £784 for the depreciation of the pier and pavilion structures, &c., carrying forward £467. The ordinary capital of £30,000 therefore receives no dividend. The purchase of the pier originally cost £18,000 and £32,745 has since been spent on its extension. Other capital expenditure amounts to £739, making rather more than £51,000, and as no attempt has yet been made to create a reserve fund the directors no doubt act wisely in using all available profit for depreciation. Little or nothing is owing to sundry creditors, and various small assets make up a total of £1,839.

Notes on Books.

Children of the Nation, by the Right Hon. Sir John E. Gorst (London: Methuen and Co. Price 7s. 6d. nett). We are indeed glad to see this question dealt with by so able an advocate as Sir John Gorst, and sincerely trust that his telling book may bear early fruit. Of the many problems set by modern civilisation to the nations of the world by no means the least important is the care of their children—"a nation's greatest asset"—yet to our shame be it said, we in this country have so far only grappled with it in a half-hearted fashion that merely seems to accentuate the reforms required. To us a child is nothing more than a child, since public opinion, or at any rate that portion of it which governs the country, does not seem to have grasped the idea that in the future of its children lies the future of a race. Education, of course, a child must have, indeed we rather pride ourselves on being one of the pioneer countries in the matter of elementary education, but there we have stopped. That a child needs health even more perhaps than tuition does not appear to have dawned upon the official mind, judging from the examples of incompetence exhibited by the Education Department and mentioned by Sir John Gorst. Unfortunately the ill-health so common among children of the poorer classes is due almost entirely to one cause—hunger, and that being so the most natural thing to be done seems to be to give the starving child at least one good meal a day at the expense of the public funds, Imperial or local. But no, in the United Kingdom any scheme having this object is at once crushed by the assertion that free meals would mean pauperism, and also make parents shift their responsibilities on to the State. Why it should, is difficult to understand. In France and Germany, as Sir John Gorst points out, starving scholars at the public schools are fed by the municipal authorities without detriment to either scholar or parents, and if it can be done in these countries without evil effects surely it must be possible here. The French and Germans, however, understand the real meaning of the whole question far better than we do, particularly the Germans, of whose methods Sir John has much to say in praise. Children in the State schools of the German Empire are not only educated on more rational lines than ours, but the local authorities watch over their general health, their diet, and their surroundings. Every scholar is medically examined on entering, and from time to time during the school career all defects, physical and mental, being noted and made the subject of special treatment, should such be necessary. Few towns, it is true, have gone the length of Charlottenburg in establishing a forest school for sickly and backward scholars, to which an extremely interesting section of this book is devoted; but as the experiment has proved to be a success, it is certain to be largely imitated, since, after all, it is merely the logical outcome of the general system. When will it be followed here?

In another direction, besides the school life of the child, we are far outstripped by France and Germany, for there attention is paid to the welfare of the mother of a child both before and immediately after its birth. Free medical attendance and nursing, with sundry necessary comforts, are provided for her at this doubly critical period, and in Cologne and certain cities, when the mother's earnings are of vital importance to the family purse, she is granted a small allowance out of the public funds to compensate her for her lost wages. Were such a proposal made in this country what would be said? True, free medical attendance can be had at child-birth, but unfortunately the granting of it rests with the Board of Guardians, and these worthies, Sir John states, treat any assistance of this description as relief from the rates and, though it is illegal to do so, penalise the husband of the applicant. The gift of an allowance from public funds is a thing quite unknown, and consequently the mother works as long as she possibly can at the mill, factory, or wherever else she may be employed, and returns there at the earliest possible moment she can after child-birth. It is not her fault, for it may be her earnings represent the thin dividing line between barely sufficient and grinding poverty, but the child none the less suffers. Deprived of its natural nourishment and its mother's attention at the time most needed, it too often dies, as our heavy returns of infant mortality show, or grows up physically or mentally unfit, and becomes a permanent burden on the State, affording a melancholy example of a penny-wise policy. But the whole picture is sordid, and nothing else than a national disgrace.

Is it well that while we range with Science, glorying in the Time,
City children soak and blacken soul and sense in city slime?

Assuredly it is not, and the quicker public opinion realises what the problem of "The Children of the Nation" means and the responsibilities underlying it the better. Sir John Gorst, we observe, dedicates his book to the Labour members of the present House of Commons, and from this we presume he looks chiefly to them for some alleviation of the misery of childhood among the poor. And, perhaps, he is right. The two great parties now existing so far as one can judge are equally cursed by the fetich of militarism and have little money to spare for social purposes. Yet if either one of them would but divert some of the many millions annually spent on the up-keep of the army to this, the most pathetic, perhaps, of all our social questions, what benefits they could bestow not only on the present generation, but on posterity. One subject we miss though in this thoughtful and able book—the relation of the system that breeds millionaires to the cold, bleak outlook which is the lot of our poverty-stricken "lower classes." Why, in other words, does the necessity for State interference arise?

TRADE AND PRODUCE.

WHEAT.—With sellers adhering to late rates and buyers holding off, the London cargo market has been quiet, and it was not until the end of the week that business became even moderately active. The firmness of the market then induced buyers to operate more freely, but trading was never very brisk. Northern markets found little more to do, lighter shipments, together with reduced stocks, causing a small rise in prices. The undertone, however, was not strong, and despite higher American cables a sagging tendency soon set in. Dornbusch estimates the quantity of wheat and flour on passage to the United Kingdom at 1,795,000 quarters, against 1,915,000 quarters last week, and to the Continent 1,840,000 quarters, against 1,710,000 quarters. Russia, India, America, and California are the largest contributors at present. American markets seem to have been little busier than our own, and an increase in the visible supply from 38,447,000 bushels to 39,370,000 bushels did not help the bulls. Favourable reports also came from the Argentine, and a certain amount of liquidation set in. Bradstreet's estimate showing only a small increase of 450,000 bushels at 71,527,000 bushels in the visible supply east of the Rockies checked the decline, and at the close the markets had a firmer appearance.

WOOL.—Trade everywhere continues in a fairly active state, with more buoyancy in prices. Here and there consumers find themselves bare of stocks, and are ready to buy freely where this is possible on favourable terms, but are forced to respond to the higher rates demanded by sellers. In country districts staplers and dealers are also operating more freely, but even at the advance which has recently taken place current rates are still quite 3s. per tod of 28 lbs. below the highest. After several months of poor business the conditions are now changing in favour of dealers and staplers. All descriptions of Cheviot wools are wanted, and half-breds are actively sought after both for home and American account, whilst a better business is being done in Shropshire and Down fleeces. At the East India wool auction at Liverpool 6,306 bales were offered, comprising a more representative selection. The list of arrivals for the sixth and last series of colonial wool auctions in London for the current year, which open on the 27th inst., are now closed, and the following are the quantities available:—New South Wales, 28,932 bales; Queensland, 29,147; Victoria, 22,661; South Australia, 9,484; West Australia, 8,192; Tasmania, 60; New Zealand, 12,500; Cape and Natal, 10,319; total, 121,295 bales. Deducting 21,500 bales which have been forwarded direct to the Continent, Yorkshire, &c., and adding 8,000 bales old stock, there is a total available for the 107,500 bales, against 107,000 bales a year ago.

LINEN.—There is still a steady and good demand for export. Many firms are well employed on contracts for drills for the Argentine, while business for the Continent is quite satisfactory. In the home markets the demand is only of an ordinary character, and is mainly for the medium range of linens. Supplies of flax at farmers' markets are about on the same scale as previously. Demand has been strong, and where any change has occurred it has been in favour of sellers. Reports from Continental markets indicate a brisk demand at hardening prices. The Irish yarn market is also an excellent one, and prices are firm at the highest markings in every department. Some of the prices quoted have been refused by spinners, not so much that they are inadequate, as that it is found impossible to go on piling up commitments to which justice in delivery cannot be done. An idea is gaining ground in many minds that already the profits are unfairly divided between the spinner and manufacturer, the latter in some important departments, damask especially, being compelled to face vanishing margins.

COTTON (from our Manchester correspondent).—Owing to the irregularity of American cotton in Liverpool and New York during the past week, business in our market has been very difficult to arrange, and not much has been done in either cloth or yarn. The undercurrent of the market is healthy, but buyers who have orders to place find the position of affairs against them. Both yarns and piece goods are dear as compared with the price of cotton. Merchants abroad cannot understand that owing to the scarcity of yarn quotations are much higher than at an ordinary time. Advices generally, therefore, from the foreign outlets are for buyers here to defer placing large orders as much as possible, pending a more favourable opportunity. The inquiry in cloth for India is extensive, but transactions are not easily settled. Buyers and sellers have very different ideas as to what is a fair price to pay for a certain cloth. Fine goods such as dhooties still drag in demand, and makers have now turned on to other makes wherever possible. The business coming round for China is quite small in extent. The Continental outlets are open to do business at a price which is not acceptable to manufacturers. Buyers for South America are doing very little at the moment. The demand has fallen off as compared with a few weeks ago. On the whole, healthy reports are given of the home trade business going on. Distribution is satisfactory to the heavy goods departments. Large orders are now being placed for the spring in light fancy cloths. Home trade American yarns have not moved off quickly, but spinners have not pressed for fresh contracts. Rates are higher in sympathy with American cotton, and producers only sell at a wide and remunerative margin of profit. In shipping bundles the business coming round is not at all important. Order lists for producers are running down, and the offers show very little improvement. A fair Continental trade is reported, but for the Far East scarcely anything is going through. Bolton yarns are decidedly strong, and some pressure for delivery is beginning to show itself. Wefts are not over plentiful.

In New York the market opened with a steady tendency, several points higher, on firm cables and a scare of shorts, but it weakened for a while on expected bearish figures and fears of increased ginners' estimates. A sharp recovery ensued on the daily weather reports showing too much rain. The ginners' report was regarded as bullish, as it caused shorts, and with bull support the market became firm. Towards the close there was another reaction, and the market is quiet.

COAL.—Considering the time of the year and the weather we have experienced, the coal market has been somewhat disappointing, as demand has been rather slow, and prices are without material alteration. There is but moderate activity in seaborne. It is surmised that one reason why demand is not equal to expectations is partly due to the inclination of merchants to keep out of the open market as far as possible, in view of the approach of the end of the month and the end of the year. Steams are in quiet request, and irregularity is the condition of the Welsh market. At Cardiff the latest quotations are:—Best large steam, 15s. 9d. to 16s. 3d.; best seconds, 15s. 3d. to 15s. 6d.; seconds, 14s. 6d to 15s.

COPPER.—Buying by consumers and strong American advices caused considerable activity and excitement in this market, and business commenced at a substantial advance in prices. Heavy repurchases by bears and free speculative buying kept values up, and a strong inquiry was experienced for future metal. Supplies seem to be very short, and offerings were much restricted, but the tendency showed signs of weakness later in the week, owing largely to monetary fears. The demand from consumers was smaller, and the withdrawal of "bull" support caused a moderate reaction. This, however, only served to stimulate fresh buying, and prices were soon moving forward again, the figures being £101 10s. for cash, and £102 12s. 6d. for future delivery.

TIN.—Dealings in this metal were somewhat restricted by the activity in copper, but the market ruled firm at the start, with bears anxious to cover. Heavy buying orders on local and foreign account caused further improvement, and although profit-taking sales caused occasional reaction, the undertone was steady. Eastern markets, however, then became irregular, and values slipped back rather sharply, on free offering of forward metal. American orders later came to the support of the market, and prices rallied to £196 cash and £197 three months, forward.

IRON AND STEEL.—In the North of England a very active business continues to be done at advancing prices. Cleveland warrants have gone higher, and G.M.B. is firmer. There has likewise been a steady business in leading districts in hematite pig-iron, and the market keeps very firm. Demand is fully maintained, and makers are all well sold forward, most of them having their hands full well into the spring of next year. In special classes of hematite business is fairly brisk, and there is also a steady trade in other classes of iron. Pressing orders for pig-iron continue to be received from the United States, where buyers recognise the difficulty there is in getting supplies for prompt delivery, and are now offering to buy well into next year. There is a likelihood that if the American demand for Scotch iron is maintained in 1907 a condition of things may come about which will be most embarrassing for home consumers. As one effect of the existing pressure, makers have been steadily raising their prices, and to-day they are at the highest level since 1900, the year of the last "boom."

TEA.—The quantity of Indian tea offered this week was increased to 46,866 packages, but the competition seemed as strong as ever, especially for the commonest sorts. Finest grades were occasionally easier, but the average price realised on the 44,257 packages sold was nevertheless distinctly better at 8.22d, compared with 8.07d. for the previous week and 7.19d. last year. The strength of the market appears to be due in great measure to the enormous increase in the foreign requirements. Messrs. Gow, Wilson, and Stanton point out that the increase in exports from London has amounted to over 100 per cent., and that this demand has not only materially assisted in the reduction of stock, but has had considerable influence upon the price. The Indian Tea Association gives the exports from Calcutta and Chittagong for the ten months to October 31, including the shipments to Indian ports, as 137,946,357 lbs., against 124,470,117 lbs., while for the first half of November the exports, exclusive of Indian ports, were 1,770,000 lbs. up at 15,120,000 lbs. Ceylon teas brought forward reached a total of 19,100 lbs., and with a keen inquiry for all except the higher grades of broken Pekoes, the average rose to 8.65d., against 8.46d. and 7.45d. a week and a year ago respectively. Java teas shared in the general improvement, and the average realised of 7.55d. was the highest since October, 1901.

SUGAR.—A firmer tone prevailed in the sugar market this week, owing, Mr. Czarnikow states, to a belief that the present level of values is justified by the decrease of nearly 200,000 tons in American and Cuban stocks compared with a year ago, and by a prospective deficiency of 500,000 tons in European statistical production during the next three or four months. After making various corrections, the shipments in October to non-statistical countries were only 136,000, against 154,000 tons, and the European consumption 335,000, against 361,000 tons, but large quantities are going to America, and Mr. Czarnikow is of opinion that a price of about 9s. for May delivery should not involve much risk. The New York market has been steadier

without much increase in actual business, and more disposition was shown to take new crop Cuban sugar for December-January shipment. Landings in the three ports amounted to 40,000 tons, against meltings 32,000 tons, bringing the stocks up to 140,000 tons.

RHODESIAN MINING RETURNS.

A melancholy return is that for the month of October. At the moment when the gold fields directors were boasting of the progress made by the industry it suddenly goes backwards, thus showing once more how utterly unreliable it is. Though October was a longer month than September, the total of 45,664 ozs. shows a decrease of 2,746 ozs., though it is 11,951 ozs. better than for the corresponding month of last year.

NEXT WEEK'S MEETINGS.

MONDAY, NOVEMBER 26.

Dolores.—Salisbury House, noon.
Employers' Liability Association.—Hamilton House, 2.30 p.m.
Ivanhoe South Extended Gold Mining Estates.—Salisbury House, noon.
Swift Cycle.—Coventry, 11.30 a.m.

TUESDAY, NOVEMBER 27.

Allan (Thomas) and Sons.—Thornaby-on-Tees, 2 p.m.
Bengal and North-Western Railway.—Gresham House, noon.
Bieckert's Brewery.—Winchester House, 11.30 a.m.
Kellner-Partington Paper Pulp.—Manchester, 3 p.m.
United States Debenture Corporation.—Winchester House, noon.

WEDNESDAY, NOVEMBER 28.

Argentine Great Western Railway.—Dashwood House, 2 p.m.
Argentine Land and Investment.—Winchester House, noon.
British and Benington's Tea Trading.—118, Southwark Street, noon.
Cleveland Salt.—15, Philpot Lane, 3 p.m.
French Hickman Flax Fibre.—Winchester House, 3 p.m.
Hepworth (J.) and Sons.—Leeds, noon.
Liverpool Warehousing.—Liverpool, 2 p.m.
London Nitrate.—Liverpool, 3 p.m.
Natal Estates.—3, Fenchurch Street, noon.

THURSDAY, NOVEMBER 29.

British Chinese Corporation.—Cannon Street Hotel, 3 p.m.
Castner-Kellner Alkali.—Cannon Street Hotel, noon.
Coats (J. and P.).—Glasgow, noon.
Dartford Brewery.—Winchester House, noon.
James Nimmo.—Glasgow, noon.
Phillips and Marriott.—Coventry, noon.
Santa Catalina Nitrate.—Winchester House, 2 p.m.
South Durham Steel and Iron.—Stockton-on-Tees, 12.15 p.m.

FRIDAY, NOVEMBER 30.

Anglo-Sicilian Sulphur.—Winchester House, 2.15 p.m.
Callard, Stewart, and Watt.—Cannon Street Hotel, 2.30 p.m.
Duff Development.—Winchester House, 3 p.m.
Kelantan Gold Dredging.—Winchester House, noon.
Lewis and Burrows.—Winchester House, noon.
Pillsbury-Washburn Flour Mills.—Winchester House, 2.30 p.m.
Salvador Railway.—Cannon Street Hotel, noon.
Weardale Steel, Coal, and Coke.—Newcastle-on-Tyne, 2 p.m.

COMPANY MEETINGS.

SAMUEL ALLSOPP AND SONS, LIMITED.

The twentieth annual general meeting of Samuel Allsopp and Sons, Limited, was held on Friday at the Cannon Street Hotel, E.C., Mr. C. J. Stewart (chairman of the company) presiding.

The Secretary (Mr. J. Hartshorn) having read the notice convening the meeting and the report of the auditors,

The Chairman, in moving the adoption of the report and accounts, said he had hoped that before the holding of the meeting the company would have been in possession of the two businesses they had acquired, but a variety of conflicting interests had made the negotiations very difficult. It was only within the last few days that those varying interests had agreed, and they were now in the position, subject to some small formalities, to state that the scheme was ripe for the approval of the Court. Nothing had occurred in the meantime to shake his confidence as to the advantages of the amalgamation. From that organisation the board were hoping to show a much better result in the accounts than those presented that day. (Applause.) It was the opinion of the board that the Allsopp business had such a large amount of interest-bearing capital, about 65 per cent., that if attempts were made to reduce expenditure unduly the foundations which had to carry the whole superstructure would be cut away. They possessed all the material, plant, &c., at Burton to handle the increasing trade, and anticipated that larger profits would be derived from it. One of the principal items that had lately been touched upon was the question of salaries. It had been suggested that there should be a reduction all round. He did not think it would appeal to the shareholders as men of busines to reduce the employees' salaries because trade was bad. The result, he thought, would be that if such steps were adopted they would lose some very good men. He pointed out that the breweries were acquired at a time when the industry had touched bottom, and it was gratifying to see that of late there had been some improvement. The board were looking forward in addition to some relief from the temporary war tax which had been hanging round their necks for some years. If they could be free from further legislation the future of the brewing trade would be a bright one. He hoped that whatever measure was brought forward in the coming session the shareholders as voters would do their best to see that the brewing industry was not unfairly treated. He suggested, in the shareholders' interests, that the meeting in future should be held at Burton, so as to enable them to see of what their business consisted. (Hear, hear, and No, no.) Referring to the pension fund, he remarked that it was now closed, and pensions were yearly diminishing. The business premises had been enlarged owing to the increased plant required for the rapidly-growing lager beer trade, which was producing very satisfactory results. It was a trade which was supplying a recognised want and one which he thought should not be supplied entirely by the foreigner. (Hear, hear.) The company was in a position to do a very large business in that particular branch. With regard to the directorate he thought that the appointment of Mr. Sinclair was a great advantage. That gentleman was a most successful business man, and had materially assisted the company in the very trying times it had lately been passing through.

After some discussion the resolution was put to the meeting and carried, with two dissentients.

On the motion of the Chairman, seconded by Mr. Mayberry, Mr. W. Gardner Sinclair was unanimously elected a director of the company, as was also Mr. F. J. Roe.

Mr. Sinclair, in acknowledging his election, said that he had no hesitation in saying that he now saw daylight for Allsopps.

The auditors having been reappointed the Chairman moved that a hearty vote of thanks be given to the advisory committee for their services, which was unanimously carried, and Mr. Mayberry having acknowledged the vote the proceedings terminated.

KENWARD AND COURT, LIMITED.

Only the small addition of £100 was made to this company's properties during the year to September 30, raising their total to £152,790, but the depreciation of £300 was equally insignificant and cannot be considered sufficient, even though £2,104 was allowed for repairs. Machinery, plant, rolling and other stock is entered at £6,693, making a total capital outlay of about £159,000, and against this the reserve fund is only £7,000. Some money has been raised on loans, these with accrued interest appearing at £7,583, and the trade liabilities and rents payable stand at £2,054. On the other side, book debts, rents, and loans receivable are put down at £6,918, stocks are worth £3,548 and the cash balance is £869, so that altogether the position is not very grand. Gross profit, rents, and transfer fees for the period under review were £19,491, of which rather more than £11,000 was absorbed by repairs, salaries, wages and agency expenses, tradesmen's accounts, and other charges, including £453 for the compensation fund. Nett balance is brought out at £8,355 and £402 is brought forward, making £8,757. Out of this the debenture interest takes £2,500, and in order to pay 6 per cent. on the share capital the credit to next account is reduced to £257.

The General Mining and Finance Corporation convene a meeting in Johannesburg for the 27th prox. to pass a resolution for raising the capital from £1,250,000 to £1,875,000.

DIVIDENDS ANNOUNCED.

RAILWAYS.

Bengal Dooars.—Interim of 1½ per cent. on the ordinary stock for half-year ended June 30, carrying £13,380 forward.

Cordoba Central.—Interim of 2½ per cent. on the first preference stock, 2½ per cent. on the second preference stock, and 1 per cent. on the income debenture stock (Central Northern Section).

Southern Punjab.—Interim at the rate of 5½ per cent. per annum for six months ended June 30, carrying forward £49,193.

BREWERIES.

Hereford and Tredegar.—5 per cent., carrying £3,663 forward.

Marston Thompson and Evershed.—Interim on the ordinary shares at the rate of 10 per cent. per annum for the half-year ended Sept. 30.

West Cheshire.—For year to Sept. 30 of 4 per cent., placing £1,000 to reserve and carrying £165 forward.

MINES.

Broken Hill Proprietary, Block 10.—No. 76 of 3s. per share and bonus of 2s. per share.

Globe and Phœnix.—Third interim of 1s. per share for 1906.

Golden Horse Shoe Estates.—Third interim for 1906 of 6s. per share.

Great Boulder Proprietary.—Interim of 9d. per share on account of 1906.

Mount Lyell Blocks.—No. 2 of 6d. per share.

Oroya-Brownhill.—Interim of 4s. per share, payable Dec. 21.

MISCELLANEOUS.

Armitage Bros.—Interim of 2 per cent.

Army and Navy Investment Trust.—At the rate of 9 per cent. per annum on the deferred stock for the half-year ended Nov. 30.

British and Benington's Tea Trading.—Further on the ordinary shares at the rate of 7 per cent. per annum (making 6 per cent. for year).

Broken Hill Water Supply.—No. 53 of 4½d. per share.

Callard, Stewart and Watt.—Final at the rate of 10 per cent. per annum for six months ended Sept. 29, making 10 per cent. for the year, carrying forward £1,051.

Cassel Cyanide.—12½ per cent., making 20 per cent. for year ended Sept. 30, and a bonus of 5 per cent.

Colonial and United States Mortgage.—Interim for six months ended Sept. 30 at the rate of 5 per cent. per annum.

Gerste Fabricken Hatherley Distillery (In Liquidation). — A further of 3s. 6d. per share.

Griendtsveen Moss Litter.—At the rate of 5 per cent. per annum, carrying £430 forward.

Guardian Assurance.—Interim of 4s. per share, being at the rate of 8 per cent. per annum.

Ilford.—Final at the rate of 6 per cent. per annum on the ordinary shares for half-year ended Oct. 31, making 6 per cent. for the year.

Liverpool Warehouse Construction.—10 per cent. on the preference shares, being two years' arrears to Dec. 30, 1906, out of profits for year ended Sept. 30, carrying £553 forward.

Prentice Brothers.—At the rate of 6 per cent. per annum on the ordinary shares, carrying £1,000 forward.

Pyman Steamship.—Interim of 2½ per cent.

Richard Hornsby and Sons.—On 5,545 new shares, of £10 each, fully paid, from Jan. 1 to Sept. 30, 1906, at the rate of 6 per cent. per annum, and 8s. per share (being 5 per cent. per annum), on ordinary shares to Sept. 30, placing £5,000 to reserve, and carrying forward £1,026.

Starkey Knight and Ford.—Further of 6 per cent., and a bonus of 5 per cent., placing £3,000 to reserve, and carrying £1,743 forward.

Stewart and Wight.—Interim on the preference shares for six months ended June 30 at the rate of 6 per cent. per annum.

Tenement Dwellings.—Further of 2½ per cent., making 5 per cent. for year.

Wm. Cory and Son.—Interim of 4s. per share on the ordinary shares.

MINING RETURNS.

Associated Queensland.—Kulamadau: 220 tons for £373 gold, ex residues; Golden Gate Consols: 140 tons for £9 per ton.

Brilliant Extended.—Crushed 1,940 tons, value £4,960.

Briseis Tin.—Shipped 21 tons, including 9 tons on behalf of New Brothers Home No. 1.

British Broken Hill Proprietary.—1,495 tons crude ore produced 220 tons concentrates, containing 141 tons lead and 5,720 ozs. silver.

Carrington's United.—Crushed 368 tons for £1,775.

Chinese Engineering.—Output of coal, 24,000 tons; sales, 25,500 tons; consumption, 1,475 tons.

Croydon Consols.—Marshall's Queen 450 tons for £1,280; McColls, 109 tons for £237.

Day Dawn Block and Wyndham.—1,350 tons treated for value (including concentrates, &c.) £2,500,

El Oro.—Crushed 22,100 tons of ore, producing U.S. $171,469.

Esperanza.—13,810 tons dry ore; shipped to smelter 6,401 tons dry ore; value, $752,068.

Golden Gate.—Golden Gate Consols: crushed 140 tons for £9 per ton; 4 North Phœnix: 61 tons for £350.

Hyderabad-Deccan.—Output of coal 31,847 tons.

Kelantan Gold.—No. 3 dredge recovered 21 ozs.

Mill's Day Dawn United.—Crushed 2,019 tons; value, £7,700.

Mount Lyell Blocks. — Treated 6,000 tons crude ore for 65 tons 2 cwt copper.

Mount Roudny.—Ore crushed 2,860 tons, 292 ozs.; concentrates 113 tons, 287 ozs.; tailings (cyanide) 1,534 tons, 29 ozs.; total, 608 ozs.

North Broken Hill.—Treated 2,070 tons crude ore, producing 361 tons concentrates, containing 252 tons 3 cwt. lead and 6,665 ozs. silver.

Oroville Dredging.—Gross returns, $23,500.

Ouro Preto of Brazil.—6,650 tons of ore produced 2,293 ozs.

Weardale Lead.—Ore raised, 333 tons; pig lead smelted, 263 tons; average price obtained for lead sold, £19 per ton nett.

Waihi.—27,503 tons of 2,000 lbs., yielding £62,820.

Ymir.—1,750 tons of ore, 363 ozs.; 205 tons concentrates, value $5,330.

SIBERIA.

NOTICE
To Shareholders in the
H.A. SYNDICATE, LIMITED,
SIBERIAN MINES, LIMITED, and
THE NERCHINSK GOLD CO., LIMITED.

KLUCHI GOLD MINES, LTD.

(Incorporated under the Companies Acts, 1862 to 1900.)

BEING THE FIRST SUBSIDIARY COMPANY OF THE

NERCHINSK GOLD COMPANY, LTD.

A Prospectus (which has been filed with the Registrar of Joint-Stock Companies) is being issued.

The CAPITAL of the Company is £280,000, divided into 280,000 Shares of £1 each. 115,000 Shares have been underwritten by the H.A. Syndicate, Limited, and are being Offered for Subscription at Par, payable as follows:—2s. 6d. per Share on Application; 2s. 6d. per Share on Allotment; 5s. per Share two months after Allotment; 5s. per Share four months after Allotment; and 5s. per Share six months after Allotment. Shareholders of the H.A. Syndicate, Limited, the Siberian Mines, Limited, and the Nerchinsk Gold Company, Limited, will receive (ratably, according to their applications on this prospectus) preferential allotment as to one-half to shareholders of the Nerchinsk Gold Company, Limited, and of the balance, 40,000 Shares, equally between Shareholders of the H.A. Syndicate, Limited, and the Siberian Mines, Limited.

The Prospectus states that the Company has been formed to acquire the gold-mining rights in respect of the Mount Kluchi block, forming part of the area comprised in a concession (as altered and amended by the supplementary agreement hereinafter mentioned), which area is situate in the eastern part of the Nerchinsk Mining District of Siberia. The Company will acquire the benefit of all moneys expended upon and all developments made in the mines on the Mount Kluchi block, and of all machinery, mills, boilers, stamps, plants, ore-houses, assay and other offices, houses, buildings, electric installation, or stock, tailings, provisions, material, and all other property whatsoever except gold recovered after a certain period in or upon the said mines on the 1st day of July, 1906, or which was in transit to the mines or had been ordered for use in the said mines on or before the 30th day of June, 1906, and together with the benefit of, and subject to, all contracts made in connection with the said mines, and all gold extracted from the said mines at any time after the 30th day of June, 1906. The Nerchinsk Gold Company, Limited, has expended over £45,000 upon these developments and in the purchase of machinery, &c.

Messrs. Pearse, Kingston, and Browne, who have acted as Consulting Engineers to the Nerchinsk Gold Company, Limited, and have superintended the developments, report to the directors of Kluchi Gold Mines, Limited, as per report enclosed with the prospectus, from which it will be seen that:—

The area of the Mount Kluchi block is about 7½ square miles or 4,800 acres.

The Kluchi lode formation consists of a highly altered and silicified quartz porphyry, mineralised with pyrites and gold. The mineralisation extends for a considerable distance laterally, as well as along the strike, where it has been proved for upwards of 1,200 feet. The developments in "A" level show it to be continuous for the whole distance driven (over 600 feet). The limits of width have not yet been reached by the crosscuts, though they extend from 15 feet to over 150 feet across the formation, the latter under the big costeen at the greatest depth so far reached (about 150 feet).

The assays from surface discoveries ahead of the workings give values up to 1 oz. 6 dwt. per ton.

The underground developments consist of "A" level 630 ft. long, with crosscuts, which level is connected with the surface by shafts "B" and "C" 95 ft. and 115 ft. deep respectively. A costeen shaft has been sunk, and will meet the north crosscut at a depth of about 150 ft.

The whole of these developments are in ore. Over 230,000 tons may reasonably be considered to have been disclosed above the "A" level.

The Mill Crushings up to the end of August last were 5,214 tons for a return of 2,419 ozs. 16 dwts. 17 grs. of retorted gold, leaving 8 dwts. 9 grs. per ton in the tailings, the ore thus treated showing an average of 17 dwts. 16 grs. per ton.

It is anticipated that within a few months the present mills, capable of crushing 100 tons per day, will be in full operation, and that the profit will amount to, approximately, £40,000 per annum; if the mills be increased to a capacity of 500 tons per day the profit would amount to £200,000 per annum, subject to provision for Sinking Fund, Administration, and other expenses. The balance of cash available from the present issue will be sufficient to cover the whole cost of the additional machinery and equipment to enable the mine to be further developed sufficiently to provide a continuous crushing up to 500 tons per day.

This is based on taking the average value of the ore at 12 dwts., and allowing for the extraction of 85 per cent., and milling, mining, and cyandiding costs, at 14s. per ton.

The metallurgical tests made show, by amalgamation and cyaniding, an extraction of upwards of 90 per cent. of the value.

The purchase consideration payable to the H.A. Syndicate, Limited, of 62, London Wall, London, E.C., and the terms and conditions relating thereto, together with the various contracts and all other information required by the Companies Acts, are fully set out in the prospectus.

The Company will pay a brokerage of 6d. per Share on all Shares allotted on application forms bearing brokers' stamp.

The minimum subscription upon which the Directors may proceed to Allotment on this issue is the number mentioned in the Articles of Association—namely, 55,000 Shares, but 115,000 Shares have been underwritten.

The DIRECTORS are LORD LURGAN, K.C.V.O., 21, Lowndes Square, London, S.W. (Chairman) (Director of Siberian Mines, Limited; Director of Egyptian Estates, Limited; a London Director of Norwich Union Life Insurance Society). THOMAS HAMILTON ADAMS, De Tillens, Limpsfield, Surrey (Managing Director) (Managing Director of H.A. Syndicate, Limited; Managing Director of Siberian Mines, Limited). E. MEREWETHER BOVILL, Norcott Court, Berkhampstead (Director of Peel River Land and Mineral Company). C .L. WILLOUGHBY WALLACE, 10, Drapers' Gardens, London, E.C. (Director of the Argentine Railway Concessions and Land Company, Limited).

The Bankers are Parrs Bank, Limited, 77, Lombard Street, London, E.C., and branches. The Solicitors to Vendor Comuany are Herbert Smith, Goss, King, and Gregory, 62, London Wall, London, E.C. The Solicitor to the Company is H. Percy Becher, 26, Bedford Row, London, W.C. The Broker is Wilfred Stephenson, Gresham House, Broad Street, London, E.C. The Auditors are Hudson Smith, Briggs, Smith and Taylor, 23, College Hill, London, E.C., and Exchange, Bristol. The Consulting Mining Engineers are Pearse, Kingston, and Browne, Worcester House, Walbrook, London, E.C. The Secretaries are Hamilton-Adams Frères, and the Registered Offices are at 62, London Wall, London, E.C.

Applications for Shares must be made on the form accompanying the prospectus, and forwarded to the Company's Bankers, together with a remittance for the amount payable on application.

This notice is not published as an invitation to apply for shares, but merely as a notification to shareholders in the H.A. Syndicate, Limited, Siberian Mines, Limited, and Nerchinsk Gold Company, Limited, that a prospectus of the Kluchi Gold Mines, Limited, is being issued, and that Prospectuses and Forms of Application can be obtained at the Offices of the Company and of the Bankers, Brokers, and Solicitor. The List of Applications will close on Tuesday, the 27th November, 1906, at 4 p.m.

"THE INVESTORS' REVIEW,"
Norfolk House, Norfolk St., W.C.

Printed for theProprietors by ST. CLEMENTS PRESS, LIMITED, Newspaper Buildings, Portugal Street, Kinesway, London, W.C., and Published by CLEMENT WILSON, at Norfolk House, Norfolk Street, Strand, W.C.—NOVEMBER 24, 1906.

The Investors' Review

EDITED BY A. J. WILSON AND SON.

Vol. XVIII.—No. 465. SATURDAY, DECEMBER 1, 1906. (Registered as a Newspaper.) Price 6d.
New Series.

PUBLISHER'S NOTICES.

The Investors' Review is a Subscription Journal, and will be delivered to subscribers in London by the first post, or sent to the country and abroad by the first mail, on Saturday Mornings on the following terms:—

One Year - £1 1s. Six Months - 11s. Three Months - 5s. 9d.

Short of Three months the Price is **6d.** per Copy *Inland*, and **6½d.** *Abroad, Post Free.*

Subscribers can change their address as often as they please, but notice of change must reach the Publishing Office not later than the First Post on Friday Morning.

For a fortnight before the Subscription expires the **Investors' Review** will be forwarded in a different coloured wrapper.

Cloth cases for binding the Half-Yearly Volumes price **1s. 6d.**, postage **4d.** extra. Bound Volumes **16s. 6d.**, or **17s. 3d.** post free.

Cheques and P.O. Drafts should be made payable to

CLEMENT WILSON,
"Investors' Review" Office,
Norfolk House, Norfolk Street,
London, W.C.

Investment Queries.

Questions about Public Securities will be answered each week in the **Investors' Review** on the following terms:—

For each question thus answered the charge will be **One Shilling.** Where more than One Question is put they should be numbered, and a copy kept. No Security is ever named in the Answers Printed.

Private Letters giving fuller answers can be had if desired The minimum charge for such letters is **Ten Shillings** each; but for that Three Questions will be answered. For all additions beyond three the charge will be **Half-a-Crown** per query.

Lists of Investments furnished by correspondents will be annotated, or new lists of suggested investments will be supplied on the same terms, viz.:—**10s.** for the First Three, and **2s. 6d.** for each Additional one. But no group of securities forming a trust calculated to yield a given income will be supplied or less than **One Pound.**

The charge for Wires about New Issues appearing on days that prevent timely criticism in the **Investors' Review** will also be **2s. 6d.**, plus a prepaid telegram form.

The Editors cannot undertake to return rejected communications.

Letters from correspondents must, in every case, be authenticated by the name and address of the writer.

The Editors desire it to be understood that a charge is made for the insertion of reports under the heading of Company Meetings, and they cannot accept responsibility or statements made therein.

The Investors' Review.

The Condition of the Money Market.

We fully sympathise with the people who are longing for a reduction in the Bank rate, but cannot share the confidence many of them express that an ameliorative change of this kind is coming soon. Indeed, if it did come, as some prophesy, before the end of the year, we should be more alarmed about the future than we are now, because it would be an easement without durable foundation. The 6 per cent. rate is unquestionably a severe strain upon all credit users, and not least upon the legitimate commerce of the country, but it is better that it should endure until dangerous positions have been liquidated, or until whatever rottenness there may be under the surface of markets has been brought to light, than that a superficial veneer of restored confidence should be applied to a position essentially unsound. Why is this hunger for gold so acute if not because credit has been manipulated and brought to a state of tension dangerous even to the most solvent users thereof? Were it not so, there would not be any anxiety about gold, for the mines are producing plenty of it, so much of it that the surplus of the metal thus brought into employment tends to do mischief rather than good. Were it not that on all hands an underlying position of absolute deadlock exists through credit having been created in excess of the market value of assets; the sustaining capacity of the output of human energy; through losses concealed that may have been accumulating over a long series of years; through the absolute helplessness of banker and borrower to wind up whole categories of their engagements, we might look upon the world's gold hunger with serenity.

It is not only in London that this hunger has made itself felt. New York has suffered, and suffers now, in spite of the large amounts of gold imported by it during the last two months, much more than we do, and anyone who looks carefully at the New York market can see perfectly well that it suffers because the credit machinery it possesses has been abused and overstrained to an unexampled degree. So bad is the position there that, as Mr. W. R. Lawson ably points out this week in the *Financial Times*, the bankers in the States are clamouring for an addition of £60,000,000 to the paper currency. Were this granted, the silver and bond secured paper money would amount to $1,429,000,000 compared with $1,196,000,000 in gold or gold certificates. Well may the writer observe that under conditions such as these figures represent, "gold will have its work cut out" in keeping such a mass of inferior money up to par. In France and Germany the position is also strained and tender. This week's return of the Bank of France shows that the stock of gold compared with the same date last year has declined by £5,382,000, while at the same time the note circulation has increased by £2,342,000. The German Reichsbank also shows a diminution in the cash in hand, accompanied by an expansion in the note issue on the comparison of years, although its position improved last week. That is to say, both these countries are suffering from the consequences of abused credit facilities, of credit manipulation and distension, often against assets to come into existence at a future date, and it is therefore impossible for either of these countries to come to our assistance in any effective manner. We must rely

upon ourselves, and the 6 per cent. rate is having the good effect of putting the Bank of England in a position to buy all the raw gold coming into the market from the mines, all the coined gold that the Australian colonies may be able to send us, and whatever parcels of the metal coined or uncoined may turn up from India or other parts of the world. In time the banking reserve will be strengthened to an adequate extent by this inflow of the yellow metal, but were the first symptoms of improvement to be laid hold of in order to force the Bank rate down, the gold hunger of other countries, due to their reckless manufacture and misuse of credit, would at once reassert itself, and the Bank of England would not only find itself effectively competed against in the open market for the metal available there, but would again see its still most limited stock drawn upon, and the result of a recurrence of these symptoms would almost certainly be a violent wrench to the Money market, possibly enough ending in a panic.

In looking at the problem this gold hunger presents, we must never forget the excessive current expenditure of the various Governments whose stocks of gold are alone in any measure available as a foundation for banking credit. All the great industrial countries of the world—England, France, Germany, and the United States—are to-day spending more money on the business of government than they can afford. We as a nation certainly trench upon our capital every year in order to meet the calls of the Exchequer. It takes time for an impoverishing influence of this description to make itself visible on the surface, but none the less does it continually sap the foundations of our prosperity, weaken the recuperative energy of the people, and tend to increase the multitude of the infinitely poor. Therefore it steadily saps the foundations of wealth, and cuts them away. Our Money market has not yet by any means worked itself clear of the financial consequences of the South African war. We can see that it is still in subjection thereto by the state of the Consol market and the prices of all gilt-edged securities, and until the national expenditure has been materially curtailed, reduced by at least £25,000,000 per annum, we have very little hope that the Money market can escape from its difficulties, from ultimate disaster. The resources of the people, their savings, are drained away to pay debts, to maintain naval and military expenditure on a scale that is perfectly suicidal, destructive of the Empire and of the nation's own prosperity. Symptoms there are, we are glad to note, that the present Government is to some degree alive to the dangers ahead, and we congratulate Mr. Asquith on having paid off £2,000,000 of Treasury bills last Monday. His immediate predecessors in the Chancellorship of the Exchequer habitually borrowed fresh money in millions at this time of year. We hope he will go on reducing the floating debt in this manner, for that is the best use to which he can put his sinking fund and his surplus. There is still nearly £17,000,000 of this form of debt in existence, and most, if not all, of it ought to be paid off as rapidly as possible, because it is a debt highly embarrassing to the credit market, especially when that is drawn upon and over-weighted in all directions. But even this redemption of debt will not relieve the country of the deadly consequences of an excessive budget, and we were sorry to hear the other day that Mr. Haldane, the Secretary of State for War, is reported to be making little or no progress with reductions in the cost of that branch of our man-slaying services. There will be trouble for the Ministry of which he is a member if this report turns out true. Better would it be for us to be without an army of any kind, except the patriotic Volunteers, than to go on year after year spending upon the "regular" army twice as much as should be necessary in this twentieth century of commercial progress, of growing amity between peoples, and to some extent between Governments.

When all is said, however, we have to come back to the helpless position of credit in all directions as the explanation of dear money and the necessity for maintaining a 6 per cent. Bank rate. Why is it that we have had so few failures on the Stock Exchange during all the years of agony when prices have been shrinking with scarcely a week of respite or relief? How is the Stock Exchange able to stand the strain imposed by the fall in trustee securities, in Home Railway stocks, and in that miasmatic bog, the Kaffir Circus? The only explanation we can give is that credit institutions are carrying the losses, or much of them. All losses are not thus hid away; many individuals have been wholly or partially ruined during the exhausting process of subsidence in prices, and the losses they have suffered have not directly affected the credit of corporations, banking or other, though they have contributed to the reduction in banking deposits. But above and beyond this there must be hopeless locks-up in advances, in dead accounts carried by banks and other generators of and traffickers in credit, and these would probably amount to actual insolvency in many instances if the facts were known. Just look again at the accounts of that Consolidated Gold Fields of South Africa Company, with whose affairs we have recently had to deal in the usual unflattering fashion. It appears to have upwards of £1,321,000 lent as contango money upon the Stock Exchange, and altogether its credit commitments in the form of cash advances and mortgages, sundry debtors, and these Stock Exchange loans approach £2,000,000. How much of that money could be got back were the company's bankers to call in their loans? Probably not £250,000 of it. If an attempt were made to force the miserable contango payers to realise, as we said when dealing with the report, the Kaffir market would fall into a state of paralysis. It would be impossible to sell anything there, and the bankers who have advanced money to this company in order that it might slowly bleed to death thousands of victims of South African company swindling might whistle for their money. It would no more come back to them than ghosts rose to the incantations of Owen Glendower. And conditions such as this balance-sheet reveals are known to exist in all directions, and when we note how easy it appears to be for businesses, once they enter into the enjoyment of good credit, to continue their daily functions without suspicion for, perhaps, a generation after they have become insolvent, we may well be alarmed lest a continuation of a 6 per cent. Bank rate brings to light some yawning cavities of long-existing insolvency. Its disappearance just now, in any case, would leave disease spots in our credit machinery to be renovated, cleaned up and put in order.

Immigration into the United States.

It is an interesting subject this to the student of political history as much as to the ethnologist, and an excellent report concerning it from the pen of the Hon. R. C. Lindsay, second secretary to our Embassy at Washington, has lately been issued by the Foreign Office. To the poor and oppressed of the Old World the New has been at all times an Eldorado, a land of easily won wealth and freedom, and from the days of the Pilgrim Fathers onwards a constant stream of emigration has consequently flowed across the Atlantic. For obvious reasons the greater part of it has directed itself to what is now the United States, and as the Government of the Republic began at a comparatively early date to take stock of its foreign arrivals, much can be learnt from the statistics of its Immigration Bureau about the history of the movement which Mr. Lindsay rightly calls "one of the most remarkable movements of population to be met with in history." Since 1820, the year when the United States Bureau of Immigration was started, up to June, 1905, no less than 22,900,000 immigrants reached the shores of the Republic. Of these, it need scarcely be said, by far the greater number arrived after the first half of the past century; indeed, the Bureau's records show that between 1820 and 1850 only some 1,250,000 came into the country. The causes that have driven so many

people to leave the land of their birth to seek another were, particularly last century, commercial depression, political disturbances and harsh laws, though at the same time it must not be forgotten that many even of the political exiles meant to be only sojourners for a space. To the European America always has been primarily a country in which to make money, and with a great number of these earlier immigrants their main idea was to earn sufficient to enable them to return home and end their days in comfort. Consequently, whenever there was a period of dull trade in the States or during a time like the Civil War, the European stayed where he was and immigration in those years dropped considerably. Of late, however, other elements have come into play which have given a new stimulus to the older ones if they have not in some measure supplanted them. The most important of these newer forces is undoubtedly the improved transport facilities which have robbed the voyage of many of its terrors, and transformed what was a serious and costly undertaking into an everyday occurrence cheaply, quickly and comfortably accomplished. Moreover, the keen competition between the great transatlantic companies to secure the steerage passengers, whose money provides no small share of their dividends, has roused their respective agents to make strenuous efforts to capture the traffic. So great indeed is their anxiety, Mr. Lindsay states it to be reported that wretched immigrants have been hustled off to the States who never meant to go further than this country. This may or may not be true, but there can be no question that many an ignorant peasant of Eastern and Central Europe, tempted by the visions of easily acquired riches conjured up by the touts and runners of the companies, has sold his little plot of land and set out for the West to seek a fortune, knowing not what it meant.

But with this flood of newer immigration has come a curious alteration in the nationality of the immigrants themselves. Prior to 1880 the majority of the foreign population of the States was furnished by the Celtic and Teutonic races of Northern and Western Europe, all of whom may be said to have possessed the attributes of desirable and useful citizens. With the exception of the Irish, who in those years largely filled the ranks of unskilled labour, but few were illiterate, most were temperate, while all, even the illiterate Irish, were sufficiently intelligent to quickly assimilate with the native-born inhabitants. But in 1880 a change almost dramatic in its suddenness occurred, and the Celtic and Teutonic immigrants yielded their leading position to other races which up till then had scarcely been represented; for in that year the influx of Latins and Sclavs coming from the South and East of Europe first came into prominence, and has continued down to the present day. Immigration to the States has therefore become differentiated into the old and the new, and, to quote Mr. Lindsay, "it is the vast increase of the latter that lends energy to the associations for the restriction of immigration, leads trade unions to protest against the price of labour being cut down and causes grave concern to Congress." Compared with the older immigrants, the new are certainly far from satisfactory. Illiterate for the most part, less cleanly in their habits, more inclined in the case of the Sclavs towards intemperance, and all more poverty stricken on their arrival, it is not surprising that the people of the United States view their coming with disfavour, and consider their presence in the country by no means an unmixed blessing. Many, it is also stated, are avowedly mere "birds of passage," whose sole object is to make enough money and then leave the country, which alone is sufficient to put wrath into the heart of the true American citizen.

Probably from the point of view of the Republic these objections are valid and have considerable weight, yet to the outsider it would seem that much can be said on the other side of the question. The States, of all countries of the world, is the one most needing population, since it must be many years before its people can at the natural rate of increase develop its resources or adequately populate its wide area. Such being the case, it would seem natural that all immigrants, provided they were physically and mentally well equipped, should be welcomed and transferred on landing, if need be, to places where their labour would prove most useful. Even though they intend to leave the country after they have earned what they consider sufficient, the work they have done in earning it must remain behind, and, moreover, it is a well-known fact that many though returning to their native countries do so merely to bring back their wives and families with the view of taking up their permanent abode in the Union. Illiteracy and uncleanliness, other objections raised to the new immigrants, are defects which in a new and progressive country like the States should disappear after the first generation or, at any rate, show a marked diminution in the second growing up amid improved surroundings. What is more serious than any of these, and where the States have certainly good cause for complaint, is the formation of colonies by the various races in which they perpetuate the language and customs of their homes. In this respect the Germans, who belong to the older immigration, are as much at fault as the Italians and the Sclavs of the new, and it is in these colonies that we consider one of the great dangers of the Republic's foreign population lies, since their tendency is towards *imperium in imperio*. What ultimate effect these varied races will have on the national character is also an interesting question, but one on which speculation is worse than useless, since mankind in the States is at present most decidedly in the making.

Economic and Financial Notes and Correspondence.

Old-Age Pensions.

It is to be hoped that our kind-hearted Prime Minister has not gone too far in encouraging the belief that an old-age pension scheme can be brought into practical operation on a large scale in this country at no distant date. We cannot see the slightest hope for any such project under present conditions as to national and local expenditure, or as long as the poor law continues to exist with its waste, its cruelties, its mockery of charity and its continually increasing corruptions. Our poor law, indeed, notwithstanding its frequent amendment, is as much a relic of a barbaric past as the House of Lords itself. In one sense it is a natural corollary to the existence of a House of Lords, of a privileged class, and it had its beginnings in an effort to prevent such uprisings of the masses as might long ago have swept feudalism and privilege out of existence. There is as much real charity in the routine administration of the poor law as there is Christianity in a bishop's lace and lawn. We should be glad, therefore, to see the whole fabric swept out of existence, regarding as we do the indoor relief system —with the arrangement of guardians, incompetent often, corrupt not infrequently—as morally degrading always. In England and Wales alone poor law relief cost last year £27 17s. 10¼d. per pauper in London, as against only £10 14s. 9¼d. in 1871. And in the rest of England and Wales the cost has risen from £7 1s. 2¼d. per pauper in 1871 to £13 7s. 0¼d. last year. Of this expenditure by far the greatest proportion is due to the indoor system. Thus in London outdoor paupers cost last year only £6 2s. 1¼d. per head and in the rest of England £5 19s. 1d. per head. In London the cost has nearly doubled and in the rest of the country it has risen from £4 7s. 8¾d. in 1871. It is the poorhouse system that most of all runs away with the money, and if the present vicious methods of dealing with the poor could be swept away enough money might be released in a very few years to allow an effective system of old-age pensions to be established without adding to the pressure of rates and taxes on the poor.

Such a system, as we have always insisted, must depend upon the yearly revenue assigned to sustain it.

It cannot partake of ordinary insurance by means of premiums to any appreciable extent. Facilities might be given to the working classes and others whereby they could accumulate funds of their own, to be devoted to the increment of the pensions received from the State or from county and borough authorities, but the State cannot insure by premium payments the masses of the aged poor. The whole question thus requires to be examined from the foundation, and to its many other Commissions we think the Government ought to add a strong one whose task it should be to thoroughly examine into the working of the existing poor law with a view to its supersession by a wholesome system of old-age pensions. Imperialism is driving the country this way, for it is to Imperialism and the cost of it more than to any other single influence that we owe the masses of our helpless poor. From this point of view, our Empire is only repeating the experience of all Empires. The greater the glory, the greater the misery; and the swelling outcry for old-age pensions is only a modern variety of the old Roman cry, "*Panem et circenses.*"

Is this a Practicable Suggestion?

Appended is a note from a subscriber whose judgment we hold in great respect, and we should like our readers and other subscribers to read it, and, if possible, give us their opinion upon it. For a long time back we have felt that more should be done to help the public in dealing with their investments, and to protect them from the ravages of the bucket-shop circularisers, by whom they must be victimised to the tune of many hundreds of thousands of pounds every year. The difficulty, however, is to discover a way. Many friends of The Investors' Review have urged upon us the advisability of entering into competition with these bucket-shops, and such a course has often been discussed, but the idea has never commended itself on close inspection. No attempt to make a profit on stock dealing in any form has ever been made by us since The Investors' Review was started. We have never sold anything recommended for sale, or bought ahead of advice given to buy. Stock markets have been observed but never entered by us. It is probably to this fact that the general soundness of the advice given is in large measure due, a soundness continually testified to by those who avail themselves of our help. The subjoined note, however, opens up another field of helpfulness, and we are not indisposed to enter upon it, provided sufficient support is forthcoming. The work would be great, but we think we see a way to cope with it by the help of a good organisation, and, provided the remuneration were adequate, we think a systematic supervision of the investments of those who may put their confidence in us —and many have done so from the day the Review was started in 1892 down to the present hour—might be undertaken. Those who have appealed to us in the past have had no cause, on the whole, to lament our help. But obviously the scale of fees charged could not be limited to £5 5s. or £10 10s. per annum. They would have to vary according to the number of securities dealt with and watched, the number of special recommendations forwarded privately, and also the number of general letters of advice circulated amongst clients as a body. All this, however, is matter for future discussion and careful estimates. What we should like to get, meanwhile, is the opinion of The Investors' Review public upon this subscriber's suggestion:—

"I rather sympathise, in a way, with that man who grumbled at the space you gave to my numerous answers (although fully appreciating your own sufficient reasons), and wish you could see your way to resume the model trusts, especially just now, when bargains may be picked up in the markets. I think I remember you dropped them when (was it because?) some stupid person abused you because your Mines Trust did not turn out satisfactorily to him. Very few of your readers are such fools as to imagine you infallible; on the other hand, very few, I suppose, would not willingly grant your experienced judgment to be much superior to their own in matters of finance. If you do not care to publish recommendations in the pages of the Review, might it not be worth while to issue a confidential sheet from time to time to special subscribers, advising them as to what might be advantageously bought for investment (and what, previously advised, should be sold), giving your reason for the advice in each case? In this circular questions might be openly answered for the benefit of all the special subscribers. I should be glad myself to pay, say, five guineas a year (or ten if it came to that) for such a circular, combined with free special answers by post when needed; and I should think a sufficient number of your present supporters would take the idea up to pay you fairly well. As the actual out of pockets would be very small, 100 at £10 10s., or 200 at £5 5s., should do for a start. I am inundated with circulars from people whose dishonest advice I don't want at a gift; yours, which is honest, and, on the whole, well worth having, you are so shy and sensitive about, that it is almost painfully difficult to get at on any conditions. I often regret your refusal to take an advisory oversight of my public investment list."

The Position on the Rand.

Light from various quarters continues to be thrown upon Transvaal affairs, and all of it, even the contemptible sophisticated communications of the *Times* correspondent in Johannesburg, tends to reveal a most critical position. Perhaps the situation is most clearly summed up in the subjoined extract from the syndicated letter sent to the British Liberal Press by its Johannesburg correspondent, Mr. Outhwaite, dated November 3. It shows that the Chamber of Mines, backed by the dominating house of Wernher, Beit and Company, is in no way departing from the determination to secure a monopoly of all the means of existence, and to stifle the political life of the still bleeding provinces. And another most striking letter was published in Thursday's *Daily News* from the pen of Mr. J. B. Robinson, head of the Robinson group of mines. It goes partly over ground with which the readers of this Review are only too familiar, but the story must be continually retold until our Colonial Secretary is made alive to the dangers lying immediately ahead. He appears to have imbued the members of Sir Henry Campbell-Bannerman's Cabinet with the notion that once a constitution has been granted all will run as smoothly in the Transvaal as an electric motor car. It is not so, and if the Home Government does not lay a strong hand upon the monopolists the trouble after the constitution has come into operation may well be greater than before, and we shall have to go to the aid of the people by remitting debt charges and in other ways helping to keep them alive. There is going to be a deficit now, it would appear, thanks to the manner in which white people are being deprived of employment, and to the steady pressure of monopoly upon all manufacturing and distributing occupations in the country. Railway receipts are declining, and must continue to decline as the white population is driven away, as the poverty of those that remain deepens, and as the sources of supply fall more completely into the hands of the adventurers surrounding the "corner house." And all the time the mining industry becomes less profitable, in spite of the "record" outputs of gold. It benefits the country in which the mines are situated in no degree proportionate to the magnitude of the wealth brought into existence, and but a slender proportion of that wealth ever reaches the ultimate shareholders. Were our Government to intervene, and put a stop to the evil designs of the alien group of nondescripts who now grasp at the control of the country's means of subsistence, and take the mines completely out of their hands, the whole position would change for the better, and we should have healthy instead of languishing markets, a busy population settled all over the country creating a new

nation, and profits to distribute at home. Look at the picture Mr. Robinson draws in his letter. "It is from the tyrannical rule of the Chamber of Mines that the Robinson group is trying to escape, and instead of the Government's action in any way injuring the future prospects of the gold industry, it is beyond a doubt that the sooner we can establish a wider field for the recruiting of natives the better it will be for every unit in the country. Trade in the Transvaal will expand in all directions, we shall be able to work the mines, and employ a much larger number of white men. The whole aspect of affairs will change for the better, and there is no doubt that even the lower grade mines will be worked."

Of the truth of this forecast we have no doubt whatever, and trust that Sir Edward Grey will bring effective pressure upon the Portuguese Government to stop the nefarious underhand practices whereby the liberty granted to the Robinson group to recruit on Portuguese territory has been made abortive. Has some of the £200,000 which Mr. Robinson says has been accumulated by way of reserve or secret service funds by the Chamber of Mines gone into the pockets of Portuguese officials at Delagoa Bay? We should not be surprised if considerable subsidies disappeared in that direction, but our Government has the power to overrule corruption in any form if it will only act with vigour and determination. And other things besides recruiting are involved, for, as Mr. Robinson also says, a continuation of the Wernher, Beit and Chamber of Mines monopoly "would mean the control not only of the Transvaal, but of the whole of South Africa." Already these people control every interest in the country, "because they can make or suppress the supply of labour at their own will just as it suits their purpose." That is an intolerable situation to be allowed to exist in any part of the British Empire. It is as much a disgrace upon our Government as the condition of the Congo Free State upon King Leopold of Belgium, and the country emphatically demands that it shall be put an end to.

The most significant event of the week has been the announcement that railway receipts are falling off at the rate of a million pounds for the year, and that the shortage of £600,000 may be anticipated for the year ending June next under the estimate presented to the Inter-colonial Council five months ago.

This is a logical outcome of the Chinese labour system. A commercial centre like Johannesburg is not needed with a system of serf labour. It must shrink as Kimberley did until it attains dimensions proportionate to requirements. The yellow men have few needs and no money to spend. Neither have the unemployed whites. The present population of Johannesburg will become more and more superfluous as the field over which the wealth produced is distributed narrows down to China and Europe.

The process of adjustment as regards the town would have made more headway but for the counteracting factors of a temporary nature, such as the huge loan expenditure of the municipality on sewerage works and trams, of which the end is in sight. Thousands of white men are hanging on pathetically, either unaware that notice to quit has been given or in the hope that self-government may bring salvation. The number of the unemployed increases. A thousand men discharged from the mines have been added to their ranks during the last six months. The more fortunate leave. It is necessary to bespeak a passage to Australia six weeks ahead. The less fortunate stay and starve, getting what satisfaction they may out of the announcements of "record outputs" and such items as that the profits of the Robinson Deep will amount to half a million for the year.

In view of all these facts the falling off in railway traffic is easily understandable. An unessential population that is being steadily reduced to pauperdom naturally makes a lessening demand for goods, and so a short-fall is created. The Government has promptly met the situation created, and has discharged a number of railway men to join the ranks of the unemployed. So the Transvaal steadily drifts to the appointed end—a financial crisis, and eventually a conflict which will determine whether the whites or the Chinese shall go, whether freedom or serfdom is to be maintained.

There is one aspect of the position here which must be taken into consideration by the Imperial Government. I refer to the belief cherished in England that the people of the Transvaal will themselves end Chinese labour, and this undoubtedly they desire to do, but there is a danger that men will not be forthcoming to carry their will into effect. All the three daily newspapers are controlled by the financiers, and already a campaign of scurrilous attack has been started against those taking a prominent part in the anti-Progressive campaign. Mr. Wybergh has been made the subject of an insolent attack, in which his religious views were held up to ridicule. Mr. Creswell has been vilified in a malignant manner, with a design to injure his professional reputation. Mr. Whiteside, the well-known Labour leader, standing for the Municipal Council, had to meet and dispose of a blackguardly insinuation of corruption, and the organ of the Progressives at Pretoria has just been mulcted in damages for a libel on General Botha.

Such are the tactics adopted by the Chamber of Mines. As Mr. E. P. Solomon says in a letter to the *Star* refuting a personal attack, it is evident that the intention is "to drive every honest man out of politics." This danger of the coercion and intimidation of the people here by Tammany methods has wide recognition locally. The difficulty will be to find candidates in the popular cause willing to face loss of livelihood and the prospect of venomous attacks from the newspapers.

Stock Exchange Morals.

We are glad to see that the City editor of the *Pall Mall Gazette* has again raised the question of Stock Exchange habits, especially in dealing with prospectusless companies. That scandal has often been girded at in these columns, with apparently as much effect as a dishclout would have in mitigating the strength of the east wind. None the less will it be necessary for the Committee of the Stock Exchange to take this and other reforms into serious consideration one day soon with a view to applying a remedy. More money has been lost by the general public through the laxity of the rules of the Stock Exchange in this one direction of surreptitious introductions of new shares than through all the machinations of the Hooleys, Whitaker Wrights, and other geniuses of finance whose squib and cracker careers through the City have left devastation in their wake. We should have had no Kaffir Circus agony worth speaking about if the adventurers who hatched companies out in Johannesburg had not been permitted to introduce the shares of them by millions on the London Stock Exchange without a single word of explanation. A large minority, if not an actual majority, of the members of the Stock Exchange have always been against the loose system of management, the absence of all control, by which plundering of this kind was facilitated, but the influence of the monied interests outside, the low morality of certain groups among members of the "House," and a general disposition to allow players to make money where they could, suffered mischief to be done, and the Stock Exchange is going to pay for its laxity in this one direction for many years yet. Some lines of business upon it have been almost killed for good. Bucket shops have come into existence outside and drawn away, if not a sensible portion of its business, at least large sums of money that in ordinary course would have found their way through the market, levying toll there. How many of the members exist under present conditions passes our understanding. They have killed the trade of the Kaffir Circus by their own greed, or the greed of the adventurers they served, and by allowing themselves to be the tools of the unscrupulous harpies outside. Scarcely a speculative market has come into prominence in recent years except the Yankee one, which they have not done their best to destroy. It is a much wider question than one of mere prospectusless companies, a question of the utility of the small jobber, of the jobber of any kind; a question, also, of the protection of the public from manifest swindles of every description. The mere fact that a prospectus has been published does not warrant us in saying that the new venture is good and sound. The prospectus is only a slight and transitory safeguard, and it ought to be the duty of the Stock Exchange Committee to overhaul the particulars relating to every security which it is proposed to introduce upon the market, whether the shares of a company issuing a prospectus or anything else, and to forbid dealings or settlings except on full disclosure and publication of the facts. It ought not to be possible to carry on the confidence trick on the market under any pretence, and however much the temporary consequence of the application of a little common morality and decency to the supervision of scrip offered on the Stock Exchange might

seem to involve a loss of business, we are quite sure that in the end the hold of the Stock Exchange upon the esteem of the public would be incalculably augmented to its benefit.

Norwich Union Life Insurance Society.

It is only its quinquennial report that we have before us now, but it is a splendid one, and we are not surprised at the jubilance of its tone. After a most strict valuation on a 2½ per cent basis by help of the new "Office Males" Table of Mortality, the most perfect hitherto drawn up, the five years ended June 30 last show a gross profit of £458,346, of which £56,604 has been distributed in intermediary bonuses, leaving £401,742 to be distributed now, or enough to pay a reversionary bonus of 10 per cent. on all premiums in the old series and of 33 per cent. on the new series. After setting aside the £365,878 necessary for this, £35,864 is left to carry forward. What makes the exhibit all the more satisfactory is the care with which every security in the society's possession has been valued by a special committee of the board. In all cases, say the directors in their report, in which the slightest doubt existed, the value was scrupulously written down to an amount which appeared certain of realisation. They add that where any writing down was necessary it occurred mainly in regard to what are generally known as gilt-edged or trustee securities. Just so! That is how the rich are being compelled to bear their share of the reckless expenditure involved in that South African war. The directors of the Norwich Union add that it is not at all improbable that a change in the condition of the Money market may in a few years allow these gilt-edged securities to recover their previous values. Perhaps, but in the way things are now going that happy consummation will not come in our generation.

Oceana Consolidated Company.

Like so many South African finance companies, the Oceana Consolidated suffered from the severe depression in the market last year. Profits fell off considerably, as there were few opportunities of doing successful business. Dividends and interest received and accrued amounted to £35,929, whilst the profit made on the realisation of shares was only £9,040, the total credit being £45,599, with a little from transfer fees. Expenses absorbed all but £25,050, this being the nett profit for the year, and £45,532 was brought in. No dividend is paid this time, against 1s. 6d. for the the previous year, nearly the whole of the credit being swallowed up in the necessity to provide for depreciation. We are not enlightened as to the extent of the depreciation in the past twelve months, but are permitted to infer what we please from the statement:—"It was inevitable under the circumstances that some of the company's assets should suffer from the effect of these bad times," and it is in view of this that the directors have decided to create a reserve against depreciation. The method they have pursued is to transfer the premium account of £142,884, the balance of £45,532 brought in, and the profit earned last year to an appropriation account. These sums aggregate £213,467, and out of the whole a reserve fund of £200,000 has been created, leaving the odd thousands to be carried forward. The directors consider this reserve amply sufficient to provide against any eventual loss that may arise in any of the assets, but how can they foresee happenings and possibilities in the South African market? Their shareholdings are spread over a vast variety of interests, such as railway shares and debentures, mining ventures in the Transvaal and West Africa, land and territorial acquisitions in Portuguese East Africa, the Congo Free State, Egypt, Soudan, &c. The cost price of these is put in the balance-sheet at £1,296,602, but £303,480 represents unquoted paper, while the auditors write: "The values attached to the investments and the steamers, and Chiromo and Govuro assets are introduced on the responsibility of the directors, and are subject to realisation." It is extremely doubtful if the whole would fetch £1,296,602, or anywhere near it. As regards other liquid assets, the company is well off, cash totalling £23,263, Consols £88,541, and loans to the Stock Exchange £42,767. In addition, there are loans to various companies of £66,446, and other debtors in London and Africa owe £38,958, but, then, it ought to be able to display some real wealth out of an issued capital of £1,733,197. Current liabilities are heavy, too, including loans, £87,670, almost equal to the cost of Consols; creditors, £23,521, and bills payable £7,420. No serious objection is to be urged against this method of manufacturing a reserve against depreciation, as it is not an unusual practice. But it is mainly made up of money provided out of past issues of shares, and the account is largely a change of name, the £200,000 being spread over the conglomeration of share assets. The directors do not furnish a schedule of the shares held, so it is impossible to apply any test to them, but most of those companies alluded to in the report are very speculative. Five months of the current year have already gone, and there are no indications of an improvement in the market. On the contrary, the depreciation in prices since June 30 has been more severe, and the outlook shows no promise as yet of clearing.

Scope for Economy on the Rand.

An illuminating article on this important subject of Rand economies is published in the issue of *South African Mines*, to hand, and deserves to be studied by all shareholders who are affected by the deplorable waste going on. Lord Harris is waiting for someone to invent a hand-drill that will save a large amount of manual labour, but if he will read and digest this article he will learn that a great deal can be done before the inventor comes along. What our contemporary sees to-day is that the proportion of barren rock crushed on the Rand is unduly high, and that in many of the mines unnecessarily wide stopes are carried. In fact, it is generally admitted by all disinterested and honest authorities that this waste of labour and profit is constantly going on. To demonstrate how ruinous it really is, the following table has been drawn up in order to show the profits that can be obtained by working a reef 2 ft. wide and assaying 20 dwts., or 85s. per ton, in (*a*) a 3 ft. stope, (*b*) a 4 ft. stope, and (*c*) a 5 ft. stope. Working costs are in each calculation assumed to be 5 dwts., or 21s. per ton:—

3 ft. stope ..	Value, 13·33 dwts., or 55·986s. per ton.
	Profit, 8·33 dwts., or 34·986s. per ton.
4 ft. stope ..	Value, 10 dwts., or 42·5s. per ton.
	Profit, 5 dwts., or 21·5s. per ton.
5 ft. stope ..	Value, 8 dwts., or 34s. per ton.
	Profit, 3 dwts., or 13s. per ton.

Such calculations show how seriously the habit of widening stopes eats into profits, and how important it is that managers should try, by every possible means, to reduce stoping widths to reef widths. It must be admitted that this is in many cases impracticable, that managers are forced to adopt the practice of wide stoping by conditions beyond their control. Air drills, for instance, need elbow room, and since a sufficiency of labour is not available for hand stoping air-drills have often to be used on narrow reefs. Again, it is often necessary to break down a good deal of country rock in order to get a safe roof or floor. But much country rock is broken through avoidable causes, of which unworkmanlike mining is one of the chief.

We have heard a great deal of late, from the bosses themselves, of the considerable benefits to be derived from the enlargement of batteries. By increasing these, they say, working costs can be appreciably reduced and profits raised; but, plausible though the argument seems, there is quite another side from which to view it. In order to feed these large mills there is the great temptation to resort to wide stoping. A manager with 200 or 300 stamps to feed is often hard pressed to find a sufficient supply of ore, hence he has to mix a large quantity of country rock with his reef. "Another, and, it is feared, more fatal 'merit' of

wide stoping is that it enables the manager to reduce his working costs per ton," is the paradoxical-looking argument of our contemporary. "Desirable as it is to reduce working costs, it is still more desirable that they shall not be reduced at the expense of profits, but is there any authority who will deny that this is precisely what is happening on the Rand to-day? Look at the table. The fourth foot added to a stope on a 2 ft. 20 dwt. reef means reducing the profit by between 13s. and 14s. per ton, whilst the addition of the fifth foot means a further reduction in profits of over 8s. per ton. If a reef of smaller value be taken as the basis of calculation the reduction of profit caused by widening the stope becomes even more serious, and whatever figures are employed it seems, therefore, that wide stoping is about the most costly excess in which a mining company can indulge." This is a serious answer to the plea of the bosses that colossal mills will increase profits by reducing costs. On the contrary, costs are reduced at the expense of profits, for the simple reason that the wider stoping lowers the value of the ore. That is to say, it reduces the average yield per ton, the only conclusion one can arrive at from a study of the table. If this is so, does it not help to clear up the mystery, so generally bewailed, of lower grade ore? At any rate, it helps one the better to understand it, apart from any past practice of eye-picking. To put it even more bluntly and clearly, the mines are made by this practice to appear less rich than they really are. "We cannot afford to employ white labour because the mines are so poor," cry the bosses. Here is an explanation of it. They are designedly made poor, just as the scarcity of black labour is the result of sinister motives and tactics. And we are glad that a Johannesburg organ has the courage to argue so.

A. Darracq and Co. (1905), Limited.

Since the issue of the report for the year ended September 30, 1905, this well known and flourishing motor enterprise has been expanded and enlarged in various ways, and now possesses a share capital of £650,000 in 375,000 preferred ordinary and 275,000 ordinary shares, all of £1 each. Formerly the capital was only £375,000 in 100,000 preference and 275,000 ordinary £1 shares, and since debenture bonds to the amount of £150,000 have also been issued, the expansion has been considerable. It cannot, however, be said that the additional money put into the business was unjustified, as after writing off commissions, depreciation on machinery, buildings, &c., the trading profit amounted to £220,020, and £261 came in from transfer fees, &c., making £220,281. That is an improvement against the previous twelve months of £53,404, making an increase since the end of 1904 of more than £100,000. General charges require £14,982, and £4,061 was payable to the directors as commission, leaving a nett balance of £203,238. Of this sum £27,261 has been transferred to capital reserve in respect to the period between October 1 and November 17, 1905, when the present company was registered. A further amount of £22,739 is now added to the same fund, making a total of £50,000, which is a very good recommencement, the former reserve having apparently been divided up when the finances of the company were reorganised. Service of the debentures requires £15,000, and after giving the preferred ordinary shares their fixed 7 per cent. the ordinary shares receive aggregate dividends of 25 per cent., which entitles the preferred ordinary to an additional 3 per cent., bringing their total return to 10 per cent. for the year. It seems that the directors have been in negotiation for the purchase of the business and patent rights for the manufacture of omnibuses, lorries, and other steam-propelled vehicles, and means of transport owned by M. Léon Serpollet. These have been brought to a satisfactory conclusion resulting in the formation of new venture called the Darracq Serpollet Omnibus Company, the English Darracq company receiving 156,000 fully paid ordinary shares of £1 each. These have been valued in the balance-sheet at par, but since the company does not appear to have paid anything for the shares, their equivalent has been applied in reduction of goodwill. A considerable share interest has also been acquired in a company formed in Italy for the manufacture of Darracq cars, but the securities had not been received up to September 30, and have not been brought into the present accounts. The balance of goodwill now stands at £266,823, or not very much more than the past year's trading profit, while the freehold and leasehold land, buildings, &c., after deducting depreciation, appear at £79,815. Machinery, plant, tools, &c., are worth a further amount of £68,946, and next year these items will probably have grown somewhat, as the company has erected a new factory at Suresnes to provide accommodation for its ever-growing business. Materials and stock-in-trade have been valued by the managing directors at £116,981, and although bills payable and sundry creditors amount to £95,227 against £57,377 due to come in from debtors or on bills receivable, this is really a good point, because the company has cash to the amount of £286,001, indicating that its customers pay up promptly for their goods.

"The Jumpers" Gold Mining Company.

After a long suspension of six years, this outcrop company, one of the Wernher, Beit group, was able to resume dividend payments in 1905, with the modest distribution of 20 per cent. It has followed this up with 50 per cent. for the financial year to July 31, an increase of 30 per cent., but, unfortunately for the shareholders, they are unlikely to receive many more dividends. This is not because black labour is scarce, or coolie labour dear and inefficient, but because the mine will very soon be worked out. In a table we gave last year, we put the life of the mine at five years, and though it may go on for that length of time practically all the ore will have been taken out long before then. The mine is now practically developed to the lowest level on all its three reefs, namely, the Main Reef, the South Reef, and the Main Reef Leader. By including partially developed ore amounting to some 30,000 tons, there is approximately a reserve of 180,385 tons of payable rock. To this may be added the ore to be ultimately extracted from safety pillars spread over eight levels, calculated to produce 35,000 tons, giving a total tonnage of 215,385 tons. As in the past twelve months, 141,400 tons were sent to the mill, and 32,707 tons of waste discarded, the quantity left cannot last two years at the present pace of crushing. But, in addition to the three ordinary reefs mentioned, there is what is described as a "pyritic band" lying to the north of the Main Reef; also a newly discovered conglomerate reef situated about 100 ft. to the south of the South Reef. This has been opened up on the surface for a distance of over 1,000 ft., and from it about 800 tons per month, of a value of 11 dwts. per ton, are being sent to the mill. Shareholders, however, should not attach too much importance to these reefs, for in the case of the conglomerate reef it is doubtful if it will continue in depth, as it is only some nine inches in width. When the reserves are exhausted, about two years hence, the new slimes plant, recently erected, will deal solely with the accumulated slimes, and these are calculated to keep it going for three years. So altogether the prospect is not a happy one. Slimes alone cannot maintain dividends of 50 per cent., or anything approaching them, and the shares of a mine with such a future are very dear at their present price.

Coming to the details of the past year's working, the quantity of ore crushed was 141,326 tons, and the mill produced 36,714 ozs., the sands 17,492 ozs., and the concentrates 1,075 ozs., an aggregate of 55,281 ozs., equal to 7.82 dwts. per ton. Compared with the operations of the preceding year, this shows an increase in the total yield per ton milled of 0.77 dwts., the value of the ore extracted from the Main Reef Leader being raised by the method of sorting out and

retaining in the respective working places a portion of the waste broken. The whole of the gold realised £232,507, an average of £1 12s. 11d. per ton, an increase of 3s. 3d. over that of the previous year. Total working costs came to £168,196, equal to £1 3s. 9½d. per ton, showing a saving of nearly 10d. per ton. Thus the working profit was £64,311 per ton, other revenue added £1,422, and £4,839 was the sum brought in, making a free balance of £70,571. The 50 per cent. dividend absorbed £50,000, and after allowing for depreciation, &c., £7,959 is left to carry forward. In the balance-sheet the assets are far from imposing. Cash tots up to £33,184, but the final dividend will require £30,000. Creditors are owed £8,224 against £1,941 due from debtors, and there are 25,100 Jumpers Deep shares, which cost the company £8,433. So when the end comes there will be little to distribute amongst shareholders, for the property, and some of the other assets will be valueless.

New Zealand Loan and Mercantile Agency Company, Limited.

After a study of the report and accounts of this business for the year ended June 30 last there can no longer be doubt that the condition of affairs in the Australasian colonies has vastly improved. When a company like this one is enabled to appreciably improve its position, it means that the country in which it operates must be making real headway. For a long time the concern bordered on insolvency, but, by means of various devices, one of which was the formation of the New Zealand Land Association, which relieved the company of some of its least productive and most burdensome assets, it managed to struggle along without complete default, and is now reaping the benefit of its pertinacity. We are quite glad to see this, particularly on account of the unfortunate shareholders who have a terribly heavy uncalled liability hanging over their heads, and if business continues profitable, as it seems likely to do, it may perhaps be possible to continue the small dividend of 5 per cent. on the paid-up share capital now recommended as some slight compensation for past sufferings. The revenue for the past year was £319,696, and £1,603 was brought forward—together £321,298. Against that general administration cost £135,784 and land and income-taxes £7,986, leaving £177,528 as the nett profit. It goes against a total of £122,710 for the previous year, meaning the substantial increase of almost £55,000. The directors can therefore meet the interest on the prior lien and second and third debenture stocks with a sum remaining of £59,403 compared with only £5,151. Pleased are we that no less than £52,622 of this credit is carried to the reserve accounts, increasing them to £157,000, and out of the money still left a payment of 5 per cent. is made on the fully and partly-paid shares with £358 carried forward. It will be noted that a very small sum is required to pay this dividend, but then the total paid-up share capital is now only £135,222, while the authorised amount is no less than £2,000,008, the shareholders being liable for practically all the rest.

This uncalled capital is part of the security for the total debenture debt which runs up to the terrific figure of £3,296,345, but it may be well to again remark that something like £439,000 of these debenture stocks have been, as it were, repurchased by the company, and are now held as an asset. There seem, however, to have been some small realisations of these debenture stocks during the year, as in the last balance sheet the amount so held appeared at £458,000. In addition to this heavy fixed debt the company owes £42,099 on bills payable, besides £244,046 on current account, and £317,433 against about £223,000 left on deposit by the New Zealand Land Association. Under all heads therefore the floating liabilities exceed £600,000 compared with £542,000, the comparatively small increase being due to the fact that the bills payable are something like £66,000 less. The company's assets are in a distinctly more liquid form than the history of the undertaking would lead one to suppose, the cash balance, for example, being £289,090, including £40,000 lent in London at short notice. This shows a small increase against last year, when as much as £97,000 was similarly lent in London. Bills receivable are £85,275, or £33,000 more, and advances on wool and produce come to £349,083, an increase of some £47,000, both these items being an indication of the larger and better business done during the year. Secured loans and other advances £1,029,886, is a much more doubtful item, but it shows a drop of nearly £40,000 on the year. Properties and stock, whether foreclosures or not we do not know, come to £202,307, and there are current accounts of £552,353, which also seems a rather dubious item. Do they consist of further advances? Merchandise on hand is valued at £136,793, and lower down in the balance-sheet we come to the interest in the New Zealand Land Association. Four per cent. debenture stock is held to the amount of £356,692 besides shares of £195,966, making the total interest £552,658 as before. The company's offices in London and colonies, wool stores and premises have increased again to £307,990, and certain high-class and other investments add up to a total of £297,178. It is, however, not the intention of the directors to reduce the company's fixed debts in any way, but rather the contrary, it would seem, as they say it will be convenient from time to time to borrow on these securities for the purposes of the business. They therefore propose to alter the borrowing powers so that instead of £50,000 now authorised the amount may be £200,000 larger. As to this land company, it seems to have gathered a revenue in the year to March 31 of £25,831, and after providing all charges, including debenture interest, there is a balance left of £8,135. A surplus of £11,752 was realised on properties, and the two sums are applied in the redemption of the trustees certificates suspense account, the origin of which has been frequently explained, leaving it at £8,427. This company's balance-sheet does not need much scrutiny, the principal item being the cash balance of £311,783, most of which, as already indicated, has been deposited with the Mercantile Agency Company. The sum of £83,136 has to come in from sales of land, and properties in New Zealand and Australia, together with the plant, furniture and live stock, are valued at £149,332. Of course no one has a means of knowing how far these figures accord with actual worth, and while the improved conditions in Australia enable the companies to keep their heads above water we are hardly likely to get the real truth about any of the assets.

American Business Notes.

At last the figures of the New York Associated Banks indicate that they are no longer able to hide away the return of securities from Europe, for there was an increase of $4,070,000 in the loans last week, in spite of the help given by the Union Pacific Railroad or the Standard Oil potentates in sustaining the market. The Union Pacific, in fact, has gone heavily into the contango business for the time being, is said to have lent large sums on Wall Street, but, notwithstanding the Banks have had to expand their advances, and we fear the pressure upon them must increase from now onwards to the end of the year, do what they may. They last week, however, obtained an increase of $1,110,000 in the specie held, and of $1,793,000 in the legal tenders, so that in spite of an increase of $3,485,000 in the deposits, product of the increased advances, the general reserve rose by $2,903,000, while the surplus reserve crawled up by $2,032,000 to a total of $4,406,000. A year ago, however, it was $9,157,000, and within a fortnight of that date money had risen to 125 per cent. in the street.

It is stated in New York telegrams that the Standard Oil people are going to spend £7,000,000 sterling on railways in the republic of Bolivia, and that enormous regions of rubber forest will thereby be opened up. This is good news, and indicates that in spite of themselves the Standard Oil people must do good sometimes with a portion of their wealth. But presumably

they will not risk their own money further than they can help, and we must be watchful to see that they do not dump on European markets the bonds created to represent money spent in that quarter of the world.

A Washington despatch of November 15 states that action on the part of the Federal Government against the Standard Oil Company had begun the same day at St. Louis. The indictment included charges of conspiracy, coercion, intimidation, rebating, and other illegal acts and practices in restraint of trade, but for the present the prosecution will only be a civil action. The advisability of bringing criminal proceedings was at one time under consideration at Washington, but ultimately it was determined to make it a civil case. The case has been entered under the Sherman Law, and makes all the seventy-one companies of the Standard Oil Company of the State of New Jersey defendants. The heads of the company, including John D. Rockefeller, H. H. Rogers, William Rockefeller, H. M. Flagler, John D. Archbold, Oliver H. Payne, and Chas. M. Pratt are personally indicted as being the authors of the system under which competition in production, transportation, and sale of oil has been virtually destroyed.

The original capital of the Standard Oil Company was $47,830,200, but has been raised to $100,000,000, and the dividends paid since 1879 have amounted to $587,390,679. The capitalisation of the constituent companies is $102,230,000. The total capitalisation of the five industrial concerns, the Amalgamated Copper, American Sugar Refining Company, United Metals Selling Company, Butte Coalition Copper Company, and Corn Products Company, is $356,000,000. That of the three gas companies, the N.Y. Consolidated, Brooklyn Union, and the Chicago People's Gas Light and Coke, is $298,000,000. The railway corporations controlled by the Standard Oil are the Chicago, Milwaukee, and St. Paul, Union Pacific, Southern Pacific, and Atchison, Topeka, and Santa Fé, with a total of $2,079,000,000 capital. But their banks, with their enormous deposits, are the main source of the power and influence of the Standard Oil Company's heads; they are the National City of New York, with $25,000,000 capital; the Second National, with $300,000; the Lincoln National, with $300,000; the Bank of the Metropolis, with $1,000,000; the Hanover National, with $3,000,000; the Seaboard National, with $1,000,000; the Citizens' Central National, with $2,550,000; the Rigg's National of Washington, with $1,000,000; the Farmers' Loan and Trust Company, with $1,000,000; and the United States Trust Company, with $2,000,000. Besides all these the Standard Oil has very heavy interests in the New York Central Railroad Company, the New York, New Haven and Hartford, the Pennsylvania, the Illinois Central, the Lake Shore, Delaware, Lackawanna, and Western, Chicago and North-Western, and several others. The indictment against the Standard Oil is voluminous, and the cost of the proceedings will be enormous, but the general opinion in the United States as to results, so far as they will be to the advantage of the American people, is that they will be *nil* or next to it. It is now a little more than thirty years ago that Mr. John D. Rockefeller was indicted by a grand jury for illegal measures to obtain control of the Pennsylvania Oil producers, and he became a fugitive from justice. Since then nothing has been done to break his monopoly more effective than the proceedings now being taken, and everyone is asking why it was not done before.

The New York Central Railroad has again been convicted of rebating and other offences in violation of the Elkins Anti-Rebating Law, and may be heavily fined. Mr. Choate, lately United States Ambassador to England, was counsel for the defendants, and his motions for dismissal were overruled by the Court.

The Union of London and Smiths Bank, Limited, announce that a branch of the bank will be opened on Monday next, December 3, at 54 and 55, Bishopsgate Street Without, E.C.

Passing Events.

So many things are happening in the world every day that it is impossible to keep pace with them. Hence we have never yet mentioned the important fact that Persia has become possessed of a Parliament, has become, in fact, the first constitutional Mohammedan State in the world. How the Shah and his people will fare under the new *régime* we will not venture to forecast, but the deputies are said to be adopting a strong nationalist tone, and they have been prompt to follow the Western fashion and provide for living by credit. According to a Reuter's telegram from Petersburg the deputies unanimously decided to authorise the foundation, without foreign support, of a national banking company, with a share capital of from 8,000,000 to 15,000,000 tomans, say, £3,000,000 to £5,625,000. The condition is added that the State revenue shall be paid into the Bank, and in return it is to bind itself to meet the State outgoings, to pay State debts, and to advance money to the Government at 7 per cent. interest. Altogether a very nice arrangement, especially for the Government.

A ghastly famine appears to be eating the life out of a considerable proportion of the Chinese people. Fully 10,000,000 of them are on the point of starvation, says a Reuter's message from Shanghai. Thousands are migrating south, and many are selling their cattle, their tools, and even their children. This distress is in North Kiangsu, where the floods have completely ruined the crops over an area of 40,000 square miles. So great is the misery that an international committee comprising the foreign Consuls in Shanghai, merchants, missionaries, Chinese officials, and the heads of the Chinese trade guilds has been formed, and is issuing an appeal to Great Britain, Europe, and America for help in relieving the distress. We feel sure all interested in the welfare of China, and possessed of means to give will promptly respond to this appeal.

M. Jaurés has been telling over again in *l'Humanité* the story of the Russian Government's recent attempt to get a new loan subscribed in France. His version differs in no respect from that current at the time when the Russian delegate, Mr. Isvolsky, took the train back home. Consent to the issue of such a loan by the French Government was made conditional on its sanction by the new Duma, whereas the autocratic *régime* wanted the loan before the Duma met, so that it might have the means again to crush down the nascent liberty of the people with a high hand. The delegate refused to acquiesce in this stipulation, and declared that the new Duma would be animated by the same spirit as the former one, and would soon be dissolved. It is in order to crush it out, says M. Jaurés, that Tsarism is seeking support in France, and he adds, "horrible would be the complicity of our country if, yielding to temptations of gain *(chantage)*, it risked its capital on the last card of autocracy."

Some facts are out at last regarding that extraordinary venture, the Victoria Falls Power scheme. The promoters are going to Germany for the bulk of the capital, and it is better the Germans should run the risks than English investors. The total capital of the undertaking is to be the mere trifle of £6,000,000, including £2,500,000 of debentures, a like amount of preference shares, and a million of ordinary shares. All is not, however, to be issued at once; the first issue will be £650,000 debentures, and an equal amount of preference shares. The debentures will be subscribed by a group of German banks, and the contract for the work will be given to the Electricitäts Gesellschaft of Berlin. We shall not know exactly what the dreams of the promoters are until the prospectus is issued. It is known, however, that the project is to develop electric power from the waters of the Zambesi, and transmit it some 600 miles to the spot where it is to be utilised. It is to do wonders for the Rand and Rhodesia—except to put gold in reefs where Nature has not put it.

There is a mystery about Esperanzas that needs a great deal of probing, but it is hardly possible to probe it unless the officials give their assistance. In fact, they should have given it many weeks ago, and their continued silence only tends to deepen the mystery. Substantial and even "record" monthly profits are followed immediately by free selling and a slump in prices, so that some say there is a "tap" on, others that it is a "bear" attack. Anyway, the situation, from the shareholders' standpoint, is becoming intolerable, for they don't know what faith to put in the mine's achievements. The output for last August was the highest ever earned by any mining company, whilst the earnings for September and October, though lower, have also been good, yet the shares show persistent weakness. Various unfavourable rumours are floating about the market, the most important one stating that the rich vein on the property has pinched out, and that in a short time the high-grade stuff will all be exhausted, and the company be compelled to rely upon its lower grade ore. How has such a story got about? Some say it has come from men who have worked in the mine. In face of such rumours and the fall in the price, it is imperative that the directors should make a statement of some kind, and put an end to conjecture and suspense.

The interesting fact is reported that the South Crofty, an old and well-known Cornish tin mine, will be represented at the next tin ticketing, and will bring forward a parcel of tin which, previous to being offered, will have been passed through the magnetic separator. This is the process that has been so much talked about of late, from which the Cornish mining industry is so greatly to benefit. By the use of this separator the wolfram is extracted. This process has been strongly recommended for all tin mines, but it is only useful for treating ore containing wolfram. The increased price to be obtained for the black tin which has been treated by the magnetic separator is estimated roughly at about £10 per ton. As there is a demand for wolfram, this will be an additional asset. It is a by-product which can be sold at a good price, and so it should swell the profits of the tin mines. Indeed, the advantages to be derived from the process can hardly be exaggerated.

According to the official statistics of the mineral production in Spain in 1905, supplied by the Madrid Embassy, there was a substantial increase in the output of the leading metalliferous ores, particularly iron. The yield of iron ore was 9,077,200 tons, against 7,964,700 tons in 1904, while the value increased from 42,117,000 to 47,133,500 pesetas. Of coal, some 3,067,800 tons were produced in comparison with 2,903,800 tons, and the value rose from 28,099,600 to 30,339,800 pesetas. Other ores that showed an appreciable increase were zinc and lead, the last-mentioned gaining 12 per cent. in quantity and nearly 40 per cent. in value. The movements in copper are not so great as one would have expected them to be, having regard to the upward course of the market. Indeed, the production fell from 2,646,100 tons to 2,621,100 tons, but owing to the rise in price the aggregate value increased from 42,589,000 to 42,783,300 pesetas. In the output of smeltings and other manufactures from raw minerals there was not much improvement over 1905, steel being an exception, with 223,500 tons against 186,700 tons in quantity and 45,843,100 pesetas compared with 24,218,000 pesetas in value.

In despair of being able to generate a boom in Kaffirs speculators are trying forlornly hard to start one simultaneously in two distinct classes of mining—in the deep leads of Victoria and in the Siberian mining industry. Their efforts to hoist Loddon Valleys and other deep leads shares have met with equivocal success, for there is nothing in this particular enterprise upon which to base a boom and drag in the public. We are told that the Loddon Valley company has at last entered the wash, but up to the present a little disappointment has been met with. And no sooner is the price hoisted on this side than the colonials start selling, for it is better to snatch profits on the market than wait for those that may or may not be earned on the property. As for the Siberian boom, this has grown up in a night, like the West African boom of some years ago, and it may fizzle out in precisely the same way. Siberia may be rich in gold, but nothing has happened yet to justify wild inflation. It is a great pity such means as these are adopted to tempt the public, but the illusion cannot be kept up for long. That is fortunate, for the reaction might leave lasting wounds if the public widely played the fool. To counsel restraint to gamblers is about as hopeful a proceeding as inculcating practical Christianity upon a Hottentot drunk.

We have only seen the newspaper summaries of the Income-Tax Committee's report, and these make us doubt whether it would be worth while to invest in the complete document. Many sensible comments seem to be made, but anything like a thorough overhaul of the tax, its incidence, its scope, and possibilities of extension has apparently been shirked. In many ways there is no more inequitable impost than the income-tax, but we do not think that a special "super-tax" on the rich is a practicable remedy for the most glaring of these inequities. Nor can we accept off-hand the suggestion that incomes of £1,000 or more might be allowed abatements. On a man's earnings such abatements might be roughly fair, but not at a rule on a man's revenue from invested capital. And has the committee examined the taxable status of the artisan, the well-paid working man, in relation to this impost? A bank clerk receiving £200 per annum pays on £40 of that income; does the skilled artisan earning £4 or £5 per week in wages pay on anything at all? We believe the tax should reach all classes, and would be disposed to graduate the tax on large incomes on a steadily ascending scale, which should be small when the incomes were all earnings, and larger when they arose from invested capital. But the man earning a pound a week should pay something, and get it back in reduced indirect taxation, when the goad of direct had made the democracy unfailing supporters of economy in public expenditure.

Mr. Fielding has unfolded his eleventh budget as Finance Minister of the Dominion of Canada, and in doing so disclosed a prospective surplus of £2,600,000, and a reduction in the nett debt of £300,000. He also intimated that the Government had received £3,000,000 from the Canadian Pacific Railway to meet the guaranteed loan of 1888. This money comes out of the proceeds of the land sales, and is evidence of the Government's generosity in endowing that now all-powerful corporation. For the rest the Minister spoke of tariffs and gave cold comfort to those who had hoped for the triumph of enlightened ideas. Tin plates are not to be taxed, and the reason given for this exemption applies with equal force to many other articles now penalised in the interests of the capitalist minority. Henceforth, moreover, Canada is to lie under the confusing and demoralising shelter of three tariffs a general, an intermediate, and a "British preference." This last object lesson in economic ineptitude is to be continued because "British preference is a good thing for Canada." If that be so, would not a lower tariff all round be "good for Canada"? The thing savours much of the cant of selfish capitalist imperialism, and not least in the ostentatious parade of unselfish liberality. "We do not intend," said Mr. Fielding, "to ask for a return preference." No, they had better not.

Egypt is a fine country for taxes. In the budget for 1907 the revenue is set down at £E14,740,000, and the expenditure at £E14,240,000, so that the looked for surplus is £E500,000. Both income and outgo show an increase of £E1,240,000 as compared with the current budget. The surplus is reached after providing £E380,000 to cover the Sudan deficiency. In the expenditure, as above, moreover, no less than £E1,083,000 is "special," or what the Germans would call "non recurring" only it seems always arising somewhere in some shape.

A very remarkable state of affairs has arisen in connection with the well-known silk mercers' business of Lewis and Allenby, and one that needs strict inquiry. The company has been in a very unsatisfactory condition for a long time; in fact, ever since the conversion into a public company took place, and the last report made a really deplorable display. Shareholders, however, were told that certain negotiations were pending with a view to placing the business on a more satisfactory footing, and will probably be amazed at a document just sent out from the accountant's department of the firm. Not a word is said about the causes which have dragged the business down, but preference holders, who paid £10 each for their shares, are calmly asked to give an option over them at £4 10s. per share until December 25, 1907, in consideration of a payment of threepence per share. The circular letter, which is rather clumsily typewritten, proceeds to point out that the Stock Exchange quotation for the preference shares has fallen to £2 to £3, which is surely adding insult to injury. From the tone adopted one would think the present price of the shares was the fault of the shareholders. Who is Mr. Chas. H. Newman, the writer of the letter, seeking the option, and why is it not sent out by the directors with their signatures attached? Did not the chairman two years ago say that the assets of the company were sufficient to repay the preference capital in full? We do not like the look of things at all, and counsel shareholders not to sign away their rights, but to press for a full and searching inquiry into the position.

The long awaited meeting of the Buenos Ayres Cedula holders was held in La Plata on Tuesday last, and bonds to the value of 99 millions are said to have been represented. There was an overwhelming majority in favour of the scheme which has been already outlined in these columns, the minority representing only five millions of bonds. The representatives of these, however, seem to have withdrawn from the meeting, leaving the number present insufficient to form a legal quorum. It therefore became necessary to adjourn the meeting to December 11, but since 94 millions of bonds voted in favour of the Government scheme there is no doubt that it will then be immediately accepted.

Holders of the first issue of 3½ per cent. debentures of the Agricultural Bank of Egypt are offered the privilege of exchanging them for the second issue bonds on payment of £6 per cent. in cash. The latter are guaranteed as to principal and interest by the Egyptian Government, and the assumption apparently is that they are therefore the better security. According to the official details, however, the older bonds have a first charge on the Government guarantee of 3 per cent. on the share capital of the company, and on the face of it there does not seem to be sufficient difference in the intrinsic merits of the two issues to make it worth while for any holder to pay £6 per cent. for the exchange.

Critical Index To New Investments.

Carthagena and Herrerias Steam Tramways Co., Limited.

Formed as far back as 1872 to work mineral railways from the Sierra of Carthagena to the port of that name, this undertaking has been a struggling one throughout its whole existence. Its fortunes, however, seemed to be on the mend in 1905, and since then numerous additional lead and iron mines have been opened up in the district of "El Beal," all of which furnish fresh material for the traffic of the line. Additional rolling stock is required to deal with this, meaning, of course, fresh capital, and as the directors propose to take the opportunity to pay off the outstanding £72,000 of 5 per cent. and 6 per cent. debentures, they offered an issue of £100,000 5 per cent. registered debentures at par. For the year ended December 31 last the gross income was £35,606, and the nett revenue £14,666, out of which the service of the old debenture issues took £8,233. The earnings for the ten months of the current year show an improvement of no less than £13,325, and the profits for the nine months to September 30 are £3,206 in excess of those for the whole of 1905. At the same time, the new debentures will only require £6,000, so that the conversion should tend to strengthen the company's position.

Kluchi Gold Mines, Limited.

The flotation of this company has been foreshadowed for some time past, and as some activity is being shown in various Siberian issues, the directors have probably considered the present a favourable opportunity to appeal to the public. This is the first subsidiary of the Nerchinsk Gold Company, and it has been formed to acquire the gold mining rights in respect of the Mount Kluchi Block, situate in the eastern part of the Nerchinsk mining district. The authorised capital is put at £280,000, in £1 shares, and subscriptions are invited at par for 115,000 shares. Shareholders of the H.A. Syndicate, Limited, the Siberian Mines, Limited, and the Nerchinsk Gold Company, Limited, will receive preferential allotment, as to one-half to shareholders of the Nerchinsk Gold Company and, of the balance, 40,000 shares equally between shareholders of the H. A. Syndicate, Limited, and the Siberian Mines, Limited. As regards the Mount Kluchi Block, the company will occupy in substance the position of sub-concessionaires under the Nerchinsk Gold Company, and will acquire the benefit of all the money that has been spent upon and all developments made in the mines on the Mount Kluchi Block. The lode formation is said to consist of silicified quartz porphyry, mineralised with pyrites and gold, while the mineralisation extends for a considerable distance laterally, as well as along the strike, where it has been proved for upwards of 1,200 ft. Developments in "A" level show it to be continuous for the whole distance driven. Up to the end of August last the mill crushings were 5,214 tons for a return of 2,420 ozs. of retorted gold, leaving as much as 8 to 9 dwts. in the tailings, the ore thus treated showing an average of 17 dwts. 16 grs. per ton. It is anticipated that in a few months the present mills, capable of crushing 100 tons per day, will be in full operation, and that the profit will amount to approximately £40,000 per annum. Should the mill be increased to a capacity of 500,000 tons per day the profits are estimated at £200,000 per annum, and the balance of cash that will be available will enable the mine to be developed sufficiently to provide continuous crushing up to 500 tons daily. Altogether it looks a fair enough speculative venture.

Samuel Williams and Sons (1906), Limited.

In addition to a business of lightermen, contractors, steam tug and dredger owners, founded in 1852, the private company, of which this is the successor, owns a freehold estate of about 620 acres at Dagenham, with nearly a mile of frontage to the Thames. This estate is considered ripe for development and it is partly to provide the necessary funds and partly to adjust various family interests in the private company that the new company has been formed. The assets, exclusive of investments, book debts, cash balances, and goodwill, have been valued by Messrs. Fuller, Horsey, Sons, and Cassell at £376,273, and by Messrs. Wheatley Kirk, Price, and Co. at £378,308, and the first-named figure is taken as the basis for arriving at the purchase price. Adding £51,026 for investments in colliery properties and subsidiary companies, the total value is brought out at £427,299, and for this the vendors take £150,000 in cash, £75,000 in preference shares, and £200,000 in ordinary shares, or £425,000 in all, nothing being included for goodwill. In addition, they are to receive £13,500 for interest from July 1 to the date of registration of the company, and 5 per cent. per annum on the unpaid cash portion from the latter date until payment. Of the total share

capital of £400,000 divided equally into 5 per cent. cumulative preference and ordinary shares of £10 each, only the vendors' shares are issued at present, but subscriptions were invited at par for £200,000 4½ per cent. first mortgage debentures, redeemable within 40 years by purchase or drawings at 105 by means of an annuity of £11,067. Gross profits, which are set out in detail for the eight years to June 30, 1906, show a very steady rate of progress on the whole, and even at their lowest sufficient was earned to meet the debenture charge three times over, so that the issue should be a good enough investment.

South Mount Boppy Gold Mining Co., Limited.

This company acquires 21 gold leases aggregating 264 acres in the Cobar district of New South Wales, of which eleven formed part of the property of the Mount Boppy Company, and the remainder are extensions of that area in a southerly and south-easterly direction. The capital is £150,000 in £1 shares, of which 90,000 will be sufficient to satisfy the consideration for the transfer of the options, the purchase price of the properties and other sums payable under various contracts. Another 10,000 shares are held in reserve, leaving 50,000 to be offered for subscription, of which 28,000 have been applied for by the Anglo-Australian Exploration, Limited, its directors, and their friends. Particulars are given of the results obtained by the Mount Boppy Company, and the directors state that they expect to find the continuation of that company's lode in this company's property, and that it may reasonably be assumed that the company would have over 3,000 feet of ground to explore upon it. Another reef has been found in the leases lying to the south-east, so that there will be two to develop, either or both of which may equal in importance the one now being worked by the Mount Boppy Company. The venture is naturally a speculative one, but it is worth noting that the whole of the purchase price is payable in shares, and that no underwriting commission is paid to those who have applied for so many of the shares offered.

Answers to Correspondents.

Magog.—We believe the undertaking to be in thoroughly honest and competent hands, but its business is of such a nature that profits must inevitably fluctuate widely. It has never paid more than 10 per cent. as yet, and for some years paid nothing at all.

C.B.V.—There should not be the slightest danger of your losing anything in the event of such a thing happening.

Drews.—This is hardly a security for a trustee, however unrestricted his powers may be, as the company is by no means flourishing. The stock would certainly need very close watching.

L.G.R.—The shares were lifted in the beginning of this year on prospects of the line being bought by another company, but the anticipations were not fulfilled, and we see nothing in the present outlook to make the shares attractive as a speculative investment.

Hukeem.—Business has certainly improved since the company altered its methods, but the debentures can hardly be ranked as a first-class security yet. As a speculative investment, however, they might be worth buying to a moderate extent.

B. W. J.—(1) The company might have a good future, but we gather the bonds are redeemable at par, not at 110 as you state. This takes off some of the gilt, and at the present we do not see that you would gain much by the exchange. (2) You would in all probability be throwing your money away, and you should not accept the invitation. (3) As the yield indicates the bonds are speculative, but we believe the company has been improving its position since it wrote down its capital, and a small purchase might be made with reasonable safety.

Wellington.—At best this can only be said to be a blind gamble, and in any case the market for them here seems to be dead.

F. E. D.—(1) These do not seem particularly attractive at present price, as a very slight set-back might involve a reduction of the dividend. (2) Has fairly reasonable prospects of improvement, and a small purchase should do no harm. (3) These shares hardly seem worth buying, even at the lower figure you mention. (4) In the present state of the South African market we think it would be too risky to buy these shares.

J. B. S.—Yes, it is a Government issue, on which dividends and sinking fund are paid out of a special fund, with a provision that should it be insufficient the balance required will be provided by the Imperial Government.

L. B. A.—We believe you are right in assuming a connection between the two concerns mentioned, and fear that the business of the one is to get rid of securities in which the other is interested. (1) Too little of this concern is known to render the stock a good investment. It is a fairly safe rule never to put money into securities which do not enjoy a free market and regular quotation, and whose accounts are not available. (2) We do not suppose for a moment that the interest on the debentures is in danger, but the business depends for its prosperity on public fancy. Should that change there would be little or nothing to fall back upon, most of the assets being mere trade marks and goodwill. (3) There is nothing to be said against this if you do not mind the absence of a London quotation and free market. (4) Fairly good as things go, but not cheap for a security of the kind. It has the same objection regarding quotation, &c., as some of the others. The selling price, if you wanted to realise, might differ widely from the buying figure. (5) Reasonably good, but only a second-class security.

PUBLIC INCOME AND EXPENDITURE

The following are the receipts into and issues out of the Exchequer between April 1, 1906, and November 24, 1906:—

Treasury, ovember 27, 1906.

SOUTH AFRICAN MINE RETURNS.

The return for October is really a splendid one, but increasing monthly outputs are evidently not the bait that will catch the old gudgeon, for another grand "record" has been followed by a further slump in prices. The aggregate was 540,609 ozs. of fine gold, and of this total 521,397 ozs. came from the Rand itself, and only 19,212 ozs. from the outside districts, the value of the whole being £2,296,371, these figures showing a favourable comparison with 505,111 ozs. and £2,145,575 for September, which was a shorter month. Thus the increases were 35,498 ozs. and £150,796 respectively. For the first time in the history of the Rand the return includes the "secret" gold reserves, now declared, amounting to 14,968 ozs. for October. Even if we deduct these the increase for the month was the substantial one of 20,530 ozs. Inclusive of these reserves it is the highest return from the Transvaal, exceeding the previous best, in August, by 31,494 ozs. or by 16,526 ozs. if we exclude them. So the improvement is really remarkable, and the more astonishing as it is coincident with lamentations about the dearth of labour. Compared with the corresponding month of 1905 the increases are 125,082 ozs. and £531,324 respectively. There was a notable increase in the supply of native labour, the nett gain for the month being 2,458, although there was a loss by wastage, say of 7,387. At the end of the month the total employed was 76,035, but this does not include those working for the Robinson group, who have ceased to be members of the Chamber of Mines.

Bank of Adelaide.—A cablegram has been received from the head office in Adelaide notifying that Henry Scott, Esq., J.P., has resigned his seat on that board on account of ill-health, and that Arthur Waterhouse, Esq., has been appointed a director in his place.

THE MUSIC HALL LADIES' GUILD.—The *matinée* in aid of the funds of the above deserving charity for the relief of necessitous artistes out of employment (by kind permission of Mr. G. Adney Payne) took place at the Canterbury last Tuesday, and was a big success. Many of the leading lady artistes connected with the variety stage gave delight to the large audience present, others acted in the capacity of stewards, and Miss Constance Moxon was stage manager. The members of the Stock Exchange did their share in the success, having bought liberally from Miss Lily Burnand tickets for the *matinée* when she paid a visit to the Stock Exchange last week, accompanied by Miss Anna De Grey, the secretary of the fund, and Mr. Reginald Leyland, well known in City circles and as a public entertainer, who introduced them to Throgmorton Street finance.

RAILWAY TRAFFIC RETURNS.

Foreign.
